the real one A subtrope of Brand X . For fake products that are transparent copies of real ones, but with a letter or two switched around, it's Bland-Name Product . When this is done with a person, it's No Celebrities Were Harmed or No Historical Figures Were Harmed . When this is done with a city, it's No Communities Were Harmed . When this is done to entire countries or cultures, it's Fantasy Counterpart Culture . See Oceanic Airlines for a fictional airline often used whenever something bad is about to happen

Tropes that describe entire fictional cultures, nations or ethnic s group See also National Stereotypes for tropes that relate to the s fictional portrayals of specific Real Life nation s

The landmasses look different . The names of the nations don't exist in the real world . It must be a fantasy world . Nope, it's Earth . Just different It's very much the same planet. It orbits the same star and it has the same moon. But with different landmasses and nations, the creator of the story gets to take many liberties. The use of a Fictional Earth means that past and present real world history doesn't have to affect the story and absolutely anything can be made up. The story's nations may have real world counterparts . These worlds will usually have real world physics, but not always The planet has to be identified as Earth at some point, otherwise you're just dealing with a Constructed World that may or may not look like Earth in some aspects. Alternate History settings that are geographically different enough may overlap with this, if the country or continent boundaries changed, especially after a traumatic event Compare Earth All Along , where a planet seems alien at first but turns out to be a version of Earth. Contrast Earth Drift , where a setting starts as Earth but gradually becomes a fantasy world as the series goes on. Like Reality, Unless Noted is when the difference with our Earth is minimal and mostly about events and characters

The world is full of wonderful things, with countless new discoveries paving the way to whole new scientific fields. A hundred years ago, fields like genetics, quantum physics and computer sciences were either almost unheard of, or simply did not exist yet. Go back a hundred years more, and more scientific disciplines we know today did not exist yet Science Fiction writers have picked up on this, and creating a whole new scientific field has become a common method to show that this is The Future . It also helps legitimize their Applied Phlebotinum (especially if it's a Minovsky Physics -type one) by telling us that there's a whole scientific field dedicated to it, making it feel more like an ingrained part of the work's setting May or</ may not be a fictional extension of an already existing Real Life discipline. Super-Trope to Fantastic Science , which is when the new "science" studies/explains the supernatural. Not to be confused with Fiction Science

So many sci-fi works across the various media forms have Psionics, the " scientific " study of Psychic Powers , that listing them all would overshadow the rest of the examples. The term was first used in fiction by Jack Williamson , and heavily promoted by editor John W. Campbell under the belief that there was some scientific validity to the paranormal.

Alchemy is a well-known and respected field of science in Fullmetal Alchemist </, with the government eager to employ exceptional alchemists and sponsor their research. Alchemy is (or was) a discipline in Real Life , but it doesn't actually work unless you count people who have a particle accelerator.

In the Marvel Comics Civil War </ series, Reed Richards helps Iron Man with the Superhuman Registration Act because he'd calculated the future of society by Psychohistory . In one issue, he explicitly stated that he'd been fascinated by Asimov's description about the discipline as a child, and as a result, had actually defictionalized it in-universe. He and Johnny even went and brought the Thinker to his HQ and showed him his equations, as aside from Reed he was probably the only one who could understand them.

Isaac Asimov :

Star Trek </ has Warp Theory , Temporal Mechanics , Exoarchaeology ("Exo-" as in "Exoterrestrial"), Exobiology, Exogenetics, and Exochemistry.

Shadowrun </ has Parazoology and Parabotany, the scientific study of Awakened (magical) animals and plants, respectively.

Artifice </ features a robopsychologist.

Even in the chaos of war , there are rules. You can't go around killing innocents, you can't kill medics, you probably can't rape or pillage, and you can't use certain weapons. Hollowpoint bullets, some types of gas, possibly barbed wire, and in general much of the methods that had been developed in war have been restricted or outlawed for decades, even before World War I brought it to promise For more information on the weapons that can't be used, see The Laws and Customs of War and Now, what happens when you have a fantastic speculative setting? Where magic spells or high-tech weapons could wreak more damage than imaginable? In any war, there must be certain rules, or people would be doing unthinkable things on a battlefield with nothing to stop them. These may be enforced by a group such as a Fictional United Nations . Oddly, any use of this trope tends to result in the Broken Aesop that making war less destructive makes it more likely;</ without heinous consequences for conflict, people are more willing to enter it. These are common rules that can apply to most Speculative fiction genres: Generally, no Necromancy (this doesn't include resurrection, which is a task of high-level priests or doctors). Having obedient mindless soldiers is creepy and a single person with this power can use it against his own government .

Most SF settings tend to be based on modern warfare. As such, conventions tend to include rules regarding the proper treatment of Prisoners of War and Civilians. Overall, the story will focus on what technologies cannot be used No Nuclear Weapons And to General Ripper and Colonel Kilgore : Yes, sapient lifeforms and/or sapient machines count as civilians and prisoners of war. And yes, even the ones that look like bugs

There are obviously rules of magic, making certain spells impossible (such as resurrection in an All Deaths Final setting). In addition to those, there are certain customs that regulate

the use of magic in war No permanent curses , especially not petrification or soul-sucking

It is quite common for characters within one work of fiction to reference another. If this show takes place in our Universe then it is to be expected that the characters would know about any other show that exists in the real world. The only real show that by default doesn't exist within a story is the one you're watching right now (and there are some exceptions to even this). On the other hand, there is no reason why the author is required to stick to real media. Sometimes, an author will make references to a work that was never written in the real world, even if it's completely real for their characters. Some other times, the author will use a non-existent book to mock something. Or use it as a Take That! for a film, or just as a parody. Characters in series may listen to platinum albums that were never recorded, watch movies never filmed, or play videogames never programmed. This is not necessarily just a throwaway reference either; sometimes the whole point of the main work is based upon this Fictional Media , for example a review of a non-existent book, or a trailer for a film that no one had any intention to make. Common types of Fictional Media include:

The sport equivalent to the Fake Band : A "real" sport invented for the work itself which is played in the 'verse of the work. Different from Calvinball in that the sport actually has consistent rules that could be followed, at least in theory, although for obvious reasons there will likely be some gaps in our knowledge of the game rules These are sometimes defictionalized if the source material gives enough information for fans to base it off of (and sometimes even if it doesn't). How difficult this is to do and how accurate of a recreation is even possible varies pretty significantly, of course. A fake card game can be created pretty easily, while a sport requiring advanced technology, magic, or superhuman athleticism just to play will obviously be impossible to accurately recreate. That said, you'll be amazed how creative fans can be Sometimes a Blood Sport . If a fighting sport, may involve Fantastic Fighting Styles . Related to Improbable Sports Skills for sport skills that are impossible in Real Life , which may or may not involve a Fictional Sport Not to be confused with Fantasy Sports

The Fictional United Nations is a formal international diplomatic Thapparatus that mediates in disputes between nations. Its primary Thgoal is usually to prevent wars, and it sometimes forms out of Than Enemy Mine or Fire-Forged Friends situation, as was the case Thwith the real-life United Nations e concept is similar to The ThAlliance but can contain both good and evil members , which Thprovides a story set there with a source of conflict. Also, Thalliances are often just a treaty or even an informal agreement Thmaking nations allies, whereas here there is a formal governing Thapparatus. However, unlike The Federation , the Fictional United ThNations is not treated as a single state: Individual members are Thstill sovereign nations and may take action unilaterally if they Thfeel the need. It also tends to have no military of its own, and Thoperations ordered by its (usually) ruling council are executed

Thby the armies of member states is can fall practically anywhere Thon the scales of Idealism Versus Cynicism and Romanticism Versus ThEnlightenment . In some portrayals, the Fictional United Nations This hamstrung by applications of Realpolitik and greed, with big, Thpowerful countries essentially free to ignore it without much Thconsequence and run riot over weaker polities. In other cases the Thauthor depicts the job of keeping the peace between nations as Thtricky but not impossible, with the participants more inclined Thtowards Enlightened Self-Interest and willing to work together Thfor the greater good, allowing for Aesops and/or positive moments Thwhen peoples of many tribes and creeds come together and do Thsomething awesome e Fictional United Nations may enforce a set Thof Fictional Geneva Conventions . See also United Nations Is a Superpower , Thwhere the Fictional United Nations has a lot more power than Thusual; the logical conclusion of this is One World Order

We've all seen Close Encounters of the Third Kind </, The X-Files </ and Buffy the Vampire Slayer </ . But what if these stories weren't false, but rather, made to distract people from the real aliens, government conspiracy and vampires? This trope describes the use of stories to serve as a psychological smoke screen. If someone came up and said that small grey aliens with big eyes just abducted him, you'd probably dismiss him as watching too much TV . It's used in media to show how big the conspiracy is. The people in charge know that they can't keep a lid on it all the time, so they start to release fictional accounts of their exploits, so if they ever do get seen, people will not believe the witnesses. Such a show is always popular , which isn't exactly reassuring about how much power the Conspiracy must have... There are two main variations: Subtrope of Cassandra Gambit . See also Plausible Deniability , Literary Agent Hypothesis , Direct Line to the Author , and All Part of the Show . When the "fake fake show" is a direct part of the main plot, it's a Show Within a Show .

Where Science Fiction is the writing of stories derived from some form of extrapolation from the laws and theory of science, there is a subgenre of books which take well-established settings and worlds and take a documentarian, analytical view of how that setting fits into, illustrates, or contrasts with the "real world" There are many reasons for this. It'd be nice to say that a lot are written because the author is using the known milieu and expanding the understanding of why the stories speak so strongly to the reader, for great stories do not exist in a vacuum. We are hopefully led to a deeper appreciation of both the stories and the world around us However, there is more than ample evidence to make the argument that a lot of it is either merchandising, trying to milk a franchise, or a Fan Wank gone horribly and publicly wrong

How William Shatner Changed the World </ Note that while a lot of the books are in fact science-oriented, this is not the only topic. Thus we also have:

"Ficton" is another way to say 'verse — it refers to the characters and settings of a world, usually as it has been defined by a single author. The term was coined by Robert A. Heinlein as "a basic or indivisible unit of imagination". The term is used

primarily among Speculative Fiction fans. It is possible for two fictons to merge, usually through repeated crossover This page just defines the term. See The 'Verse for examples

Alice and Bob are married, engaged, or otherwise attached. Alice gets it into her head to somehow 'test' whether Bob is faithful to her. Sometimes, she believes he is, but makes a wager with someone who insists that he isn't, or that no one else ever is. Alternately, she's just suspicious for no good reason Then Alice's agent, or the person with whom Alice made the wager, or Alice herself in disguise, goes and attempts to seduce Bob. In almost all cases, Bob will prove to be true to Alice. Often she doesn't realize it, though; either her agent lies to her, or, in a twist as old as the trope, he sees through her disguise or otherwise becomes privy to her plan, and plays along to teach her a lesson A Sub-Trope of Secret Test of Character In Così Fan Tutte </, Ferrando and Guglielmo make a bet with Don Alfonso and he concocts the Zany Scheme in which they attempt to seduce their girlfriends disguised as Albanians

A commanding officer — who may be in command now or may hold the correct rank for his position — sorely lacks in senior officers. Perhaps they're Trapped Behind Enemy Lines . Or communications are shot to hell. Or the senior officers were treacherously invited to a Nasty Party . Or he's piecing together something resembling a unit out of the shattered remains of an army Any suitable disaster to remove them will do. He must brevet many juniors. Expect some of them to panic for at least a minute or two. May also inspire moments of grief because their predecessor is dead — hopefully, no matter how beloved he was, not Losing the Team Spirit . If the doesn't stick, it still tends to be an advantage for future promotions . And it often does, because mortality weeded out the senior ranks, and because the jump is often not that great. There is often a ripple effect: brevet a captain to major; brevet a lieutenant to captain to replace him; brevet a sergeant to lieutenant to replace him; and finally, brevet a private to sergeant to replace him</ . Normally, under this trope, their existing ranks are not put out of order; the sergeant doesn't become the major over the head of a lieutenant, etc. A slightly less chaotic situation may result in actual promotions as needed to fill the gaps, Closely related to Closest Thing We Got , and in fact many stories with Field Promotion also use that trope. If you have no one left to promote you, You Are in Command Now instead.

The act of blowing up or burning down the evidence implicating you in some crime. Very popular among evil corporations and governments who go as far as torching entire city parts to cover up something particularly nasty. Often takes place when the heroes are in the middle of discovering said evidence Attempting this is very much Truth in Television . Part of firefighter training is to be on the lookout for signs that fires might have been started to conceal another crime, such as noting if a window was broken before they put an axe through it to get into the building. Also known to happen in cases of Insurance Fraud . As forensic science has improved, it's often the case that arson will create</ more evidence than it destroys, though it's a very mixed bag whether the writer of a story will actually know this. This trope is

often averted in real life; house fires generally can't reach the temperatures that would be necessary to completely consume a human body, and any competent forensic pathologist would be able to tell whether a person died before or during a fire just by checking whether there's any soot or burns in the airway and lungs Compare Destroy the Evidence which deals with characters covering up the crimes of others. Also compare Gas Leak Cover-Up , Kill It with Fire , and Revealing Cover-Up . Furnace Body Disposal can also easily come into play

A Fiery Redhead is a red-haired character who is strong, Hot-Blooded , outgoing, usually outspoken, and (if a love interest) often female . She has a big personality and she's not afraid to use it. Whatever you do, don't get on her bad side, or there will be hell to pay. (Especially if powers of personality and/or elements are present: she likes Playing with Fire . Thus, in a Four-Temperament Ensemble , expect her to be Choleric.) She will be unladylike unless it's the case of a redheaded Spirited Young Lady . She might be One of the Boys , a tomboy or a lad-ette . Heroes do like redheads after all This hair-color stereotype probably developed since red hair was associated with the Irish and Scottish (and before this, Horny Vikings) for a long time, and they ended up being stereotyped as loud, strong, and passionate (see the Fighting Irish and Violent Glaswegian tropes for more info on that). On the other hand, it's even found in Eastern Europe where any association would have been with Russians or Swedes, and these are nationalities not generally stereotyped as hotheaded In addition to this, it extends even into ancient texts from Babylonian and Scandinavian Oral Historian. In the Prose Edda </, Odin is depicted as blonde, green-eyed, cool, and calculating — while his son, Thor, is a redheaded, blue-eyed (something of an omen of war/perfection in Scandinavian culture) fire-breathing stereotypical Viking (the raiding kind) who treats Earth as a giant freshman mixer. Gilgamesh is also a Fiery Redhead with blue eyes whose duties include being a good precursor to Thor, for the most part — though with more reservation and a cooling trend near the end of his life (this makes both an eerie paradigm of Fiery Redheads at the creation of their respective people's writings). The whole "red-haired, blue-eyed" thing is usually split in Japan between two people Although real redheads can have tempers like everyone else, this trait is exaggerated in fiction , so no real life examples are listed here. Also, they can have green eyes and this association is also exaggerated in fiction Compare Heroes Want Redheads , Dark-Skinned Redhead , Evil Redhead , Rose-Haired Sweetie , Red-Headed Stepchild , Redheads Are Uncool , Red Is Heroic . In anime, could be a Shana Clone . If you have a blonde, a brunette, and a redhead in close proximity (i.e. in the main cast), it's Blonde, Brunette, Redhead . Contrast Shy Blue-Haired Girl for Red Oni, Blue Oni and Eerie Pale-Skinned Brunette for the realistic opposite hair color and personality. Compare and contrast Beware the Nice Ones , if the two overlap you get a redheaded character is super nice and calm all the time but briefly becomes this trope once pushed too far Please do not confuse this with a redhead being literally fiery , or having literal fiery head , although these tropes may overlap. And a red who's literally fiery does have their hair color fit their elemental powers . See also Red Is Violent (in this case, the hair color)

There is good reason why a thirty-second commercial in the Super Bowl costs millions of dollars : The Super Bowl is always, without question, the most-watched program of the entire calendar year in America. If you're blowing half your annual advertising budget on just getting the spot, the commercial better be pretty damned good. And many are. This is so well known that many people watch the Super Bowl just for the commercials, creating the advertiser's dream: a three hour block of time where over ninety million people tune in to watch advertisements Many ad campaigns are debuted at the Super Bowl. The commercials are generally given a much bigger budget, and quite a few include celebrity cameos . Most will have a funny twist ending intended, as many commercials do, to help you remember the product or service being sold (although sometimes this doesn't work out). Many also go sexy (which can cause Distracted by the Sexy to occur on occasion), each year being more titillating than the last... or so they did until the infamous " Wardrobe Malfunction " at Super Bowl XXXVIII. For even more meta-flavor, some commercials will recall commercials from years past Almost invariably , each year's crop of commercials will be called worse than last year's crop These days, organizations will sometimes deliberately create commercials that will be rejected, usually for being too sexy, for the publicity that</ generates. The commercial is then of course put online, where it will quickly generate a million hits This would also be a good time to note that the NFL has trademarked the name Super Bowl , which is why you almost never hear anyone mention it in commercials. Generally, you'll hear "The Big Game" instead, or a gag name like "That game at the start of February where the professional football championship is contested". The league itself runs an ad during the broadcast, often thanking its fans for their patronage during the season that is ending. And, of course, the network that airs the game itself gets plenty of free air time to promote the crap out of their big shows, the biggest of which will likely be airing a special episode right after the Big Game Since the advent of YouTube , advertisers have taken to uploading their Super Bowl commercials (along with behind-the-scenes footage etc.) there. This may or may not result in news outlets posting lengthy articles about the leaked commercials, resulting in a sideways case of Trailers Always Spoil . Platypus Comix took some time out of to state that this seems to be why people say that the ads get worse and worse every year: "Well, what do you expect when there are no surprises going in at all?" The website Adland has a of Super Bowl commercials, dating back to Super Bowl III in 1969 A similar, worldwide version of this is the FIFA World Cup Special: since the FIFA World Cup is the most watched sports event in the entire world, the mid-time ads are where the world's biggest mega-corporations pull out their BFGs Once of the earliest is a Xerox commercial where the monk, Brother Dominic, getting a completely unreasonable order to make dozens of the ornate document he slaved over by hand, and going to a print shop with a professional Xerox heavy duty photocopier to do it instead

Rule of Cool insists that when a bunch of fighters (planes, spaceships, or even Mecha), go into battle, you always have to see them taking off first. Always</ . There are several reasons for this. One is the sound </ of the fighters starting up. There is something very evocative about fighter engines — the promise of power and danger right there in the turbine's whine (or the exhausts'

roar). Science fiction versions of the trope will have the fighters make a very similar sound despite not running on turbine engines. This isn't always a case of Space Is Noisy (because they're probably still in the pressurized hangar) but it's definitely common. This is closely related to Red Alert with its attending imagery of lights flashing and klaxons sounding as the pilots in their flight gear race for their fighters while the ground crew calmly preps them for take-off as their commander goes over the PA with something like "All fighters, " In anime , you always have to have the commander gesture impressively on the Bridge when they do this. In fact, this usually shows up in the Opening Credits. Sometimes this trope is subverted , with the pilots attempting to scramble only to have their airfield or mothership disabled or destroyed before they can launch. That would be an example of Sitting Duck . A Sister Trope to Lock-and-Load Montage , Technology Porn . Compare Engaging Chevrons , Transformation Sequence , Standard Establishing Spaceship Shot , Epic Launch Sequence .

Two or more characters are enjoying a snack from a communal source. At some point there is a realization that there is only one left for multiple people. Hilarity ensues as this one bit of food, unlike its fallen brethren, becomes monumentally important. Usually, this is because the food does not divide evenly, such as there being 9 pizza slices for 4 people. There are several variations on how this may play out: One character may absent-mindedly reach for the last one, when they are interrupted to point out that it is the last one This may be played for comedy as everyone realizes how important the last one is, or played for drama, likely resulting in an argument over why it's so important. If multiple characters realize it at the same time, there may be a Wild West -style stare-down to share this understanding, followed by a quick-draw analogue in grabbing the last one, or a more convoluted competition to determine who is deserving Cutting the last one in half and sharing it is NOT an option. Expect some Fork Fencing along the way, considering how likely this is to devolve into an actual, physical fight. (And while this is going on, someone else might sneak in and take the last piece before the others notice.) Occasionally, one character may simply be deprived of the last one because they were absent when it was taken. They will very likely be upset by this and, sometimes, will launch an investigation to see who took it. If the food was something they themselves brought, they'll be especially</ angry. If the "last one" is a MacGuffin , it's a Macguffin Melee . Subtrope of Lost Food Grievance . Compare Cut a Slice, Take the Rest .

If a bully attacks a kid and the kid fights back in a school environment, often both</ of them will end up being punished for "fighting", with the bully somehow getting kinder</ treatment. This is an Aesop in which fighting back against a bully is portrayed as a bad thing. Often involves the message that sinking down to the bully's level will make you no better, or even worse, than they are and may be a way to maintain the status quo of the bullies picking on the main characters. Countless numbers of books and professionals about bullying will almost always say that fighting back is the wrong option. This can apply to more serious villains as well, but fewer shows will take the extreme stance that fighting back against serious threats is wrong. Another consequence of this trope is that the bully fights back and may kill the good guy and eventually The

Hero Dies , another aesop that you should stay away from making this. Also may lead to Arrested for Heroism . According to law, if someone attacks you, you have the right to defend yourself with equal force. Not so in schools - they're not teaching kids to resolve problems with violence, after all. It's rare for the works to mention any alternatives to deal with bullying, or to say that bullying is something you have to stand against, even if you don't fight it head on. Most commonly it's to report to the authorities; for school settings, it's commonly the teacher. If Adults Are Useless , though, all bets are off - your only good option is to become a Badass Pacifist . If a show like this features a Bully Hunter they will be portrayed as misguided or really just bullies themselves. Compare to Turn the Other Cheek , Actual Pacifist , Suicidal Pacifism , Made Out to Be a Jerkass and Crime of Self-Defense . See also Revenge Is Not Justice , If You Kill Him, You Will Be Just Like Him , If You Taunt Him, You Will Be Just Like Him , Perfect Pacifist People and He Who Fights Monsters . Since this is a controversial issue and could be converted into a Hate Sink if misused, No Real Life Examples, Please! American Dad! </: Played with and subverted in " Bully for Steve ", where Steve is having bully troubles and Francine tells him that fighting back is not the answer... until she finds out that said bully is her own husband.

Usually, when someone fights, it's for a reason. Sometimes it's for patriotism or to fulfill an ideal. Sometimes it's to protect something or someone. And sometimes it's for some sort of compensation. The motivation of fighting solely for monetary gain is generally not treated as sympathetic. However, when the compensation is more than simply money, that can change. This group of people lost their homeland and has been seeking it ever since. Perhaps it was destroyed , or they were exiled , or they were on the losing end of a war. When their home is still habitable, they often want their original home back and prepare to solve the problem that prevent them to live in it. However in cynical stories, some bad things usually happened, making it uninhabitable. They decided to abandon it, choosing to wander around until they find someplace to call home . They often have no one but each other. As a consequence, their commander is often A Father to His Men , and they are True Companions . (But not in more cynical stories.) Compare with The Promised Land , which is what the characters in the work will view this future homeland as. Not to be confused with fighting for your homeland .

There are thousands of places where people can go and battle. Whether it be up on the roof , inside an old warehouse or any place that looks dramatic . But what can they do when these places are unavailable or out of reach? Well, they'll have to make do with what they can find, no matter how silly it looks. A normal fight in the woods can result in being taken to a nearby local park where children usually play. It's rather unlikely that children are around at the time or people passing by. Expect the people taking part in this fight to be either grown adults or creatures from another planet... or someone who should know better. Some instances can be children as well, but the scuffle might not always be childlike . Most cases, the fighters will be using war weaponry like swords and guns, or they'll just use Improv Fu . Expect to see things such as fighting on the spinning roundabout, a quick escape down a slide, and/or someone claiming empowerment on the bridge above the monkey-bars. If they are

ever caught by a passer-by, said passer-by might back away slowly or not react ; it's could also be a child that is immediately shushed by their oblivious parent , but if an adult is the first one to see, they might try to distract the child or Cover Innocent Eyes and Ears .

Everywhere a hero goes, he finds a fight. There's always a horde of Mooks who can't wait to mug the monster and nobody will pass up the chance for a piece of the hero. Complete strangers will pick a fight with the hero for the most trivial of reasons and gang up en masse at the slightest excuse This is especially common in action movies and shows, especially martial arts centered ones. It's often used as an excuse to show a fight scene when the plot doesn't call for one Related: Busman's Holiday , Mugging the Monster , Bullying a Dragon , One-Man Army , RPGs Equal Combat . Compare Enemies Equals Greatness (when the hero is proud</ of having a lot of people out to kick his ass)

The character, usually surrounded by Kryptonite and severely weakened, in a lot of pain, and sometimes already badly injured, uses Heroic Willpower to work through the pain and proceed to save his own or his friends' lives, and kick the ass of the Smug Snake who thought they could just wave a rock in his face and win. This is a tough trope to use correctly: if overdone or used too often then the dramatic purpose of a Kryptonite Factor is lost. Hence, in extreme cases, this precipitates a case of Heroic RRoD and ultimately a Heroic Sacrifice as the punishment his body has endured kills him. Or not Compare Brought Down to Normal , where the hero has to fight with no powers, but is not otherwise in pain. Contrast Cross-Melting Aura , where an evil creature can repel holy items that would otherwise weaken it. See also Kryptonite-Proof Suit , for other means of resisting Kryptonite To avoid excessive overlap with Heroic Willpower , all examples must be of characters with a potentially deadly or disabling Kryptonite Factor

Almost all fighting you see on TV is fake. It's for safety and insurance reasons. Producers just can't have their actors actually</ hitting each other, as most do not wish to be held liable for broken bones, stitches, etc. So, fight scenes in movies have to be cleverly staged to make it appear as though they are real, but in such a way so that nobody actually gets hurt. Sometimes this is pulled off extremely well, making for one hell of a great fight scene. Then there are these scenes . When a fight scene isn't</ pulled off so well, there's usually a number of factors in play, but it can usually be attributed to poor choreography or simply poor acting. But regardless of the reason, the whole fight comes out looking extremely corny to the viewers and the characters look like utter buffoons. Of course, this can be a matter of opinion, though some of the examples that follow are so bad that they fail even the most generous benefit of the doubt. Compare Fight Unscene and Special Effect Failure – when they overlap, this is often an example of When Props Attack . See Wimp Fight , What the Fu Are You Doing? , and Fake Special Attack for when this is done deliberately. If the Fight Scene Failure fails and someone really does</ get hit, expect the producers to Throw It In!

There are at least two kinds of TV viewers: the group that goes to the refrigerator during the fight scenes, and the group that describes the episode's plot as " Blah, blah, blah, Fight Scene!</ , blah, blah, blah." If you are going to have fight scenes, the trick is to write them in such a way that both groups are entertained. If you decide to leave out the "Blah, Blah, Blah" part, see Chop Sockey . Also see Fighting Series , which use these regularly, Harbinger of Asskicking , which is often used to signal a Fight Scene, and Write a Fight Scene for how to write one.

In animation, cool fight scenes draw an audience — but are expensive to create There are two ways to handle this: pour most of your budget into the fight scenes or use lots and lots of tricks. These tricks include tight first-person perspectives, eliminating backgrounds, and making sure there's as little actual contact as possible. There may also be a censorship aspect to it, if the fight would otherwise look brutal Making a virtue of necessity , characters may "move too fast to be seen!" as one of their in-world powers. Ideally, they move between static poses in a split second and dramatically hold those poses for many frames, with the melee replaced by a Hit Flash . Or we can always just see a Big Ball of Violence Typically The Movie will ditch these gimmicks entirely due to the amount of money that inevitably gets put into such projects Can also be Played for Laughs as a kind of Gilligan Cut - Bob threatens to beat Charlie up, and the next thing we see is Bob</ being wheeled into an ambulance Compare Battle Discretion Shot , Relax-o-Vision , Offscreen Moment of Awesome , Coconut Superpowers , Hit Flash , and Inaction Sequence . When a scene is skipped entirely and only described afterwards, it is Second-Hand Storytelling instead Do not confuse with a fight unseen

This trope occurs when one character asks for information and another character simply refuses. The Only Way They Will Learn is to discover the answer for themselves. Just telling</ them would defeat the purpose This trope is often used by The Mentor and its subtropes. It is all fine and dandy to teach them how to do whatever it is that they teach, but the student eventually has to find their own answers. The Trickster Mentor enjoys keeping him in the dark , of course, but also because it would mean nothing if they just told</ the student the solution to the mystery. A list with media originating from, or involving, the Philippines Note: This list may include works or personalities coming from the Filipino diaspora</—that is, Filipinos who live and/or regularly work outside the country. Much as with the Jews, the Chinese, the Irish or the Polish, the diaspora is an essential concept in Filipino society, with millions going abroad either to send back aid to their families or to migrate and seek greener pastures. As such, if a work is produced in a foreign country, but primarily by people of Filipino descent</ , the priority is to count it under "Filipino-created" media, rather than "foreign media about the Philippines/Filipinos" In addition, the list of Filipino characters and settings in foreign works may include examples not explicitly stated to be Filipino</ per se, but have strong implications or circumstantial evidence pointing to that conclusion (for instance, an Asian character with a Hispanic name, is Catholic, and comes from an unnamed tropical Asian country). If the general fan consensus, Word of God or not, agrees that the character or setting is most likely Filipino, then it may be considered on this list

Self-demonstration aside, "filk" is best described as the music of science fiction fandom , or at least, the music of the filk community. Songs about SF books or movies, fandom in-jokes, or even just related topics such as computer geeky references are all common sources for filk. And, despite what the self-demonstration says, filk doesn't have to be new words to old music, or spoofs of the lyrics of original songs — many filk songs are originals. Filk can also be thought of a special genre of Folk Music . as a typo in a proposed essay for an SF fanzine in The '50s . The essay wasn't published at the time, but the editor liked the typo and spread it around, and it was applied to the nascent but already peculiar style of musicianship, weird humor, and camaraderie of fandom musicians. By the mid-60s, the term was widespread within fandom. Filk has a few general styles: humorous, serious but positive, and depressing and angsty . The humor is often, but not always, parody (here defined broadly as "new lyrics," not only the ones referencing the originals — see Parody Satire Pastiche) — some filkers

are specifically parodists, some do both parody and original, and many only do original work. Some even specialize in "refilking," parodying others' original filk songs. Parody filk is sometimes seen on fanfic sites as an exclusively literary form — lyrics parodying a popular song, but not necessarily meant to be sung (and sometimes taking such liberties with the meter that it cannot</ be sung to the specified tune). The example seen to your right is a parody filk written to the tune of The Beatles ' "Paperback Writer." Sing along at your discretion. The angsty stuff is called "ose," as in, "it's ose, ose, and more</ -ose." Of course, like all things, especially fandom, there can be some overlap — there are terms such as "cheeri-ose," which is both cheery and depressing; "sucr-ose," sweet and sugary and depressing, and "verb-ose," long and drawn out...and depressing. (Oh, and in case it isn't apparent already, a lot of filk songs have puns. Lots of puns.) Most SF conventions nowadays have a room set aside for the filkers to sing in large bardic-style circles once the main panels end for the day — some even have concerts. Filk-specific conventions do exist, the biggest being the , which includes the annual Pegasus Awards for best filk songs. Check it out for some examples of particularly well-regarded filk. For more examples of filk, there's also , which bills itself as the oldest anthology of recorded filk music on the Internet. Unfortunately, defining filk more concretely than "the music of fandom, or at least, the music of the filk community" can be tricky; even in fandom circles, filk is sort of a Red-Headed Stepchild that a lot of people don't like. That's probably because they've been exposed to one too many bad singers — filk has a performance aspect, and mangled music can put you off of the entire field. And Sturgeon's Law still applies, after all — it's just that, unlike fanfiction, filk will often be sung aloud</ , which makes it harder to avoid the bad stuff when you're looking for the good. The filk culture also used to be quite aggressive in getting general participation in the singing, and it still lives on. Partially as a result of that, there are a number of artists — such as "Weird Al" Yankovic and Jonathan Coulton — whose work is frequently sung in filk circles, but who don't consider themselves filkers. Other filkers, especially ones more on the "funny and pun-filled" side, prefer the term "dementia," derived from the Dr. Demento show, which has been playing comedy and novelty music since the '70s. The examples will therefore be divided into "Filk," where the artist considers him- or herself a filker (or dementia artist; we're keeping it simple) and part of the community; "Found Filk," where the artist isn't a filker, but the music qualifies and has probably been sung in circles; and "Somewhere in Between," where it's not so clear. A more detailed history and examination of filk can be found in by Gary McGath. Related genres, as far as themes, are Heavy Mithril , which almost by nature qualifies at least as "found filk," Nerdcore , and Wizard Rock</. The music of the Society for Creative Anachronism has also many connections with filk and filkers. Note there's a related phenomenon in the Second World, called "minstrel song" in Russia. It's also a phenomenon of the fandom, but it's derived from the Soviet tradition of bard song</ (which is itself derived from the early XX century Russian urban romance</ music). Basically, Three Chords and the Truth about various fandoms, mostly fantasy (and among fantasy, mostly J. R. R. Tolkien). Oh, and it almost never recycles melodies from older music. The practice of holding certain stories hostage throughout the course of a News Broadcast , in order to force viewers to watch the whole thing to see what it is they're being taunted with. This is done by giving part of the information, and promising to reveal the whole story at some point during the news show. Usually, the story is placed almost at the end of the broadcast (just before Yet Another Baby Panda), amounts to the sum of the tidbits that the newscasters and ads have dropped, and is extraordinarily anticlimactic. The teaser often refers to "your family", as in "coming up, a deadly new trend that could affect your </ family !" The phrase originated in the 1970s, when stations began to run teasers for the late local news during Prime Time (such as "shootout at local gas station, Film at 11.") This was often a Justified Trope at the time, since it could take hours to transport exposed 16 mm film from a remote site to the station, develop it, edit it, and add a voiceover. Even now stations don't like to broadcast raw video from outside sources in case it contains something not fit for the six o'clock news, and satellite uplinks aren't always possible in remote areas or in less developed countries. But the majority of delays these days aren't unavoidable; in almost all cases, they do it only to keep you watching to the end of the broadcast, so they can make more money from advertisers. The phrase itself persisted in the public lexicon long after newsrooms switched from film to videotape .

The first time Superman and Wally West had a race, they were forced into it by Mr. Mxyzptlk, who kept popping up to annoy them as they ran. At one point he says "Who will win? Who will lose? Stay tuned — film at eleven!"

Parodied repeatedly during The Kentucky Fried Movie </ by the Zucker Brothers :

This trope pretty much applies to anything that features "coming up next" clips before commercials, like Reality shows. For example, early episodes of American Idol </ love to tantalize the viewer with clips of a really good or really bad singer...and then shove them in at the very end of the episode.

The characters in the science fiction novel Ridley Walker</ use the word "Filmateleven" to mean "We'll see."

Wired</ magazine once did a piece taking off on the famous six-word story supposedly written by Hemingway ("For sale: baby shoes. Never worn.") by asking Speculative Fiction writers to try the same format. Robert Jordan's entry was "Heaven falls. Details at eleven." For those of you keeping score at home, yes, Jordan's story was actually shorter than the original at five words.

Parodied in the Flash cartoon Homestar Runner </. In the Strong Bad E Mail " ", Strong Bad kept pre-empting the special "investigative news

report" on "The World In Crisis" for other stories, to the point where it wasn't shown at all. Even better, they continued the hype for it by saying it will be on next time.

Also parodied on The Simpsons when Kent Brockman was one of the many people running for the re-call election of Mayor Quimby. He threatened to withhold vital information about deadly household products if not elected.

Aka anime comic, Cine-Manga (a trademark of Tokyopop), Ani-Manga, visual manga. In this genre, the artist adapts animation to the comic-book medium by taking actual frames from the cartoon and adding word balloons. For added effect, play while reading the article Film Noir (literally "black film" in French) is a genre of stylish crime dramas, difficult to define, but the 1940s and 1950s were the classic period. Whether works since then can be accurately classed as Noir is a subject of much debate among film critics. Film Noir, and the literature from which it is drawn, is the progenitor of several modern genres, particularly cyberpunk . Common plots of noir films include murder investigations, heists , con games , and (mostly) innocent men or women Wrongly Accused of crime. The double-cross and cigarette smoking are mandatory. Complicated plots are further convoluted by Flashbacks and Flash Forwards — the narration tying everything together, assuming we can trust it Noir</, in the classic and stylistic sense, is visually darker than your average gangster picture, playing with light and long, deep shadows instead of bright, documentary-styled camera work. This visual motif is so iconic that homages and parodies are almost universally Deliberately Monochrome , using a transition between colour and black and white where necessary. Scenes are often filmed on location, and night scenes are shot at night. Camera angles are often very creative and unusual, heightening the viewers’ sense of unease, adding to the atmosphere. The contrast between light and dark is sometimes used in the cinematography to reflect the difference between the villain and the protagonist(s). It rains most every night in Film Noir; filmmakers admit that this is entirely because at night wet pavement looks cooler than dry. Also, the rain makes it plausible that no one else is around Film Noir is not really a genre in any sense, rather it reflects a tendency in certain American films of the 40s and 50s where crime and gangster stories are infused with an excessive visual style, a modern urban sensibility and a powerful sense of moral ambiguity. These movies differed from the crime movies of the 30s, the Depression Gangster films such as The Public Enemy</ or the original Scarface </, in that criminal behaviour is no longer relegated to gangsters or ethnic ghettos, and the plots don't usually revolve around turf wars or police clampdowns. Protagonists in films noir are often normal people who get involved in crime, and the motivations are no longer just social or circumstantial but psychological and personal. The standard noir plot is, in broad terms, best summed up as centering around a protagonist who, usually by pure chance, is placed in a complex and dangerous situation completely beyond their control where they are pitted against an adversary whose identity and motives are not immediately obvious. The system and the law is usually either apathetic to their plight or is even outright working against them , meaning that they will have to take up the fight and make sense of it all by themselves or die trying. As a style and sensibility, Film Noir was flexible to include hybrids such as the Western-Film Noir (The 1947 film Pursued</ with flashbacks, Dark and Troubled Past , high contrast black and white lighting and weird Freudian themes), and even the

film-noir musical (The Man I Love, Love Me and Leave Me</) and in the case of Leave Her to Heaven</ a Film Noir in technicolor Trying to explain Film Noir is hard, since it's kind of a mix of European cynicism and post-war American angst. It involves a clash between crude pulp fiction narratives and complex storytelling and characterization, which itself derived from emerging psychological research on criminal behavior, as well as wider influences in modern art and literature. The term was first used by French critics (hence the name) and it derives from "Serie Noir," the label of French translations of American pulp fiction, and French imitations thereof, which were highly popular in France at the time . French critics looked at the American crime films from their</ perspectives of post-Occupation France, which to some extent led them to overemphasize the doom and gloom of American films by projecting their experiences onto their interpretations of these films. Later, American writers when translating these articles into English brought this into Pop-Cultural Osmosis The mix of European cynicism with American landscape is also borne out in the fact that several directors of films noir — Billy Wilder (who lost his mother in Auschwitz), Robert Siodmak, Fritz Lang , Otto Preminger — were refugees, exiles and emigres from Nazi Germany , being quite active in 1920s Berlin which in many ways was the closest a real-life city came to being the exaggerated City Noir landscape. The lighting in Film Noir was also strongly influenced by European trends, especially German Expressionism , but later after the war, the Italian neorealist films of Roberto Rossellini also influenced it greatly. The subtext of many of these films often dealt with the trauma of the returning Shell-Shocked Veteran (most notably, Act of Violence </) and the rising Red Scare and The Hollywood Blacklist which made the working climate in Hollywood highly paranoid and hostile, and this infused the films made in the late '40s The standard Noir landscape is a large, oppressive city (filmed in dark and dusky conditions to create a moody atmosphere) . Familiar haunts include dimly-lit bars, nightclubs filled with questionable clientele (including the Gayngster) whom the lead may intimidate for information, gambling dens, juke joints and the ubiquitous seedy waterfront warehouse . At night in the big city, you can bet the streets are slick with rain, reflecting streetlights like a Hopper painting. Most of the characters (including the lead) are cynical, misanthropical and hopeless all the way through the film, and never find true redemption . It is important to note that the term "Film Noir" was not available to the people who made them in the '40s and '50s. As Robert Mitchum famously stated, "We called them B-Movies." It comes from later audiences and critics who rediscovered these films in revival theaters and clubs and picked up the subtext, visual clues and other Hidden Depths . Many historians feel that the classic Film Noir genre died when it became self-conscious. Raymond Borde and Etienne Chaumenton cite the MGM musical The Band Wagon</ (made in 1952), where the final number featured a technicolor parody of a Mickey Spillane crime setting, with Fred Astaire and Cyd Charisse playing the detective and femme fatale in an obvious send-up. Others feel that Orson Welles ' Touch of Evil </ was the real end, since it was made by the director of Citizen Kane </ (which, while not a Noir, influenced the lighting and style of several other films noir), and the genre conventions were pretty much stretched inside and outside. They also argue that Noir only worked in a climate of censorship, as the crime genre often fell Beneath Suspicion allowing writers and directors more chances to subvert cliches.

Once censorship eroded, Film Noir had pretty much served its purpose and achieved its goals Attempts to revive this style led to Neo-Noir, which with some exceptions tends to Flanderization . The tone and outlook must</ be bleak , defeatist , and pessimistic , always suggesting</ a sliminess beyond what it can show . Nobody gets what they want, and everyone gets what's coming to them . Characters are often armed — revolvers especially Snubnosed .38's if you're a cop or a dame , Colt 1911s , and if they need More Dakka , tommy guns. Also, no self-respecting Film Noir thug will be seen without his brass knuckles. They'll probably wear a Fedora or trilby hat with a trench coat . Frequently the ending will be low-key and leave no one character happy or fulfilled . Commonly, there is also a great deal of sexual tension between the hero and the female lead; Noir stories are quite risqué. The original Film Noir era followed the Hays Code , so the odds of a female lead removing her clothing are minimal, but even so, she'll often have some fine gams on display . This applies to modern versions; gratuitous nudity or scenes of excessive violence are hinted at rather than portrayed. It is often what is not</ seen that adds to the mystery and suspense Film Noir usually features the Anti-Hero , Anti-Villain , Villain Protagonist , the ambiguity often resting on questions of trust, leading to an atmosphere of paranoia where Poor Communication Kills regularly. The conclusion may or may not tie up all the loose ends, with the major mystery being the morally ambiguous theme of the story. These factors contribute to the widely-held opinion that Film Noir works are among the best artistic works of all time and contributed greatly to the maturity of cinema as an artform See Film Noir Index for a listing of live-action films noir. Examples from other media are listed below Not to be confused with the religious conspiracy anime Noir </ (although that is</ an example of the genre)

A special kind of film that was a mainstay in cinemas from the 1910s to the 1950s The basic structure is a film that is presented in consecutive installments in a theatre, with the expectation that the audience would come each week to see the whole story through. As such, it was famous for its fight scenes and its cliffhangers (most of which were notoriously poor) The genre first started with such serials as the silent film The Perils of Pauline </. Although some big studios like Universal played the field with the Flash Gordon </ serials, the most famous and renowned producer of serials was Republic Pictures, especially with the director team of Whitney and English, who produced classics like Daredevils of the Red Circle</ and The Adventures of Captain Marvel </ (the

first Super Hero film) Eventually, the genre petered out against the competition of television. Furthermore, a common criticism during the genre's waning years was that the focus had shifted from plot and character development to action and stunts, highlighting the importance of the Cliffhanger as a gimmick tool (and also underscoring said gimmick's flaws to boot). But the spirit of the Film Serial lives on whenever a TV show episode cuts to commercial with a cliffhanger — and even more so in the modern era of arc-based plots, or whenever a last-second twist at the end of an episode entices viewers to keep watching. Of those, the first incarnation of Doctor Who </ (1963-89) is the early example of this programming format with the stories' serial format The influence of these serials also led to film series such as Star Wars </ and Indiana Jones </ See Compilation Movie for the practice of editing a serial down into a single feature film

Film series are created when a film becomes a success. Sequels, prequels and spinoffs can turn a group of films into a real Cash Cow Franchise . Sometimes the makers choose not to make another movie based on the success of the first one. This can be due to lack of interest or the knowledge that they will not be able to duplicate everything the original made great Many others simply go for the quick buck and mass produce new movies. This is Finagle's Law: The perversity of the universe always tends toward a maximum.</ Sometimes called "Finagle's Law of Dynamic Negatives." A simplified version , often called Murphy's Law (or Sod’s law) is this: Anything that can go wrong, There is another related Murphy's Law — "If there are two or more ways to do something, and one of those ways can result in a catastrophe, then someone will do it." In layman's terms, that means that if someone plugs in a toaster backwards and it fries itself, the problem isn't just that some idiot plugged it in backward, but that it was able to be plugged in backwards in the first place. Someone's</ going to try and mess it up (or mess it up without trying) . Murphy was, unsurprisingly, an engineer. After all, when you try to invent something idiot-proof, the world invents a better idiot. The name "Finagle's Law" was coined in order to distinguish it from Murphy's The term was popularized by SF writer Larry Niven . More on Finagle's Law can be found in the . (The concept can sometimes also be used seriously in certain real-life situations. For example in computer programming this is the driving principle behind so-called .) The true Finagle's Law is stronger than "anything that can go wrong will</ go wrong". It allows for things going well, as the universe is merely lulling you into a false sense of security before proceeding to screw things up for you . It also allows for things that can't possibly go wrong going wrong; some cases of this count as Gone Horribly Right . Finagle's Law in storyland owes its existence more or less entirely to the Rule of Drama , and is especially common in Crapsack Worlds where things that do go wrong tend to go wrong in the worst possible way. Can also happen to Real Life in a limited pace, as entropy indicates. One is generally left with the impression that the universe is controlled by a malevolent (or at least mischievous) deity — some might say author — who is obsessed with making your life as difficult and humiliating as possible. At some level, this underwrites a huge percentage of TV plots, especially in comedy. The odds of something happening as the plot unfolds depends not on its actual likelihood, but on its potential for disaster. The term was also played to both seriousness and hilarity in Christopher Stasheff's "The Warlock Unlocked" and "St. Vidicon to the Rescue" which essentially spotlight an entire order</ of Catholic monk-engineers dedicated to the philosophy of Murphy's and Finagle's Laws, with the Imp of the Perverse thrown in for good measure. Everything the heroes have fought for hangs on the outcome of this fight. Consequently, the heroes (and sometimes the villains) throw everything they have into winning the Final Battle Often, the battle itself is the object, and, other times,

the battle is merely a diversion: a Supporting Leader leads the army of Good into battle so the real</ heroes can sneak behind the Army of Evil's back to infiltrate the Supervillain Lair and destroy the Artifact of Doom or engage the Big Bad . Oddly enough, the real heroes' success often coincides with (or even causes) their allies' victory in the larger battle Expect Gondor to call for aid beforehand. Expect The Cavalry or the Big Damn Heroes to make their big damn entrance. Expect someone to say " This Is Something He's Got to Do Himself ," or " Leave Him to Me !" Quotient to reach previously unheard-of heights If the story intends to Kill 'Em All , this is where most of them will die. If they were already killed , they may get brought back for a Climactic Battle Resurrection . For an extra-chaotic battle, make it a Mêlée à Trois Sometimes a Final Battle is rendered not-so-final by the events of the sequels or later seasons. On the other hand, if it's the Grand Finale of a particularly long series , the Final Battle can serve as a kind of retrospective; all manner of characters from previous books or seasons will show up to participate, allowing the audience to remember all the many stories that led up to this moment In Videogames , this overlaps with The Very Definitely Final Dungeon and the Final Boss . To make this reading experience feel as climactic as possible, listen to either , or A Sub-Trope of Boss Battle , the Final Boss is the last major challenge in many video games. They will usually be much harder to defeat than all of the enemies the player has faced thus far (as always, there are exceptions), and will be prone to making a suitably grand entrance for their stature. These may also be known as "the Boss of the Game". Usually resides within The Very Definitely Final Dungeon , and with rare exception is the Big Bad or Greater-Scope Villain of the game's general storyline (in games with a Non-Action Big Bad , the final boss tends to be The Dragon) — in the cases where this is averted, you may find yourself facing a final challenge against someone for the sake of the challenge rather than because they Must Be Stopped. When they're evil, they usually have multiple forms that must all be defeated back-to-back or even taking forever to complete the game. If the game uses the same boss music throughout the game (a lot more common in earlier games), expect this boss to get its own theme. It is sometimes a Load-Bearing Boss , so even after defeating it, there will be one final challenge to escape its Collapsing Lair (or part of the ending cutscene will depict the heroes escaping the lair, if you don't get to play that part yourself). See Giant Space Flea from Nowhere when the Final Boss seems to have nothing</ to do with the events leading up to it. If they show up earlier in the game just to beat up the heroes, it's a Final Boss Preview . If the Final Boss is considered

the last "normal" enemy, but you did so well that another boss appears out of nowhere, the replacement is called the True Final Boss instead. May make future appearances if Promoted to Playable . Being a near-ubiquitous trope in video games, a list of specific examples is unnecessary - almost every game with Boss Battles has one that takes place just before the ending of the game, and that's the Final Boss. Note that the Final Boss isn't necessarily the hardest; even if it's not a pushover , there may be a really hard boss earlier on, and Bonus Bosses are usually around to give Challenge Gamers a tougher fight than is needed to finish the game. More interesting forms of this trope are under different pages. Also, the final boss need not be the very last thing you fight. Sometimes, a post-climax finisher fight occurs; less difficult, or smaller stakes than before, meant to tie up loose ends; we like to call that a Post-Final Boss . Or, as mentioned above, a True Final Boss shows up. We may also use this to refer to the final enemy faced by the protagonist(s) in other pieces of fiction. Also see Wizard Mode , the Pinball equivalent.

The simplest definition of this is " the last character left alive to confront the killer" in a Slasher Movie . The character in question tends to follow a certain set of characteristics. The most obvious one is being (almost) Always Female . Especially in older works, she'll also almost certainly be a virgin , remain fully clothed, avoid Death by Sex , and probably won't drink alcohol, smoke tobacco, or take drugs , either. Finally, she'll probably turn out to be more intelligent and resourceful than the other victims, occasionally even evolving into a type of Action Girl by the movie's end. Looking at the Sorting Algorithm of Mortality , you could say that the Final Girl is a combination of The Hero , The Cutie , and the Damsel in Distress — which obviously gives her a very low deadness score. The Final Girl is usually but not always brunette, often in contrast to a promiscuous blonde who traditionally gets killed off The term was coined by Carol J. Clover in her 1992 book Men, Women, And Chain Saws: Gender In The Modern Horror Film</ , a critical examination of slasher movies The character is ultimately the last one left to tell the story. If the Final Girl appears in a sequel to the movie she survived, there is a very high chance that she will fall victim to Sudden Sequel Death Syndrome It's also interesting to note how the Final Girl can be interpreted in film theory. On one hand, the character seems to be the living embodiment of stereotypical conservative attitudes of what women "should be". On the other, feminists have noticed that through this device, the males in the audience are forced to identify with a woman in the climax of the movie. In practical terms, the makers of a horror film want the victim to experience abject terror in the climax, and feel that viewers would reject a film that showed a man experiencing such abject terror This trope has seen a growing number of subversions, aversions, and parodies in recent years, which suggests it may be slowly weakening. Then again, the Action Survivor 's replacing the Action Hero points in an interesting direction Thank God for Monster Threat Expiration Often overlaps with Token Wholesome . Compare and contrast Kill the Cutie and Men Are the Expendable Gender . Has nothing to do with Last Girl Wins , which is about romantic pairings. A villainous (and usually male) variant might show up as part of a Mook Horror Show As both a Death and Ending Trope , all spoilers will be unmarked ahead. Beware

When you need to get rid of a small flame, sometimes blowing it out isn't gonna cut it. Perhaps it's out of reach, or blowing it might cause a mess. So your next best idea is to get rid of it with your hand. Characters may do this through using a wet hand or simply doing it with them bare This trope can be Played for Laughs or used to show how strong a character is. After all, touching fire is the ultimate strength test Another way this trope is played for laughs appears in cartoons with a horror or suspense veneer: the hero may be in an old castle or haunted house, and they hold up a candle or torch as the monster stares them down...only for the monster to grin heartily and put out the torch with a mere pinch Obviously, this is way more common in an animated format, as doing it for live action would require the actors to do it themselves, which, as mentioned below, is a risky endeavor. While it's unlikely that trying this would result in extreme burns or death, the heat can easily blister your fingers, which can cause filming delays and put productions behind schedule. So it's generally best left to the toons In Real Life , requires you to lick or dampen your fingers to protect them from the flame, and to avoid holding the wick too long. Some people can even do it with dry fingers, although it takes a lot of practice before they can get the timing right Can apply to Macho Masochism . Not to be confused with Finger Snap Lighter

In the event of a kidnapping or Hostage Situation where characters are held for ransom, when the kidnapper is ready to make his demands known and/or make sure he is taken seriously by his hostage's loved ones or law enforcement authorities, the kidnapper will send severed extremities from his hostage to the family/police. Fingers are very common, but ears, teeth, toes, hair, etc. are frequently fair game, as well In other circumstances, the situation can involve a Serial Killer mailing more gruesome body parts (typically internal organs or severed heads) from recent victims to either taunt the police/detectives tailing him and prove to them that they are receiving correspondence from the suspect they are after or to convey the gruesome fate to a loved one of the victim See Also: Fingore , Past Victim Showcase

Poisons in detective novels are one of the great romances in fiction. Writers of the genre are always looking for new ways to administer the deadly stuff, which gives us this trope: a murder method wherein poison is unwittingly self-administered when the victim licks an object coated in the poison The object could be anything, although the more innocuous, the better. One popular method is to coat the pages of a book in poison, so that when the victim licks their finger to turn the page, the poison is passed to them. This is somewhat dated, since people don't lick their literature much anymore, but it may be Justified by saying the pages were stuck together or from an old, delicate book Other seemingly innocent lickable objects, such as stamps or envelopes, are also popular Most often a mystery trope , considering the murder angle. Modern examples of are probably inspired by the novel/film The Name of the Rose </, although one early example is from the Arabian Nights </ Related to, but separate from, Poisoned Weapons and Drugged Lipstick . The murderer may use a Perfect Poison to do the job. Not to be confused with a Fingertip Drug Analysis , though less-subtle examples may rely on the victim trying one

Diabolik once used this method, soaking with cyanide the text of a speech a journalist would later read to call Ginko an incompetent and Diabolik himself a lousy criminal. Diabolik chose this method specifically because he knew the journalist had this habit and wanted to kill him in a most spectacular fashion . 11th Hour

In the first book of the Grimtooth's Traps </ series by Flying Buffalo had an 'additional trap', to 'punish' players who read the book. On the trap page, Grimtooth claimed that the book pages had been liberally coated with a deadly neurotoxin absorbed through the skin ... with two blackened fingerprint outlines right where a normal reader would hold the book when reading.

A variant appears in the old TV show, Jacob Two-Two Detective Conan </ :

One Batman In the Pathfinder A poisoned letter stamp in Apollo Justice: Ace Attorney . , had a tendency to bite her nails a lot.

While not highly toxic by itself, Dimethyl Sulfoxide (DMSO) has the property of being quickly and easily absorbed through skin contact, allowing easy contact absorption of whatever else happens to be mixed with it. This allows a deadly but hard to deliver poison to be easily absorbed through the skin. It is regularly used as a solvent in industry and scientific research, so it's quite easy to get hold of too.

The detectives have raided a house and found some suspicious white powder or liquid. One of them puts his or her finger in it, then either sniffs it or tastes it. They pronounce it's heroin or cocaine or whatever. Or if it's phony drugs, they announce "Powdered sugar!" Also done by drug-dealing baddies. Seen in almost every 1970s Cop Show . The mysterious white powder (almost) never, ever, ever turns out to be a deadly poison or corrosive chemical that kills or maims our hero outright, despite the fact that he's found something, doesn't know what it is, and is stupid enough to put it directly in

his mouth. Even if it isn't poison, the amount of powder the hero tastes could very easily be far more than his system could handle. This is Truth in Television to the extent that certain drugs (opium, for example) have a distinctive taste or odor. Cocaine can similarly be identified not by taste, but by the way it instantly numbs where it touches. However, any modern police lab is loaded with all kinds of test equipment for just this kind of thing. Without it, it's just a cop's word on the stand. (And how reliable would that word be if they just deliberately ingested something mind-altering?) But if a chemical reaction proves it's really drugs, it's a lot harder for a lawyer to disprove, and a lot safer for the cop (see the Real Life entries). Not to mention the fact that a police officer could get in serious trouble if they were tested and found to have a drug in their system. If the substance is blood, you're performing The Ketchup Test . For any case of testing mysterious substances by taste or smell see Sniff Sniff Nom .

So... you're unconscious. That sucks for you, huh? After all, this is probably the result of being banged on the head , having some horrible illness , or just being so injured that you can't voluntarily wake up or move around. The doctors around you are talking openly about the likeliness of you never waking up. Bye-bye, you. But wait! You're not licked yet! As you slowly begin to rouse yourself, a telltale sign of your impending consciousness will show itself. It will often go unnoticed, perhaps when everyone has turned away. But it will indeed happen: your fingers will twitch back to life.</ This is an extremely common trope, usually done in extreme close-up on the hand as a last-second Cliffhanger of a scene or even the entire show/film. The dual categories of whose fingers could be twitching determines the tone of this trope. If it's a hero or a love interest, this is a moment of renewed hope and happiness (and usually is then immediately followed by the full wake-up scene); if it's a villain, the moment is a threat. The ubiquitiousness of this trope covers up the fact that twitching fingers may not always be the most likely part of the body to first signify someone's revival - eyes could open, shoulders could adjust, chest could rise and fall with breath. But even when the arms and fingers of a character have been significantly hurt, and are even bandaged up or suspended in one spot, this is more often than not the way we'll be shown that the character is coming back to his/her senses. See also Playing Possum , No One Could Survive That! , Raised Hand of Survival , and The End... Or Is It? . Compare to Eye Awaken , which this may be used along with . Additionally, by its nature, this is more often than not a spoiler trope . Could also potentially be horrific if the character whose finger twitches goes completely unnoticed. Those around could go on to assume that the character is deceased and treat them as such. This can then lead to many situations like abandonment, burial, cremation and the likes... all while the character is still alive. Movement as proof of life, incidentally, is not always Truth in Television : Creepily enough, even dead bodies can sometimes move or make noise caused by the contraction of tendons and the presence of gas escaping from the corpse. Burned bodies often curl into a fetal position as the tendons dry and contract, which can give rise to stories of deceased persons suddenly "sitting up" on the pyre. When this happens because of Special Effect Failure revealing that the "corpse" is a live actor, that's The Living Dead .

Eyes , teeth , tongues , throats , feet and genitalia are not the

only human body parts that are extremely sensitive and fragile. Our fingers are, too. As one of our primary means of negotiating the world other than our eyes, our fingers have an abundance of nerves, making them especially vulnerable to pain. This trope includes all the nasty things that can happen to them: Fingers broken one by one; What makes fingers so attractive for horror writers is that unlike the eyes, we generally have ten of them. The fun lasts five times longer! And that's not counting the toes.</ Also, most people can relate to finger and toe injuries, since they tend to be very common in everyday life. This makes finger severing and other injuries a lot more cringe-inducing than something as over the top as limb dismemberment or decapitation. Most people have no idea how something like that would feel, but we pretty much all can imagine what a having a section of your finger cut off would feel like, and it seems very unpleasant. There's also the fact that in humans, fingers have the highest number of touch receptors of any part of the body, primarily as an evolutionary consequence to the human species' tool biased survival strategy that required the use of the hands. As a result, fingers are so sensitive they could even be considered to be sensory organs on par with the eyes. The loss of hands can also be extremely disabling for the same reasons above, just as the loss of an eye can be. The same thing can also happen to the toes. This is nastier than people may assume, as losing even minor toes can cause serious damage to people's ability to walk and balance. See Mutilation Interrogation for Cold-Blooded Torture that often involves this. For this done as a ritual, see Yubitsume . Fingers are a fairly common Creepy Souvenir . Compare An Arm and a Leg , where an entire limb is lost; and Impaled Palm , where the handpalm is pierced by some object. Contrast, among other things, Intertwined Fingers .

One character starts saying something, and while completing the sentence, another character (or several) join in May be done sarcastically (the first character says X so often that everyone can tell what's coming), or as a sign of group solidarity (especially common with the Catchphrase). This also often happens with Eureka Moments that involve two or more characters of a similarly high intellectual level. It's played for comedy if the characters aren't really that smart, or they're coming to same ridiculously outlandish Insane Troll Logic conclusion by complete coincidence Gags aplenty exist for this one — the people say different things, or there's an Expo Speak Gag or something. Or one of the characters yells "Jinx!" There's also usually also a coda, because you can't let something like that go This is also very common with shows shot before a studio audience; the audience chime-in is usually done out of enjoyment and pleasure of being familiar with the character's Catchphrase or Verbal Tic Closely related to Finishing Each Other's Sentences . Could be related to Are You Pondering What I'm Pondering? . See also Speak in Unison , for when characters do more than just finish the thought at the same time

We've all heard it before... literally. Some people know each other so well, they finish each other's sentences. The effect is usually a demonstration of how close the two people are — they're so familiar with one another, they even think</ alike. (That purpose is the last in the following list of purposes.) Generally comes in two forms— the single line and the complex dialogue. The single

line goes something like, The complex dialogue is more elaborate: Closeness and familiarity aren't the only reason for this trope. Others include: Lampshading a Catchphrase or Arc Words This trait is often found in Creepy Twins , Single-Minded Twins , and Sickeningly Sweethearts , but hardly restricted to them— lovers, parents, siblings, friends, co-workers, enemies, even strangers can do this. And while we're at it, it doesn't have to be only two— loads of people can get in on the act, although it might start to stretch credibility. Also present as a way of showing that two characters are telepathic or are parts of a Hive Mind . If the characters are built around this trope, it's a sign of a big problem when they don't</ finish each other's sentences. If one character is a psychic, expect the other to shout something like, " Get out of my head! " Or even if they aren't psychic, if it happens often enough. A similar effect is having characters Finish Dialogue in Unison . Two Scenes, One Dialogue and Distant Duet have characters finishing each other's sentences without even being in the same scene. Compare Strange Minds Think Alike , Catchphrase Interruptus , Speak in Unison .

The Finishing Move is a special combat maneuver that is only ever used to cap off a battle, especially one that's already been won. It's often incredibly flashy, frequently requiring a "charge-up" time long enough that it would be impractical to use if your opponent weren't already on the ground in a bloody heap. Even without a "charge-up" time, using a Finishing Move at the beginning of a fight is often unwise (especially if It Only Works Once), because if the enemy can counter it, they most likely will When a new Finishing Move is introduced in a story, it's often treated as a case of Forbidden Chekhov's Gun — if the move isn't carried out perfectly</, it could backfire and kill our hero(es), or even cause The End of the World as We Know It . Inevitably, the move turns out to be the only thing that can save them this week, and so it works perfectly , and it's treated as being reliable from then on Limit Breaks in video games are usually intended as Finishing Moves, but often have different uses. Finishing Moves are also common as a natural part of gameplay in games, as opposed to being intended to be used at the end of the fight and it's just cool. A Finishing Move which makes it easier to kill other enemies in a fight after killing one enemy with it is a Chain Lethality Enabler A Coup de Grâce may be used as one, as might Finishing Stomp and Kick Them While They Are Down . See also Coup de Grâce Cutscene . If the effect tends to be delayed then it is You Are Already Dead . If the move is countered, No Selled or otherwise fails to finish off an enemy, especially if it's to show off how badass the newest villain is, then you've got a case of The Worf Barrage

It's common enough for a love triangle to be between two guys over one girl, instead of the other way around. Whether hostile to each other , indifferent, or strangers, different groups must fight on the same side. All the way up to an Enemy Mine situation. Afterwards, they are no longer hostile and perhaps even actual friends. If they continue as enemies, they are Friendly Enemy . Bonus points if: The Power of Trust often comes into play, since they often must trust the other not to stab them In the Back . Borderline cases when Redemption Equals Death , since the friendship could have broken up after the fighting ended. Still, expect the survivor to refuse to let the other die alone , and often a Meaningful Funeral or To Absent Friends follows, especially if it involved a long period of time and hiatuses in the actual fighting — a campaign or a war rather than a battle. Other hazardous or even mere strenuous activities that require mutual assistance, such as The Chase , can also develop a kind of this; the closer it comes to as dangerous as war, like an attempt to escape through a jungle full of man-eating beasts and other dangers, the more it will resemble it. Overlap with Band of Brothers is considerable, but in this trope, they need never to work together again, and that one, they do not have</ to be friendly, just reliable. When these fire-forged friends belong to opposite genders, expect them to take it to the next level . Truth in Television to a very large extent, as many people who served in any military force can testify, even more so if they are war veterans. A water cannon is a device that shoots a high-velocity stream of water, which is frequently used for riot control. This weapon evolved from the use by authorities of fire hoses to quell riots in the late 19th and early 20th century Sometimes in fiction, a character (almost always The Hero) will still use a fire hose (or other high-pressure water source) as an Improvised Weapon . In most

cases (especially if the wielder is The Hero) the target will be an individual or small group rather than a mob A Sister Trope to Water Hose Rodeo and to Deus Ax Machina , as many public and industrial buildings contain fire hoses (probably more than have fire axes) Compare Making a Splash , where characters can do this without</ a hose Very much Truth in Television as any firefighter can testify to the concussive force of a stream from a high-pressure hose, and the difficulty of getting back to your feet if you are being bombarded by it

In fictionland, Water Is Blue , Wind is (sometimes) Green , Lightning is Yellow or Blue , Earth is Yellow or Green , and This trope is fairly omnipresent in cultural thought. Red is the colour of fire and even the Sun in most eastern Asian cultures, and has had associations with fire in the western world for several millennia. When elements are colour coded , who gets Red? Fire. What colour do fire-powered characters wear? Red In Real Life , actual fire is rarely red at all. Most normal flames are either orange or gold with a white center; to get actual red fire, you have to use specific substances. This is why the fire scene when Sam defeats the Samurai in Brazil </ was quite hard to make, as pure red fire is really hard to generate without filtering. The reason why fire is associated with red may be due to the natural tendency to see red as a warm colour (when it is actually the lowest energy region of the visible spectrum; accordingly, blue fire is much hotter), as well as the fact that embers tend to be red. Another possible explanation is the fact that orange's identity as an individual colour is very recent, and thus older works might use "red" as a placeholder As a consequence of this, some works subvert this trope by associating fire with other colours, namely orange or gold. This subversion is Older Than Dirt ; ancient Indian traditions used the colour yellow for the Manipura, the fire chakra, while red was reserved for the Muladhara, the earth chakra This is also a likely reason why Lava is Boiling Kool-Aid A Sub-Trope of Color-Coded Elements . A Sister Trope to Red Is Heroic . Contrast Blue Means Cold . See also Technicolor Fire

Since man has known what sort of sphere we live on, we have looked at the stars and wondered: are we alone? In this vast, empty Universe, are there any other intelligences gazing up at our star from under an alien moon? A common theme in Speculative Fiction , science fiction writers have loved to speculate for decades what that pivotal moment will be like: the day we first make contact with an extra-terrestrial intelligence. Writers have invented everything from truly Starfish Aliens to Rubber-Forehead Aliens and every scenario from aggressive aliens or humans to peaceful coexistence, and everything in-between The name for the trope and the term itself comes from the 1945 Murray

Leinster novelette First Contact </ . This is not the same as first contact, lowercase, which describes any first contact between two cultures. Expect someone to make a statement or speech about what a pivotal moment this is for the human race. You may find religious fanatics who claim the aliens are devils, angels, or even gods . Unless the aliens are Sufficiently Advanced or it is Handwaved , there may be communication difficulties and misunderstandings , sometimes leading to outright war . Scientists will want to study the aliens, ofttimes without the aliens' consent . The aliens will usually be more technologically advanced, although not always more sociologically advanced. A specific group of specialists may be formed to create a First Contact Team in order to plan for every contingency. If taking place in America, it may turn out that First Contact actually happened decades ago in Roswell, New Mexico , and that the government has been keeping it under wraps ever since. When the aliens send an embassy right to the capital, there may be overlap with a Washington D.C. Invasion if the negotiations disappoint. Speculation about First Contact scenarios has led many scientists and philosophers to consider that the human race may not be ready for such contact — they often argue that the multitude of armed conflicts and the pollution of our own world as reasons that an extra-terrestrial lifeform may pass Earth by, which Hollywood will pick up on when they feel their movie needs a message. Compare Alien Among Us . Contrast with Absent Aliens . See also First Contact Math , The Xenophile (who will actively look foward to this), Boldly Coming (a.k.a. Naturally, this is the step between The Masquerade and The Unmasqued World .

First Contact situations with Starfish Aliens have an inherent problem—since the aliens are so incomprehensible, how will you even realize that they're intelligent? For that matter, how can you convince them that you are? The generally accepted universal signal of intelligence in this situation is the ability to produce a sequence of prime numbers: numbers that are only divisible by the number one and themselves. Why? Because it doesn't matter what number base you are using or what you call the numbers, 7 rocks cannot be divided up into any whole number of equal groups of rocks without breaking them. the aliens have math , they'll get this — resource allocation is one of the first tricks any group has to figure out. The idea is that they're too irregular to arise from any natural process), but mathematically simple enough that it's assumed any intelligent being can recognize them as non-random. More generally, anything obviously recognizable as simple math (such as digits of pi, or a proof of the Pythagorean theorem) can serve the same function. Of course, the digits of pi will change if the aliens don't have a base-10 system (odds are that they don't), while the prime numbers will not change if you represent them properly. Often this can look like an instance of Only Smart People May Pass (just like plenty of humans do not know about prime numbers or basic math, plenty of otherwise intelligent aliens won't know what to do with the puzzle). However, while Only Smart People May Pass happens in the context of a pre-created puzzle or situation, the entire point of First Contact Math is that it provides the best hope we might have of communicating without having any context at all. See also First Contact Team , for when First Contact Math might fail and you need to

Whenever there's some kind of alien artifact found, or an extraterrestrial ship spotted in space, the government will always have some kind of official plan for dealing with First Contact . This trope is for when there is a "team" assembled, usually consisting of scientists, mathematicians, cunning linguists , and often a few oddball specialities The reasoning is that, because nobody knows how the heck to talk with the aliens or how to interact with them, you'll want a team with a wealth of knowledge to draw on in order to ease the First Contact . For example, if you can't understand the Aliens language, you might have your mathematician demonstrate a little First Contact Math . Or, if the aliens behavior is bizarre and incomprehensible, you might have an anthropologist on the team to help discern their meaning

In Sphere </ by Michael Crichton, when an alien ship is discovered at the bottom of the ocean, the government sends a team composed of a psychologist, a mathematician, a biologist, and an astrophysicist. Later becomes a subversion : the psychologist who wrote the "Emergency First Contact Plan" admits that, after having been approached by the government to produce the plan, he thought it was so ridiculous that he lazily based all his recommendations on popular science fiction In Communion of Dreams</ by James Downey, when an artifact is discovered on Titan (Saturn's largest moon), the government sends a team similar to the Sphere</ example, but also includes an anthropologist, an expert on Game Theory, and an artist Any Star Trek </ episode that revolved around first contact, from any season, often had this with the away team, although they avert it almost as much Any diplomatic mission meant to travel beyond the sphere of a given ruler's sphere; to chase an interesting rumor, for instance, or to begin relations with a previously isolated people. First Girl After All is a narrative technique of concealing a character's first Love Interest for as long as possible until the moment when it's most dramatically shocking to the audience, usually at or near the climax of the plot. This is accomplished either by never making it clear who the First Girl is, or by misleading the audience into believing that another character is the First Girl After much of the story, we approach The Reveal , the Final Battle , the Grand Finale , or some other tense moment, and it seems like the "Second Girl" in the Love Triangle (or Last Girl in the Love Dodecahedron) is going to win. But something suddenly "clicks", and the story reveals that they first met when they were children! But wait! This could only have possibly happened BEFORE he met the First Girl. This can only mean that the girl everyone thought was the Second Girl is the First Girl After All Most likely a subversion of Last Girl Wins and Double Subversion of First Girl Wins , used to embrace it without giving the romantic resolution away to the audience. In a romance plot, this can be considered a Plot Twist if this happens before a romantic resolution is reached. In a long runner, this can easily be a Retcon that overrides a First Girl Wins by declaring another girl was even firster</ The trope can also be used as a Continuity Nod if this is revealed after they get together, such as bumping shoulders in a hallway during a flashback that was on screen for a completely different reason, an encounter which can have the byproduct of being this trope Related tropes include Love Triangle , Love Dodecahedron , First Girl Wins , Forgotten Childhood Friend , Forgotten First Meeting , Connected All Along , Childhood Friend Romance , any of which may be involved, as well as either a Flashback or a Prequel As this is generally only revealed toward the very end, the example list is generally filled with spoilers and potentially ending spoilers</ . In romantic works, the first girl introduced — either overall or as a potential Love Interest — has a very good chance of ending up with the protagonist (especially if the protagonist is male) There are all sorts of explanations as to why this is. Things ending up the same place they started is a very old narrative technique. The First Girl "winning" has a Because Destiny Says So kind of appeal — she metaphorically "called dibs" on The Protagonist and tied a string to his heart . This might actually strike a chord with readers because of its Truth in Television overtones; psychological studies suggest that the first people someone meets in a new or unfamiliar social situation have a greater chance at becoming their close friends later on From a Doylist point of view, the Law of Conservation of Detail suggests introducing the Love Interest early. An early introduction allows you to get the audience interested in her and rooting for her, gives you space for Character Development , and give her relationship with her (eventual) partner the most time to develop organically. And conversely, the later in the story the Love Interest gets introduced, the harder it'll be to convince the audience to accept them in the role. Characters introduced earlier (be they a Romantic False Lead or even a character that was never intended as a romantic contender at all) will often pick up fan followings who root for them to "win", and it's not easy to convince those fans to abandon their initial preference in favor

of the Official Couple And with all that said, it's such a common device that in all likelihood, it sometimes gets played for its own sake</. It telegraphs , "Lookie here, serious contender for Love Interest ." From this perspective, it's not so much that the First Girl wins because she comes first; rather, she comes first because she's going to win As weird as it may sound, sometimes it isn't that obvious which girl is the First. Is it the first girl the protagonist meets according to In-Universe chronology, even if we first see her halfway through the show's run? The first one to show romantic feelings? The first new</ girl the protagonist meets? If we have different adaptations, by which of them are we going? If you're suspecting some girl is supposed to be the First Girl, a good idea would be to take a look at how the writer has played her up. Is she a major character? Is her "first" interaction led up to, emphasized, treated as a big deal? All other things being equal, is she a strong contender for being the protagonist's Love Interest ? These things may be the difference between the First Girl and a girl who happened to be first. Most writers will take care to put some effort into building a would-be triumphant First Girl as a romantic option in her own right, so as to avoid Strangled by the Red String The First Girl will rarely be the first one to confess her feelings , admit them, or sometimes even develop them . In fact, she's much likelier to be the one who does it last — maybe near the end of the series when she and the main character become the Official Couple . The logic behind this is that she's the one whom the main character loves (even if he doesn't want to admit it or doesn't realize it himself); if she showed him romantic affection, then he would immediately choose her. That's tantamount to throwing the Romance Arc (or in some genres , the whole plot) out the window, and we can't have that Of course, a writer can't outright admit that's what they're doing, which is why you can expect an in-universe justification for how these two people met so early and took so long to figure out they belong together. Their first impression of each other may be immense dislike or possibly indifference. Complications will abound, Romantic False Leads will show up, misunderstandings will arise between them, pride and denial will keep them apart. In extreme cases, it may turn out her apparent lack of interest in him was a major turn-on . Paradoxically enough, nothing screams "major romance incoming" like this sort of thing. A more subtle tactic is to get the First Girl "off the radar" somehow — Demoted to Extra , Put on a Bus and similar tactics — but this adds the additional challenge of bringing her out</ of exile in a believable way Inevitably, most shippers will already have their own idea of who the "right" girl is, so if she might conceivably have any sort of claim to being the First Girl they will gleefully reach out to put this feather in their Ship's cap. Given the above ambiguity of what exactly it means for a girl to be the "First", it's not a surprise that the question of which girl was first tends to become yet another front of Ship-to-Ship Combat Be warned before you proceed. "Winning", in this sense, tends to be very iffic See also Victorious Childhood Friend and First Girl After All . Contrast Second Love and Last Girl Wins of adding Beta Couple examples. Their lack of screen-time means the "introduce the relationship early to get space for development" consideration becomes crucial, and as a result meeting "first" is all but a staple of the Beta Couple . They will sometimes have obvious C-List Fodder Romantic False Leads in orbit that we're not supposed to take seriously, but that's pretty much it. For those, list aversions , or instances where more than one

possible relationship involving a cast regular gets seriously</
played up but the "first" one ends up winning anyway

There's a general trend that when people consume works, especially serial works, they read/watch/listen in publication order. Which means "everyone" saw the first installment, most people saw the second, many people saw the third... the earlier it is in the series, the more familiar it is amongst the general populace. The culmination of this is that the very first installment (and, going even further, the first couple scenes</ , even) will be the one that is the most familiar by a wide margin. However, this is not true with all works Creators anticipate that audiences may start a work during the middle of airing, so add tropes such as Soft Reboot to facilitate audience entry to that installment of the work. This provides a contrast where some installments of a series are more well-known or popular than others. Installments can range in size, proportional to the series. A franchise with three Sequel or Spinoff series can consider each one an installment, and each series can consider the first episode the first installment of that series. Examples should clearly define the scope of the series and why a given installment is first. William Hartnell , of Doctor Who </, represents the first installment of the entire multimedia franchise, whereas Christopher Eccleston can only be considered the first installment of the "nu-who" revival . Still, to "win", one of the Doctors would have to be better known than all</ of the others. By now it's recognized as never happening, and Whovians will often introduce themselves by "their" Doctor, which might be the second, fourth, twelfth, or whatever installment. Other works tend not to have the same struggles, and this page contains many examples of works that have embedded their first installments into the public consciousness far beyond what their successive installments have achieved. Concepts that help form this Audience Reaction are Nostalgia Filter , Sequelitis , and Small Reference Pools . Concepts that work against this reaction are Contested Sequel (when the first installment has a Broken Base), Early Installment Weirdness (when the first installment feels strange to fans of the second) and Sophomore Slump (where the third installment of a series turns out to be better than the second, and possibly even the first). Note: inversions may be listed in Sequel Displacement (or Adaptation Displacement), where one of the successive installments (including adaptations) has become vastly more popular than the original. Reactions similar to the inversion are Surprisingly Improved Sequel and Even Better Sequel , where the successive installment is considered better than the earlier installment, which often makes it more popular as well. </

Not only are male-to-female Gender Benders a lot more common than their female-to-male counterparts, they are also a lot more permanent</. One might think that the same Applied Phlebotinum that can change a male into a female should just as easily be able to do the opposite, but that's rarely the case in fiction— most characters who try to reverse a male-to-female Gender Bender will learn that Failure Is the Only Option There are many reasons for this. Even if the phlebotinum is</ ordinarily reversible there will be a Phlebotinum Breakdown or something else</ will prevent the character from simply switching the gender-bender into reverse. Perhaps he's</ become the only person who can protect the Earth with her</ gender-based superpowers . Perhaps she's</ fallen in

love with his</ best friend after Jumping the Gender Barrier (the mind is a plaything of the hormones , after all). Maybe a Kid from the Future triggered her inner Mama Bear and she doesn't want to do anything that would prevent that child from being born (the possibility that he</ could have been the kid's father</ all along is almost never considered). Or maybe the Evilutionary Biologist responsible for overprinting half of his DNA simply forgot to make a backup copy of that pesky Y chromosome Regardless of its in-universe rationale, the First Law is usually enforced because Status Quo Is God : When the original sex change is a central tenet of the premise, then it will never</ be (permanently) reversed because the series simply wouldn't have happened without it . If the series has a finite length, such an event might be saved for its Grand Finale ... or not . On the other hand, if the sex change is not</ a central element of the series, it's probably just the plot of one-off episode and will be reversed quickly (perhaps to deliver a An Aesop about walking a mile in another "man's" shoes). If the work is a webcomic called The Amazing Girl-Boy's Adventures in Femininity</, expect the First Law to be enforced. If one episode of a Kid Com called Homeroom Genie</ involves the Jackass Genie turning Zach into Zoe to teach him a lesson? Not so much Many applications of the first Law carry Unfortunate Implications by trading on the assumption that becoming a woman carries an inherent demotion, punishment, or loss of status. Even the most feminist Take That! against men may unconsciously support this Double Standard if it assumes that a Humiliation Conga is inevitable if you put a Handsome Lech in skirts. (In these cases expect the author to avert No Periods, Period in unfortunately graphic detail.) In contrast, female-to-male gender benders are not only less common, but are typically resolved quickly and easily, ultimately reinforcing the woman's original femininity because Women Are Wiser . And since Most Writers Are Male and Beauty Is Never Tarnished the very forces aiding the restoration of her gender will work against him restoring his because just that much more pulchritude to go around if she gets restored and he doesn't. And if the gender-bent man refuses to act in gender-appropriate ways, then who cares? Tomboys have always been more popular than sissies Before you ask, there is indeed a Second Law of Gender-Bending , and even a Third Law of Gender-Bending . They may or may not overlap with the First Law. See Man, I Feel Like a Woman for an example of why some (ex-)men may not want to change back This trope was originally named "Mandy's Law of Anime Gender Bending", after the person who first promulgated it and the source of her inspiration

For any fictional system, the sum of the mass in the system and the energy in the system is a constant</ . If a character or setting is added, then the plot will slow down so that the character or setting can be properly introduced, other characters or settings will fall Out of Focus , if not outright Put on a Bus . How long it takes to bring the plot up to speed, remember neglected characters, or otherwise regain a status quo depends on how much detail is added at a time; widely-spaced revelations can be worked in more quickly than large infodumps . Adding characters can also lead to Flanderization of existing characters. This is self-evident for SitComs , where all changes are reversed by the Reset Button . But it applies to systems without the Reset Button , too. If a character or setting is removed, then the plot will move faster or grow more complex to accommodate

the development, or the remaining characters and settings will get more focus , or other characters will replace the ones that were removed to fill their niches. Adding energy by removing characters increases the possibilities for those who remain. Usually, some of those possibilities will crystallize quickly. If a work gets Cerebus Syndrome , the work grows more massive, and energy must be removed. If the original work didn't have that much energy to start with, the transition to drama is likely to fail. If a character is Flanderized or a work is converted to The Theme Park Version , the work becomes less massive, and more energy will be released into the system. This is why Flanderization and theme park versions are so widespread. Strictly enforcing continuity adds mass as the amount of continuity increases. RetCons remove mass and release energy. This is why DC Comics is fond of Cosmic Ret Cons . Soap Operas live on this trope; the more subplots and characters involved in them, the slower any of them advance. This law is the force behind these tropes: Bleach </ is a textbook case of the results of suddenly introducing Loads and Loads of Characters since the start of the Soul Society arc: the plot slowed down as tons of secondary characters were briefly introduced, and in the Fake Karakura Town arc the plots slows down even more</ as many of these characters are given multi-chapter fights.

This law explains the rotating roster on most Super Teams , as well as the immediate replacement of Robins and Batgirls .

The Divine Comedy </: The more sub-divisions there are in a circle of Hell or sphere of Heaven, the longer it takes to go through. This is why half of Inferno</ is spent in the Eighth Circle with its ten sub-divisions and why the Eighth Sphere of Heaven takes a similar amount of time with its line-up of those who represent the theological virtues In Serenity

Buffy the Vampire Slayer </: Dawn is introduced, an episode or two are spent explaining her relationship with the rest of the group. Also when Cordelia left the show, Anya was brought back to fill the "Xander's Love Interest / Deadpan Snarker " role.

Acknowledged in Homestuck </ and avoided. Many characters are introduced slowly until Act 5, which introduced an avalanche of characters at once, which rendered many of the original characters Out of Focus . However, many characters, new and old, were Killed Off for Real during Act 5, and according to Word of God this was preplanned. However, Act 6 avoids this, despite also adding many new characters and still manages to bring characters previously Out of Focus back to prominence.

"If the creator wants to bring back a dead character, then by god that character</ come back."</ It doesn't matter how Deader Than Dead or Killed Off for Real that character is, they'll find a way to return. Much handwaving may be required to explain it (if they don't leave it unexplained), but anything is possible with a bit of Foreshadowing thrown in. Also known as "comic book death" because comic books are especially known for taking place in long-spanning continuities where Death Is Cheap , important characters almost never come back wrong , Applied Phlebotinum is everywhere and iconic villains always come back from whatever fate that no-one could have survived . In addition, the turnover of writers means that even if one writer says, "No really, they're dead this time," with no

intention of bringing them back, odds are some future writer will disagree and bring them back a few years down the road . The First Law of Resurrection almost always trumps the Sorting Algorithm of Deadness , with only a few exceptions (like Death by Origin Story). May lead to Opening a Can of Clones . See also Reports of My Death Were Greatly Exaggerated and Disney Death . Despite the name, there is no "Second Law of Resurrection", let alone a "Third Law of Resurrection".

In any work that has both drama and comedy, the drama rises proportionally with the level of tension in the story. The comedy does the reverse.</ A tragicomedy (also known as a dramedy) is a mix of lighter and darker material that uses humor to lighten the tension and drama as a way to show the audience that something serious is going on. This is a difficult balancing act to carry out, and only a few shows have ever done it successfully. In the worst cases, however, over the course of a series of books, films, television episodes, or other media, the subject might start out mainly comedy, switch to dramedy at about the halfway point, then continue to become darker and less comedic until beloved characters start getting wiped out with frightening regularity . Fans are then more justified in complaining that the series Jumped the Shark with a Genre Shift . To prevent this, a show might intentionally keep all the high-tension drama for climaxes and action scenes, while saving all the comedy for the filler moments when nothing too important is actually going on. Other times, outright comedy will be added to an otherwise work of straight tragedy. If it does this by pushing comedic characters Out of Focus or having them Put on a Bus , that's Shoo Out the Clowns . If the work frequently shifts between tragedy and comedy without warning, that's Mood Whiplash . If the actual plot</ has jumped the tracks and gone in a completely different direction, it's Halfway Plot Switch — the trope on this page only implies a tone change. Titles that have undergone Cerebus Syndrome fall under this trope, Cerebus Rollercoaster even more so.

Ah… first love. The love that is remembered the most fondly by the participant , as this is commonly what people experience when they first have a first crush, but it is also the love before the Second Love , if that should ever happen, and for a guy, he usually holds her memory very close to him if he is a widower whereas for young girls, the memory of the First Love they ever had is a special memory to them, especially if he later becomes the boyfriend they've longed for On the other side, if the relationship with the First Love doesn't turn out the way they hoped, the girl or boy might end up having a revelation that the Second Love is in fact better for them even though memories of the First Love linger There is also the story arc that comes along with the First Love when it turns out well for both involved—that "special, sweet, innocent first love" that often plays a major part in Coming-of-Age Stories like Bridge to Terabithia , </ for instance The phrase is somewhat common in Romantic Comedies , where the heroine is likely to say with a sigh, "Oh, he was my First Love!" or something along those lines. In action films, the concept of the First Love tends to pop up as The Lost Lenore for any action hero, male or female Compare The First Cut Is the Deepest , where the first love is hard to get over and Second Love , where the lover who has been in mourning for his First Love finds love again with

his Second Love . Also compare Wrong Guy First , where the First Love turns out to be wrong for the lover, and First Girl Wins , where the girl the boy first meets in the story ends up becoming his first and forever love, although sometimes this is turned on its head and she is actually his Second Love , since this trope is mainly about how a boy meets a girl (or vice versa) within their series, but meeting someone first doesn't necessarily determine true love

The sudden switch in nickname or honorific when referring to a character, usually from their family name to their given name, is frequently used to demonstrate a significant change in the relationship between two characters, the desire for one by one party, that they have evaded listeners who require more formality, or that they are Not Themselves . Never using any</ formal indicators and just calling a character by their exact name is about as common to show the same thing Another common trope is a character saying the other's actual name rather than some rude variant of "you" or of their name to show a relationship getting closer. The other situation is a character who was previously irritated to be called by a "cutesy" name finally accepting the moniker, usually from the sort of overly cheerful character who does that with everyone's name Propriety may demand that it be used only in private. Referring to a character by a first name to a third-party can reveal the nature of the relationship. This can range from a total accident to an intentional flaunting Juniors may stubbornly insist on titles and family names when they think the senior is using his authority to feign friendship For the creepy use of this by an enemy, see Terms of Endangerment Keep in mind that in Japanese the family name comes first so in anime and manga this is more of a "last name basis" . That Other Wiki almost always reverses this order for westerners, as do some translations (and many Japanese themselves when they write names in alphabet), complicating things considerably. Bonus points are awarded if you notice in the audio that one name is used but in the subtitle a different name is used. Note that this is much less important in languages other than Japanese, because most languages just automatically use First Name Basis to denote equality and/or friendship, more or less. Except when they don't A variant of this is when a character on first name basis is known and called exclusively by the diminutive version of that first name. Therefore, a character, named William, regardless of the situation, is "Will", "Bill" or "Billy". The character uses his full first name only when he is required to (official paperwork and I.D., for example). This can often occur with individuals in positions where formality is more the convention, such as Jimmy Carter, Bill Clinton, Joe Biden, and Prince Harry for example. This is often a deliberate, individual preference in the interest of a promoting a more unassuming, approachable, and less high-falutin' persona This trope is the polar opposite of They Call Me MISTER Tibbs! . Compare Last-Name Basis , when the characters never made the switch, Full-Name Basis if they never even switch to last name, and Hey, You! . May get interesting when the character is Pals with Jesus Not to be confused with Only One Name , such as Prince, or Cher

The First-Person Shooter is a subgenre of shooters, and a really popular form of them. Its basic style of play is exactly what the name says: the perspective is through the eyes of the player character, and the action revolves around shooting within a

three-dimensional environment. Contrary to popular belief , it's not always</ about shooting the first person you see. This is a game genre that was first widely popularized by id Software , via Trope Maker Wolfenstein 3-D </ (1992) and especially Trope Codifier Doom </ (1993). Indeed, before the genre's name finally crystallized, many following games were referred to as "Doom Clones". It actually had two potential sets of progenitors: Game designers went with the latter for a while, but as technology advanced, the genre has begun to shift towards having more interactive surroundings, setpieces, friendly NPCs , vehicle driving sections , physics-based puzzles , cover mechanics and RPG Elements with games like System Shock </, F.E.A.R. </ or Half-Life </ . See also: Standard FPS Guns and Fackler Scale of FPS Realism . If a game never breaks from the first-person perspective of the player character, that's Unbroken First-Person Perspective . Some Third Person Shooters have similar gameplay. Contrast Fixed Camera (in terms of perspective).

Want to be able to breathe in outer space or underwater? Easy — just place a fishbowl or a similar object on your head, and you're good to go Commonly seen in older works of fiction featuring astronauts and aquanauts so characters' faces could be clearly seen. NASA astronauts wore throughout the Apollo program, although this was eventually abandoned in favor of sturdier designs with bubble face plates Not to be confused with Mobile Fishbowl . Compare Artificial Gill . For characters who don't even need a fishbowl, see Batman Can Breathe in Space and Super Not-Drowning Skills . If somebody tries a space walk wearing nothing but this it qualifies as a Space Mask

Out on a fishing expedition, and the fish aren't biting. Suddenly, there's a snag on the line. Someone's taken the bait; hook, line, and sinker. A quick flick of the rod and a frantic reeling in reveals your prize to be... an old boot . Dammit. Several false alarms and several boots later, you start to wonder. Why are there so many boots ? Fish don't wear boots, hell, they don't even have feet. Yet there seem to be more boots in the water than there are fish. And it's not just boots, either. Spare tires, tin cans, other useless junk... why does it seem like you're fishing in Lake Erie? Well, you're just having a bad run of luck. The bane of fishermen in old cartoons and fishing minigames alike, Fishing for Sole is when you seem to pull just about everything out of the water... except for fish. Of course, there is also magnet fishing, where a person has a strong magnet on the end of that fishing line and is trying to get metal objects under the water on purpose. Compare I Got a Rock and My New Gift Is Lame for similar lucklessness in receiving gifts. Contrast Rod And Reel Repurposed ; the character tries to use their fishing rod for something other than fishing.

A Fish out of Water situation that results from characters being placed in an unfamiliar time period. This may be caused by: In addition, the story will most likely follow one of these scenarios: Someone from The Present Day ends up in The Future : In this case, the "fish" will be awed by an incredibly wonderful future, be horrified by a dystopian future, enjoy the benefits of a mostly positive future or be surprised by a future that's strange in an unexpected way. Whichever version it is, the future depicted will

inevitably end up being completely inaccurate when the year given actually rolls around . If the story is a comedy, the time-traveller is likely to discover that Ridiculous Future Inflation has occurred Then there will be the pop culture references that no one understands (Elvis? Who's that?) . There will also probably be humorous references to how the celebrities of The Present Day have ended up by then. An amusingly and horrifyingly dated one of these appeared in Back to the Future Part II </ , which had a newspaper in 2015 make reference to "Queen Diana." (On the amusing side, Elizabeth II was still Queen in 2015... and on the horrifying side, Princess Diana died in 1997, eight years after the film came out.) If the story is not a comedy (or is a Black Comedy) you get Cold Sleep, Cold Future . Someone from The Present Day ends up in The Past : This past is usually sometime before the "fish" was born, ranging from about twenty years ago to The Middle Ages . Not that their form of English would be the least bit intelligible to modern-day time-travellers, but hey . The "fish" will probably make little effort to fit in, awing the locals with A Little Something We Call "Rock and Roll" , telling them that This Is My Boomstick and possibly becoming a Blithe Spirit . Apparently it's the sworn duty of all time-travelers to show the people of the past how to be hip in The Present Day. If they get anywhere near a military installation, they'll probably be mistaken for a spy . The "fish" may also describe the future in an ironic way or tell people about things which would have seemed impossible or ridiculous in that era : The savvy time traveller (or the one who thinks they are) in the past might also decide to be the one who invents velcro only to find that when he return to the future, the fact that they now aren't wealthy like they thought they would be is the least of their problems . If a Trapped in TV Land situation fits this trope, it will fall into this scenario. Someone from The Future ends up in The Present Day : In this case, the "fish" will be confused by the simplest things, which are, of course, completely obvious to the audience. They will also likely refer to the newest and most advanced technologies as "quaint". Fortunately, they will have brought back lots of Applied Phlebotinum , just in case there was any doubt that they really were from The Future. They may have a flawed view of The Present Day reality influenced by idealizing revisionism of the historians of The Future , sometimes disenchanted that they lied. The traveler, unless downright awesome at all times</, will almost inevitably be dangerously Genre Blind and equally likely to nearly get killed almost as much as the next type. They will also be horrified and disgusted by some of the mundane tropes and conventions until they are carefully explained. "Hot dog? You mean I just ate a..." Someone from The Past ends up in The Present Day : The humor will result from the "fish" attempting to relate to The Present Day with only the knowledge of a previous time. Naturally, they will make mistakes and/or be awed by things which the audience has come to take for granted. The Values Dissonance between the two eras may come up. This is now its own subtrope — The Future Is Shocking . If they're from any time after about the midpoint of the Industrial Revolution (when people first began to take for granted that the future will be different from the present), the " surprised by a future that's strange in an unexpected way " trope will probably apply. If they're from far enough back, their first encounter with a motor vehicle will</ involve the words "metal demon", or alternately "horseless carriage". They will also be completely unfamiliar with the word "computer" in spite of this being a common retooled word, which once meant someone who does calculations or 'computes' for a living. Not knowing the

word "accountant" would be just as unusual. If the character is from one of the more romanticized time periods, such as the Middle Ages, Antiquity or any age dominated by warriors, princes, kings and Old-School Chivalry , they will regard the people of the present as soft, weak, and uncultured (especially the men) and will often upstage and shame the modern men, winning the present day women over with gallant or gentlemanly behavior . In more recent works, this has however, become more subverted due to the influence of feminism and the historical fact that these time periods look better in fiction than they did in reality . A character who isn't literally</ from the past, but somehow deludes himself that he's still living there anyway, is a Disco Dan . A character who neither literally from the past nor holds no delusions that he's living there, but is just more comfortable with the attitudes, mindsets and styles of the past than the present is Born in the Wrong Century Someone from The Future ends up in The Past : Fairly common Star Trek </ plot (and cause of some of the best episodes and a couple of the worst). Essentially combines The Present Day to Past and The Future to The Present Day tropes. Thank you for being unusual, Data. Thank goodness he had amnesia. Someone from The Past ends up in The Future : Also a common Star Trek </ plot (although not quite as common, and usually done in a more unusual way than straight out time travel. Usually.) Here's looking at you, Sam Clemens. Someone from The Future ends up in The Future : Can involve either going forward or backwards (but generally backwards). Does your mind hurt yet? Will be generally played for laughs (like somebody complaining that the technology that would be super-advanced to somebody from The Present Day is an antique) or for Continuity-based Fanservice (Trials and Tribble-ations</ , anyone?) : There's a LOT of Past. Can usually result in one Historical Figure or archtype meeting; befriending or fighting another. Ninjas, Pirates, Napoleon, Hitler, Genghis Khan; etc. Compare Technologically Blind Elders .

A character is placed in a situation completely unfamiliar to them. Humor and/or tension is created as the character adapts — or doesn't . Naturally, Fish Out of Water have a danger of becoming awkward the longer a show runs. Or conversely, if they become used to their new surroundings, the risk is that their original characterization will be less applicable (same if they return to their old familiar surroundings). Specific variants: If the character quickly adapts to the new conditions and finds it better than back home, it's Like a Duck Takes to Water . If however, they decide to change things to how they used to be back home they are a Blithe Spirit . See also Graceful in Their Element . Contrast Outside-Context Problem . Not to be confused with Terrestrial Sea Life , which is the literal version of this metaphor.

Fish People are a specific category of (usually) intelligent, underwater fantasy species. While they're humanoids (one head, two arms, two legs), they don't look human at all; their bodies, especially the faces, have a fish-like/reptilian appearance. This means that mermaids are not true Fish People, at least not the kind described here. Neither are more human-like sea dwellers such as Aquaman or Namor the Sub-Mariner . A Fish Person's Character Alignment and ability to survive on land vary depending on the character and the work While Fish People are most often a pre-existing race, sometimes they are former humans (or fish) who are the result of mutation . This origin seems especially prevalent in Western Animation Merfolk can have a similar style, but they

usually fail the critical "has legs" check — although the key word here is usually</, since Our Mermaids Are Different . Since many Fish People appear somewhat reptilian, Lizard Folk and Reptiles Are Abhorrent are also related tropes. Expect them to create breathtaking Underwater Cities . The more civilized variants may have Clothing Appendages formed from fins if they don't have actual clothes Like merfolk, they will frequently develop a romantic and/or sexual attraction to humans, though their more animalistic appearance tends put such attraction more in the Mars Needs Women category than Inter Species Romance , and will usually be played as more the monstrous lust of an Abhorrent Admirer than as true love. Exceptions do occur, however Fish people are a subspecies of Beast Man , Super-Trope to Shark Man , and cousins to both Frog Men and the above-mentioned Our Mermaids Are Different

Cheating in games is almost as old as games themselves, but if you get caught, you will be instantly kicked out of the competition This trope however, is when a character is cheating in an obvious and blatant manner and all the other players and the audience can clearly see that. He may do something seemingly impossible that could be only be done with special equipment or supernatural powers that aren't allowed, or something that the game itself makes impossible. The best example is the name of this trope, named after the very common gag in media of a character playing Poker and having a hand of five aces, when a card deck has only four , or something similar like having a hand of six cards, when in Poker you can only get five In extreme cases, all the competitors are doing something impossible or that they can't do all at once, such as a card game in which every player has four aces, meaning all of them are cheating This is pretty much a Paper-Thin Disguise version of cheating and it's almost always Played for Comedy . The more comedic version is when no one notices the obvious cheating and they maybe even think the character is just that good, or someone actually notices but does nothing about it. The less comedic version is when audience and other competitors notice it and complain, but the cheater still gets away, or doesn't. The Played for Drama version is when it's revealed or stated since the beginning that the whole game is rigged, and/or the cheater is such a powerful or dangerous person that nobody will risk standing up to him When adding examples involving supernatural powers, avoid cases where use of powers is allowed through Loophole Abuse or because all the characters regard "creative" use of superpowers as part of the fun

Virtually all US phone numbers on fictional programs are made up of the following: Area Code — 555 Or in works set before the Turn of the Millennium , 555</ — four random digits, as at that time, it was not necessary to dial the area code before making a local phone call. In the late '90s to early 2000s, the area code requirement was tacked on to avoid confusion, as long-distance calling technology improved , more and more people got long-distance plans bundled into their standard phone bills, and more and more people got cell phones, thus requiring more numbers in an area, which in many cases could only be accommodated by using multiple area codes in a city. "555" is an exchange number commonly thought to be reserved by the phone companies for use by TV and movies in order to prevent prank phone calls to real people. In fact, only 555-0100 through 555-0199 are now specifically reserved for fictional use,

and the other numbers have been released for actual assignment. The 555 exchange was originally useful for this purpose because under the North American Numbering Plan (NANP), which includes the United States, Canada, and several other nearby countries, it was reserved for various internal phone company service numbers, so calling one of the 555 numbers would not have reached an actual customer. In particular, in most areas in North America (AREA CODE)-555-1212 connects with directory assistance. Another fake number used back in the 1950s through the 1970s when most of Southern California was entirely one area code, 213, was to reserve the extension 1 plus the prefix in every prefix, so that the number 462-1462 or 733-1733 was never a working number. Eventually the 714 area code would be split off from 213 in 1953 and later 818 would split from 213 in the early 1980s, but Pacific Telephone continued the practice of reserving the prefix-1-prefix number in every exchange as a non-working number. A number of TV shows and made-for-tv movies took advantage of this fictional number feature. Still another fake number, used into the 1970s, was possible because under the original NANP, the second digit of a seven-digit local number was not allowed to be 0 or 1, whereas the second digit of an area code was limited to 0 or 1. This allowed fictional telephone numbers such as 606-0842 in the eponymous song by The B-52s . However, because of the need for additional prefixes and eventually additional area codes, this limitation was eliminated in certain large cities in the eighties and early nineties and throughout the NANP area in 1995. Some movies and TV shows have taken advantage of a technical requirement of NANP telephone numbers, that the first digit of the seven digit local number cannot be 0 or 1. So they'll give a number like 818-162-1353 or 213-079-1611. As it happens, if the area code is "800", "888", "877", "866", "855", "844", or "833" (the NANP area codes for toll-free dialing), "555" is a valid prefix. So 1-800-555-(four digits) could be a real phone number. Some works used to use 311 as a fictitious area code. Now, however, many communities in Canada and the US use 311 as a short telephone number for non-emergency county or municipal services, as a counterpart to 911 for emergency services. A variation of this is IP addresses; media will commonly use addresses such as 127.0.0.1 (which refers to the local computer) or impossible addresses (an address in the most commonly used protocol, IPv4, is essentially a 4-digit number in base-256, so any address with a "digit" 256 or greater is fake). Similarly, any hexadecimal character higher than F is fake (numbers in hex are represented with the characters 0-9 and A-F). And to top it off, there are certain IP addresses that are reserved for private networks and can never be assigned to internet-facing machines (see Real Life section for more info). Another variation is street addresses. A work may be set at an address that is (or was at the time of writing) outside of the range of possible address numbers for the given street. Still another is car license plates. If the licensing jurisdiction (e.g., a US state) is shown, the plate number may have a letter where a digit would be expected or vice versa,</ the plate number may be in a range not actually used in that jurisdiction, or a character may have a Vanity License Plate with more characters than that jurisdiction allows (e.g., eight in California, which allows only seven). The point is moot where the licensing jurisdiction is fictional or where its name is not visible. The latter is often the case in commercials for cars or car insurance. Manga and anime in general often use symbols like Xs, triangles, squares and circles in place of one or more digits of phone numbers. This can apply to license plates too. Works set during an era when exchanges were commonly specified as names (say, during

World War II) may use the exchange name "KLondike (or KLamath)" (followed, or not, by a 5 depending on the exact time period), which works out to the same thing. Works actually from</ those eras normally don't; the songs "Beechwood 4-5789" and "PEnnsylvania 6-5000" are examples. This trope does not apply, or at least should not apply , to telephone numbers beginning with 555 in non-NANP countries where there is nothing special about such numbers. It does apply to telephone numbers or area codes reserved for use in works of fiction in non-NANP countries that have done so. Compare to Jenny's Number , which is also commonly used as a phone number. See also Logging onto the Fourth Wall for the website equivalent. Whatever you do, don't confuse this with 666 , though bonus points for works where that's the area code for The Devil .

Since 555 is commonly used as the exchange for phone numbers in movies and television, the line could be interpreted to mean that if you're trying to fit in and be acceptable, he's trying to be edgy and unacceptable.

With the notable exception of America, of course. Compare Samurai , which usually tends to be the Japanese equivalent of this trope

This is the set of tropes that cluster around Knight Templar : the forces of light in hardcore mode, excessively or otherwise. This mentality is all the way over on the Idealistic side of the Sliding Scale of Idealism vs. Cynicism — but it has nothing</ in common with modern idealism of the Granola Girl and Cloud Cuckoo Lander variety The Trope Codifiers are the Chivalric Romances of the medieval Matters of Britain (King Arthur) and of France (Charlemagne) — especially the innumberable fantasy novels and verse epics of the 15th through 17th centuries which were based on, set in, or the older Carolingian myths. The Arthurian myths have a less militantly idealistic style than the Carolingian ones; the Arthurian work most completely of this style is Sir Gawain and the Green Knight </ This pattern is rarer outside of Europe (and before the Middle Ages) than within it. The closest analogue to European chivalry was bushido </, the code of the Japanese samurai </, but the Japanese code emphasized loyalty to one's lord, even to the point of doing evil , while the European one emphasized loyalty to one's conscience, even to the point of treachery Of course, that doesn't mean that non-European heroes can't act like this—and it doesn't mean that European heroes always do, either. The Roman-derived tradition of " My Country, Right or Wrong " was always present in Europe.. See also Hero Tropes , to an extent. A particular variety of Idealism Tropes . A civilization that embraces this is a variety of Martyrdom Culture

There's a reason the Knight in Shining Armor needs</ the shining armor—and the weapons. The world is filled with Wide Eyed Idealists who believe in truth and justice and devote their lives to fighting for it. And then the dark, cruel and brutal world keeps letting them down. For them, Being Good Sucks . But rather than giving up on their goals, they choose to fight not because they believe they will truly make a difference, but because it's the right thing to do. More often than not these characters are in settings that feature Black-and-Gray Morality . It's also common for Black-and-White Morality and even White-and-Grey Morality as well. They're usually survivors who have largely given up on believing in Honor Before Reason , but still strive to be Lawful Good or as close to it as reality allows them to be. They are willing to bend the rules to save them. In Lighter and Softer settings, these characters are Grumpy Bears and are often mocked by the other characters for being so sour all the time. The presence of cynicism usually makes the idealistic behavior even more noteworthy : it's easy to love everyone when Rousseau Was Right , but you really have to be a good guy to believe that Humans Are Bastards and care about them anyway. Such characters can also be The Fettered ; their cynical outlook

tells them they could probably get away with all kinds of things that they don't do because that would be wrong , and just because the world sucks doesn't mean you need to make it worse. Then again, this kind of character goes great with a world where you Earn Your Happy Ending after much strife. This is the inverse of the worldview of most Well Intentioned Extremists , especially those who believe that Utopia Justifies the Means . Extremists or Knight Templars may believe</ themselves to be this, but their actions are far too extreme. A Knight In Sour Armor believes in the rules and breaks them only when absolutely necessary, which is very rarely; not surprisingly, many have taken a Heroic Vow related to this behavior Often has a personal set of rules, trimmed down to those that really matter</ in order to minimize conflicts and distractions. Contributes to the Knight's gruff tendencies, since politeness tends to appear a lot further down the priority list than feeding orphans and so on. Generally, these characters fit one of two personality types. Members of the first type are former Wide Eyed Idealists who have come to accept that their world is on the low end of the Sliding Scale of Idealism vs. Cynicism , but who still find something beautiful in their former ideals that they want to hold on to. Those of the second type are born cynics, who would make natural Jerkass antiheroes , but who nevertheless have devoted themselves to a code of honor or fair play. In either case, these people tend to have gone through (often painful) Character Development in their past, meaning that they are normally older than the average hero. Either way, however, the effect is basically the same: you have a Knight in Shining Armor wearing Jade-Colored Glasses ; the difference between the first and second types is which comes first. These characters show up often in Film Noir , Dark Fantasy , and Low Fantasy . Law enforcement is a particularly attractive career, but the Knight in Sour Armor will usually hold back from becoming a Cowboy Cop . Very frequently, they end up as The Mentor , a Mentor in Sour Armor , a Grumpy Bear with Jade-Colored Glasses , The Last DJ , or a Cool Old Guy if they last long enough. As teammates, they are often the Sour Supporter . They also frequently end up as Hero Antagonists and extreme Woobies . This is often the final state of The Atoner post- Heel–Face Turn . Despite their cynicism, they behave like The Anti-Nihilist . Will often overlap with The Snark Knight . Compare Angst? What Angst? , for characters who take the troubles of a good alignment with far less complaint; Noble Demon , who will proudly declare themselves evil , but still finds themselves doing good once in a while; Sour Outside, Sad Inside , for characters whose sour attitude hides the fact they're sad; and Jerkass Woobie , who spits in the face of the alignment chart. Also see Iron Woobie if they continue the good fight in spite of their pain , and Stoic Woobie if they hide their pain through Stoicism . Converted Silly Rabbit, Idealism Is for Kids! or Good Is Old-Fashioned believers may well find themselves becoming this trope if the heroes can bring them around. If they don't like idealism, but don't like cynicism, either, then you also have a touch of Silly Rabbit, Cynicism Is for Losers!

In order to add more drama to a series which has been, up until that moment, lighthearted and comedic in nature, a villain (or antagonist of some sort) is introduced and is portrayed as a genuine threat, in contrast to the bumbling and comedic villains the heroes have faced before. The villain's arrival is sudden, and is usually either a totally new character, or a character that has undergone a particularly dramatic Face–Heel Turn

This villain's arrival is heralded by a sudden downturn in humor (although if the villain is Laughably Evil , expect it to turn into Black Comedy), showing the audience this one means business. In other words, a catalyst for a drastic change in mood toward the dark and dramatic. Some characters may take the story to darker territory without being villainous in the slightest, but this trope is reserved for evil creatures. Grimdark shows and stories that take place in a Crapsack World are much less susceptible to this kind of influence, but even they have exceptions if this villain shifts the story from Black Comedy to being more serious. This isn't only about the character themself, it is also about their relation to the story A Knight of Cerebus may be a blatant Hero Killer who poses an actual threat, or even an Invincible Villain . They also tend to be the trigger of The Worf Effect against the hero. They may be the Arch-Enemy as they might have a strong personal tie to the hero or heroes of the work. They are usually distinguished from the other villains as perhaps being worse , stronger , or more personally tied to the protagonists. Sometimes this type of character can be a Complete Monster if they have no redeeming traits and do terrible things by the standards of history in an initially more lighthearted series. Often this character's arrival is a Gut Punch Their opposite is the Fun Personified , who may not be able to change the tone as effectively, but still works to prevent things from getting too</ dark. See also Dead Serious and Not-So-Harmless Villain , when a villain starts as ridiculous but, because of some change from within, ends up becoming this. Compare Shoo Out the Clowns , when the darker tone coincides with decreased screentime for comedic characters Remember, Cerebus Syndrome is a prerequisite for this trope. An increase in danger as a conflict escalates is present in almost any story with a villain, and is not automatically notable. Can overlap with Vile Villain, Saccharine Show when the setting itself contrasts heavily with the character's grimness (and that trope may be what you want for a single work)

Sometimes, the Forces of Light and Goodness get a little bit too hardcore . In a deadly combination of Well-Intentioned Extremist , The Fundamentalist , Moral Guardians , and sometimes He Who Fights Monsters , they get blinded by themselves and their ideals , and this extreme becomes tyrannical sociopathy . It's not the Forces of Darkness' fault, but they are laughing their asses off and feel so satisfied knowing that they were right</ . Usually, the Knight Templar's primary step (or objective) to their perceived " utopia " is to get rid of that pesky " free will " thing that is the cause of crime and evil. Many Knights Templar are utterly merciless in dealing with those whom they consider evil, and are prone to consider all crimes to be equal . The lightest offenses, maybe even jaywalking are met with punishments such as full imprisonment, death, brainwashing, or eternal torture . If you're in a story like this, don't jaywalk, or even THINK about jaywalking. And may heaven help you if you happen to show any mercy or pity for a "wrongdoer." Sometimes even simply being an annoying jerk can earn someone a Knight Templar's wrath, whether they had a hidden heart or not. It's important to note that despite being villainous</ within the context of the story, Knights Templar fully believe that they are on the side of righteousness and draw strength from it and that their opponents are not. Trying to reason with one isn't much good either, because many Knight Templar

types believe that if you're not with them, you're against them . Invoking actual goodness and decency will have no effect, besides making Knights Templar hate you and demonize your cause as the work of the Devil . After all, they are certain that only their</ cause is noble, and anyone who stands in the way is at best a deluded fool who needs to be "cleansed", or at worst an evildoer who needs to die. And doing so is not even Dirty Business (except sometimes, for how much it makes them </ suffer, having to hand out all this justice). Indeed, it may take them a while to realize that a person with sense and good will really opposes them ; the righteousness of their cause — and their own selves — is self-evident to them. One of the few ways to actually change a Knight Templar's mind is to kick their ass down to the ground. This is because most are convinced that Might Makes Right , and that since they are good they only kill the evil, so if you beat them but don't kill them, you are good too They won't necessarily join you, but with a little luck their mild concussion will stop them fighting for long enough to listen to your side of the story, unless of course, they conclude they're still inherently</ superior and that you only beat them because you called upon the powers of darkness to cheat . The Knight Templar is often the ultimate incarnation of Light Is Not Good , and in series where Dark Is Not Evil , you can count on this guy being the villain who believes that the "dark" characters are evil and must be destroyed (though a villain with powers of darkness can still be this if they believe themselves to be heroic). If a Knight Templar is not </ the antagonist of the story , expect to see What the Hell, Hero? and/or "Not So Different" Remark come into play at least once. If not, then they are a Designated Hero . If they are still nominally good, expect them to be a Hero Antagonist . Note that not all Knights Templar are explicitly evil from the beginning. Many an Anti-Hero will start by Paying Evil Unto Evil , and when they're not busting ass, are perfectly decent people. They may even overlook small fallacies and be classed on the good guy roster. These guys are often concerned that they run the risk of falling into He Who Fights Monsters and become this trope. Many Knights Templar can be found in the ranks of the Corrupt Church , the Church Militant , or the Path of Inspiration : expect them to be screaming that they are Holier Than Thou and we should all " Burn The Heretic !" Even a Saintly Church can have one of these as a foil for the Good Shepherds . If the deity</ behind one of these churches is one of these, on the other hand, you've got problems — count on an Easy Road to Hell due to them being so impossibly strict that few (if any) of the mortals under them can live up to their standards of morality. A Knight Templar in a fantasy setting is usually a Principles Zealot , religious or otherwise. In a modern or Sci-Fi setting, the Knight Templar is just as likely to be a Totalitarian Utilitarian instead. In either case, they're likely to be a bigot who hardly qualifies as noble , but might be troubled by their own Black-and-White Insanity . Sometimes, the Knight Templar is an artificially intelligent computer that took its instructions to "protect humanity" a bit too far . Prone to the Breaking Speech and/or Motive Rant about how the heroes going up against them are evil and they themselves the good guys. Another thing to keep in mind is that while Knights Templar will insist that they're good guys, even the ones that are practically villains, they often aren't completely ignorant of the pain they cause; they simply consider it to be acceptable collateral damage, or regret the means they "must" use to achieve their ends. If the Knight Templar fails to see any</ wrong in their actions, then you're dealing with a variant known as the Tautological Templar , who is so convinced that they're doing

the right thing that they can't even fathom the idea that anything they do might be questionable or hurting others. It can get to the point where their rebuttal to anyone that tries to call them out will basically amount to "My actions are good because I know </ I am good and can't possibly be bad, and furthermore, you oppose me because you're bad!" Very prone to It's All About Me , thus, expect their pride on being the only righteous ones to bring them down. Many Templars are Lawful Neutral or Lawful Evil , but the most egomaniacal and self-centered ones are Neutral Evil (though they'll never admit it), and the Animal Wrongs Group version is Chaotic Evil . See also Knight Templar Parent , Knight Templar Big Brother , and Lawful Evil . Those who will really</ do anything for their beliefs count among The Unfettered . A mild, comedic version is the Lord Error-Prone . Blind devotion to All Crimes Are Equal without the religious zealotry falls under Lawful Stupid . Can even overlap with Pay Evil unto Evil and He Who Fights Monsters . Contrast with Card-Carrying Villain , a villain who is fully aware of their evil nature and proudly embraces it. A Knight Templar can become this if they have a Heel Realization and decide to keep being a villain anyway . Expect this kind of villain to view their actions as Necessarily Evil . Compare and contrast with the Knight in Sour Armor , who is what happens when a Lawful Good character chooses to err on the side of Good instead of erring towards Law; and Obliviously Evil , where the villain is so thoroughly convinced of their own righteousness that the idea that they're doing anything wrong doesn't even occur to them without external output, and upon having the consequences of their actions pointed out to them, will either make a Heel–Face Turn or become a Knight Templar and continue believing that their actions are right and the dissenter is wrong. Also contrast with Not-So-Well-Intentioned Extremist , who knows they are in the wrong but keeps up the façade to manipulate others. Compare/contrast Knight Errant . Contrast Good Is Not Nice for when a character is genuinely on the side of good but may rub other characters or the audience the wrong way. Not</ related to Blood Knight . Not to be confused with Trope Namer The Knights Templar , who varied between fitting and defying this trope and were founded with the intention of protecting pilgrims. Due to the controversial nature of this trope, No Real Life Examples, Please! .

Excuse me, do you have a minute to talk about The Lord? So a pair of characters turn up at the doorstep, say something about God , maybe clutching some folded literature, say something about The End of Times with a very small chance of muttering something about a "watchtower." Cue humour inducing response. In fiction, lots of evangelical sects will have their appearances in fiction built around the practise of door-to-door evangelising (with maybe the odd peripheral belief). Jehovah's Witnesses (or at least the Hollywood variety) are the ones most frequently shown doing this, partly because they're the first evangelicals people tend to think of and partly because it's what they do in the real world . Mormons are also well known examples. The portrayal is actually broad enough that it sometimes creeps into this broad evangelical Christian depiction where nothing sect-specific appears , or perhaps some stuff from several denominations do. In fiction, the lead character often finds inventive, clever, or even cruel ways to repel the hapless missionaries. To be fair, it's often quite funny , and it's the character's time and doorstep. To be also fair, it may set up the Unfortunate Implications that it's fine to treat people from

minority sects like dicks for their beliefs. This can be a form of Activist Fundamentalist Antics . The Missionary has also been known to do this. If it actually works</ on the very first try, it's Easy Evangelism , and a high likelihood you're dealing with an Author Tract . Compare Traveling Salesman . The trope name is a pun on Bob Dylan 's "Knocking on Heaven's Door".

The format does tend to make it annoying, as the second person usually wants to hear a joke, rather than be forced to participate. But it is possible to make them funny in the right situation. Because this trope is so well-known, it's subverted more often than not, by replacing the punchline with an unexpected insult instead A second subversion is when person 1 isn't actually trying to set up a joke, but person 2 acts like it is. Generally this leaves out the 'knock knock' being said, with person 1 knocking on an actual door The Other Wiki has on this plus examples, even prototypical ones from Shakespeare's time . A bunch of Troper-supplied examples can be found here Compare Lightbulb Joke , Chicken Joke , What's a Henway? . See also Saying Sound Effects Out Loud Here is a with a lot of examples of this trope

This is the person who always seems to have the dirt on everybody. The person who runs an information-gathering system, with a network of informers. The Knowledge Broker has a web of contacts stretching into various organizations, industries, and government agencies, and always seems to know what's going on. Sometimes the Knowledge Broker seem nearly omniscient. He/she always seems to have just the right tidbit of information for whoever is willing to pay their price. For the most part, he remains impartial despite his vast influence, and most people know to stay on his good (or at least indifferent) side. This is a person who is not mysterious (Compare Mysterious Informant). Everybody knows that when you want information, you go talk to this person. Usually of dubious morality. Often your innocent hero has a buddy who grew up on the wrong side of the tracks, and knows that they ought to start by talking to "Big Eddie" or whoever, cause he always "knows anything that goes down." Sometimes the source of information is more upscale in appearance, in which case they are probably also The Barnum . They usually want something from the hero before they hand out the information (unless they owe the Hero a favor, or have a crush on him). Often they'll want nothing more than cash, but sometimes they want the Hero to run an errand for them. Or they may trade information for information. If there is romantic subtext, she might ask the Hero to be her escort somewhere — always a good choice for drama when the hero is looking for information about the kidnapping of his love interest . Obviously saving his true love justifies cheating on his true love — or does it? Many times this character is relegated to a position as a Plot Device . However, in works with a Crapsaccharine World or Crapsack World bent, they're more likely to be either one of the main characters, or a Recurring Character and have backstory and get Character Development , making them more than a Plot Device and essential to the series. When the Knowledge Broker is given Character Development , expect him to have a traumatizing past and/or an old relationship with one of the protagonists. When acting as a contact for the heroes, expect the Knowledge Broker to supply the catalyst to propel the story forward. If the heroes get stuck, expect him to suddenly come up with a new lead. If he's mostly in it for the money, expect either a Face–Heel Turn or a Heel–Face

Revolving Door that may one day make someone put a gun to his head If he's less-than-impartial towards the main character, expect him to deny payment, with an excuse like "I owed you a favor anyway." Likely to Default to Good (if only because the good side winning would keep them in business); rarely, if ever, is this character working strictly for the antagonist. When the compiler of information isn't impartial at all and instead serves an organization, they are The Spymaster . If the contact is a recurring character and the Knowledge Broker and the protagonist are different genders (or not), expect romantic subtext . Real Life information brokers tend to be consultants who work in market research, though there are exceptions. See also The Fixer .

A Know-Nothing Know-It-All is a character who insists they know everything, is always right, that they were the ''actual'' original creator of an idea , and who generally has an extremely high opinion of themselves and their abilities, when nothing could be further from the truth They are grossly misinformed, or just lying, about everything they talk about with authority. They create nothing new and are Ignorant of Their Own Ignorance . Their abilities could best be described as "scarce". When people call them out on their bullshit or fail to treat them like the geniuses that they know they are, it is because they are jealous or too stupid to recognize or understand their genius. Such people are, in fact, the living definition of the word charlatan While many characters show signs of being this, very few have it as a major facet of their character. For example, Peter Griffin of Family Guy </ tends to spew horribly misinformed information, but oddly enough, sometimes he's right, in the rather odd world the series is set in Little Known Facts are occasionally in the Know-Nothing's mental arsenal, thanks to their obtuse quality, but naturally, the research won't be. Hopefully, they're at least Entertainingly Wrong A Real Life engine driving this is the , where the less competent are paradoxically more</ likely to consider themselves good at a task (because they are also incompetent at assessing their own performance at it) Can sometimes intersect with the Jerkass to become an Insufferable Imbecile . Compare Too Clever by Half (which is when an actually smart person gets overconfident and makes a mistake they thought they were "too smart" to fall for), Small Name, Big Ego (who both want to be recognized and appreciated but take different paths to it), and Feigning Intelligence . Propense to Delusions of Eloquence , though not all of them have them. Contrast Insufferable Genius , who has the same arrogant attitude but is not</ incompetent. An Aesop having to do with how You Can't Fight Fate . Knowing when to just let go is a useful skill (it may have even indirectly contributed to the creation of The Thirty-Six Stratagems as an

actual list). Sometimes</ possible to tell that to the Determinator . The Fatalist , on the other hand, is quite aware of this wisdom The Determinator , if presented as flawed, will rarely if ever know when to back down, even when it would be beneficial; a Determinator who refuses to back down from a hopeless battle and gets their ass kicked is a very common (and easy) way to show that the threats are getting bigger and that simple iron-willed resolve does absolutely nothing against someone who can jelly you in seconds and shrug off your very worst. A Combat Pragmatist , however, thinks differently, and would see that sort of attitude as foolhardy; he'll fight as long as he can (and fights dirty</), but flees if in actual danger; quitting while they're ahead also sometimes happens, with the rationale usually being that they are not going to survive a prolonged fight and would be better off using a temporary advantage as a means of getting the hell out of there. Compare You Were Trying Too Hard , which is about situations where folding somehow causes you to win the pot This trope is known as risk aversion in psychology circles. As seen in the prevalence of this trope, it's often a useful evolutionary trait, it's why most people when gambling try to quit when ahead or any situation where risk is involved. After all, you don't get rich playing the stock market like a fool. Taking this trope too far (focusing too much on the "fold em, walk away, and run") can lead to Dismotivation when they decide since You Can't Fight Fate , why bother doing anything? The Straw Nihilist THINKS he understands this trope, but in reality wouldn't even be sitting down at the table; the same is true of The Eeyore , who has already folded before the cards are even dealt Serial villains in general owe a large part of their Joker Immunity to making escapes at the end of the encounter to appear in another . Good exit timing makes more formidable enemies than escaping a Cardboard Prison See also Screw This, I'm Outta Here! ; Villain: Exit, Stage Left ; Opt Out ; I Surrender, Suckers ; Graceful Loser ; I Will Fight No More Forever ; Run or Die ; Switch-Out Move ; Sensing You Are Outmatched ; Tactical Withdrawal . Contrast Sunk Cost Fallacy , which this trope tries to avoid, and Surrender Backfire . Compare with Dirty Coward and contrast with Rage Quit , which are more emotion-driven while Knowing when to Fold 'Em is strategically based, even though anyone who is willing to commit atrocities because he believes he has the upper hand and stands back because of biting off more than he could chew is a Dirty Coward by default, especially if the evil that they intended to commit was petty. Also contrast with Leeroy Jenkins , who is pretty much the antithesis of this trope, and Attack! Attack! Attack! , where the character's determination blinds them to when it is time to give up. Compare and</ contrast the Determined Defeatist , who is a ZigZagged example, having the attitude of this trope, but who will press on anyway

A character is in a very nature-oriented setting, with all kinds of wild plants surrounding them. They're doing whatever it is they planned to do, and at some point pick up or walk into an ordinary-looking plant. After a small amount of contact with it, someone who is more knowledgeable about nature will casually inform them "That's poison ivy" (or poison oak, the plants have the same toxin) Note: These are generally played for laughs. If you're weak of stomach, do not</ Google the types of injuries these plants can create (Unless you'd really like to see an example of a blister the size of a football). Oh, and poison sumac, if burned, releases a gas that causes allergic reactions that can kill. It really pays to

know your plants before you go hiking

This is your standard Limited Animation method of drawing an explosion: as a spikey ball. Usually several such, concentric and multi-colored. Expect some smoke too This effect can also be used to accentuate any heavy or significant impact, such as a blow to the head. See also Hit Spark In Real Life , of course, it's possible to achieve an explosion which simulates this effect. Only, usually, not as colorful as in the cartoons If you don't know what a is, basically it's a ball of rubber spaghetti used as a safer alternative to rubber balls when soft impacts are desired and bouncing is not. "Koosh" represents the sound effect the thing makes when it hits a surface Not to be confused with Happy Fun Ball

Korean Dramas are comparable in content and format to Japanese, Hong Kong , and other Asian dramas. They typically run for one season. Aimed at women with focus on romance, family and, well, drama, Korean dramas (along with music and movies) have been sweeping over Asia for the last decade in a phenomenon called the " Korean Wave " or . Some Korean dramas are popular enough to get remade in other countries— Winter Sonata </ was so popular in Japan that a Japanese anime adaptation was made. The street runs both ways, too, as the immensely popular Boys over Flowers </ was made into a Korean drama as well (not to mention a Taiwanese drama, a Chinese drama, and a Thai drama). Korean dramas are famous for the female lead inevitably having to deal with a vicious mother-in-law , tragic setbacks and someone falling terminally ill. Actually, they're famous for pretty much everything . Here is a guide (under construction) on how to write a Korean Drama. It also has a (which is for Asian dramas in general). The Kryptonite Factor is an Achilles' Heel , where the weakness is a substance or state that only affects the Super Hero . It serves a few purposes. The artistic one is to show that no one is invulnerable , not even our godlike main character . This is especially ironic if the vulnerability is completely arbitrary and commonplace. The more powerful a character is, the more likely the Kryptonite Factor will be abused. Writers in particular tend to dislike immensely powerful characters with a single Kryptonite Factor, because not using it creates a drama-destroying sense that the character is never under a serious threat. Conversely, working a rare Kryptonite Factor into the plot repeatedly can seem even more contrived . The most obvious example is kryptonite, the bane of Superman regardless of how powerful he is being portrayed at the time. A literal green rock , it seemed unusually abundant in supervillainous hands for being radioactive bits of a planet that exploded lightyears away. Many Elseworlds and spin offs to the Superman mythos include characters who are more resistant to kryptonite, but conveniently, not as

strong. Compare Supernatural Repellent , which is not specific to superheroes. See also Kryptonite Ring , Kryptonite-Proof Suit and Fight Off the Kryptonite . Contrast Depower , Cross-Melting Aura and Drama-Preserving Handicap . Related to Why Did It Have to Be Snakes? If the character is vulnerable to something comparatively mundane (and even non-threatening), that makes it a Weaksauce Weakness . When this trope turns up far more often than seems probable, see Kryptonite Is Everywhere . When this extends to having characters whose powers are nothing more than a Kryptonite Factor, you have a Man of Kryptonite . Thanks to Superman being a Long Runner , and Pop-Cultural Osmosis , a common bit of Memetic Mutation is to refer to something you are particularly vulnerable to as "My Kryptonite." Not to be confused with The Krypton Factor </. Contrast Logical Weakness , wherein the weakness logically comes about as a direct result of the powers. By the Power of Grayskull! is more or less the opposite, giving powers as opposed to taking them away.

Circumstances always seem to work out so the hero faces just the right sorts of opponents to still give him a challenge. If he has psychic powers, then his enemies will have psychic shields , or computer brains, or be Too Spicy for Yog-Sothoth . If his powers are useless against a particular color , then guess what color the incoming dangerous meteor happens to be. If his weakness is Cold Iron , which has to be both pure and</ forged with a special technique unknown to the majority of the metal-working community, his foes will naturally make millions upon millions of dollars worth of weapons, tools, and death robots out of that specific metal without even realizing... Basically, the Kryptonite Factor shows up far more often than one would expect. Otherwise the episode would be over too quickly The Trope Maker is of course Superman , originating back in the days of the radio show . It seemed that every bank robber and common criminal had a chunk of Kryptonite to threaten ol' Supes. Fridge Logic showed that if that many Kryptonite meteorites fell just on Metropolis, then based on the quoted distance from Krypton to Earth, planet Krypton would have to have been several times as large as our sun. At least one of his innumerable origin stories and retcons thereto has handwaved this by explaining that infant Kal-El's spaceship's warp drive dragged a significant chunk of the debris with it to Earth, but this isn't used nearly as much as it should for explanatory purposes Note that this is a different thing from a Kryptonite Factor that literally is</ present everywhere, like water or plastic forks: that's a Weaksauce Weakness , though they can overlap a fair bit. This is when the weakness shows up far more often than you would expect. To give an example, a character whose Nigh-Invulnerability is negated by aluminum has a Weaksauce Weakness , but it isn't this trope if the character only has to deal with it in places where it would make sense (i.e. people who grab aluminum objects like baseball bats or cans as improvised weapons, or villains who make aluminum weapons specifically to fight them). A character whose invulnerability is negated by aluminum and</ keeps inexplicably encountering swordsmen with aluminum blades, space monsters with aluminum jaws, and prisons whose walls have aluminum lining is this trope This trope is the exact opposite of This Looks Like a Job for Aquaman , where circumstances conspire to make a low-powered hero more useful. Compare Deus Exit Machina , Uniqueness Decay , Why Did It Have to Be Snakes? ; see also Easily Thwarted Alien Invasion and

Contractual Boss Immunity . Countered by a Kryptonite-Proof Suit . If it's embodied in a specific person, it's Man of Kryptonite Note that if the villains specifically tailor their abilities or tools to defeating the hero, this trope does not apply. That means they're just plain smart, or Crazy-Prepared

Weaksauce Weaknesses are great to exploit, but suck to have. However, clever and enterprising creatures of the night, aliens, mutants, robots or what-have-you's can create a limited resistance or immunity by counteracting its effects. Vulnerable to fire? Asbestos-fiber suit! Holy objects repel? Wear a Darwin-fish necklace! (If the reason the creature's faith would matter more than the faith of the one wielding the religious object is even brought up , it's usually that the creatures' vulnerability to holy symbols is a case of Your Mind Makes It Real , and skepticism or having stronger faith in its own God of Evil protects it) Does water dissolve you? Coat yourself in water-proof paste! This doesn't even need to be limited to clothing, a sun-blocking satellite and a Protective Charm are among many possibilities to counter their weaknesses Usually this resistance is limited in some way , it may be bulky or conspicuous, only works once , or rubs off over time . It's also possible for an enemy to somehow nullify the resistance with a counter... unless they have a counter to that counter Commonly used in response to the Kryptonite Factor when Kryptonite Is Everywhere . Speaking of Kryptonite, it certainly helps when you're trying to fight it off . Contrast Flaw Exploitation . Not to be confused with Removed Achilles' Heel , which involves someone developing a permanent way to rid themselves of a weakness rather than use an external protection. In some rare cases this can also crossover with Powered Armor , sometimes it doesn't hurt to have your suit that's able to nullify your weakness to also have a few tricks up it's sleeve

In an optimistic setting, this device is from a character who is aware of their Kryptonite Factor and puts the means to stop them in the hands of another (usually, in case they're brainwashed or go evil somehow). This usually implies a bond of trust since the receiver often has mixed feelings about the idea and the giver has to insist. This is also a show of good faith to a skeptic so he will allow the hero to operate in a legal grey area This trope is named after the ring Superman gave Batman in case he ever got out of control Compare Betrayal Insurance where the "stopping" character came up with it on their own; exactly how extensive this planning comes off can seriously affect the relationship depending on how betrayed the other feels. May overlap with Mercy Kill Arrangement if the results are likely to be fatal

The Kuleshov Effect is a well-documented concept in film-making, discovered by Soviet film editor Lev Kuleshov in the 1920s. Kuleshov put a film together, showing the expression of an actor, edited together with a plate of soup, a dead woman, and a woman on a recliner. Audiences praised the subtle acting, showing an almost imperceptible expression of hunger, grief, or lust in turn. The reality, of course, is that the same clip of the actor's face was re-used, and the effect is created entirely by its superimposition with other images According to Kuleshov, this came into being largely by necessity. Soviet cinema in its

early days was chronically cash-strapped. Kuleshov and other early directors trained themselves by reediting existing films, mostly movies produced in the Tsarist era. Kuleshov found that filmmakers could create an entirely new story by reordering scenes and shots, noticing this could in turn alter an audience's reaction More generally, the Kuleshov Effect is the basis of Soviet montage cinema, and is used in many many films since. The idea is that, by editing different things together, it is possible to create meanings that didn't exist in either of the images put together—constructing 'sentences' and 'texts' out of film Compare Rewatch Bonus , Acting in the Dark , Nothing Is Scarier Contrast with Dull Surprise , which is more or less this trope's opposite. The Kuleshov Effect is about a single dull facial expression taking on deeper meanings based on context, while Dull Surprise is about a facial expression which should convey a deep meaning based on context, instead coming across as dull and meaningless

A New Media and comedy trope in which Jesus (or any other similar Messianic Archetype or Crystal Dragon Jesus figure) is depicted doing very, very</ awesome deeds that somehow were never recorded in the Bible. May involve Jesus being a badass, or just generally doing something really cool . Has a certain degree of Truth in Television , if you believe in the Bible. Empathy is the ability to share in another person's emotions. The capability to be happy because someone else is happy, sad because they are sad, and so on. It is closely linked to love and compassion. Furthermore, guilt to a large extent arises from the ability of a character to put themselves in the shoes of someone they've hurt A lack of empathy is a major character trait, one that drives many others. A villain will often have this trait, and will be denounced sometimes as a psychopath, or a sociopath . Real-world disorders with the same names inform this trope, but the relationship is very loose These characters may feel fear, but not the fear of others</ , regardless of the situation Note that a character who lacks empathy can still be perfectly capable of cognitive</ empathy; that is, the ability to recognise and identify an emotion — they might not be able to share</ in somebody's happiness or sadness, but they have learnt well enough what happiness or sadness looks like, and coupled with the lack of remorse, this tends to result in a ruthlessly effective Manipulative Bastard On the flip side, just because a character has empathy does not mean that they possess one ounce of compassion or sympathy, though the lack of either usually coincides with at least a diminished sense of empathy. For instance, someone with narcissistic or antisocial personality disorder should not be confused with someone with Asperger 's or another form of autism . Narcissists and sociopaths usually have perfect cognitive empathy, but utterly lack the affective empathy necessary for genuine compassion. Those with Asperger's or Autism sometimes have defective cognitive empathy, but normal or even hyper-effective emotional or compassionate empathy. In short: narcissists and sociopaths are generally superficially charming and polite, but their pretense of empathy is simply that, a mere ruse to attain a tangible end. Autistic people, on the other hand, more or less invert this: they're perfectly capable of feeling other people's triumphs and tribulations — often quite intensely — but you wouldn't necessarily know it from their face or tone of voice, and that's assuming they have learned to identify them Jerkasses , the Moral Myopic , Straw Nihilists , Empty Shells , and The Soulless tend to express this. When taken to its logical conclusion, it leads to It's All About Me . Often an integral part of Comedic Sociopathy . Sometimes characters with a Lack Of Empathy have a Freudian Excuse up their sleeve. Sometimes, they just laugh and say Virtue Is Weakness as their justification. These characters often shrug off charges of their actions with But for Me, It Was Tuesday Not to be confused with No Sympathy , which refers to characters who supposedly do</ have an ability to empathize, but completely fail to demonstrate it. Kids Are Cruel , Teens Are Monsters , and Adults Are Useless often have this trope, though these can be (partially) excused by the cognitive faculties required for empathy having had insufficient time to develop (the former more so than the latter; anyone who's been around toddlers will tell you that they can be selfish little bastards/bitches). The person in question doesn't have to be human per-se, but if empathy is an entirely foreign concept to the character because they don't see things the way that we/the character do, it may be a form of Blue-and-Orange Morality instead where the goal-posts of "empathy" have shifted from what one would expect Contrast with The Empath , who is able to empathize with another due to feeling their emotions due to psychic powers, but may still be evil due to what that power can do No Real Life Examples, Please! When The Thirty-Six Stratagems talked about removing the ladder once the enemy ascends to the roof, this probably isn't what they meant This is an occurrence that shows up very often in Comedy or Action films. A character chases after another, until the chase leads to climbing up a ladder. However, when The Hero gets to the top of the ladder and his enemy starts climbing, the good guy will then push the ladder back, causing it to fall backwards with his enemy still on the ladder Expect this to show up in Comedy , or in medieval sieges. This trope may be the reason why some people say " I Need No Ladders "

The Lady and Knight is a chivalric image that many of us probably know very well, though perhaps you didn't realize they come in two flavors. A staple in fiction everywhere, the Lady And Knight dynamic is at least Older Than Feudalism , though no doubt that whole era of Romantic adventure stories like King Arthur </ and Robin Hood </ perpetuated it. While it is very common in works set in a Medieval era or equivalent fantasy version , they can pop up anywhere but even in modern settings, they are usually meant to invoke that era's ideal image of a Lady and her Knight The iconic portrayal is of the Lady as a beautiful, admirable woman with dignity and nobility and The Knight as a strong, brave man of virtue sworn to protect her. The Lady And Knight, while originally female and male respectively, aren't always nowadays and either role can be played by either gender. While there is often a Bodyguard Crush involved, sometimes it's a chaste Courtly Love and in same-sex couple versions, there's less of a chance of romance being involved. In the past, the Lady was often a Damsel in Distress , but now it's nearly as common for the Knight and his Lady to form an Action Duo or Battle Couple There are two

particular variations of the Lady And Knight dynamic: the , a good version, and an Evil Counterpart , the . While the types are fairly distinct, it's not unheard of for Ladies and their Knights to switch from one to the other, should they perform a Heel–Face Turn or Face–Heel Turn . For more information about the two different types, see the Analysis page Often there's some sort of ceremony or official pledging, accompanied by the knight giving the Lady a kiss on the hand or kneeling. Sometimes non-historical based works will slip something similar in as a tip-off to the two characters' relationship. In settings that support actual knights being in the work, if the Knight doesn't start off as an actual</ Knight, he is almost always formally knighted by the end of the work Compare Mistress and Servant Boy which has a similar dynamic, but the Knight is less about serving and doing menial tasks and more about protecting his Lady and his honor. If the servant also happens to be a Battle Butler , however, they may overlap. If there's rescuing going on but none of the courtliness, it's a Rescue Romance

The Casanova has scored dozens of women, never showing any real affection for any of them. However, maybe one of the girls, for whatever reason, is immune to his charms . Maybe he initially hates the girl, but then comes to appreciate her . Or maybe he's beginning to develop romantic feelings for a female friend of his Basically, the man (whore) genuinely</ falls in love It can be played for quite a lot of angst — how will the Handsome Lech convince his Love Interest that he's being genuine? Usually, this trope either humanizes or defangs the character. A staple for Romantic Comedy . Nine of ten male protagonists in Hispanic Telenovelas </ follow this trope and if the lead character of a Chick Flick is a man, you will</ see this in action A common effect is that the charming ways that made these guys such winners with the ladies fall apart under the pressure of really wanting to charm her: fluent flirtation turns to Gibberish of Love and/or Cannot Spit It Out Most of the time, the characters give up their perverted ways for love; however, it's becoming more common for them to maintain their flirtatiousness (for the most part), but have it toned down for the sake of their love interests Compare Looking for Love in All the Wrong Places . Can't Act Perverted Toward a Love Interest can result from this, and if combined with Madonna–Whore Complex , the Casanova themselves may be the one who Sleeps with Everyone but You

An unfeminine female character looks like or is mistaken for a male. Sometimes this is to show that she's as tough as a guy, even One of the Boys , sometimes to show that she's a Butch Lesbian , but frequently just to show that she's (supposedly) unattractive. Often used for comedy, in which case she may be an Abhorrent Admirer Supertrope of Bifauxnen , where a woman looks like a Pretty Boy , usually with fangirls (or fanboys) who take obvious notice. Not to be confused with Sweet Polly Oliver , who is a woman deliberately disguised</ as a man; Samus Is a Girl , where the story is deliberately misleading about the character's gender; or Viewer Gender Confusion , where there's only out-of-universe confusion. Basically, the Lady of War is an Action Girl who retains an air of grace and reserve not usually associated with violence . If she's not a Pretty Princess Powerhouse , she tends to be otherwise highly placed or at least look and act like it. If she's not gentle-mannered, she may be an Aloof Dark-Haired Girl or arrogant and generally prissy and might become subject to a Defrosting Ice Queen scenario. Often, she's simply The Stoic . In RPGs , female roles tend to be limited to magic use , but sometimes women get to take on more physical roles in combat, and that leads us to a different Odd Couple pair: the Lady of War and the Cute Bruiser . Character-design wise, she doesn't tend to be overly sexualized in the way that other types of Action Girl often are, or at least not to such an unsubtle degree. The Lady of War does</ have her own charm in a cool, collected, Nicole Kidman way. She's also very likely to have no Love Interest at all, or if she does, she is very unlikely to be paired with the protagonist — that's what White Mages are for — unless there is</ no White Mage. In any case, she almost certainly occupies a firm place in the hearts of at least a minority of the fandom. (see Amazon Chaser) A Lady of War is almost always given an elegant weapon that emphasizes her femininity — often a bow , rapier , naginata , steel fan , or even an umbrella , all weapons that have a certain choreographic element in the way they're wielded. They also allow her to avoid getting her hands dirty and usually invoke Wouldn't Hit a Girl as a result. If guns are the norm, she's likely to prefer an easily-concealed revolver with deadly aim, as opposed to an automatic. If the story deals with martial arts, she'll use a "refined" fighting style like Tai Chi or Aikijutsu or will be given the gymnastic prowess to engage in some variant of She-Fu . Expect her Impossibly Cool Clothes to still reflect her position . She might even wear a Battle Ballgown . In terms of physical capabilities, she's usually some form of the Fragile Speedster (and/or Glass Cannon , if a ranged fighter), but it's not unheard of for her to be a Jack-of-All-Stats or Mighty Glacier / Glacier Waif , especially if she wears armor. It is possible a degree of Sarashi will be necessary to deal with an inescapable physical reality which might impede free movement in combat. If she were a preteen, she'd be a Little Miss Badass . Contrast Short Tank or Bokukko Cute Bruisers . While the Lady of War is about grace and reserve, the tomboyish Cute Bruiser (or Girly Bruiser if they are more feminine) is more about unrestrained passion and power. The former also tends to be older than the latter. There is</ the possibility of having the Cute Bruiser grow up into a Lady of War, but it's not that common. See also Girly Bruiser . Expect anyone</ with the title "Lady" in an Action-Adventure story to be this. Compare Royals Who Actually Do Something , Rebellious Princess , Pretty Princess Powerhouse , Kicking Ass in All Her Finery and Officer and a Gentleman . Contrast Princess Classic , Prince Charming . A subtrope of Action Girl , though not all Action Girls qualify as Ladies of War if they lack the calm, dignified demeanor. Officer and a Gentleman is a related trope, but a Lady of War is not always a military officeholder. A Lady of War who uses magic rather than a melee weapon is a Lady of Black Magic , although a female Kung-Fu Wizard or Magic Knight can fit both. May be the female half of a Battle Couple . Like a male Cultured Warrior , some incarnations have a chance of being developed into a Warrior Poet . Please list examples in alphabetical order.

Every pregnant Sitcom character must</ attend a Lamaze natural childbirth class, usually with the male character least suited for the position as her coach/partner (as the natural father, or most responsible friend was supposed to do it but had a last minute problem that had to be dealt with first). In the event that the natural father is</ her Lamaze coach, it usually serves to highlight that he is either a Panicky Expectant Father or a Bumbling Dad ...or both. What results is the usual total disaster as the flustered male screws up in every possible way. It usually leads into a Screaming Birth later in the season This page may include unmarked spoilers regarding characters' relationships. Beware

A character (especially a Pungeon Master) makes a pun , that is claimed to be so obvious or disgusting, that it makes listening characters wince , groan or even feel compelled to inflict violence on the punster — or, at least, bring a lawsuit against him for pun-itive damages. This can work both ways — rimshots and some form of celebration by the punster is completely optional. Since puns are considered one of the lowest forms of humor by default, this claim can be made even if the pun in question is actually really, really funny. The chief purpose of this trope seems to be to allow a writer to deploy an awful groaner and still dodge the blame for it by pointing the karmic retribution at the character, or to use this acknowledgment as a piece of Self-Deprecation , turning this lampshading into the joke's punchline, instead of just having the pun itself. This is a subtrope of the Pun . For other puns that may or may not be bad , see Hurricane of Puns . For a character that always makes these, see Pungeon Master . For a work which is saturated with puns, see World of Pun . For an index of punny trope names, see Just for Pun . Not to be confused with Stealth Pun , which refers to puns where the punchline is simply left to the readers or listeners as an exercise. This may also warrant a Collective Groan or " Get Out! Oh, and a lame reaction to a pun is rather (not excluding some possible overlap) the opposite of this trope. In-Universe Examples Only !

Generally speaking, Lame Rhyme Dodge is the result of someone having a Did I Just Say That Out Loud? moment, but doesn't want to/is afraid or embarrassed to admit to having said what they said, or, it's a case of someone trying to dodge having heard what somebody else just said to them. It's the little sibling trope to Last-Second Word Swap Frequently used by guys who are tongue-tied around women, or teenagers trying to dodge teachers or other adults The way both parties try to dodge this situation is to come up with a word that rhymes or sounds similar to the operative word in the sentence. Unfortunately, this usually results in a sentence that makes no sense at all A common variant is to have someone dreaming/daydreaming about something, then they're awakened from their reverie by someone saying "What did you say?" and realize they've been saying everything out loud. They proceed with the clumsy cover-up Compare Freudian Slip . Not to be confused with Subverted Rhyme Every Occasion

We've all seen a lamprey mouth before: a ring- or funnel-shaped mouth with many sharp, inward-pointing teeth. Rather than being embedded in horizontal (or vertical) jaws, teeth completely encircle the oral cavity. Extreme examples may occur in conjunction with Flower Mouth . In fiction, this feature is often a trait of monstrous characters, and may offer a convenient visual shorthand implying that a creature is a parasite of some kind On film, it's often a makeup technique used to make Humanoid Aliens of the Rubber Forehead variety appear more alien by suggesting Bizarre Alien Biology through its outward appearance. Such an orifice could also appear on a radically non-humanoid creature. Common in horror, where it may convey Eldritch Abomination implications A common feature of Sand Worms or an Ant Lion Monster , and an occasional Cthulhumanoid may sport one. Does not cover insect-like mandibles Often overlaps with More Teeth than the Osmond Family . Sub-Trope to Monster Mouth

It also assures the audience that the world of the story is like Real Life : what's implausible for you or me is just as implausible for these characters, and just as likely to provoke an incredulous response The creators are using the tactic of self-deprecatingly pointing out their own flaws themselves, thus depriving critics and opponents of their ammunition. A person getting drunk enough at a party to wear a lampshade as a hat It's hard to pin down the origin of this trope. One theory

is that the guys get drunk enough to mistake lamps for hat racks; other theories are collected on . The idea of a drunk wearing a lampshade goes back to at least 1945 in the U.S. - and probably even earlier (dates it to 1928). If that's true, this trope could be Older Than Television . It has also been suggested that this originated as a piece of "dirty" physical comedy: the man puts on the lamp-shade, exposes himself, and asks for someone to "turn him on" using his " switch " Regardless, the overused nature of it has turned it into a Dead Horse Trope . It's uncommon to find examples nowadays that aren't parodies of this Sometimes the lampshade wearer will say that they're feeling light-headed The same effect is sometimes achieved with a traffic cone, though in reality they tend to be too wide and heavy to be practical as headwear. Add to that the fact that they have to be drunk enough to consider stealing the cone in the first place, so cone wearers tend to be drunker than lampshade wearers Note, there is another reason you may see someone with a lampshade on their head: the Rule of Funny use as a Paper-Thin Disguise , in order to pretend to be a lamp. This has nothing to do with being drunk A third reason is as legitimate Improvised Clothes , when someone really needs to hide their hair or face (often because Our Nudity Is Different) and their hat was stolen. This also usually has nothing to do with being drunk, although it may have something to do with swimming A Sister Trope to Necktie Headband (what a Japanese Salaryman will do instead) Not to Be Confused with Lampshade Hanging

In Speculative Fiction , one will sometimes find that entire planets get used as interstellar landfills. Implicitly this means that it is somehow worthwhile to launch refuse into space and take it to another planet, possibly one that is located in another solar system , in order to dump it there, rather than give it a push towards the nearest star , dump it on a nearby worthless, uninhabitable rock, or just recycle the stuff (not to mention massive and cheap energy sources that make such launches worthwhile in the first place — just getting into space in the first place is a lot harder than most people think) In many cases, the landfill-planet will even be habitable, if only barely, for the convenience of the protagonists who will naturally end up spending time there at some point. Locals will usually be scavengers of some description, picking through the mountains of junk and/or freshly arrived loads for anything they can use or sell, which may or may not include the main characters. Hobo cities built out of scrap optional. There may even be flora and fauna living here, ranging from hardy animals and plants, to Metal Muncher creatures that managed to adapt and thrive on eating the abundant amounts of metal lying around For this trope to work at all, the setting must have very</ Casual (and VERY CHEAP) Interstellar Travel. There are, however, ways to harden this trope: make the planet in question a useless dwarf planet in a nearby asteroid belt, Ceres-like (delta-v to reach such a planet could be really low), used only to dump garbage of space origin from the same system, and equipped with dirty recycling industries that make it more efficient to fling refuse there, rather than into the star. Rarely will it ever be a recycling planet of some kind, which would justify moving massive amounts of junk there. For this trope on a smaller scale, see Down in the Dumps See also Industrial World

This is when a fully clothed character ends up falling, usually from a great height, and lands in a bathtub in which someone is bathing at the time. The bather is commonly the opposite sex of the person who is clothed, but there are times when they are both the same sex. Most of the times when it is the opposite sex, it ends badly with the bather embarrassed or angry at the clothed person This trope also applies to clothed characters that are teleported into someone's bathtub May overlap with Naked First Impression

Back in the day, it was common for households to have multiple landline phones or handsets corresponding to the same number or phone line, allowing for easy conference calls. (Or, being able to pick up the phone in the bedroom instead of having to run all the way to the living room or kitchen and hope you got there in time.) This led to obvious opportunities for eavesdropping. If you want to eavesdrop on another person's phone call, just hide in another room that has a phone extension, quietly pick up, and hold your hand over the receiver while listening in For added drama, old landline phones made it possible for the eavesdropees to realize they were being eavesdropped. In addition to the slight click a phone could make when it connected to the line, older phones tended not to have great microphones and could pick up a wide variety of environmental sounds. And, finally, the eavesdropper might lose their cool and shout something at whoever they're listening to Common offenders include spouses eavesdropping on their unfaithful spouses' Intimate Telecommunications , nosy children spying on their parents or siblings, and Overprotective Dads spying on their rebellious teen's plans. This isn't limited to members of the household, however. It may also be used by an investigator or stalker staking out a target by hiding in their home while their target makes a phone call This was most common in the 1980s and 1990s, when having multiple phones in a house become more widespread. These days it's a Discredited Trope due to the obsolescence of landlines , but was once Truth in Television An older equivalent can be found in party-line phones. Party-lines were multiple households or apartments who all shared a single phone line. They were cheaper than a single house line, and were common from the early days of telephones all the way into the 1970s. The trope of a gossipy neighbor eavesdropping on a party line call was especially common in the 1950s and 1960s, but is pretty much a Forgotten Trope today, since most landlines are single party, and that's if a house even has a landline Sister Trope to Two-Way Tapping . A square jawline. A protuberant chin. A manly cleft. Somewhere along the line (possibly around Superman 's time), artists decided that these, more so than anything else, were the</ defining facial feature of really heroic (or really strong and dumb) characters. Perhaps to an even greater extent than broad shoulders, barreled chest, and absurdly large biceps, the surest sign of a character's strength and manliness lies in his chin Parodies of superheroes will take this trope to its illogical extreme , giving heroes jawlines large enough to logically prevent them from looking down</ — and possibly, a ridiculous "butt chin". Some artistic conventions also render the cleft as a "swirl" on the chin. While the gluteus chinnimus can affect non-heroic, not-so-strong characters, "chin swirl" is generally reserved for only the manliest </ of manly If a character with a jawline like this crops up in an American Western Animation production, there's a really good chance he'll be voiced by Patrick Warburton . Also common in Captain Space, Defender of Earth! This has some Truth in Television , as scientists have noted that there is a definite correlation between jaw size and testosterone production (though cleft chins are very much unisex). Plus, exaggerations aside, a well-defined jawline is considered by many to be an attractive trait in a man, which is why this trope is Always Male This is mostly a hero trope, but villains occasionally have chins like this Compare Beauty Equals Goodness , Top-Heavy Guy . A good way to show the physical intimacy and trust which a couple have is to rest one's head on the other's lap. Bonus points if she's stroking his hair In some cases this is done between people who are not necessarily lovers, to comfort someone who is weeping or injured In Japan, if they're really</ close, the sitter is cleaning out the layer's ears with a pick. Wherever The Empire is, you'll always find La Résistance: A Ragtag Bunch of Misfits using The Power of Love and Friendship to fight against a tyrannical rule, often to help put the Government in Exile back into power. Always underdogs, they fight using guerrilla warfare and by raising the rabble of the people by revealing unpleasant truths about The Empire they've been trying to hide, causing the oppressed peoples to shake off the yokes of their tyrant rulers. Usually led by a Rebel Leader and armed via Vehicular Turnabout . Expect them to be opposed by Les Collaborateurs Almost inevitably, The Hero will join La Resistance

while the battle is already underway, and will grow to become a great champion in the fight against The Empire . After all, Hollywood usually romanticizes resistance fighters , for three reasons. The first is rooted in America's origins as rebels fighting against a tyrannical monarchy during The American Revolution . The second is likewise World War II where the conflict between the Resistance and Nazi Germany fell, as close as it ever has, to clear divisions between right and wrong, and of course, Cool People Rebel Against Authority . In most cases in history and in Real Life , resistance movements are complex and confusing events. A common mistake is to confuse resistance movements with revolutionary movements, when this is not always the case. Some resistance movements are</ revolutionary, seeking to install a new regime to displace the old. Revolutions, needless to say, are complex, murky and at times brutal affairs. It has led in the past to the new regime forming the new government which can be as bad or worse than the old Of course, people rarely like having it pointed out that these groups are terrorists from the perspective of anyone who disagrees with them and Innocent Bystanders who may get caught up in the crossfire of said conflicts. This may be deliberately ironic, perhaps inviting a "we are not so different " moment. Or, the author might simply assume that the audience will always sympathize with rebel protagonists against The Empire , therefore moral justification of the rebellion is unnecessary and the rebels can get away with whatever is expedient . This could be averted if the Evil Empire really is evil and the rebels exercise chivalry and restraint Alternatively, La Resistance will be utterly incompetent and little more than an annoyance until the hero gets in there and shows them how it's done. Sometimes their inner dissensions render them nearly unable to get anything done. Expect at least one member of La Resistance to be The Mole , or a homegrown Les Collaborateurs sabotaging their efforts from the inside. La Resistance may even be defeated without the assistance of its enemy: when the only thing uniting it is opposition to The Empire , they may end up clashing thanks to some point of ideology (generally portrayed as stupid) or method (generally portrayed as worthwhile) Also alternatively, La Resistance may represent the last remnants of the reactionary or counter-revolutionary cronies of the old regime fighting against the Revolutionary Progressive Forces. Once re-installed, the Resistance "heroes" decide to Retcon the revolution and institute purges for the cause of revenge, and remind people why exactly they were toppled in the first place. In some cases, as it happened in some parts of World War II , the Resistance contains factions who want to restore the old regime and factions which want to bring a new regime, and these two factions might struggle during and after the war When La Resistance form the main ensemble of the show, or one of them, they'll frequently exhibit a mix of characters similar to The Squad . However, they'll usually have sneakier methods , they tend to be more morally pragmatic and ruthless than most Squads , and in series like Battlestar Galactica </ members becoming Shell Shocked Veterans Sometimes La Resistance can be downright nasty . Usually, though, even at its worst La Resistance will be the Lesser of Two Evils . If not, Grey-and-Gray Morality may be at play. In an interesting twist, if the resistance is every bit as unscrupulous as The Empire , then the hero will end up doing a bit of Conspiracy Redemption or forming a third faction . Very</ occasionally, La Resistance may even be the Big Bad rebelling against a peaceful government. Occasionally, La Resistance will be shown in a more comedic light, where they don't do much besides

sitting around debating theory Eventually, La Resistance will either die out, or grow into The Alliance as it gains power, allies, and sympathizers For the villainous equivalent, see The Remnant . For the opposite of La Resistance, see Les Collaborateurs . The tendency to visually depict leaders of an organization as large, physically intimidating people. This could be because people are more likely to follow orders from a big guy than a small one (because of the physically intimidating height). Exactly what flavor of "big" he (or she) will be depends chiefly on the character's personality, or sometimes species. He could be an Adipose Rex to symbolize his greed and decadence, but could instead be a towering seven-foot-tall man This is abundant in video games since these guys need to be able to make impressive bosses as well and players like big targets. Even when they have magic or machines for fighting, they still tend to be pretty big. Note that tall villains are not necessarily muscular or good at fighting, and in that case will usually have to rely on some shorter Mooks with Stout Strength Because Evil Is Bigger , this is more prevalent among villains. This applies to most of the brutish types of Always Chaotic Evil fantasy races, like orcs , hobgoblins , and some of the many, many types of trolls . Races which get Stronger with Age will tend to justify this either as the biggest individuals being Older and Wiser , or only very tough and resourceful ones reach old age . Thus, this trope most commonly applies to villains but there are also some heroic characters that qualify Related to Authority Equals Asskicking (or, perhaps, Asskicking Equals Authority). Also see Hitler Cam , the camera effect that you can use to accentuate height. Contrast The Napoleon (when he's in a leadership position) Sometimes found in real life- in the modern world, elected leaders are generally of average or greater height. However, this is rarely taken to the kind of extremes found in video games. Also common in the animal kingdom, where in species such as lions, the largest males become the alphas of their prides/packs Can be found in art, especially B.C periods. The most prominent example is Egyptian art; almost all periods of European art before the Renaissance too. This makes sense, as people tend to pay more attention to bigger figures Contrast Mister Big (ironically) and The Napoleon . Adipose Rex is the trope for fat kings In Brave Exkaiser </, Dino Geist , the leader of the Geisters is absolutely gigantic</. His already pretty dang big Humongous Mecha minions only come up to his ankles</

A ridiculously larger-than-life character, public speaker, or orator full of charisma, energy, joie de vivre</, and poetically powerful speeches with dramatic gestures that can devastate a scene to a billion pieces and transform even the most humdrum scene into the most GRANDIOSE </ . Often played by a guest star with an Internet Movie Database listing longer than the rest of the cast put together. Large Hams usually lack an indoor voice , and greatly relish badass boastings where they will punctuate EVERYTHING </. The first line from the Large Hams will be dramatic, portentous, often just before the act break and can almost always be replaced with:

"Did somebody order A LARGE HAM?!" Try it at home; it's great fun. Popular implementations include: BRIAN BLESSED in Britain, William! Shatner! ! North! America!, and Norio Wakamoto in Japan. Many large hams in the past have some experience in stage acting and theater: when you have to poetically act for the back rows (especially when coupled with music) it makes sense. Having an outrageous appearance is helpful but not a requirement. While often male, actresses can pull it off, but it's rarer for them (due in no small part to the expectation that female characters will be more emotional anyways). Often cast as a One-Scene Wonder , or a key redeeming element in shows that are So Bad, It's Good . It's based on the term "ham actor", meaning one who overacts, but where that</ term origininated is unclear: it's been suggested that it comes from the use of ham fat as a cheap make-up remover in the old days of theatre, or because "ham" serves as short for "amateur" (as in "ham radio"); Leslie Charteris stated it derived from " Hamlet </" in a The Saint </ short story. Another possibility is the phrase refers to being 'hamfisted', heavy-handed and not delicate or careful. Note however that a Large Ham is not necessarily a bad actor, it is either an artistic choice made by the actor for a given production or an acting style. Directors hire William Shatner because</ he is a Large Ham , and that's what they want for a particular character. In fact it generally takes a good actor, or at least an experienced one, to pull this off successfully because it takes some skill to know how far is too far. And actually going too far is harder than it looks. One of the United Kingdom's most active export industries. If a character is depicted as an American in a BBC series, he's likely to be one of these. If in a few scenes many Large Hams come together, the likely result is Ham-to-Ham Combat . Large Hams are a very rich source of Vitamin Meme and very often feature in YouTube Poops . While Narm is their primary flaw, the large hams are likely to have come from Hillshire Narm . (Go Keet !) But more often these actors are Narm Charm . A few moments of over-acting do not make a Large Ham. The actor must, to all intents and purposes, be deliberately playing the character that way. A Large Ham may occasionally be an example of Crazy Is Cool . Often a character trait of the Boisterous Bruiser . Deviled Hams also enjoy getting Drunk on the Dark Side . A Smug Super relishes showing off their power this way. Reality Is Unrealistic : a lot of real people are melodramatic or overly emotional. It is therefore NOT unrealistic at all for a character to be this way, despite how it may appear and what plenty of amateur critics will say. The major reason this is often criticized is actually because being melodramatic can be very annoying. But what these critics forget is that a well-written character is not necessarily a likeable one. Writing a hammy character is NOT bad writing. It's only bad writing when the hamminess makes no sense. Note that although it is rare, one can be very hammy without raising one's voice at all. Being hammy is about the emphasis</ in what you say (and Milking the Giant Cow to no small degree), and while emphasis can be easily shown by having No Indoor Voice , it is not the only way. This is what makes the Cold Ham trope possible. If it is the setting itself that seems to demand that ham be served in profusion, dipped in abundant Hot Blood , because it's just how the setting works, you may be in front of a World of Ham : those can provide for marvelous entertainment, if your Willing Suspenders Of Disbelief are elastic enough. Compare Melodrama , Ham and Cheese , Milking the Giant Cow , Camp , Evil Is Hammy , Incoming Ham , The Ham Squad , Ham-to-Ham Combat , Drama Queen , Comical Overreacting , Suddenly SHOUTING! . Contrast Danger Deadpan , The Stoic , Soft-Spoken Sadist , The Quiet One ,

though Cold Ham allows overlap. Just so it's noted, just because a character/actor is hammy does not mean they are bad or ridiculous - far from it! </

LARP stands for Live-Action Role-Play. It's like role playing, but instead of sitting around a table and describing what your character is doing, you generally actually get up and do it (or act it out). Think of it as cross country improv theatre. LARPing has multiple sub-genres. In the US, these include Boffer (which generally includes actually swinging padded weapons at one another) and Theater (which is generally based around pre-written characters accomplishing social and political goals, with combat frequently represented by abstract mechanics. Theater LARPing also goes by a variety of other names.) It should be noted that most boffer games also include a fair amount of roleplaying and that logic puzzles also play a large role in both types. In Europe, LARP usually sits between these genres, mixing character development and role-playing with combat. Weapons are far more realistic than their American counterparts, manufactured using latex-covered foam, or harder, unpadded plastic in some systems; consequently, the style of combat includes taking care not to hit too hard; some variant on "Pull your blows" is a standard rule. In Democratic Russia , LARP is often indistinguishable from historical reconstruction, not that anyone but hardass living-history types (and, more importantly, Jerk Jocks who are in historical reenactment for the fighting) tries to enforce the distinction much. There is a huge sliding scale , from theater RP, where the absolute worst thing that can IRL happen to you is a rubber knife somewhere uncomfortable , to -style faintly-story-driven mass violence, broken bones included. The main distinction of ex-USSR LARP scene lies in players' attitude. Around one third of the players treat it as combat sport with lots of DIY. Other two thirds are composed of teenage counterculture wannabees who are in it for the chicks, said chicks, escapists (mostly teenage, though there are quite a few more mature players) and plain old fantasy fans. Ex-USSR LARP Weapons are made from aviation-grade glass-fiber plastic, running-track rubber, , reforged leaf springs, PVC piping and hardwood, with repurposed sports implements and furniture parts considered a thing of shameful past and frowned upon. Western-style padded weapons are slowly gaining ground in the ex-USSR, but many people still view them as "sissy" and "cowardly" and limit their use to players below the age of maturity (and thus unable to give consent to broken bones). The "pull your blows" rule either only applies to unarmored targets or is absent altogether, and wearing armor is considered the manly way to avoid injury. Likewise, armor has evolved from cardboard, wood and plastic to complex sets of canon-accurate gear tailored to a specific setting, historically-accurate getups brought over from living history and historical combat (which are either past or future hobbies of more than half of LARPers around this parts), sports\hidden armor kits, replicating the construction pinciples of ballistic armor with DIY-store materials, and wide use of fencing, motorcycling and other off-the-shelf protective gear. Worthwhile games are either multi-day (up to a week) forays into the wild, far from any civilisation, with a large part of baggage being vodka (no, really — and this applies to LARP worldwide, not just Russia!), or sizeable social events with elaborate costumes and convoluted plotlines held in university ballrooms. Settings are often some variant of the standard fantasy setting (of varying levels of "yeah, we nicked this straight out of The Silmarillion </"), possibly with

a dash of Alternate History , or taken directly from a popular RPG. LARPs have their own set of common tropes, including some form of Closed Circle or Enclosed Space (which give players an excuse to stay in game even if their character's smartest option would be to leave) and Time Travel (regardless of genre.) However, the largest LARP events (sometimes called "fests", for festivals), who host thousands of players, occur on large swaths of land, which gives players space to flee while remaining in the game. LARP, especially boffer LARP, is considered one of the easy targets of nerddom. This is mainly due to the widespread popularity of the "Lightning bolt" video on YouTube , which features boffer combat in all its anarchic "foam weapons and spell packets" glory. Strangely, LARP makes an easier target among</ nerds than outside of geekdom. The occasional small-press article on LARPing is usually sympathetic, and Role Models</, while pointing out the inherent goofiness of LARP, still treats it as a great way for people to socialize and build confidence. On the other hand, the "Lightning bolt" video is usually circulated around message boards and geek-oriented blogs, often as a way of saying, "I may be a nerd, but </ ..." In several European countries, LARP is viewed in a different light. Especially in the Nordic countries, LARP is increasingly considered Serious Business , to the point where it is no longer considered an acronym, but represents an entirely independent concept, "larp" (similar to how "laser", "radar", and "modem" went from acronyms to proper nouns). This is not so much "nerds acting out D&D in a forest somewhere" anymore, but more serious historical/mythological reenactment (in the same way that 18th-19th century reenactment groups like Napoleonic Era, Wild West, Colonial America etc. tend to be taken more seriously). While your mileage may always vary, LARP is creeping into the realm of the mainstream. For example, there are more Danish kids participating in LARPs (often school or daycare related) than there are kids in football clubs and a popular is aired on Danish national television (and exported to Sweden) . (Denmark also has a LARP boarding school - see 'Examples' below.) The inter-nordic convention in particular strive to advance LARP as a medium in many ways, and serious academical papers on LARP is becoming an increasingly common phenomenon. In The New '10s , LARP is even becoming a subject of academic studies at the Nordic universities, with a large chunk of the contemporary role-playing theory penned there.

The laser blade is a melee Energy Weapon , with a cutting edge made of Pure Energy , giving it Absurd Cutting Power . It also

allows for a Clean Cut the way a regular sword does not. Despite their Absurd Cutting Power , sword fights between two Laser Blade wielders are still possible thanks to the fact that Like Cannot Cut Like . Generally a type of Impossibly Cool Weapon , they require a lot of Willing Suspension of Disbelief , but are generally awesome enough to be worth it Laser blades exist purely because of the Rule of Cool . Power Glows , therefore a weapon made</ out of glow must be really</ powerful. In real life, making such fancy swords is Awesome, but Impractical when Frickin' Laser Beams decide war , but then again, laser blade duels are frickin' awesome, and that's enough justification to be showed on-screen. Another possible in-universe justification in that the duelists are somehow Immune to Bullets , whether thanks to Deflector Shields , The Force or any other such Applied Phlebotinum , thus forcing the revival of old-school sword martial arts with laser blades Note that, although the most prolific Trope Codifier is the lightsaber , you'll almost never see the word "lightsaber" outside of that particular franchise for understandable legal reasons . Thus, such blades are given any variety of slightly less, but still awesome monikers, such as "beam saber", "energy sword", "plasma knife" and, for the paronomasiacs , "laser blade." The energy blade concept tends to be Older Than They Think ; Isaac Asimov used them as early as 1944, for " The Traders " Note also that the word "laser" is frequently used for fictitious energy weapons of all types, even in settings where the beams are created by Applied Phlebotinum and don't share the real-world etymology of the word. Yes, despite having a perfectly fictional sounding, sci-fi/fantasy ring to it, the word "laser" is actually an acronym, standing for adiation Despite being a sword made of energy, it's surprisingly rare to see one that can shoot a Sword Beam Sometimes, especially in video games, a laser blade may be mounted on a fighter ship. As established elsewhere , amnesia comes up a lot in TV. Amnesia is a funny thing in the real world and can give you lots of strange symptoms. In TV, it's very weird too, but it's much more specific. Amnesia has several basic attributes in TV land: With surgical precision, amnesia strips you of all information pertaining to personal identity , leaving just about everything else intact. TV Amnesia is a disorder where you forget where you put your keys, but you do notInterestingly, while this would seem to be Hollywood Science at first glance, this really is how retrograde amnesia works (well, some of the time). "Procedural memory", which governs skills that the brain has automated, appears to be separate from "declarative memory", where you store previous facts and events, and in many cases only one of the two is damaged. And then there's which may or may not be affected by amnesia. Very useful in maintaining that things are no big deal. To this end, it's pretty standard for The Men in Black to use this on anyone who's seen too much, often employing a Memory-Wiping Crew . Contrast Exposition Beam . Can cause an Amnesiac Hero to be born.

A character has been having a really bad day. They see a commercial advertising a service that can fix their troubles. The ad is

infomercial style, asking the viewer questions before presenting their product, and the questions are all specific to the character as if the ad was meant to be seen by them and no one else. The broadcast doesn't need to be an ad, so long as it seems aware of the viewer's identity or situation. Not to be confused with

While in Real Life there is rarely a direct and easily traced cause-and-effect relationship between Bob's actions and their subsequent reward or punishment, in fiction the connection is usually a lot more... express</. Did Bob help an old lady across the street? Several chapters later, she'll turn out to be an elite ex-commando who will gladly help him storm the Big Bad's castle. Did the Big Bad kick the little dog just because it was barking at him ? The dog will sniff him out and lead the heroes right to his Supervillain Lair . The Golden Rule states, Do unto others as you would have them do unto you</, but in fiction, the rule seems to be more, What you do unto others will be done unto you.</ If you mistreat the people and things around you, karma will strike you down. Treat them well, and you will be rewarded. Accordingly, every notable act of a fictional person will yield a meaningful return before the end of the story; every little action, good or bad, will be repaid in kind with the accuracy of a laser-guided missile. Whether its payload is sunshine and puppies (see Earn Your Happy Ending) or painful irony (also see Ironic Hell) depends on whether Bob was a saint or a bastard. Basically, this is interpreting the concept of Karma as literal Newtonian Equivalent Exchange . If taken too far, stories with this aesop can turn anvilicious or into a Space Whale Aesop : always be kind to strangers , never kick puppies et cetera</, or the universe itself</ will make your life a living hell. It also undermines the standard "do good for goodness' sake" lesson, since Bob never has to suffer for doing the right thing or accept virtue as its own reward — in Fictionland he always gets repaid. That being said, it's worth noting that the negative consequences tend to fall more directly than the positive; the villain's evil deeds turn out to be the ultimate cause of his downfall , while the hero's virtue rewards him with some much-needed assistance (but still leaves it up to him to save the day). On the good side of the karma coin: On the negative side of the karma coin: See also Pay Evil unto Evil , Sweet and Sour Grapes , and Sexual Karma , especially Karmic Rape . Contrast Karma Houdini and Karma Houdini Warranty . For karma punishing a hero for their mistakes, see Tragic Mistake . Also contrast with " No Good Deed Goes Unpunished ", which is a corrupt form of this trope; as well as Can't Get Away with Nuthin' , where the slightest misdeed committed by the hero</ results in Disproportionate Retribution . If the character is a jerkass and the karma isn't enough to make them learn, then it's a Karmic Butt-Monkey . When you help someone but receive punishment rather than reward, you might be looking at The Farmer and the Viper . See also: Hoist by His Own Petard , when a villain gets killed by their own weapon, or The Dog Bites Back , when they're killed by an abused lackey.

Since in Real Life , whether a bad thing that happened to someone had been karma or not is inherently controversial and subjective, No Real Life Examples, Please! This trope is by its nature Spoileriffic ;

The story's over. The Big Bad is defeated. The end of the world has been prevented. The heroes are victorious. BANG! From nowhere, a

bullet rips through one of the heroes, killing them almost instantly. It turns out that the villain, The Dragon , or possibly even a random mook , was Not Quite Dead . Having shot the hero, he then collapses on the floor, dead. The above is the most common form of this trope, but a) it does not necessarily have to be a bullet; b) the villain does not have to die immediately afterward; and c) the scenario may just have been added for the dramatic effect and the hero could pull through in the end (likely due to aid from a teammate). However, it is usually the last we ever see of the villain. This can also take the villainous form of a Taking You with Me depending on the circumstances. The Last Breath Bullet is probably one of the deadliest attacks in fiction. Mentors, love interests, rivals and heroes have all fallen to its power, no armor, Plot or otherwise can defend against it. When the villain does this, it can be a form of the Downer Ending , and a Diabolus ex Machina . However, it is also it is also possible for a dying character to save the hero's life this way or even defeat the big bad with their last shot, which may make it their Moment of Awesome . Occurs most frequently in action films. Can overlap with Taking You with Me , Last Ditch Move (in video games) and/or with Load-Bearing Boss . Compare with Last Villain Stand , Take a Moment to Catch Your Death , and Dead Man's Switch . As a Death Trope and Ending Trope , unmarked spoilers are abound.

In Unwanted Harem shows, the last girl to show or confess her feelings for the lead is the one with the best chance of winning him. </ Usually they will look like the least compatible couple in the beginning; she will only warm up to him later in the series. This law is especially likely to hold if the girl who will be last to confess is a Type A Tsundere . Note that it's the last confession</ that wins. This rule and First Girl Wins can hold at the same time, and it is entirely possible that everyone else will notice her love before she can admit it . Corollary: The girl who states her attraction to the lead from the get-go stands next-to-no chance of winning the guy.</ The reason for this is simple. The girl in question is the one whom the protagonist will love back after the confession, the other half of the Official Couple . Once the official couple is truly official, the premise for the Unwanted Harem show is gone. Thus, her confession will be the last for the same reason people always find lost items in the last place they look: after that, there's no longer any need to look. Be warned before you proceed: "Winning", in this sense, tends to be spoileriffic. Therefore, Ai Kora </ has Sakurako announce her love last. In fact, she doesn't confess until a little over halfway through the very last chapter of the series, even though Maeda had confessed his love (several times in one day!) in an earlier chapter.

A comedic storyline where the characters have been told that they have accidentally been poisoned, or have contracted a terminal illness, and only have one day left to live. The characters typically go around doing things they would never do otherwise: rob a store, insult some very tough-looking bikers, confess their feelings of true love to someone who doesn't reciprocate....and then they find out they aren't actually going to die after all. They are now screwed See also The Last Dance , Your Days Are Numbered , Like You Were Dying , and Mistaken for Dying . Compare The Moving Experience

When First Girl Wins is not in effect, the most likely love interest to win the heart of the protagonist at the end of a story is the last girl we meet in the series. </ In story with multiple love interests, it's usually the first potential love interest you see that wins the heart of the Unlucky Everydude . This is for a simple reason: she makes a strong impression this way, and we aren't blindsided. But there's another placement that makes sense and gives a girl a strong impression: if she's the last</ potential love interest, we see. This makes perfect sense if the series is focused on the main character seeking a long term relationship, since once he's found one he's going to stop looking. (Indeed, this trope is how most Real Life love stories end.) It is recommended that, if this rule is in effect, the entire Unwanted Harem appear in the first episode for the sake of the poor writers' health . A Third-Option Love Interest can</ win — even a girl who we meet near the end of the very last episode can win — but Die for Our Ship will inevitably descend upon her. That's okay for the series in question (since it's over), but it could cause problems for the sequel. Fans will invariably form their own preferences as to who the Official Couple should be, but the Last Girl winning will be better received if she's introduced early enough to get her own fan following, rather than if the writers are trying to convince everyone</ in the audience to abandon their initial preference in favor of her. If the last girl turns out to be the first girl, this is First Girl After All . Has nothing to do with the Final Girl (a horror trope concerning the last girl to survive</ the monster). , of course.

This girl is responsible for a guy in a Transparent Closet realizing he's gay, and inversely this could be a guy responsible for a closeted woman realizing she's a lesbian. The situation is usually that after their first kiss (or sexual encounter in some cases) he realizes that he doesn't feel the right kind of chemistry with her, and outs himself to her and breaks the relationship. Usually this requires that the ex profusely</ reassure them that " It's Not You, It's Me " and that they'll eventually find someone who will return their feelings. On the positive side, they may end up on the good end of Just Friends and have a high chance of becoming Amicable Exes This can be Played for Laughs or Drama with the girl fretting that she's a terrible romantic prospect , or such a shrew or so bad in bed she literally drove the guy into forsaking his heterosexuality . Can be played for extra laughs/tears by her having several boyfriends do this in a row</ , and then with Mom calling to ask whether she's "turned another guy gay" In the least conflictive examples, the guy will realize due to outside events rather than from their (lack of) chemistry. Sometimes it'll happen after</ they've broken up, which may or may not be a relief to the girl. In comedies, this can be a funny way of Cleaning Up Romantic Loose Ends In the case of a lesbian coming out to her boyfriend, a comedy will usually imply that the guy is so bad at sex or such a perverted pig (or both!) that she becomes a lesbian out of disgust This can of course be Truth in Television . Sub-trope to LGBT Awakening . This may be the outcome of a Bisexual Love Triangle . This trope is in a way the Inverse of Closet Key , rather than a lack of reaction from a heterosexual partner, it's a same-sex attraction leading to the epiphany. It's worth noting that some women may become Fag Hags who Settled for Gay because All the Good Men Are Gay

It finally happened. After all the Fanwank and Shipping , after all the denial , after all the Will They or Won't They? , after all the fighting (by either the couple or the fans), and after all the heartless teasing , devoted fans and viewers alike are at last rewarded with the two characters (usually the main character and his/her close friend of opposite gender) everyone knows and/or demands should inevitably get together , finally doing just that. Too bad it can't be enjoyed, what with the show ending in the next two seconds and all. Oftentimes the audience will only follow a series just to see if a specific couple will hook up. Actually hooking up the couple in the middle of the series runs the risk of True Love Is Boring and Shipping Bed Death . In many series, resolving the romantic situations of the main characters is a Series Goal , hence any attempt to break through and resolve the relationships before the Grand Finale results in Failure Is the Only Option . Status Quo Is God results in the characters' relationship stagnating for the duration of the series. With a Last Minute Hookup, even the most uncreative and hilariously unromantic of writers are enabled to enjoy all the benefits of rewarding incessant fans with an intimate relationship, without the hassle of actually having to do so. All they need to do is make sure the two have that one single kiss or exchange a single "I love you" at the very end, and it's all good. It's just that easy. This is also a way writers get rid of inconvenient romantic competition by having said competition suddenly fall for someone else . Though certainly not exclusive to them, the trope is especially frequent in premature crush -laden shows directed towards kids and tween audiences, where very few writers have the guts to take a jab at illustrating actual romance, but nonetheless, a vast majority still feel the overwhelming need to drop an innumerable amount of anything-but-subtle " hints " toward the prospect all throughout the series. For the few bold ones that do have the guts to at least give it a try, they are hampered by Media Watchdogs and the usually larger portion of the audience who, quite frankly, just aren't into that kind of stuff. While actually seeing the couple together and having a relationship would have been nice, there can be potential problems that arise from that, which this trope removes, such as the new couple not having the same chemistry now that they're together , their romance taking over the story , or the characters becoming Sickeningly Sweethearts . It may result in another ship being sunk , but that couple's shippers are spared having to see their rival ship together. This sometimes overlaps with Strangled by the Red String when it's done especially</ badly, but it can also serve as damage control for that trope, though there is a risk of any of these happening in unexpected sequels . See Hooked Up Afterwards for when this happens to side characters, and Maybe Ever After for when the hook up is hinted or implied rather than being certain. Contrast with New Old Flame . : Even though this is not an Audience Reaction , and is usually pretty straightforward, (i.e. the couple hooks up at the last minute), that examples can get subjective due to Ship-to-Ship Combat , Shipping Goggles , or just plain disagreements. What one person considers to be the couple getting together, another person may not. For example, the couple may have confessed their feelings for each other earlier, at which point part of the audience now considers them to have hooked up, but the couple doesn't have their First Kiss until the very end, (or vice versa) and the other part of the audience doesn't consider them officially together until then. This can also apply to couples that hook up earlier but break

up and don't get back together until the very end. Warning: This is an Ending Trope , so spoilers abound

Last-Minute Reprieve is a situation in which our brave hero is facing death on the gallows. Suddenly, a messenger or Courier gallops in to inform everyone he's been pardoned Just in Time The gallows can be replaced with a firing squad , an electric chair or lethal injection in modern settings. Similarly, the messenger on horseback can be replaced with a telephone call from the mayor, governor or other Reasonable Authority Figure Now a Discredited Trope that is subverted more often than not. Sub-Trope of The Pardon . Compare Acquitted Too Late . See also The Cavalry for other occasions when someone shows up to save our heroes in the nick of time

In many shows, the characters refer to each other by their given names , and the audience refers to these characters as such. We refer to the friends of Friends </ as Rachel, Phoebe, Joey, etc. This is usually the case in Dom Coms and other shows where many of the characters are related and therefore have the same last name. In other shows, usually based on a shared workplace, characters refer to each other by surnames only. Accordingly, since this is the way the character is canonically addressed, fans will refer to them by their surname as well, sometimes to the point of forgetting a character's given name entirely. (These characters are not referred to with titles , either.) At times the last-name basis becomes jarring. (This kind of situation may be used to set up a joke if the character has an embarrassing first name .) Characters on a last-name basis are much more likely to be male than female. Sometimes there's a Double Standard for this trope: the same show may refer to men by their last names and women by their first names. In a few of Dan Brown's books, regardless of how the characters address each other, the narrator mostly calls men by their last name, and women by their first name, including protagonists or co-protagonists. If only some characters in a work get this trope, it is frequently because they have a boring or common first name (like John), or an embarrassing or unusual one . Switching from last-name basis to First-Name Basis may indicate a Relationship Upgrade , platonic or otherwise. How much Truth in Television this is varies based on time period and cultures worldwide. Compare Full-Name Basis , They Call Me MISTER Tibbs! . Contrast Hey, You! and Terms of Endangerment . The X-Files </ could probably be considered the Trope Codifier , as that series took this trope to an extreme. Try thinking of a single character in that series who isn't referred to with either a descriptive title, or their last name.

A character who is a species unto themself, the Sole Survivor of some calamity that has wiped out their entire civilization . If this civilization used to be important in the power balance between civilizations that still remain, it's now considered missing This might mean that they're the last survivor of a particular society or secret order, but for full effect they are actually the last of an entire civilization, or even biological species Such a character is liable to manifest some profound Survivor Guilt , and the prospect of avenging their kind may develop into an obsession that acts as an Achilles' Heel . It will also provide an excuse for them to be substantially different (read: "better") in skill,

abilities, or morality than the rest of the characters. However, the writers still need to be careful as to how they construct this Survivor Guilt : owing to Angst Dissonance , even something as traumatic as this can still degenerate into Wangst if the character seems determined not to get over it and eventually move on, or if the character's pain is written in an unconvincing fashion Will often manifest qualities of the Warrior Poet or the Stranger in a Strange Land Since this kind of loneliness is the sort of thing that could easily drive you mad, evil versions are about as common as good ones, particularly of the Straw Nihilist strain. In general, being the last of one's kind is a polarizing experience: the only folks who tend to survive the death of their species are either the very best examples, or the very worst. The evil version will often carry a thematic notion that their very existence is an affront to the natural order, as they "ought" to have died with the rest of their kind, and it's rather rude of them to keep hanging on to life well past their time. Some really evil versions might even be responsible for the deaths of the rest of their race in a way (see Lobo below), as may The Atoner every once in a blue moon (see Tetrax, further below). Not-quite-as-evil versions may have survived because of some evil act such as cowardice, betraying their race to the enemy , being exiled for crimes, or morally questionable ways of prolonging their lives . In either case, if it was an engineered genocide, it just backfired . Or, the "last of his kind" character could be evil just because the "kind" itself is Always Chaotic Evil Very often, at least for the heroic sort, it will eventually be revealed that There Is Another It is fairly uncommon for such a character to be the</ lead character, even if they are an important member of the regular cast. Perhaps that level of isolation is just too much for the audience to really wrap their minds around — with most characters who are cut off from their own kind, there is at least the prospect</ of an eventual reunion. This character lacks even that</ prospect. However, a common Aesop (for the heroic ones at least) they learn is that, even if their race is gone, they aren't truly alone, having people with them who still love and care for them Compare Fling a Light into the Future , Humanity's Wake , Uniqueness Value , Genocide Survivor , and Living Relic . The Heel–Face Turn that never was If your villain is tragic , insane , infected with some kind of horrible, mutating, alien virus or otherwise not entirely responsible for his actions, and your hero isn't a complete meanie , then you might want to include the Last-Second Chance scene, in which the hero offers to help the villain put things right and/or cure his affliction. "It's not too late yet" is a common stock phrase Because viewers have come to expect that villains must</ die in the final act, this offer is usually turned down . It may be done tragically ("no, no, I can't go back now , not after what I've done"), selfishly ("why would I want to give up this power?"), or dramatically ("there's nothing left for me anymore..."), but it will almost certainly happen</. It may also happen after the innocent loved one of the villain is killed , giving him no reason to turn back and driving him into a despairing rage . Most frustrating perhaps is when the villain realizes that accepting what the hero says is the right thing to do... but he doesn't do it anyway This scene typically occurs just after the big climactic battle, so that the villain can have one last go at killing the hero before meeting a Karmic Death . Sometimes, however, it happens just before</ the big battle, so that the audience can relax and enjoy the fireworks without having their conscience harmed. This also serves to make them a Self-Disposing Villain , freeing the hero from much of the guilt associated with killing Should the villain actually accept the Last-Second Chance, it's usually curtains for them, since Redemption Equals Death , maybe even immediately . At best, they may get a Redemption Quest to go on in their attempt to become The Atoner . Still, this is nothing to sneeze at since they have essentially proved Redemption Earns Life May also occur with a Rival Turned Evil or a Fallen Hero . Different from the Kirk Summation in that there the hero is trying to browbeat the baddie into capitulating through moral rightness, whereas here the hero is trying to save</ the villain and offer help Compare Save the Villain and Redemption Rejection . Flip the speaking roles, and it's We Can Rule Together (if the villain is trying to convince the hero to join him) or Last Chance to Quit (if the villain just wants the hero to back off). In particularly poignant examples, one party can attempt to take the offer after all, only to learn that it's now Off the Table Incidentally, the trope name is sort of a phrasal portmanteau and can be interpreted both as "another chance offered at the last second" and "the final offer of a second chance" at the same time

If you were looking for the flash game, look under The Last Stand . For the Arnold Schwarzenegger movie, see here . </ The Siege has not killed you all, but the battle is over. Victory is impossible. Escape is impossible or futile . Surrender will not be accepted, or is dishonorable , or will lead to a Fate Worse than Death . The chance to cross the Line in the Sand has come and gone. The Cavalry might not be coming. There is only one thing to do: make them pay . In blood. Make them pay for every inch they take. For every drop of blood you shed — shed a gallon of theirs. No matter that they outnumber you so badly that you can kill a hundred of them and still be overwhelmed. Take as many of the bastards with you as you can. You can even hope that the casualties you inflict may aid others on your side when you are gone. Maybe. Even if no one will ever know . If the forces are in a place with good defences, Truth in Television . Vastly disproportionate forces may be needed to get at such forces in Real Life . It usually ends badly for the smaller force but can become a Pyrrhic Victory for the larger. Sometimes, The Cavalry or the Big Damn Heroes do</ show up. Sometimes, the enemy will run out of supplies, victuals, or ammunition, or decide a Pyrrhic Victory is not worth the effort, and leave the battlefield. Sometimes, the dogged opposition causes the enemy forces to decide to take an end-run around you. Sometimes, the news of newly-made peace will reach both the defenders and attackers and resolve the situation without a fight. In very rare cases, the defenders even manage to impress the attackers so much that they offer them extremely favorable terms of surrender that are not only perfectly acceptable but can be considered a victory. More usually though, this trope is a set-up for a Downer Ending , perhaps sweetened by one or two survivors Left for Dead , or sent away to Bring News Back of the loyalty, friendship , and unyielding honor of the doomed forces, leading to It Has Been an Honor — and the Dying Moment of Awesome . In rare cases, it ends with Kill 'Em All and a full-blown The Bad Guy Wins . Sometimes the villains</ are forced into a Last Villain Stand , in which case Villainous Valor is often invoked. Tip-offs when the character is wounded , or stays behind to allow others to escape , include: May overlap with You Shall Not Pass! , but in that case, the characters want to maximize the time</ they hold out. They will sacrifice the chance to slaughter more enemies if it would cost their lives when they could buy more time. When the characters make them pay in one grand swoop, it's the subtrope Taking You with Me . This can drag out a long time, as the characters send as many people as possible ahead of them. Individual characters (especially wounded ones) may introduce several Taking You with Me incidents. At least one Moment of Awesome is likely, even if the characters know each one to be a Pyrrhic Victory . From the enemy

standpoint, it is a Self-Destructive Charge . Compare Roaring Rampage of Revenge , which often expresses similar sentiments about those killed. On a larger scale, Hopeless War . Bolivian Army Ending often implies such a stand. In Its Hour of Need often leads to one. May also be related to Doomed Moral Victor . Stand Your Ground orders this. Characters who do this can also be considered Defiant to the End . Compare Do Not Go Gentle when it is individuals doing it. Compare And Contrast The Last Dance that is considered a one-on-one version of this trope. Contrast To Win Without Fighting . It has nothing to do with a person being the possessor of the final Stand

A Last Villain Stand is where the villain has lost his army (if he had one), his plan has been ruined, and he decides to fight the heroes on his own. Usually, he uses Applied Phlebotinum or a Plot Coupon to take on a One-Winged Angel form (or at least grow to giant size) and becomes more powerful than ever before Usually, this is a desperate play by the villain when he has nothing left to lose, has gone through a Villainous Breakdown , and all that he's driven by now is a mad thirst for revenge for the heroes thwarting his plans to rule the world , the universe , or whatever he was after. He may take things to such an extreme that he doesn't care what happens to him as long as he destroys the good guys. Also, he may be deluding himself with the thought that it's not all over and that he will win somehow and may even tell it to his enemies, even when it's impossible to see how the tide can turn now. It usually ends with the villain being destroyed and the heroes coming out alive There are some cases where this trope is inverted when the villain is a One-Man Army , his one man stand is not so desperate and he's still able to carry out his diabolical plans on his own. If this is the case, the villain is usually defeated when a miracle happens and the heroes gain the power needed to defeat him . This requires a certain amount of Villainous Valor , and if played correctly, it may shift the audience's sympathy a bit more toward him Unlike a Last Breath Bullet , the villain is still very much alive. However, this can still lead to Taking You with Me . Compare with Last Stand , where it's the heroes who are the ones making the desperate play. May be a form of Villainous Valour if the villain could easily escape but instead chooses to be noble and fight to the last. Contrast with Villain: Exit, Stage Left , where the villain flees instead of staying to fight to the end

Congratulations! After plenty of hype aversion and general laziness, you finally decided to check out that series everyone's talking about. You go to the store, buy the first season, set up your Blu-ray/DVD player, turn on the TV, crack open the case and... ... wait a minute. Isn't that a commercial for the latest season? Why is the first season's ruthless and merciless Big Bad being all friendly with the main protagonists? You mean he's going to turn good?! Feeling annoyed that a major event has just been spoiled for you? Irritated? Enraged? Too bad, because other fans, and apparently the advertisers, all agree it's your own fault for not being aware. A Late-Arrival Spoiler is when a particular revelation in a current work is spoiled by official sources and merchandise. This could be due to a number of factors, like the toy division making an action figure of one of the heroes post- Face–Heel Turn , or showing them off on the front cover . In any case, it all boils down to being spoiled because you started too late. Hence, it's a late-arrival spoiler. Sometimes, it is hard to avoid this in shows that feature

major changes in setting and cast line-up that hinge on major plot twists in previous seasons. For example, the Season 1 big bad is a major player on the good guys' side in Season 4. How exactly are you going to hide</ that in promos just for the sake of not spoiling the people who haven't watched Season 3 yet? Also a frequent problem in longrunners and multi-volumes where the story unfolds over a long period of time. This may also manifest when publication is not simultaneous across different places, usually between countries (for example, a movie is released at X day in the United States and X+Y day in Europe, or a comic book or animated series is not published or aired in a certain country until it's translated to the local language). Once the work is available to the public at the source country, all official sources and related business may consider that it's fair game to consider that the audience has already seen it, and proceed to sell the " Luke, I Am Your Father " T-shirts. If the spoiler in question is common knowledge to people in general, then it was his sled . See Popcultural Osmosis for cases when the reveal is included in modern and more popular works, such as adaptions or parodies. Compare Spoiled by the Merchandise , Trailers Always Spoil , Spoiler Cover and Spoiler Title , when the plot is spoiled before the fans even get their hands on the product. See also First-Episode Twist and Mid-Season Twist . Can often overlap with a Walking Spoiler , when a work is difficult to discuss in future installments without knowing any type of spoiler from the one before. For obvious reasons, all examples may contain spoilers for some people, as described.</

When a work from another country or region is released in that region, fans elsewhere are aware of it (usually through the internet) and, either due to an arduously long wait for localization, money/licensing, and/or simply laziness on the part of the creators/distributors, it takes several months or even years to reach other shores. However another reason for the long delay is due to local censorship laws that the content is having trouble navigating through. Since there almost always is some</ waiting time involved in an overseas release, examples are limited to when the process takes an abnormally long time and/or gets a significant portion of the fanbase annoyed, or even enraged, by the wait and/or importing directly from the country of origin instead. The wait may also cause a significant amount of Fan Disillusionment , especially if the unlucky portion of the fanbase gets exposed to too many Spoilers in the interim A general example of this occured in South Korea with Japanese media. Most of the anime and manga from 1980s and early 1990s would get its official release in South Korea after its historical ban on Japanese media was lifted in the late 1990s This is different from No Export for You , when the creators don't plan on releasing it overseas at all, and Bad Export for You , when a terrible localization of a work is released. However, cases of this may overlap. This can often go hand in hand with Remade for the Export . Sometimes characters or elements may end up appearing in a different body of work before their "proper debut" in their native series Contrast Short Run in Peru , where the work is released somewhere else before</ it debuts in its country of origin. Also compare the Denial of Digital Distribution variety where the digital release comes much later than the physical one

Sometimes it takes a long time for a character to get a joke. Missed in-jokes , Stealth Puns , and Parental Bonus can mean

someone gets the joke much later. Or perhaps the character is just slow of mind. At the time the character may not even realize it was a joke Truth in Television due to the fact that you probably didn't get every single joke you heard as a kid right away This trope is what happens when, several scenes, in-universe years, or even seasons</ after the original joke was told, the clueless character finally understands the joke and gives off a great big laugh about it. Irony makes this especially funny if the actual joke had to be repeatedly explained in the process of all this Compare Fridge Logic , Fridge Brilliance , Fridge Horror (those three for this trope as applied beyond the Fourth Wall), Brick Joke (where the punchline itself is late in arriving), No Sense of Humor , Comeback Tomorrow (when the character takes too long to think</ of a humorous line) and Lampshaded the Obscure Reference . The non-joke version falls under Delayed Reaction or Late to the Realization

In any form of comedy and/or drama, whether it be Eastern or Western, important characters will be painfully oblivious to the events that are occurring right in front of them. This is a thing that usually happens to main characters for plot pacing reasons, leaving it up to the rest of the cast to take note of the painfully obvious clues and figure out what's going on. Said support then inevitably tries to get the information to the protagonist with unsuccessful results When the main character eventually does</ find out what the others have been trying to tell him/her, one of the two outcomes will happen, depending on the situation: If in a comedy, the character will step back, stunned, and contemplate the news before properly freaking out. Subtrope of Idiot Hero , Too Dumb to Live , Late to the Punchline , Delayed "Oh, Crap!" and Genre Blindness . May involve some elements of Failure Is the Only Option , and might become a Running Gag if used on more than one occasion. For the romantic varieties of this, see Everyone Can See It ("It" being the fact that a couple is in love/attracted to each other, which is a known fact to everyone except the couple) and Oblivious to Love (where one person is oblivious to either someone else's affections, or the stirrings of their own heart.) If it becomes the entire character's mindset, it is destined to become Flanderization . Compare Remembered Too Late , where the crucial knowledge didn't even need to be pieced together, but merely recalled.

In fiction, full-head pullover latex or silicone masks can be made so perfectly that it is impossible to tell the wearer from the person he is impersonating until the moment he pulls off his face by grabbing an invisible seam at the back of his jaw. Sometimes the mask is pulled off by grabbing the top of the head. Even close acquaintances and family members will be fooled. Masks of this quality can completely alter the shape of the wearer's face and head, even to the point of making them thinner or smaller as needed, regardless of common sense or physical law. If you want to make out with someone while wearing one, don't worry—the person you're kissing will never notice your face feels like rubber rather than skin. Best of all for those who need them, masks of such exquisite detail can be made without resorting to casting the face of the target—a couple of small black-and-white photos will do just fine as a reference. Typically, a mask like this can even easily mimic the wearers' expression , making it easier to fool others. In animation, the wearer's eyes can sometimes change to match the eyes of who he is impersonating, or the mask may have molded on eyes that

seem to become real when the mask is worn. Regardless, the mask will almost always have eyelids that blink with the wearer's, something that is rare with such masks in real life. This is the number one tool of the Master of Disguise . It's not seen nearly as often in modern TV, but it still lurks about and surfaces every now and then The Darkman </ movies, for example, and the opening of the first Charlie's Angels (2000) </ film. Sometimes the unmasking is done in a rather dramatic manner . If a man disguises as a woman this way , the unmasking can often be seen as an Unsettling Gender Reveal . This trope can be nightmare fuel for some people, especially if it's accompanied by a graphic "peel-the-face-off" shot (and it often is) Woe to the who runs into a film using this trope (especially if they don't know it's coming) and gets treated to seeing an actor remove their face. If it's around Halloween , then this trope may come into play, as that's the time of year when people can be expected to wear rubber masks. Also expect to see this in parodies of the secret agent genre, particularly spoofs of Mission: Impossible </ (which gradually made this trope into a cliche), but sometimes in James Bond </ -styled spoofs as well (despite the films in that franchise not using it as often - see "Film" for their examples.) The exact polar opposite of Latex Perfection is the Paper-Thin Disguise . When it covers the entire body (i.e. a full rubber bodysuit), then it's a Full-Body Disguise . A usual technique is to use a different actor under the "mask" (Compare Magic Plastic Surgery for another method of "explaining" how one actor can suddenly perfectly resemble another) Remember, We Will Not Use Stage Makeup In The Future , and the latex mask will be subsumed by Applied Phlebotinum .

Villains can be many things... magnificent , horrific , self-obsessed , philosophical and even sympathetic ... but special attention goes to the villain that makes you laugh . It might be because they’re an idiot , it might be that you empathize with them , it might be because they’re quick with a quip , or it might be simply that their actions are so unexpected. In any case, some villains will always be funny Of course, funny does not always equal weak. Praise be to the villain who can cause a chuckle from the audience, right before viciously thwarting the hero's best efforts. In fact, if done correctly, the very things that make a villain qualify can make them downright disturbing once they begin crossing the Moral Event Horizon . Villain laughing at faking someone out with a gun with a "BANG!" flag coming out ? Funny. Same villain doing the exact same laugh when shooting them for real a few seconds later? Creepy.</ A truly well written one can manage to pull off both at once. See the trope picture for an excellent example of this subtype. Just because a character qualifies, it does not prevent them from being completely evil and there are many villains that manage to be both (again, see the page image). In these cases, what makes them funny also makes them very</

unsettling because of how much fun they have committing the most horrific acts possible Often overlaps with the Harmless Villain (Harmless Villains are inherently funny, but funny villains are not inherently harmless), Affably Evil , Faux Affably Evil (who are often funny), Love to Hate , the Ineffectual Sympathetic Villain and Magnificent Bastard . And with Large Ham (playing a villain seems to be very fun). It's also a prerequisite for the Bumbling Henchmen Duo , the Terrible Trio and the Quirky Miniboss Squad . Interestingly, this either subverts or complements Evil Has a Bad Sense of Humor , as does Too Funny to Be Evil , a closely related sister trope. Tends to be the sort who Crosses the Line Twice . See also Laugh with Me! and Beware the Silly Ones . A villain who is laughably evil need not have an Evil Laugh , though it can help. Alternatively, they may have an Un-Evil Laugh . A particularly Card-Carrying Villain with emphasis put on the comical aspects of their " Bad is Good and Good is Bad " morality can very easily turn into a Laughably Evil villain

Adventures of Sonic the Hedgehog </ :

A case where a person (often a comedian) will laugh at his own jokes. May be a sign that such characters are not as funny as they think they are . Sometimes involves Don't Explain the Joke , especially if no one else laughs There is a bit of real life stigma against this, but nowhere near as much as you'd expect compared to film or television. Laughing at one's own jokes in certain social situations is a good way of signalling that you're being friendly and jovial, but overdoing it can be irritating. Nevertheless, media will usually depict characters who laugh as a catch-all semiotic that they are meant to be taken as lame and unfunny If a villain does this, expect a Laugh with Me! moment. Sometimes a sign of The Bore . Might also be done in a case of Tough Room

Trauma and tragedy tend to follow characters like plagues, and they often break them down, turning them into insane, jaded shadows of their former selves. This can often happen in various ways, but the best way to tell if a character just can't take it anymore is if they just break down and start laughing for no reason at all, or for all the wrong reasons. Usually, when this happens, they will continue to sit there, laughing uncontrollably, as if in a trance, until someone breaks them out of it, sometimes by a slap in the face Expect the laughing character to either gain control of themselves and apologize for losing it (while still emotionally fragile , of course), or, alternatively, simply stop caring about life . This may lead to them becoming distant , or become more harsh than before More often extreme cases occur, causing a character to turn to complete madness, going into an insane asylum On the flip side, villains are also prone to this. It is often shown as being fundamentally different from an Evil Laugh , usually as them either laughing a lot longer than normal, having the laugh sound more deranged than cold and boastful, or a combination of the two. This is normally used if the writer wants to characterize the villain in a much more psychotic light and have a more frightening nature than normal. Expect it to also be used for a Villainous Breakdown in some cases Like Insane Equals Violent , this phenomenon is rare in real-life instances of severe mental illness. In fact, a common characteristic of

schizophrenia is the absence</ of laughter, or indeed of other indicators of emotion ("flatness of affect"). Of course, the Truth in Television here might come from Bipolar Disorder, where mania causes inappropriate laughter on a euphoric scale — or Schizoaffective Disorder, which is the two in a blender. Then there's the simple fact that inappropriate laughter can accompany intense grief, anger or other forms of distress, without actual mental illness needing to be involved — a related phenomenon is "hysterical laughter", where an intense bout of Inelegant Blubbering starts to resemble a laughing fit. Yet another related if rare phenomenon is Pseudobulbar Affect, which can cause laughter or sobbing at inappropriate times usually in response to stress — like Tourette's syndrome, this is not something the person can control; unlike Tourette's, it usually is the result of severe head trauma and not mental illness Not necessarily related to Evil Laugh , but definitely a type of Freak Out . Also see Put the "Laughter" in "Slaughter" for maniacs who engage in this regularly, and Giggling Villain for a constant if contained laugh. Sometimes overlaps into Die Laughing , especially if it is the result of a Villainous Breakdown . May be the cause of Ominous Adversarial Amusement . Compare Corpsing , involving laughter at inappropriate times (probably because repressing is maddening). Contrast Mirthless Laughter , which similarly involves someone bursting into laughter at an inappropriate/stressful situation but without the extreme of being driven insane

Giggling is also a sign of the character imagining themself doing things with their lover. For... less than stable characters , it shows their obsession with their love, and can overlap with Giggling Villain in extreme cases This trope tends to be common in romantic comedies This is Truth in Television (obviously)

Closed-captioning for the humor-impaired. In the early days of television, comedies were "traditionally" performed essentially as short plays in front of a live Studio Audience , broadcast live or with minimal editing (see Three Cameras). However, as television production grew more sophisticated in the late 1940s and early 1950s, there was at least a partial shift away from live performances to productions that were filmed movie-style, with a single camera and on a closed sound stage or on location. The latter gave the director more freedom in selecting shots and angles, as well as the luxury of multiple takes. However, there was no longer an audience to provide instant feedback on the humor. The general opinion of the audience held by television executives then (and some would argue now) was very low. There was serious concern that without an audience to "prompt" the home viewer's responses, a comedy would fall flat. The solution was the creation of the Laugh Track (also known as "canned laughter") — an artificial audience that did nothing but react uproariously to anything and everything. Naturally, within a few years of its introduction, it was abused and overused . Every</ punchline, no matter how lame or subtle, would receive the same tsunami of belly laughs from the virtual audience. It became epidemic, even intruding bizarrely into cartoons (The Flintstones </ and The Jetsons </, anyone?). By the 1960s, it had become an annoying intrusion, hated but (in the minds of most producers) mandatory. In the 1970s, however, most sitcoms began to switch away from the single-camera, movie-style format and back to the multi-camera format with a studio audience

providing real laughter, which producers found more pleasing because it had a better comic "rhythm" and helped them write better jokes. By the 1980s, the only hit that still regularly used a laugh track was M * A * S * H </ (which increasingly dispensed with the device toward the end of its run). And while the Turn of the Millennium saw a resurgence of single-camera comedies in the US, these were influenced by the new wave of British comedies of the 1990s, which omitted laugh tracks completely (leading to some Misplaced Nationalism). Some comedies resorted to the use of certain sound effects that served the same purpose, but as the focus of 2010s-era comedies shifted towards either dramatic or outrageous situations , laugh tracks have seen a decrease in use. They are sometimes Played for Horror in the Subverted Sitcom , though. Although it may not seem so, laugh tracks were surprisingly sophisticated systems at the height of their use. Rather than being just simple recordings of a laughing audience, they were actually carefully generated and mixed, with such discrete components as "the guy who gets the joke early" and "housewife giggles" and "the one who didn't get the joke but is laughing anyway" all precisely blended and reblended to create the illusion of a real audience responding to the show. Up until the late 1970's, these were all the work of one company, owned by Charley Douglass, which used a mysterious machine of his own invention to create those imaginary audiences for hundreds of shows. A history and analysis of the laugh track can be found on the web Cecil The term "laugh track" is often misapplied to shows that are filmed and later screened to an audience, whose responses are then recorded. This is inappropriate, though, because in these cases the laughter was a genuine response to the humor in the show, and was not pre-recorded... although it's not unheard of for supplemental canned laughter to be inserted afterwards. Sometimes the term is even applied to the existence of a Studio Audience . In fact, studio audience sitcoms tend to get accused of employing "laugh tracks" more </ than shows that actually do so, because a laugh track tends to be quieter and less noticeable than real live audience laughter. This situation led to many shows, such as Cheers </ to add a disclaimer either at the beginning or the end of a program: "(Program X) is filmed before a Live Studio Audience ". In some Latin American countries (Argentina, for example), the laugh track is replaced by a crew of off-screen people paid specifically to laugh on command</ whenever the comedic situation (presumably) merits a laugh; they are known as reidores; a senior laugher signals all the others when to laugh. In Mexico, the Chespirito programs, particularly El Chavo del ocho </ , had laugh tracks for most of their runs, but in later years this device was dropped, with a disclaimer proclaiming that it was done to respect the audience. Note that even the shows that record laughter live from an audience (or show pre-recorded material to an audience and record that laughter) will edit, alter, or even add to the laughter in some way, even if (as in most cases) it's just to cover the transition between takes/scenes, using the same techniques used to add true canned laughter. While some claim the reason for laugh tracks is Viewers Are Morons , in their defense laughing along with everyone else in a group is a very social phenomenon and watching TV can be a very solitary phenomenon. It's not polite to laugh at something that isn't funny, not everyone has a well defined sense of humor (and that doesn't mean they are a moron, either), so the cue can be helpful to some people. One other criticism of laughter tracks is that it creates an enforced No Fourth Wall scenario for every series that features one, continually reminding viewers that that are viewing a performance rather than allowing for immersion into the story and characters (see, for example, M * A * S

* H</). Laugh tracks and other uses of recorded laughter can have one interesting benefit in terms of pacing a show. Similar to theater, when the audience laughs, the actors will often pause for the joke to "land" and for the audience to calm back down before continuing. This pause is beneficial in some cases because it prevents dialogue or important details from being missed if the audience is still laughing. However, the dialog sounds very strange without the laugh track, as the actors must deliver a line then pause for about five to ten seconds for the next one. It also changes the type of dialog one writes; a laugh track forces short, brief, quip-laden dialog. Without a laugh track, more natural dialog and more complex jokes can get the space to breathe.

The Big Bad has the princess locked in his tower, the hero is in a death trap, and he is moments away from taking over the world. He is surrounded by his minions so it's the perfect time for a little Evil Gloating followed by a nice, hearty Evil Laugh . He belts one out but stops once he realizes he is the only one laughing. Where's his Contagious Laughter ? He will immediately let his Mooks know, probably through verbal means, that they need to join in. Getting the message, the henchmen start laughing and continue to do so until it's okay to stop Then, the villain might tell them to shut up after a few moments Sometimes the villain might even persuade the captured hero to join in the fun, to get everybody in the room laughing like idiots for no real reason. See also Actually Pretty Funny for when there actually is a reason to laugh This trope is typically Played for Laughs and is a parody of the Evil Laugh trope. Contrast the Everybody Laughs Ending , which may still seem contrived but isn't forced Compare Tension-Cutting Laughter , often used in a similar way; in that case, the other people are laughing out of genuine relief that the boss is amused, as it looked like he might go another way

When shipping , some fans have One True Pairing that they cannot bear to break (or several of those), but some have just a Launcher Of A Thousand Ships character. It's the character that goes with everything</, or, in this case, everyone. Actually, come to think of it, everything For example, if someone in the Harry Potter </ fandom says his Launcher is Snape, he will happily read Fanfics featuring the Snape/Harry ship as well as fanfics with Snape/Hermione, Snape/Lupin, Snape/Lily, or even exotic pairings such as Snape/ Legolas or Snape/ Megatron . Anything goes as long as the Launcher is included There is also a tendency for the entire fandom to consider a character a Launcher Of A Thousand Ships; notably, the Heroes not helped by the fact that Milo Ventimiglia, who plays Peter, and Hayden Panettiere, who plays Claire, dated for a while, spurring a) and even his own future self Also known as the "ship launcher", the "fandom bicycle" (everyone gets a ride), the "cargo container" (gets shipped to everyone), or the "little black dress" (looks good on anyone). The last shouldn't be confused with the Little Black Dress trope, which is Exactly What It Says on the Tin This usually has to do with Wish Fulfillment : either the character is a lusted-after character and everyone likes to pair them with whoever reminds them of themselves, or the character is relatable and the fans see them as some sort of Audience Surrogate and they are paired up with different characters that the fans lust after so they can project themselves onto this character. If there are enough of these in one work, it becomes a case of Gotta Ship

'Em All Common traits tend to include lack of a canon love interest (or, if they have one, the show delays resolving their romance as long as possible or downplays it in general), interaction with enough of the cast to form some kind of rapport, or just general popularity meaning that most people have some</ crazy idea of where they should go. It also tends to snowball easily ; if there's a lot of competing ships for this character, then suddenly more fringe pairings start to look a lot more reasonable The Trope Namer is Christopher Marlowe's version of the legend of Faust . In reference to Helen of Troy , Faust asks, "Is this the face that launched a thousand ships/And burnt the topless towers of Illium?" No relation to the Rachel Platten single "1,000 Ships" Also see and related to Fan-Preferred Couple

Laundromats are a convenient setting when the plot requires characters to meet and strike up a conversation . People don't generally like to leave their laundry unattended, so they have a couple hours of nothing to do but wait for the machines. They might as well pass the time by chatting with the person next to them on the bench. Romantic comedies often use this to set up a Meet Cute . It can also be played for the awkward, like an Uncomfortable Elevator Moment only stretched out to several minutes (on stage). Or it can be creepy : how is Alice to get out of this conversation without abandoning her laundry? The audience doesn't learn anything about the characters from the fact of their being in a laundromat, but by the same token, characters who meet there could plausibly be anyone</, from an Everyman type to a budding supervillain . Sometimes the writers play up characterization quirks in laundromat scenes, to compensate for the blandness. Or the characters might be down to their very last clean outfit</, making them look like a Rummage Sale Reject or even someone wearing Improvised Clothes . It's not uncommon for the characters to get a peek at each others' laundry, invoking tropes such as Black Bra and Panties .

A self-funded, self-supporting private agency which can act as a legal authority and law enforcement power, or as an official military outfit, even with minimal (if any) ties to actual government/military/police organizations. Agents can act as fully deputized and authorized agents of the law and/or government without bothering with official credentials, pesky background checks, and so forth. The strike force can consist of a One-Man Army (usually if they're the good guys) or an entire Red Shirt Army (usually if they're the bad guys). The agency might have its own rigorous training regimen or simply recruit former soldiers and policemen. There are no pesky "letter of the law" rules and procedures which apply to traditional agencies and seem designed to protect the guilty while punishing the innocent. The government might even sub-contract the agency to do all its dirty work. For an actual government agency version, see Heroes "R" Us . See also Private Military Contractors , which may overlap. There's also a good chance it could be part of a Mega-Corp or a N.G.O. . It also might employ Corporate Sponsored Superheroes . Such agencies must simply be the police in a society which has everything </ privatized (sometimes it's all owned by a single private entity), in which case it's just one arm of the larger group. May be connected to a Private Profit Prison , if they also own the prisons. This item is available from the Trope Co. catalog </

Sci-fi and fantasy writers often find themselves with the challenge of creating dozens, if not hundreds, of exotic-sounding names for their characters and locations. Perhaps it's just because they want something that sounds pleasing to their Anglophone audiences, or maybe they are unaware of how strange foreign names can sound even here on Earth, but in the end their countless alien species will have remarkably similar-sounding names, always adhering strictly to English phonology, or deviating from it in very minor ways. Television sci-fi writers seem to be fond of using a particular formula: The name may start with any consonant followed by any vowel. For an example, we'll start with "Ga". The next letter will be either an R or an L (sometimes both) either an M or N. Next up is another vowel, usually followed by R/L or M/N. An R or L may be followed or substituted with another consonant, usually something soft. This would give us something like "Galdin" or "Gamar." If it's a woman's name, a "feminine" (to Western ears) ending such as -a or -ia will usually be added, eg. "Galdina," "Gamaria." Names will sometimes end with T, D or K, although these are more common in the warrior race . They will commonly be given names with hard consonants and guttural sounds. Sounds such as K, Ch, T, Th, Z and sometimes X are favored - K especially as the last consonant, if not the last letter. R may also be used as a final letter, if only because it makes a good excuse for someone to make a hearty "ARRGH!" sound: "Well met, GormARRGH!" Writers are also fond of using the Pūnct'uatìon Sh'akër on warrior race names like salt on cheap French fries. Female members of the warrior race may be exempt from the harsher-sounding names carried by the men and given names that fit the former formula better: for example, Klingons such as Sirella, Larna and Mara. On the other hand, elves will virtually always have names and a language that sounds Tolkien-esque, full of soft sounds such as Th, Dh, D, L, R, M, N, and V. Doubled-up vowels are popular, and names often as not end with the letter L or N. Elven names are often on the long side, usually passing the seven-letter mark on a regular basis. Where a female character in a sci-fi show would be called Marin, an elven female would be named Marianael. Vowels are often doubled up to increase the exotic factor; usually A and U— Maara instead of boring old Mara. (A for nice aliens, U for mean ones. Bonus points if the name is some variant of Cruul/Kruul.) As a corollary, you can often tell a lot about a race just from the names of its members: the harshness of the species is often directly proportionate to the harshness of its language . You will probably never see a race of peaceful agrarians with names such as "Gorthog" or "Churgzak," nor will you ever see a race of bloody warriors with names like "Mathiella" or "Farlian". You can bet that someplace called "Jakrizag" isn't going to be a world of green meadows and fluffy bunnies. Someplace like that will have a pleasant-sounding name like "Elasolia". In some cases, even the same name</ will appear harsher in the transcription that an author adopts for the language of a harsher culture: despite being pronounced almost the same way. Mind you, most of the patterns described above do have limited factual underpinnings , in what is (somewhat dauntingly) called a by phoneticians. Unless the setting as a whole has some kind of Theme Naming (like all the villains in an arc are refrigeration equipment or musical instruments), aliens from Japanese media usually have repeated sounds in their names. It might be because Japanese onomatopoeia tend to be duplicated like that (they use them for a lot more things than sounds, e.g. "shibu-shibu" means "reluctantly"). Additionally, it's common to see the conflated

"R"/"L" phoneme utilized in Japanese alien names. Both of these ideas are meant to represent inhuman sounds that aren't normally found in the Japanese language. A Planet Named Zok is a Sub-Trope . So you've gotten on the boat and want to explore the world. Perhaps you even brought a world map with you, and want to see where you're going before you actually get there. It's usually only a world map</ for the following reason: every land mass fits nicely within the square, never crossing the edges on either axis. Since everything's placed in the center, the edges of the map serve one of two purposes: Seen in almost any video game that uses a world map where the player can freely travel. Fantasy World Maps also frequently obey the Law Of Cartographical Elegance. It should be noted that this trope can be blamed on actual maps of earth which also happened to be set up in such a way that the only land masses that actually cross over the edges are Antarctica and the Chukchi Peninsula. Of course, there is good reason for this since it'd be rather inconvenient to read a map that is cut in half but in any case, an acceptable break from reality . Subtrope of Video Game Geography .

Which colors are better depends on what you're doing. For instance, let's say that you want to make some really good toast. But all you have is a crappy plastic toaster with a handle that sticks down. You don't have enough money to buy a new toaster, so how do you get the perfect toast you want? Simple: paint the toaster red. The resulting toast will be three times better than normal toast. Red also makes every video game enemy three times stronger. The Red Shirt can be a case of some colors being worse: they go down</ faster . While red is one of the most common colors to receive this treatment, it isn't the only one. It's generally held that the rarest color in a work will be the "best" one. A guy dressed all in black will always</ defeat opponents clad in lesser colors. Gold is always</ better than silver (unless you're dealing with werewolves), and silver is always better than bronze. Since bronze and gold are sometimes the same color, it makes for a complicated hierarchy. Every detail given is important.</ We have 42 minutes. If we give a detail, it'd better be important . Oh, sure, we can set up a Red Herring or two, but we had better expect the viewer to attach importance to any detail we let loose in the plot. Shame on us, if we later expect the viewer to be surprised by the importance

of the detail we let slip. This is an Omnipresent Trope . There is a fine line between having good Worldbuilding and rambling on about pointless crap—conservation of detail is all about filtering out irrelevant information to highlight the actual plot or interesting aspects of the setting. It is rare for an author to devote thirty pages of description to a character's choice of clothing, unless those choices provide great insight into a character or are being used as a metaphor for the human condition. When a medium has less time to tell a complete story, conservation of detail tends to be particularly pronounced. A TV show (with 25 or 50 minutes to complete a story) spends less time on details than a movie, which in turn has to provide fewer details than a comic book, and so on. How come people on TV always find a parking spot right outside their destination? Why aren't people shown actually traveling between destinations? How can a couple plan a date without discussing pertinent details? Why do high school classes never seem to last more than three on-air minutes? When do the characters go to the bathroom ? This is why. Video games have their own version of this law, in that any detail in the game requires a significant investment of time and manpower to develop between art asset creation, writing, programming, and insertion into the game. Details of lesser importance get economized: One-off NPCs rarely ever get anything more than a generic sprite or character model , have only the most generic walking animations, and have no name . You can tell that a character will play some role in the plot if they have an unusually complex character model or a unique headshot next to their dialog. Plotwise, this serves to separate Round and Flat Characters . Since artists create video game worlds from scratch, scenery also obeys the law. Suppose that they set a level in a supermarket; a real supermarket stocks thousands</ of individual products in hundreds</ of different brands, each and every one with different label designs, and the time it would take to design (or license) all that packaging and trademarks could easily add up to several games' worth of development cycles. So they use a handful of designs over and over. And it works to their favor: We accept less detail because it is not central to the game. This trope has probably caused more Epileptic Trees than every other trope combined, Dying Dream not withstanding, as people expect</ things to have a reason. Conversely, issues that are not fully explored due to the constraints of this trope often make for good Deconstruction material later on. Sometimes we see the payoff for a detail later, but we are still not done with it: it will prove to be important in a different way later still: the writers have used Chekhov's Boomerang . The predominant use of Chekhov's Boomerang is to let the writers surprise you. Any time a critic or a fan refers to something as "gratuitous", whether that be an obvious narrative tangent, a scene of extended violence, a sex scene, a comic relief scene, an extended bout of Scenery Porn , etc., they are invoking this trope. However, in this context it is very subjective: one viewer's porn is another viewer's necessary character development; one viewer's "boring five-minute long tracking shot of a beautiful mountain range" is another viewer's "this is not a movie, it's art." For the drawing equivalent of this trope, see Rule of Animation Conservation . For the nonhuman equivalent, see Rule of Personification Conservation . When writers deliberately take advantage of this trope to overwhelm and confuse audiences, see The Walrus Was Paul . When a work flouts this trope and contains lots of little asides that are not necessary, that is Narrative Filigree . This trope is responsible for One Degree of Separation , Always on Duty , Everyone Is Related , Nameless Narrative , Nominal Importance

, and sometimes What Happened to the Mouse? . When an adaptation removes explanatory details to save time or attention, see Adaptation Explanation Extrication . When the creators of an interactive work account for an absurd amount of obscure variations or things the player might do in a detailed way, that is Developers' Foresight . When the characters are exactly where they need to be, when they need to be, in order to move the story forward, it's a collaboration between Conservation of Detail and the Anthropic Principle . Combine this with Rule of Symbolism , and you get Everyone Is Jesus in Purgatory . See also Chekhov's Gun , Chekhov's Gunman , Uniqueness Value , and Inevitably Broken Rule .

Freed from the strictures of anything resembling 'volumes' or 'episodes', many webcomic authors enjoy writing 'big' plots. Big, sprawling, possibly-never-ending Kudzu Plots that spawn two new plot points for every one resolved, and leave the characters changed forever! There's no need for Snap Back when any new readers can just read the archives to get up to date! On the other hand, many of the same authors enjoy having characters they can identify with . And they like having a setting close enough to the modern day that they can reference current events. These things can be problematic when any given arc has enough mad, grotesque or visionary events to render the cast insane and the world unrecognizable. The solution? Everything is mutable, except</ for the vicissitudes of life that everybody seems to face. For example: Imagine a David R. Rand. He's a normal guy, he works at a 7-11 and goes to college. One day, The Devil steals his soul! Furious, David astrally projects himself into the body of a Fungus from Yuggoth and battles the Devil in a devastating fight that levels Denver. Defeated, the Devil spitefully cracks open the gates of hell, releasing a plague of flesh-devouring ghouls, and retreats. The next day, David is still a tentacled alien, and Denver is still levelled, and the Devil is still at large — but Dave still</ has to drag himself across those ghoul-haunted streets to the 7-11 or there will be hell</ to pay. And has he really considered what his girlfriend is going to think of his new appearance? Similar to Reed Richards Is Useless , but sillier, and goes beyond socio-economic issues. This is the standard method of keeping World of Weirdness from becoming totally</ incomprehensible Compare Weirdness Censor . Contrast Superman Stays Out of Gotham .

Bakemonogatari </ lives and breathes this trope. In fact, some episodes focus so heavily on the mundane aspects of Koyomi and Senjogahara's lives and relationship that it's possible to forget that he's an ex-vampire and she was once rendered weightless by a crab god.

Spider-Man invented this, pioneering the idea of a main character who was also an Ordinary High-School Student . The most obvious example is how he still has to work for a living despite being able to whip up a multi-purpose, industrial-strength adhesive in his basement College Roomies from Hell!!! </ is the king of this trope. Cthulhu arises, science runs amok, supernatural armies amass for the end of all things, characters mutate and die and rise again… and not once does it give them a break in their romantic and familial hangups. Usually the reverse In the Paradise </ setting, this happens in stories set in 2009 and beyond, when the masquerade has been broken and the fact that humans have been changing into potentially gender-switched Funny Animals (though normals could not see the change) is known to the world. One of the later stories in the setting, "Family Tree", involves a family

holiday get-together after the Change has become widely known. Most of the family has Changed, and the last holdout's impending Change (and the possibility of it involving gender bending) is treated as a perfectly ordinary matter

Garfield complains about this in an episode of Garfield and Friends </ where he prevents an alien invasion of Earth (again) . Despite having prevented the enslavement of humanity, no one saw him so Garfield has to simply resume his normal life with no reward.

Fundament of television comedy: Characters will not bat an eyelash at the absurdities of their daily life, but a relatively small slight or obstacle will completely unhinge them.</ Now, this might be because they live their lives so close to the edge that it only takes a small thing to break the camel's back, but it seems more likely that the writers just can't be expected to consistently come up with problems of the week which really compare to the absurdities they've written into the premise. Perhaps all the weird, outlandish, improbable dilemmas that occur every episode have just become routine by now as a result of living through them, but the more humdrum dilemmas only crop up when a specific subplot needs them, and thus seem more of a break from the norm, and thus cause for panic or irritation. Small things for our characters to get bent out of shape about include: Sometimes leads to an Escalating War . Other times, it's the Pretext for War for two trigger happy nations. Perhaps not actually more common with teenage characters, but less obtrusive, since we expect teenagers to act like that anyway. The Law of Disproportionate Response may be a subset of Finagle's Law . See also Rant-Inducing Slight . Can go hand-in-hand with Berserk Button , where the cause is specific and predictable (even if the response is no less unreasonable). Occasionally goes the other way, with a Disproportionate Reward for small favors. May result in No Sympathy . Compare Felony Misdemeanor . Not to be confused with Disproportionate Retribution , where the perceived slight may actually be legitimate, but the response is still way over the top.

The fertility of a couple is inversely proportional to their desire to have a child.</ The Rule of Drama , as applied to parenthood. Couples who want to have children will have trouble not only conceiving, but adopting and using surrogates as well. People who don't want children, however, will be faced with unwanted pregnancies even if they used birth control , particularly if the conception was forced upon them . In fact, the page image leaves out rape, which is about 200% (that's right, you'll probably have twins). Teenagers, of course, will get pregnant their first time , double points if they thought they couldn't . The reason for this, of course, is obvious: "woman becomes pregnant with longed-for child immediately" and "woman doesn't want to get pregnant and doesn't" don't exactly make the most thrilling plotlines . At least the woman with a baby she doesn't want can give it up to the woman who is desperate to conceive—but, expect much angst along the way. If it's the man</ who was reliably told he was infertile, expect Mama's Baby, Papa's Maybe to rear its head; to maximize the drama, usually the woman knows he's the father. In many cases the stress of trying to have a baby will suppress fertility, and, once the couple decides to adopt or give up, the stress disappears, and: hooplah! They have a baby! Sometimes it's after</ they went through the hassle of adopting, as if Mother Nature

felt humorous one day . Conversely, if an unexpectedly expecting woman starts warming up to the idea of being a mother, her chances of a Convenient Miscarriage or Tragic Stillbirth double. Or it'll turn out that she was never pregnant in the first place. This particular trick is common on shows where Status Quo Is God and having a baby would spoil everything; whether the former or latter version is used depends on how much drama the writers wish to evoke. Even that much is assuming they let things get that far; some kind of pre-existing condition getting in the way of conception can be milked for Angst as much as they want. If, against the odds, a couple who genuinely want a baby manage to get pregnant without complications, don't expect both parents to live to see it. One limited case where a woman who wants to get pregnant can do so — after one night, even — is if she is sneaking into the man's bed with a Bed Trick because she is his wife. This may be because the man does not want her to become pregnant; it is often the condition he set on accepting her as his wife. This trope is very old; involuntary infertility is found in the opening of a number of Fairy Tales before the birth of the main character, and just about required for the Wonder Child . Note that this law gets revoked during the Dénouement for Babies Ever After . In The Bible , the fertility of the couple is inversely proportionate to the eventual significance of the child to God's Big Plan. Compare Law of Inverse Paternity and One-Night-Stand Pregnancy . Distinct from (though an accurate statement of) the Immortal Procreation Clause .

Or, to put it in plainer terms: If it is strongly hoped that a given character is the biological father of a character of unknown paternity, he probably won't be. If it is strongly hoped that a given character</ the biological father of a character of unknown paternity, he even more probably will be.</ A Sub-trope of Who's Your Daddy? , although it may also be coupled with Law of Inverse Fertility if it comes into play early enough. Owes its existence to the Rule of Drama , much like many other tropes. So, Alice is pregnant and caught in the horns of her Triang Relations —she doesn't know who the father is. So, after sufficient tension has been built up, she discovers that her baby's dad is not Bob (her and the fans' one true love) but Charles, the hypotenuse—her worst nightmare. The law applies to the men too: Bob will hope he's the father before anyone knows for sure and be disappointed when the truth is known, while Charles will have much stronger misgivings than Bob (often treated sympathetically) about taking on the responsibilities of fatherhood. In Nana must be the father, so she ends up with him.

This came into play in Snow Dogs </ (starring Cuba Gooding, Jr.). Our protagonist goes to Alaska to find his real father. He develops mutual hate at first sight with an old and mean dogsledder. Unfortunately, circumstantial evidence suggests that this fella is his father, for various reasons, including a shortage of plausible choices and a mutual liking for blue cheese. And it turns out to be true.

In Juliet Marillier's Son of the Shadows</ , Eamonn tries to pull this, telling Bran (who has trust issues) that Liadan's son might be his. However as the audience knows, Liadan never had sex with Eamonn, and by this point Bran is learning to trust more, and Eamonn's ploy does not work.

The recoil of a real-life projectile weapon on television is inversely related to the recoil it has in real life.</ Firearms depicted in films and television seldom (if ever) demonstrate realistic recoil action (ironically, it is usually more realistic in comedies or when used for comedic effect, e.g., the weapon smacking the shooter in the face or flying out of their hand as they lose their grip). The practical reason for this is because blank-firing prop guns have no projectile, meaning very little mass is pushed out of the barrel, hence minimal recoil (Newton's third law) — it is not true that they have none, however, or they would not even be able to cycle their own action. No matter what type of small arms are used in fiction — even fully automatic, high-caliber ordnance and heavy-gauge shotguns — the shooter will not so much as flinch. This often leads to surprises for first-time shooters who expect that the 10-gauge shotgun or .454 Casull revolver they rented at the range will have no discernible "kick", when both actually sport recoil powerful enough to bruise the shoulder or sprain the wrist — possibly even fly back and smack the unprepared shooter in the face. Naturally, this makes Guns Akimbo with automatic weapons wholly impractical in real life (of course, never stopped anyone in pursuit of cool). On the flip side, real</ shoulder-fired rocket launchers have very little to no recoil: they are open at the back and make use of Newton's third law of motion, which states that for every action, there is an equal and opposite reaction (rocket power relies on this law of physics), imparting no momentum ("recoil") on the shooter (sometimes, it is augmented with counterbalancing weighted objects expelled backwards). There is some</ recoil, originating from either friction between projectile and tube, compressed-air expulsion system, or anything else needed to throw several pounds several feet forward. In fact, they're alternatively called recoilless rifles for this lack of recoil . Grenade launchers, meanwhile, use the same propulsion method as normal firearms, yet their much larger mass is accompanied by much lower speed, giving recoil similar to a regular rifle or shotgun. Yet, when used by a fictitious character, both of these somehow pack enough force to violently push back the wielder. Presumably, this is due to the erroneous belief that anything that destructive has</ to have a powerful kick. See Missing Backblast and Blown Across the Room for related misconceptions . The trick to this trope is finding any film or TV show that doesn't</ do this. Subversions are much more common outside of live action simply because there are no actors around forgetting to simulate recoil as they fire blanks. Many films also opt to add muzzle flashes in digitally, which can invoke this trope

as guns can now be depicted firing when they were never originally intended to during filming. Video games tend to be more realistic in regards to firearms, but explosive "launching" weapons still pack monstrously unrealistic recoil (on the other hand, player characters tend to not be blown to smithereens for using such weapons indoors or with their back to a wall, something suicidal with most recoilless weapons). In some video games, you can even use recoil for extra propulsion . Interestingly, this trope does make slightly more sense when combined</ with Missing Backblast . If all that pressurized gas isn't coming out the back of the weapon to create backblast, then as per Newton's Third Law it's going to create a hell of a lot of recoil. Fridge Brilliance ? High-velocity Magnetic Weapons are going to have significantly less recoil for their size (as kinetic energy scales to the square of velocity but momentum and thus recoil only scales linearly), but any sufficiently powerful or rapid firing weapons would go back to this trope. The other side of Blown Across the Room . See also Steel Ear Drums for another ignored part of guns being fired. Since the trope is so prevalent , it's only worth listing exceptions :

The bigger the problem, the easier to overcome</ This is a mechanic deeply rooted into both the minds of the audience and the writers, and thus, is a common and accepted narrative device. As problems and obstacles pile up on a character, there comes a point when the problems can be summed up as a singular problem requiring a singular solution For example, if the hero is faced with one enemy, it might be difficult. If two enemies, it might be even harder. If ten... the enemies are no longer individuals, but one group </ ... and one is clearly a smaller number than ten, requiring only some clever trick or strategy to best This is the reason why a hero might be crushed by one or two rocks, but will be able to bust out from underneath one pile</ of rocks It is also the reason why the bad guy can defeat the entire police force or army, because it's just that: one</ police force. One</ army Likewise, it explains why the One-Man Army has their power...and is central to the Law Of Conservation of Ninjutsu , and potentially A Million Is a Statistic As the entire world turns against the hero and everything imaginable goes bad, suspicions mount in the reader's mind that they have a trick up their sleeve that can bring everything back to normal Compare Wake Up, Go to School, Save the World , which suggests that for Kid Heroes defeating the forces of evil is considerably easier than getting their homework done on time and asking people out on dates Truth in Television , too: as a person becomes troubled with more and more difficulty, they tend to take a step backward to look at all the problems as a whole and to devise a strategy to deal with them

One hundred is the magic number because the counters for these items usually contain only two digits. Most of the time, the extra lives from these items are either too frequent to be meaningfully valuable or too infrequent to be meaningfully beneficial . The real reason for these items is that placing long trails of them throughout the levels motivates the player to progress onward, and the crisp 'collecting' sounds and the increasing counter gives a

Sometimes people want revenge on someone or to cheat in a contest. One thing they do is put laxatives in their drink or food. Why laxatives? Because ideally one of two things will happen: They will suffer a Potty Emergency and forfeit the contest/run away to use the bathroom. In fiction this is normally Played for Comedy , but occasionally it is Deconstructed to emphasize the dangerous dehydration element of it. A frequent variation is using something that induces vomiting rather than defecation. Do Not Try This at Home . Seriously, don't </. This is illegal and incredibly risky in real life ; even over-the-counter laxatives are by definition a type of medicine, and misapplication of medicine can have severe consequences (and a "prank" is absolutely</ misapplication). The victim could end up seriously ill, hospitalized or worse. Dehydration is also not the only risk: the person could be allergic to the laxative or its inert ingredients (particularly soy, an extremely</ common allergen that is often used as a binder) or could even suffer a ruptured appendix or internal bleeding. The induced vomiting variant can cause internal bleeding, and is actually far more likely to do so than a laxative. Consequently, administering even such a seemingly-trivial pharmaceutical drug to someone without their knowledge is classified as a serious criminal offense in many jurisdictions—the perpetrator of the prank could face serious criminal charges—and in most jurisdictions this act would also constitute civil battery, or at least gross negligence (or the local equivalent), opening up the possibility that the victim could sue for

damages (including, in many places, punitive damages). This could also fall under laws that criminalize adulterating or tampering with food. There is also a variation involving over the counter eyedrops that ostensibly have the same effect. This is even more dangerous as ingestion of the active ingredient in the drops can cause a range of dangerous symptoms up to and including sending the victim into a coma,</ with diarrhea being the least</ likely symptom. A subtrope of Tampering with Food and Drink . Compare Slipping a Mickey , which is basically this trope but with drugs, and Medication Tampering , which is basically this trope but switching drugs with other</ drugs, and Revenge Is a Dish Best Served , which is putting other gross stuff in food. With certain magical rituals, you can move down into deeper layers... but there are things </ down there you might not wanna meet. In a Layered World , several dimensions coexist in space and time. When you move onto deeper layers, you are usually capable of limited perception and interaction with the normal world but never vice versa, though magical sight may allow you to look down a layer or two. Also, each new layer often features slightly different laws of physics: you can gain the ability to walk through material walls, a speed boost , and even new powers, though these usually come at a price . Also, events in one world have an effect on attuned events in the other a la Synchronization or Fisher Kingdom . An attempt by a specialist to make incomprehensible technobabble or other jargon comprehensible to the other characters. Usually this results in an explanation that's either insultingly vague or just as incomprehensible as the original. This often occurs as the result of another character saying something like, "In English, please?" The term originally meant someone not a member of the clergy or the bar (i.e. a "layman"), because those professions actually do</ use terms people outside wouldn't understand, either because they're obscure words that only exist in that context, or because even common words in legalese can have very specific meanings and connotations not found in general English. Oh, and they use a fair bit of Latin, confusing the laymen even more. In cases of Technology Marches On or an improper assumption of Viewers Are Morons , this can lead to a reasonable explanation followed by an inane, overly simplified explanation of a concept that was already understood on the first try. Depending upon the setting, it may also lead the audience to assume different things about characters that ought to know better:

Many shows have some form of structure to their seasons, rather than just being collections of stories. This article mostly assumes that the series in question are US full-length series of around 20-26 episodes with some to low Season Fluidity . Even in cases of British Brevity , the season opening and closing episodes will tend to be similar in style to those in the US, regardless of the season's length.

This will often be big and spectacular, to lure viewers back to the show. It is not uncommon for new characters to be introduced to the show or for major plot changes to take place. See also Premiere and Pilot . It is also one of the most likely places to find a double length episode (and even when the first two episodes are both normal length, it's not at all uncommon for networks to show them back to back).

Some series only have the first 13 episodes of the first season commissioned, with the promise of more if it is successful . For this reason, the writers will work out a 13-episode arc plot so that if the series is not renewed, it will still have a satisfying ending. If it is</ renewed then they need only rewrite the final script or so to introduce another threat or more plot threads.

Episodes 15-16 of a season tend to fall around the time of (February) Sweeps , so networks will have big spectacular episodes to attract viewers. Plot shifts are not uncommon here, as these are the early installments of the " Back 9 " extension.

Again, big and spectacular, usually tying up all of that season'sed
emotional and plot arcs, although an end of season Cliffhanger ed
is possible. There may well be character departures by various ed
different means. In cases where the season finale is made prior ed
to the decision on whether or not to renew the show being made, ed
expect a finale that ties off most major plot threads, but leavesed
enough dangling to make it easy to carry on if the show is renew ed
If this is a two-season drama - even if the seasons are of ed
irregular length - prepare to be burn ed

This trope is about lazily feminized male names or lazily masculinized female names. It's often done in haste or in jest. This trope is focused on the resulting names which are unusual, atypical or downright made up It might happen that parents expecting a baby are for some reason convinced it'll be a boy,

and they plan to name him after their father, grandfather, or other male relative. Or they simply like the sound or meaning of the male name they chose. But when the kid is born, it's obvious that this specific name isn't quite suitable... because the kid is a girl. Fast forward ten or so years, and little Jamesina is telling people that she was named after her uncle. The parents rightly feel that giving a girl some obviously male name is ridiculous, but they really like</ the name, so they just add a vaguely feminine-sounding suffix. If it's the other way around, they can just cut the female suffix and change it to the male variant, like swapping Emily to Emil, or Emilia to Emilio Another typical use is by pet owners whose animals were previously thought to be males or females . When the animals grow older and mature, their owners realize their cute kitty cat is actually a tomcat, or that their little rooster starts laying eggs. But the pet is already associated with their name and it suits</ them, so they choose something that is very close, even if it sounds rather absurd Sobriquet Sex Switch involves transgender , changed sex , or characters disguised as the opposite sex who go by a name derived from their old one. Examples like Albert and Alberta or "Freddie" (for both Frederic and</ Frederica) go on that page. Some stranger examples with the lazy aspect cranked up belong here (for example, Bob changing his name to Bobiana is an example of this trope, too). It can be related to Sue Donym — mainly in situations when a character tries to think of a gender-flipped variant of their name on the spot This might serve for characterization: lack of imagination or creativity, or just being stubborn and hating to admit the characters were wrong about something. Often done intentionally by characters for the lolz. The trope is almost always Played for Laughs Feminine suffixes good for this trope are - a</, -ana</, -ina</, -iana</, -ine</, -''ella'', -''arella'' , - ette</, -iette</, -etta</ or -ietta</. For Japanese names, -ko</ is quite common (meaning "child"), but occasionally -mi</ (meaning "beauty") may also come up. Suffixes for masculine names are not as numerous, but -o</, -eo</ -io</, -ino</, -iano</ or -us</ are sometimes used because many names of Latinate origin end in -o</ Gender-Blender Name is for names thought predominantly as male or female names which are used for the opposite gender. Bob wants to get involved in something that he has never done before, but he doesn't want anybody to know it is him. His name is easy to recognize, so he signs up under a different name. The name he uses? Fakename McPicklemeister There are many ways for an alias to fall under this trope. It could just be the character's real name spelled differently or backwards . It could just be the name of somebody they know. Or, if the character is really lazy, their alias could just be their real name . Sometimes, the name gives away the nature of the subterfuge , making the pseudonym pointless. The name could also be just too silly or unusual to be a real name . No matter how lazy and/or obvious the name is to the audience, their fake name still manages to fool the most of the other characters in-universe. Maybe it works because they don't actually make a physical appearance, or maybe their alias includes a disguise to conceal who they are These aliases are often used in Prank Calls . Typically the recipient of the call figures out the name is fake, but can't trace it to a person due to only hearing

them It also likely works because they presenting themselves to people who don't know them personally. If such is the case, expect the whole thing to fall apart when somebody who does know them and hears the alias shows up and reveals who they really are , either because their alias sounds like only something they would come up with or they saw them stand up when the alias was called Not the same as Paper-Thin Disguise , though the two can occur at the same time. Compare and contrast Atrocious Alias , when a character chooses an embarrassing name for their secret identity. The character who chooses such a name may be a Giver of Lame Names

Many graphical tropes are simplifications, used to make the scene easier to draw. Books are always open in the middle, bite marks are smooth, and so on Replace "lazy" with "low-budget," "time-limited," or "unskilled" as appropriate A Sub-Trope of Limited Animation , specifically the sub-type that makes the format so infamous

Hey, Alice , have you ever noticed how sometimes a character will talk to another character about something that sounds like it's really about the show they're in, but it makes perfect sense in context? Yeah! Usually it sounds strained because it's hard to make this kind of dialogue sound completely natural. But if they can pull it off, it's usually good for a bit of comedy. This might be related to Lampshade Hanging , This Is the Part Where... , Conversational Troping or any other trope with Fourth Wall in its name. You mean like Fourth Wall Psych ? What about Aside Glance ? The inverse would be This Is Reality . Common subtropes are Diegetic Soundtrack Usage and Who Would Want to Watch Us? ... wait, why are we talking like this ? Who Writes This Crap?!

The twenty-ninth day of February comes only once every four years . People born on this day are known as "leapers" or "leaplings." This can be a hassle if said character wants to celebrate their birthday every year. One way to do this is to celebrate it on February 28 (since they were not born in March) or March 1 so technically they'd still 'age' normally. This is what legal jurisdictions will do for the purposes of determining when someone reaches the age of majority, though whether it's the day before or after depends: the UK and Hong Kong consider March 1 as the day for leapers, while New Zealand and Taiwan use February 28. February 29 is also known as Bachelor's Day, the day on which, by tradition, women were allowed to propose marriage to a man in Ireland. It was also chosen as the day for rare diseases awareness.

This is when a character learns some important and personal information about themselves or their circumstances from a public source such as a newspaper or News Broadcast . It is usually not a pleasant experience for the character, which is why, in Real Life , responsible government agencies try to contact and inform people of very bad news (such as the death of a relative) directly before releasing the news to the press Usually, this will also shock the subject's friends or relatives who also learn from the news. Sometimes, however, they may learn from the news before the subject does and may try hiding it (whether the news itself, or the broadcast) from said subject , either for good or ill reasons See also Coincidental Broadcast . While a Coincidental Broadcast is about the characters learning information important to advancing

the plot in general, this trope deals with someone getting news of a personal nature from the news media. Dangerous examples may overlap with Endangering News Broadcast

When a writer wants to acknowledge that some foreigner or alien would not speak English, rather than just having Aliens Speaking English or not having the sort of setting with Translator Microbes , they'll have the character pick up the language from, of all things, TV and radio transmissions Often this gets done too quickly to be realistic with Instant Expert maybe used to indicate a super-intellect but depending on the medium, it may fare better depending on how much TV/radio/books the character has watched/heard/read. Part of the importance of the historical Rosetta Stone was that it provided a way to connect Egyptian hieroglyphics to languages we already could translate and provided a starting point. Generally any other first encounter would have to start with the basics (e.g. the "rock" and "tree" scene in The Iron Giant </) so probably radio and books aren't that useful but television, with an audio-visual combination, could perhaps provide enough reference points. There are many foreign students who learned their most basic English knowledge in elementary school, but improved it to fluency through the media. After all, the best way to learn a language is immersion, like a baby May make the character liable to Speak In Shout Outs . It's also easier when Aliens Steal Cable which in turn makes it easier to handwave Aliens Speaking English . See also Taught by Television

When some person is expected to rhyme a word that has no rhyme in the dictionary. OrangeFans of Family Matters and film. This often is the consequence of them rhyming everything said by another character , who tries to stump them with something unrhymable. There are five conceivable outcomes: The person thinks for a moment, shrugs and gives up. Often, if they manage to make a rhyme, it will be an Ogden Nash -style Painful Rhyme , Rhyming with Itself , perhaps even a Mid Word Rhyme . Usually if the word is "orange", the rhyme will be "door hinge"; how well that works depends on your accent. For anyone who's curious: the word "orange" is difficult to rhyme in the English language because it's of Persian etymology (a relative rarity in English), and entered the language later than most other words for colors. Before being a name for a color, it originally referred exclusively to the fruit, which (being indigenous to East Asia) didn't become widely known in Europe until the Middle Ages, when it was introduced by the Moors. Before the fruit's name caught on as a word for the color, it was likely called "red-yellow" or its equivalent. Incidentally, many of these words do have rhymes, even without resorting to midword rhyme, slant rhyme, or a non-standard pronunciation for the speaker's normal accent. These are usually very obscure (silver and chilver, a female lamb) or non-English (month and granth, Hindi for book, also a Sikh holy text). That's quite interesting, isn't it?

Stock Phrase of a villain that signifies a Kick the Dog , especially if the victims are (comparatively) helpless. If the villain isn't the one directly causing mass murder or ordering his mooks to do it, then he's shown giving this instruction to a Psycho for Hire or Hitman with a Heart . The naval expression for this is "No Quarter". In Real Life , it's a war crime Of course,

if a Doomed Hometown suffers this fate, then it's more likely than not that the hero escapes such a culling and goes on a Roaring Rampage of Revenge Sink The Life Boats is the subtrope dealing with killing enemies who were alive after surviving the destruction of a vehicle Compare, contrast with Kill 'Em All , Shoot Everything That Moves , and Rocks Fall, Everyone Dies . Going one step further from "kill everyone" to organized torture, looting, and</ massacre of the population is Rape, Pillage, and Burn . If you have to kill everyone because they saw too much, that's Leave No Witnesses . When this fails, it often falls into the category of Genocide Backfire . See also Traumatic C-Section

Sometimes you just can't afford to be seen. Everybody needs to believe you're dead. Or they saw you use superpowers, or now they know there are such things as werewolves. Or they'll just testify against you and make you go to jail. Or they want to prevent a Cycle of Revenge from happening in the most direct way So you have to kill everyone in the room. Or, possibly, the city Similar to Shoot Everything That Moves , but that trope is more about the situation where everything you see is a threat. In this</ case, people would be more than happy to leave you alone, but that just doesn't seem to be an option anymore Oh, by the way, if you're a Mook and you've been ordered to kill all the witnesses, one thing to keep in mind: As far as your boss is concerned , you're a witness, too A specific case — often invoked by otherwise-heroic characters who need to eliminate individuals who might jeopardize their mission — would be Killed to Uphold the Masquerade . People who are Trigger Happy may jump to this solution a bit more readily. See also Never One Murder . Contrast with Leave No Survivors , where you're killing everyone just out of general bloody-mindedness (or hatred). Opposed to Spare a Messenger , when you specifically leave someone alive to relate what they've just seen

When a Will They or Won't They? -type couple is on the verge of upgrading their relationship , their friends will quickly vacate the area to give them some privacy. To justify doing so they may hurriedly cook up some implausible reason to leave . The less savvy friends may have to be shooed or pulled away, as may children . In some variations, the friends will spy on the couple to see how it goes. In others, the "couple" uses this trope to get others to leave, often by Fake-Out Make-Out If the friends are jerks , they might say this very loudly so that the couple in question can hear. Resulting in much blushing, and possibly a Snap Back , as they Cannot Spit It Out once they know they have an audience. If the character leaving is not subtle, it can be a typical Moment Killer The more aggressive counterpart is Get a Room!

Being a hero isn't easy, but sometimes it is soul-crushingly hard </. For their own particular circumstances, The Hero has been put through the wringer and may even wish out loud for a chance to leave The Hero's Journey behind, or at least get a chance to rest. Well, they get the chance The Hero presented with a "Leave Your Quest" Test will be given the chance to lay down their Sword of Plot Advancement and leave the fight. The form this test takes

varies quite a bit, but there are a few common variants. A Knight Errant may enter Ghibli Hills and after getting rid of the local crime boss, gets offered a chance to make a home there by the Determined Homesteader . Sometimes just making a Love Interest is enough to seriously tempt a hero to abandon their journey; if not, a forthcoming baby may raise the question of whether a new parent can endanger himself like this. Less benign opportunities come in the form of the Bad Samaritan offering the above, with a slice of Lotus-Eater Machine pie and a glass of The Final Temptation . Similar to We Can Rule Together , the Big Bad might offer the hero a clean slate and promises of non-reprisal if they abandon their quest against them. The trustworthiness of these promises varies, of course Being the hero, he or she will refuse the temptation. Reasons include never being safe until the quest is done because It's Not You, It's My Enemies , knowing they would get restless and wander again , or seeing through The Vamp or Big Bad 's ruse. The Big Bad can even inspire them with new hope: such an offer would not have been made to someone not a serious threat However, sometimes heroes do</ give in. In these cases, they usually get a vision warning them to leave, see an injustice and realize they can't stand idly by, they see the pile of cannibalized heroes in the cellar, or their new home gets razed It's worth noting that a hero legitimately at the end of their quest may feel tempted to keep on "Heroing" , and be dissuaded in favor of letting someone else pick up the banner so they can enjoy a Happily Ever After . Or he can keep on with the adventures, which may even be deemed a failure of his part, because he would have done more good in a more mundane but less In Harm's Way life See also The Final Temptation , when this is part of a Lotus-Eater Machine used to trap a hero (in which case it could also overlap with Prefers the Illusion). This test can come from the villain offering a Last Chance to Quit . For when this occurs at the beginning</ of a quest, see Red Pill, Blue Pill . In a video game, may lead to a Non Standard Game Over if intentionally included, Sidetracked by the Gold Saucer otherwise. Can be a Secret Test of Character Cold Mountain </. While on a journey back to his One True Love , Inman comes across a lonely and beautiful widow, who although she never asks him directly, clearly wants him to stay. A scout party of Federals intent on Rape, Pillage, and Burn interrupt however

This is when a character is doing a speech/acting/dancing/reading in front of an audience. If the subject is a bit complicated, the writers want to tell us it's complicated. And since the average guy doesn't like complicated stuff, he leaves. So you have this character on stage, reading a report about possible life on Mars, which is critical</ to the main plot, while random people are getting up and out of the room. Sometimes until there are only a dozen people left listening Sometimes done to show that the scientist is comically anti-social and doesn't have enough charisma to hold an audience, even if he's showing off alien technology that would make everyone immortal. Or possibly that his theories are so off-the-wall that they can't possibly be taken seriously—see the Stargate</ example below. In this latter variant the audience is usually the speaker's peers, rather than random guys, and they're leaving not because they don't understand him but because they think he's full of it, and some of them tell him so Compare with Chirping Crickets , Long Speech Tea Time , Walking Out on the Show

The tale is approaching its finale and you have a character who has undergone many changes. Now you need them to make a bold statement, to show the world that they are a fully developed individual. What's the first thing you make them do? Dump their partner. For some reason, the partner of such a character is discarded like a trinket in an It's All Junk scenario. Sometimes, it's really obvious why this happened - for example, someone that's finally mustered the courage to leave an abusive or neglectful partner, or a marriage they never wanted. But other times, it's more subtle. Sentimental characters might decide they need to be "better people" before returning to their partner. Just what this actually means</ is left for the reader to figure out. In this case, their partner will probably wait as long as it takes for their beloved to finally decide to come home. Some other characters who leave their partners in these circumstances take time out to evaluate what they want from life since apparently it hasn't occurred to them to do that before</ they got married and had kids. Others though, seem to discard perfectly good and loving partners for no other reason than that that particular person reminds them of their past...or, more selfishly, they've decided that after years in a committed relationship, they "deserve" to experience other people and leave their loyal lover in the dust, blinking in confusion. Extra Kick the Dog points if this lover has stuck by them through thick and thin. The author may try to justify this with claims that their partner was "holding them back" or "too dependent on them." This explanation has varying degrees of success - a possessive partner who doesn't want their lover to cross the threshold of the house won't get much support from the audience, but a loyal husband or wife who has nursed their spouse through illness, only to be dumped the instant the doctor gives them the all-clear, certainly will. After all, if the partner only gets discarded after the Ill Girl (or boy) gets better, it begins to look like the ill partner was only using them to get through the illness. Surely if they wanted to get out of the relationship that</ badly, the illness wouldn't have stopped them? While this trope normally applies to lovers, it can also apply to family members and friends as well. Compare Drama Bomb Finale and Journey to Find Oneself . By the very nature of this trope, here be

You're playing your favorite MMORPG , First-Person Shooter or other online combat game. You and your team have come up with a workable strategy to tackle a challenging opponent. It will require organization and good timing, but you're sure it will work if you get everything set up in advance... wait, did KillerMonkeyz548 just open fire? Congratulations, your brilliant plan has just been ruined in one move by a Leeroy Jenkins. The Leeroy Jenkins (or just Leeroy for short) is a specific type of Noob who has no patience for complicated plans, preferring to charge full-tilt into the fray and start attacking whatever's in front of him. Since this is a semi-viable strategy some of the time (depending on what game you're playing and the difficulty of the opposition), a Leeroy can remain undetected until the team hits the first real challenge, whereupon his recklessness gets everyone killed . Any attempts to point out that he had totally ignored the plan will be met with words to the effect of "plans are stupid". And he will never retreat . On the plus side, a Leeroy can sometimes be detected before they cause calamity when you see them utter (or type) words to the effect of "Hey, watch this!" In groups with experienced players, the phrase can be translated as "Immediately stop moving toward those enemies with very

big guns and back out of Alpha Strike range because Sir Badassboi is about to do something incredibly stupid and attention-grabbing." Never attempt to save a Leeroy from the consequences of his mad charge; this will only encourage him, as well as provide repeated amusement — he will often attempt the exact same thing again when he's revived. Should the group somehow miraculously pull through, don't expect him to wait for you to recover; he's already charging the next</ target. If your leader doesn't wise up and punt him from the team after the first couple offenses, he can become a real-life gaming example of The Millstone , ruining any chance you have of completing your quest or mission successfully. The trope is named after a World of Warcraft </ video that has been made famous around the net . For more information, see Leeroy Jenkins Video </ "Stop being such a Leeroy" has become multiplayer jargon in the time since, and it's sometimes used as a verb "to Leeroy" meaning to act in this way. Ironically , the original can be seen as sympathetic towards Leeroy in that it also mocks and parodies excessive planning in parties. Considering that many of the mistakes made by the group in their attempt to save Leeroy were part of the group's original plan, the implied point is that if you have a Leeroy Jenkins in your party, you probably deserve</ him. The exception is a Pick-Up Group ... in which case you know what you're going to get. If an A.I. character that you need to keep alive does this, you have a classic example of a bad Escort Mission . Some players also use "pulling a Leeroy" to refer to rushing in heedless of your own safety even when this is a viable tactic. If, rather than being a Noob , the Leeroy is doing this purposefully to get a laugh out of disrupting the Serious Business that internet gaming has become or just to mess with his group in general, then he is a Griefer and should be kicked from the group posthaste. A Show Within a Show is sometimes the stereotypical artistic independent movie, the kind which practically requires a didactic analysis to convince people that, though it does not aim to entertain the Lowest Common Denominator in any way, it's a profoundly meaningful work of True Art . If one of the main characters makes one, expect Creator Breakdown . These films are likely to have several, if not all, of these elements: Being in a foreign language, usually French . As part of this, most in-fiction examples end with a " Fin</ " text overlay. In the best cases, usage of this trope is an Affectionate Parody or a sharp Take That! to a particular work, director or movement. In other examples, though, it's quite obvious that the writers didn't know what they were referencing . It's often

the goal of the Prima Donna Director . It has to be said, however that this trope applies heavily to people with Small Reference Pools . For instance, although Ingmar Bergman is regarded as an "arty" director, in his lifetime his films were consistent box-office hits as were some of Federico Fellini 's and Akira Kurosawa 's films along with French New Wave films from François Truffaut , Jean-Luc Godard , etc. Also, there are cultural differences which mean that high concepts, artistic influences and education levels may make some audiences have larger reference pools than others, though there is plenty of debate over which is which. Put simply, what's obscure to some is commonplace in other places and vice versa (which doesn't mean Viewers Are Morons or Viewers Are Geniuses unless you're a True Art snob or Anti-Intellectualism slob). It is important to emphasize this, since there are many countries that use this trope as a legal loophole to limit the distribution of films with controversial subject matter in a market or to avoid complying with other local legal requirements such as taxes or adding a dub if the local distributor lacks the budget to include one, especially in countries when dubbing is mandatory by law. This is painfully common for non-western movies or from Eastern European countries, through there are rare cases when this trope also happens with mainstream Hollywood films, especially in markets with a love-hate relationship with the western culture, like the Sinosphere (China, South Korea, Japan, Vietnam, etc.) Please note that only Show Within a Show examples are objective. Applying this trope to a real work can be considered quite YMMV. See Euroshlock , an index of movies of the kind which this trope is riffing on.

The special feeling that you get when you've watched a show and realized that an unusually large number of loose ends have been left dangling. This special feeling is usually preceded by a glance at the clock, noting that it is 9:54 , and saying, "Wow, they sure have a lot of loose ends to wrap up in the next six minutes . How will they pull it off?" The answer: they don't. Some shows, such as The X-Files </, actually used the principle of Left Hanging in order to build an aura of mystique and uncertainty around the show. When shows that are more grounded in reality, such as CSI </ , wander into this territory, the results are rarely pretty. Occasionally the loose ends are picked up on much</ later, either as part of a Lampshade Hanging or as an "untold story" in the Expanded Universe . If, on the other hand, they're picked up later in a serious way, they might fit one of Chekhov's tropes ; if the entire episode is redeemed by one of more of these, it qualifies as an Innocuously Important Episode . Could also be a great opportunity for a Brick Joke . See also No Ending . If the hanging thread is trivial to the plot, it's What Happened to the Mouse? . Let the Kudzu Plot grow out of hand, and you have The Chris Carter Effect . If it was going to be explained, but the intended story was canceled, it's an Aborted Arc . If the creators do release some new stories after, but they're prequels or interquels that don't address the loose ends, then you're stuck staring at a Cliffhanger Wall . It should be noted that a few of these examples are merely early plot lines that are abandoned once the main plot is kicked off. Why bother tying up loose ends on one matter when they have The End of the World as We Know It to deal with? Sometimes the result of being Screwed by the Network . This will</ lead to Canon Fodder and, thus, Fanfic Fuel . See also Cut Short where the series doesn't even get a chance to ignore their

This is when someone says " We'll edit that part out later " but then...doesn't. Instead, the whole preceding sequence is included anyway , often for comedic effect. This can be done to make someone look silly or dumb, for irony, or just for laughs. A common variant is when a person is on camera but isn't aware that they're being filmed live</, so when they mess something up they'll stop awkwardly and ask for a redo. Or they'll say "you'll cut that out, right?" (The gag can be played up by the cameraman/editor assuring them that, yes, of course it'll be cut out ...). Though mostly for comedic value, in rare cases it might be used in a serious manner specifically to make someone look bad or dishonest. When used in a fictional setting, it almost always requires an In-Universe Camera . Happens often in Mockumentaries and Show Within a Show situations, but isn't strictly limited to those. Can also be used as a gag in Real Life productions, such as plays, broadcasts, or comedy shows. Compare Fix It in Post , which is Real Life Script Speak uttered during production of a work; you usually won't know about the sequence because it's actually been edited out</ . Not to be confused with Permanent Placeholder , which is about things that are put in with the intent of replacing them later, but end up staying in anyway. Contrast Throw It In! , when a Real Life unscripted performance is included in a production, whereas Left It In is an In-Universe example of someone requesting or mentioning that the very scene they're in should be cut (and then it's not). Ever noticed how many fantasy maps will detail the ocean on the left, western side? In many cases there won't even be an eastern or northern shore; however, there may be a southern shore The main reason for this is the popularity of Medieval European Fantasy . A Fantasy Counterpart Culture of Medieval Europe will naturally imitate the geography of Europe: ocean to the west and vast stretches of land to the east. For the same reason, the north is often a harsh tundra full of barbarian tribes , the east a mysterious land whence ride the Hordes from the East , and the south a hot land of jungles, tropical islands, and savages An interesting historical aside: Throughout most of the middle ages, maps were drawn with East</ at the top, rather than North. (This is how the word "orient" came to mean "face the correct direction.") A fantasy map that followed this convention would be bottom</ -justified, instead of left-justified When an Expansion Pack World is applied, this trope often leads to an Eastward Endeavor , or sometimes to a Quest to the West if the characters are interested in crossing the sea See also: Patchwork Map ; Standard Fantasy Setting

You just can't keep a good character down. Even in a setting where Death Is a Slap on the Wrist , a hero can't keep his heroics up forever (nor do most want to) and even if super-villains and world-spanning disasters can't kill him, old age definitely will. But while a man can't beat the Reaper forever, the identity</ he holds is contained in a vessel consisting of little more than a name and a mask, meaning that if he</ cannot continue his Legacy, someone else can. A Legacy Character is a character whose identity is passed down to them from an older character in the form of a title, job or persona for the newer character to assume. There are many ways this can come about: A mentor may pass their mantle on to their sidekick or the sidekick willfully takes up the mantle in the event of their mentor's retirement/death. Outside of the work, Legacy Characters are especially popular as superheroes and action heroes, or any job that involves a Secret Identity . Long-Runners that span multiple generations of characters are the most likely to use them, but they can also be created as part of a back-story, such as a Secret Legacy . Adaptations of a work with Legacy Characters to other media often only reference the current or best known holder of the legacy, only referencing other incarnations as a Mythology Gag . Younger heroes carrying the mantle often get a Rogues Gallery to match their predecessors, either via villains having kids of their own (much to the parent's chagrin), or younger villains "honoring" their own villainous legacy. This may become Generation Xerox if everyone around the Legacy Character is also</ a Legacy Character. When we are first introduced to our Hero he or she is an unknown, a new recruit, a rookie, or a peasant from a recently destroyed

village , but destiny is calling and he or she has answered. After many adventures, our Hero has accomplished great things. So much so that in the sequel he or she has become a legend, Famed in Story throughout the land When a sequel is being made, writers, directors, or game-makers like to take the protagonist from the original work and turn them into a legendary figure. This can be a way to help complete denouement from the original work which often gets truncated, or as a way to appeal to fans of the series who like to see their favorite character be recognized This trope is when the protagonist from a prior series or movie has become a legend in the sequel. They can be the protagonist themselves, a side character, long dead, or trapped in a time warp; what matters is that In-Universe they are now regarded as a legend It's also common (particularly in games like Dungeons & Dragons </) for Game Masters to apply this trope in their groups by having a previous game's characters be well-known or recognized by characters in a new game May or may not be Shrouded in Myth . Compare and Contrast with: From Nobody to Nightmare , Took a Level in Badass . The reverse is Uniqueness Decay , where once-legendary things have become commonplace in sequels. A weapon of myth, sung of in songs and spoken of in whispers. Old, powerful, and possessing a name Most of the time, legendary weapons are a pretty big deal — they don't call them "legendary" for nothing, after all — and instead of being a very</ old, rusty piece of scrap that's been in a display case for the last millennium, are actually extremely powerful and useful. They might even have the spirit of an ancient hero trapped in them, have immense magical properties, or be made with a technique that has been lost to the ages . Occasionally, when the protagonist is The Chosen One of a Fantasy setting, they'll just happen to be a descendant of the last great hero to use that weapon, and the weapon will unlock its true power only in their hands Since having the protagonist find a legendary weapon at their local store is a bit silly (unless it's an unusual kind of local store), the weapon tends to be a Sword of Plot Advancement that is rather hard to acquire Please note that this is for legendary</ weapons, meaning that the weapon has to be part of the legends and history of the work . This is not a trope for just any ancient weapon or Cool Sword the protagonists find, or weapons in a work that happen to share a name with a Public Domain Artifact Subtrope to Named Weapons . Legends are stories that are, at least in their beginnings, passed down as “true”, or at least possibly true. Tellers of a legend and their listeners may not necessarily believe in all its details, or even in its truth as a whole, but at least they believe that previous generations thought it was true. Legends often describe events that supposedly happened "long ago". Their claim to factuality or realism distinguishes them from folktales, fairy tales and other types of stories that make no claim to be anything other than fiction . Accordingly, legends often have a historical

setting, and before the emergence of critical history-writing, legend and history were mostly indistinguishable genres. Legends may feature historical figures, even though the details of the story spun around them are often clearly unreal. Of course, “legend” has acquired secondary meanings – more often than not, to call something a “legend” can mean, depending on context, “it’s awesome” (like in “ Living Legend ”), or “it’s not true” (like in “historical legend”). This doesn’t actually mean that we don’t believe in legends any more – only that we don’t call</ them “legends” (at least so long as we believe in them). Such modern day legends may be referred to as Urban Legends . Legends are related to, and sometimes overlap with myths ; colloquially the two terms are often used as synonyms. If the categories are interpreted a little stricter, then legends, in contrast to myths, are mostly concerned with the human sphere, not gods or cosmology, and accordingly are not considered "sacred" . They frequently are</ concerned with the origins of a particular people, settlement, custom, or technology; this type of legend is also called "founding legend". Besides explaining the origins of human institutions, another frequent function of legends is teaching morals — as a rule of thumb, legends say a lot about the values of the society or social group where they are passed down. And finally, they may be told to preserve and pass on (supposedly) historical knowledge, and/or simply for entertainment. Independently from their functions, legends can be grouped in different genres — mostly the following three: Heroic Legend: Stories about ancient heroes and their awesome deeds. These are mostly martial in nature and include, but are not limited to, monster-slaying and acts of war. Heroic legends praise warrior virtues like badassery, courage, and loyalty. As in most aristocratic societies the aristocracy identifies itself as a warrior elite, heroes of heroic legend are, with few exceptions, of noble blood. Heroic legends may (but don't have to) be tied to a specific mythology; if they do, the distinguishing line to myths (as mentioned above) can be blurry, as some of these heroes are demigods that are part human, part divine. Heroic legend may be told in various forms and media, but the "classical" genre of heroic legend is . Religious Legend: This was the original sense of the word “legend”. Legendae</ (which means, not very specific, “things you should read”) were stories about Christian Saint s (mostly revolving around miracles), or non-biblical traditions about biblical characters. A book that contained these was a legendarium</. But religious legend is not limited to Christianity ; the concept of "holy men" and women, and stories surrounding them, exists in virtually all major religions (compare, for example, the traditions attached to boddhisattvas</ and arhats</ in Buddhism , mahatmas</ in Hinduism , walis</ in Islam , and Tzadikim</ in Judaism). Religious legends extol religious devotion, piety, and whatever behavior is endorsed as exemplary by the religion at hand. — The genre of Christian Saints’ Legends, with its focus on miracles, was much ridiculed by Protestants after the Reformation, which is when the word “legend” acquired its present-day flavor of “bullshit story”. Folk Legend. A diverse category for legends that exist in or, really or supposedly, are directly taken from oral tradition. "Supposedly" because written sources can in turn (re-)enter the oral tradition, and there are probably quite a few "book legends" that were concocted on a writing desk to begin with. Content-wise, many folk legends are Ghost Stories ; others tell of memorable Folk Heroes (accordingly the category may

overlap with heroic legend). These kind of legends are often made into folk ballads . Urban Legends , a.k.a. contemporary legends, may be considered the modern day's folk legends. When a writer makes up artificial legends, whether to flesh out a fictional setting or the background of a story, or as a purpose in itself, that is a subgenre of Mythopoeia . Tall Tales have many similarities with legends, with the key difference that the claim to factuality in tall tales is only a playful pretense. If you came here looking for something different, go to Legend </ for the fantasy film, Legend </ for the TV series, Legend System </ for the tabletop game system, Legend Entertainment for the videogame developer, and Tropes Of Legend for this very wiki's Hall of Fame of tropes.

The French Foreign Legion is one of the most mythologized military units in the world. Its most famous writer was P.C. Wren, but it has had other writers and it has been occasionally spoofed, notably by Charles Schulz . It is legendary as a place where people with a Mysterious Past go to disappear, and of course bereaved lovers , political refugees , and various rogues and scoundrels and the like can always be found there The actual Legion existed to provide a body of cannon fodder who could fight in dangerous and distant lands without risking the lives of too many actual French citizens, though in recent years it took the role of a far smaller, elite infantry unit, completed with a light armor regiment The stereotypical Legionnaire in fiction is represented as a member of a North African campaign in the first half of the twentieth century. They are always depicted wearing white khepis while standing guard at lonely outposts in the Sahara. In real life, the Legion operates in a variety of environments and conflicts (such as French Indochina) and wears camouflage as needed. One of their real-life current deployments is to serve as the security detail for the European Space Agency's space launch facility at Kourou, French Guyana (the European Union's counterpart to Cape Canaveral) Contrary to popular belief, the Legionnaires are mercenaries. The Foreign Legion is a regular part of the French Armed Forces, which means the Legionnaires are Lawful Combatants as far as The Laws and Customs of War are concerned For more details about La Grande Muette</, go to Gauls With Grenades , or Cheese-Eating Surrender Monkeys See also Eagle Squadron , Army of Thieves and Whores and Trading Bars for Stripes

A leitmotif (pronounced "Light-motif") is a recurring piece of music (or at least melody) that represents a character, action, or theme. This is a well-established technique used in almost every medium that involves music and story. The leitmotif technique was invented (or more accurately, codified) by opera composer Richard Wagner in the second half of the 19th Century. In his later operas, not only would every character have his/her own musical theme, but so did many objects, places, and even abstract ideas Leitmotifs are often named simply "<character>'s Theme" or "<noun> Motif." They often make up the bulk of movie and anime soundtracks, and a fair chunk of video game soundtracks as well This is different from an Image Song in that Image Songs exist only outside of the scope of the show that produced them. Compare with "I Am" Song If a character with a distinctive-sounding Leitmotif is in a production or episode with No Fourth Wall (or at least some Medium Awareness), one of his or her fellows may comment

on how loud and annoying their theme music is. (To which the character will almost always reply, "What theme music?") Can become a Theme Song Reveal for audiences if (or after) they recognize the theme. The character might also have their leitmotif as their own ringtone, for a subtler joke; see also Left the Background Music On Note that if a character's leitmotif starts playing during an action scene, start running Can become a Recurring Riff when used throughout a long-running series. Bootstrapped Leitmotif is such a variation, where a song that wasn't originally intended as a leitmotif later becomes one One especially common leitmotif in video games is the Battle Theme Music , associated with monster battles in general. (Which also happen a lot .) If a specific character's Battle Theme Music is actually a remix of their Leitmotif, it may be a Boss Remix See also Mood Motif , Standard Snippet . This is what happens when (nation-)states attempt to prove that My Kung Fu Is Stronger Than Yours or build a Bigger Stick . Sometimes, this process of Serial Escalation goes way over the top (especially with Soviet Superscience). A character fights in a skintight leotard or, more generally, a swimsuit-esque one piece. Pretty common as a Super Hero trope, especially during its Golden Age , where the costume originated as acrobats' garb and since then it isn't always</ used for Fanservice One of the leotard's advantages is that it is more "modest" or

less revealing than a two-piece garment like a bikini, and thus for a long time was used in comics, games, TV shows and media to convey the portrayal of a sexy </ female character (or at least, "bold"</) without enraging Moral Guardians . Note that also, back in The '80s and The '90s the leotard (or one piece swimsuit) was "the"</ ultimate in fashion clothing, being much more popular than the two-piece garments and portrayed in aerobics shows, Baywatch </ and such, so it can be used in retro references too Similar to Underwear of Power , some females who wear this may suffer a Groin Attack at least once either for comedy, fan service, or simply for her enemy to really humiliate her. Parkour (and its similar offshoot free-running) is a physical discipline originating in France , more specifically, a suburb of Paris called Évry (although it's worth noting that the inventor's father/teacher was born in French-controlled Vietnam). It can be summed up as either acrobatics meets assault courses or skateboarding without a board </ Parkour is based on general principles of survival: Should one ever need to get from Point A to Point B as fast as possible, the shortest distance is always a straight line. The goal, therefore, is to get past, over, under, or through various obstacles without wasting any time. And it just happened that Évry's central agora is an incredible mishmash of stairs, decks, catwalks and roofs at different heights — and thus, the best way to go in a straight line from A to B in Évry was jumping and running through obstacles. (As of today, the nearby suburbs of Courcouronnes and Lisses have "parkour parks", like skate parks made for practicing parkour) Parkour practitioners (called by gender-specific nouns, following the original French; a male Parkour runner is a traceur</, a female is a traceuse</; referring to multiple practitioners uses traceurs</) run their environment like an obstacle course: vaulting obstructions, leaping gaps, running up walls , wall jumps , and otherwise taking wild shortcuts. Although commonly associated with cities, Parkour can be used to navigate any type of environment. Traceurs will tell you their discipline becomes a mindset over time. They learn to unconsciously scan their surroundings for routes and movements. Think The Tetris Effect after playing Assassin's Creed </ or Mirror's Edge </. Plus, it not only looks damn cool , but is practical, and may prove to become a more widely practiced discipline similar to martial arts The obvious example of Parkour usage is moving from point A to B, but the core idea is simply to make yourself more practically agile and more able to overcome physical obstacles. A mundane example is accidentally throwing something (e.g. a football) on a rooftop and needing to recover it. A practitioner of Parkour would be able to get onto the roof, get the object and get down safely The practice of Parkour actually predates the use of that term to describe it . It is a refinement of human movement rather than a brand new skill, the movements have been practiced in various ways for a long time. For

example, stuntmen and martial arts film actors have been doing similar things for years, a good example being Jackie Chan Not to be confused with its counterpart, "Free Running", which is similar but with a difference of "form" over "function." One of the central "rules" of Parkour is that it is not a competitive sport, and emphasizes efficiency, self-discipline, and oneness with the surroundings , whereas "free-running" is based on stunts and acrobatics that can be done in one location, just for the hell of it, and may include extra flips and spins that are functionally superfluous (and energy inefficient) but look damn cool. Note that often, traceurs will be able to and will perform flips and the like and can be considered both a traceur and a free-runner. The main distinction of traceur and free-runner is in the mindset of the person Parkour has begun to appear more frequently in TV shows, owing to its growing popularity. Its moves are commonly employed by martial artists, notably Ninja and practitioners of She-Fu . With special effects and wirework, it becomes an even more impressive feat than it already is. That could be considered proof positive that movie producers are dedicated to missing the point , because Parkour is cool because it is real </ . Many new video games employ it to expand a player's platform hopping repertoire A realistic version of Roof Hopping — most Parkour is done at or near ground level, because that's where one encounters the most obstacles. If used well this can be a great help to a person running a Mobstacle Course For the use of parkour in combat, see the subtrope Combat Parkour

The casting opposite of Tom Hanks Syndrome . With this trope, a successful actor with a history of dramatic roles plays against type and stars in a comedy, playing it for laughs and generally acting silly. And it works. Unlike Tom Hanks Syndrome, the change will rarely be permanent: the actor will still dip into serious roles, and may even bounce back and forth from comedy to drama like a rubber ball. But sometimes, the actor finds a new niche (and a new career) as a comedic performer Named after actor Leslie Nielsen , who, after a long career in the fifties, sixties, and seventies as a dramatic lead, turned to comedy in the 80s and thereby rejuvenated his career to the point that, these days, more people know him for his work in Airplane! </ and Police Squad! </ than they do for any of his prior dramatic or romantic roles Often related to The Comically Serious . See also Playing Against Type . Note that this trope is not about serious performers who have done comedic work here and there. It is about people who once were well known for serious work, and now are primarily doing comedy. If the previous Typecasting is sufficiently exploited, Adam Westing may apply as well

The Trope Namer is Leslie Nielsen . Prior to Airplane! </, Nielsen had a long dramatic career that spanned television and film. He often played military commanders and police detectives, with the occasional medieval king or Roman senator thrown in for good measure. Offers of leading roles had pretty much petered out by the 1980s, so he deliberately branched out into comedy with Airplane! </, playing The Comically Serious . After that, he experienced a career renaissance as a comedic actor.

Sometimes, when you walk in at the climax of something, it appears disturbingly violent and brutal (or creepy). And then, when you watch it in the proper order, it actually seems less disturbing if possibly still brutal (or creepy). What's going on here? Answer: The violence is built up to; the villain is shown to be Ax-Crazy , and the hero is shown to be acting relatively sanely, and the point you walked in was the Darkest Hour . In other words, it's Less Disturbing In Context. Some people cannot cook. They burn breakfast so bad that you lose your lunch preemptively. When they cook dinner, you can only think of dessert-ing. Even the Rats Won't Touch It . Sometimes, if you're lucky, they can cook something that can be charitably described as "food." Sometimes their food merely tastes bad. However, it has also been known to cause nausea, vomiting, or hospitalization. If you're particularly unlucky , it can cause, well, just about anything . If dinner eats you , you're probably in a lethal chef's kitchen. At worst, if a dish looks</ abominable beyond comprehension, it may be censored for the sake of the audience. As you may have guessed, this is usually a comedy trope. In eastern media, most examples are female (emphasizing that they fail at an aspect of traditional femininity , or femininity in general, or that they're something of an Action Girl), but there are a ton of male examples in western media, probably tying in to the assumption that Men Can't Keep House and Dads Can't Cook . There are a number of common variants. Sometimes someone is forced to stomach the lethal chef's food to avoid hurting their feelings. Sometimes they refuse to admit that they can't cook, despite mountains of evidence. And sometimes, if you're particularly lucky, their food merely looks</ bad, and tastes perfectly fine. Lethal Chefs may be employees of a Lethal Eatery , and quite often can be found fixing up a stew of Mystery Meat . Most Camp Cooks fit this category. (Truth in Television for them, as their budgets and ingredients are limited.) Compare the Cordon Bleugh Chef , who can cook just fine, but often gets too creative, the One-Note Cook , who can ace one dish, but otherwise falls into this trope, and the Evil Chef , who makes meals like this on purpose just to see you suffer. Being diagnosed with an illness is a surefire method for making it suddenly become much worse. Characters who have suffered one or two mild symptoms — such as a cough , fatigue, moments of disorientation, etc. — will visit a doctor or hospital and be told they have some kind of tragic disease, then over the next couple of weeks or sometimes even days, they'll turn into feeble, hacking wrecks who ramble meaninglessly to themselves all day. Often time, the diagnosis is made with a Radiograph of Doom May be a psychosomatic effect, or may just be the writers cranking the intensity of the symptoms up, now that the cause doesn't have to be kept secret from the audience

Whatever you do, don't ever</ stay around this nitwit. Anywhere they go, havoc will go, property will be destroyed, accidents will happen, people will die if they go near them. It is often Played for Laughs , because of the Slapstick and Black Comedy it may involve. Not to Be Confused with Too Dumb to Live , when the character's stupidity puts himself</ in danger (he might bring others down with him and then make the two tropes overlap, but that's not a requirement). Also, Lethally Stupid may not always cause death, but they can make you want to kill them!

A form of quick exposition used to sum up the crazy situation in which the characters find themselves. It can be for a few different reasons. Maybe someone's playing a game of Xanatos Speed Chess or Gambit Roulette , or there's a Gambit Pileup going down, and the character(s) are assessing the problem to make a quick decision on their feet. Maybe someone is about to do/has done something insanely stupid , and another character tries to talk them out of / calls them out on it by pointing out the idiocy of the plan . Sometimes a character, finding themselves in an unfamiliar / scary / Mind Screw situation, speaks to him/herself to clear their own head. Sometimes a previous character has just explained it for the first time, either offscreen, but presumably at too much length to show the audience or onscreen in a way the audience is not expected to comprehend . Could happen as an Inner Monologue , or by speaking to a mirror or some other object . Frequently begins with the words "So let me get this straight..." or "You mean to tell me...", and also frequently ends with "... is that about right?" However, it can also be pulled off without saying either of those phrases. Often, after the Let Me Get This Straight exposition is provided, a character will support The Plan by saying that it's Crazy Enough to Work . If the exposition puts the whole plot or certain point in a nutshell, then there is a very high chance that the line will be used in the trailer for the movie/episode. Truth in Television ; which one of us hasn't</ done this at least once? Not related to Kirk Summation unless in regards

Normally, a detective's job is to investigate a crime, question witnesses and suspects, and ultimately reveal the guilty party so the law can take over. However, sometimes over the course of the investigation it will turn out that the victim was unspeakably evil , the perpetrators' motive was unquestionably good , the perpetrator has already been punished by the consequences of his deeds , and/or the reveal will cause collateral damage to innocents, such as the criminal's family . In this case, though all the evidence points to one particular solution, the detective will never reveal this to the authorities. Instead, the detective will either feign ignorance or concoct an alternative solution, sometimes going so far as to hide the most incriminating evidence . Sometimes marks the detective as an Anti-Hero , but if done right, it's possible for this to be written as the most moral option available to the detective. It's a classic example of someone having to choose whether To Be Lawful or Good and picking "Good" If the culprit isn't a Sympathetic Murderer , expect them to be a Karma Houdini . Particularly fiendish villains may even use this to set up a Xanatos Gambit — either the crime goes unsolved, or the detective solves it but realises they can't reveal the solution without causing tremendous pain to the innocent. A duet is any piece of music made for two singers or instruments. They show up mainly in music-oriented media, like songs, musicals, and opera Due to the intimacy that comes with sharing a song, by far the most common form of duet is the Silly Love Songs type, where the two participants are meant to be lovers. Some composers play on this intimacy to give the duet a humourous or unsettling feel— for example, having two Heterosexual Life-Partners sing about their bromance, or giving the hero and the villain a duet to show they’re actually pretty similar Of course, that's only the thematic reason for duets; there are many other reasons for having them, including boosting a song by having two star performers lend their voices to it. Compositionally, duets are nice because the performers can harmonize, adding an extra layer to the song that would otherwise have to be achieved with backup singers The Award-Bait Song is often a duet. So, let's look at what the situation has turned into: The Hero stands

across the battlefield from the opponent, be it in the form of a Big Bad , Arch-Enemy , Lancer , Evil Counterpart , a Gentleman Thief , Rival (with or without a heel turn), you name it. It is abundantly clear from the story arc building up to this climactic battle that neither side will rest until the other is face down in a puddle of their own humiliation. Chances are they will pull out all the stops, and</ resort to some of the dirtiest and most underhanded tactics conceivable , right? No. See, both parties understand that there are certain rules, unwritten or otherwise, that dictate how a battle can be waged, and they plan to see that they are upheld. Sure, this is an intense rivalry that must be settled once and for all. Possibly the fate of the world hangs in the balance, but there's no reason why we can't be civil about it! We're not barbarians (and said barbarians who circumvent the rules get beaten/dressed down by both the hero and his opponent; literal barbarians often follow this trope themselves)! Ultimately, it could be because the villain wants to maintain an air of dignity even in defeat, or maybe he just wants to show The Hero that he can beat him at his own game. It could also be that the two parties simply want to see it done right, so that there can be no squabbling about what could have been (even the playing field and settle this once and for all). Formally staged battles, like Combat by Champion , Duel to the Death , or Gladiator Games , may require it; you may lose if you cheat. Throwing Down the Gauntlet is usually a requirement with this Trope, but not</ always vice-versa. A formal, or at least culturally-recognized, Code of Honour in any adventure setting will virtually always include this trope. There is some overlap with The Only One Allowed to Defeat You . A villain who sees The Hero as a Worthy Opponent might invoke this Trope as well. One of the standard codes by which Cultured Badasses operate. Contrast with the Combat Pragmatist , who only fights by the rules when it's to his benefit to do so. Has overlap with Combat Aestheticist .

Things are looking bleak. The protagonist and his allies are in a corner; the villain's kung fu is stronger than theirs. Outnumbered, outgunned, the situation calls for heroism, and unfortunately for our heroes, the only people around are all comic relief , sidekicks or mentor figures who've never really stepped up to the plate, when they aren't mere Boisterous Weaklings . Hey, what are they doing? Don't they know that they're outside the Competence Zone ? They're prime C-List Fodder ! They're... punching the villain through a wall? A moment in the story when all the quirky, eccentric supporting cast members, or Super Zeroes , stop</ being quirky and eccentric and start demonstrating their real skill. In effect, it can often be similar to taking a level in badass , except that really, when you think about it, it makes more sense. It's not so much that they pull the power from nowhere . Rather, these characters have always had</ that power, and it's simply that now they get to show it in a way that doesn't steal the hero's screen time. In some cases, they may even have been actively failing to demonstrate this much-hyped power before . The Trope Namer is the Catchphrase of Darkwing Duck , a bumbling hero whose utterance of the phrase marked the point in every episode where he would set aside his enormous ego and start taking things seriously, demonstrating his true competence as a crimefighter. Sometimes preceded by Lock-and-Load Montage or a "Hell, Yes!" Moment , depending on the circumstances. Any Retired Badass can pull off this trope if sufficiently provoked. Hobbits are also particularly likely to have it occur every so often. There is a curious phenomenon in commercials in which edible animals or the post-prepared food and drink is given intelligence and the power of speech. And it wants</ humans to eat it . Or at least, others of its kind. The title comes from the Dish of the Day sequence in Douglas Adams ' The Restaurant at the End of the Universe </. At the Restaurant, Arthur Dent is horrified to discover that the Dish of the Day is an intelligent herbivore bred to find fulfillment in being consumed. The cruelty, the Dish of the Day explains, lies not in eating animals, but in eating animals or plants</ who don't want to be eaten. Ironically, several science-fiction works written since have played this idea straight, often crossed with I'm a Humanitarian for maximum Nightmare Fuel . There is, naturally, a great deal of cross-over with Carnivore Confusion . May also overlap with Fridge Horror , and more often than not with Cargo Envy . Can be horrifying, sick or somewhat funny depending on the person. Can sometimes be justified by using fruit, which quite logically should want</ to be eaten so that the seeds will be spread. Comes in a few variations: Compare Black Comedy Cannibalism , Meat-O-Vision , and Stewed Alive . Contrast You Won't Like How I Taste where the edible person doesn't</ want to be eaten. The heroes are walking through the dark catacombs. Is that heavy breathing ? No, not wanting to imagine what could be so loathsome as to live</ in such a place, they dismiss it as the wind. They press on, then suddenly something terrible leaps out of the shadows and... the heroes burst into laughter Whether it's the Caustic Critic harping on the quality of the game's monsters, or the actual characters within a story, this trope applies any time monsters are being ridiculed. Killer Whatevers , Slurpasaurs and monsters that have suffered from a Special Effect Failure are particularly prone to being mocked If the monster looks stupid but the characters treat it as if it were terrifying, that's not this trope See also: Our Monsters Are Different , Monster Mash , Everything Trying to Kill You , Do Not Taunt Cthulhu , Monster of the Week Has nothing whatsoever to do with He Who Fights Monsters , Talking the Monster to Death , Mugging the Monster , or Bullying a Dragon . Let's Play</ is a relatively recent revival of an old concept , which became mainstream (for a certain value of mainstream) due to the Something Awful forums, and has since branched out to independent players on YouTube as well as other forums. Essentially, it's a screenshot or video Walkthrough with entertaining commentary; the goal generally isn't to Speed Run through it, but to show off how the player plays the game normally . Mistakes and multiple deaths are often left intact , for the sake of humor . Performance Anxiety for those who commentate over the game as they play leads to a large number of mistakes, often of the hilarious variety because of the stupidity of the mistakes — an effect compounded by the inherent distraction of trying to play and keep up a witty banter at the same time (imagine texting while driving with Everything Trying to Kill You) The tone and style will vary greatly with the nature of the game and those playing them. Some use screenshots and captions, whilst others use videos, or a mix of both. Some of those videos have voice commentary, and some use subtitles. Some players may already know all there is to know about the game and attempt to show off everything about it; others are going in completely blind and have no idea what to expect (horror games are most often LPed in this manner, as the candidness of the player's reaction may be more engaging to the audience than the game itself); some record commentary while playing, others record it after the footage is recorded; and still more may deliberately invoke both with co-commentators - the player showing off all that they can while being accompanied by a friend who has never seen the game before. Depending on the quality and

style of the game, the LP may be in-character Fan Fic of sorts, an informative walkthrough, or closer to a MST , the latter especially common if there's multiple commentators involved. Often they also have some degree of fan input; the viewers may submit their own side material, vote on a certain course of action to take, or offer suggestions Emulation and heavy use of save-states is often involved (though making use of the latter incredibly obvious is commonly discouraged), as most of the consoles and games able to be currently emulated don't have a save or password feature. For the most part, cheating is discouraged, though doing boring parts (like grinding for levels in RPGs) "off-camera" is encouraged. On the other hand, some LPs embrace cheats and hacks as their gimmick to mix things up Computers love to attempt suicide by any means possible partway through (a phenomenon often known as the "Let's Play Curse"), and video hosts that are not YouTube tend to delete all game footage or die entirely shortly after becoming a reasonably popular host for Let's Plays. Sturgeon's Law is in effect, and many Let's Plays on forums won't last long if they're not gripping In July/August 2011, Nintendo of Europe became what may be the first company to use the Let's Play phenomenon as a way of actually promoting their games</. For the release of Xenoblade Chronicles </ , in addition to the usual trailers and such, a 7-part mini-Let's Play showcasing portions of the game was released. Later, they even held a "Make Your Own Let's Play" contest for the same game See also Web Video , which covers live-action narrative videos released online, as well as the webcomic of the same name . Compare with Actual Play for Tabletop RPGs Please do not add this page to a work's trope list. When a group of people, faced with a problem to solve or a place to explore, decides to split up and have everyone tackle it individually It's commonly seen as a Horror Trope , and a sign of severe Genre Blindness at that. It's named after Fred's Catchphrase from Scooby-Doo </, which shows about how seriously works tend to take this trope. The obvious problem is that if everyone is out there alone (whether they want to be or not), they don't have anyone to help out when the scary creature eventually gets them — which tended to happen all the time to Scooby Doo. In a straighter horror story, this allows the party to get picked off one by one . In fact, this trope tends to be defied quite a bit more often than played straight , leading to its opposite , Never Split the Party There's one major advantage to splitting the party, though — if The Millstone knows that the party is willing to let the monster catch the slowest member and let everyone else go, having the party split up forces all of them to deal with the threat on an equal basis It's also seen in RPGs , where the game splits up the party and has different characters do different

things. This is typically a test to make sure that you've been training all</ the characters, and not just the ones you lean on all the time . If you're not prepared for it, you'll often find yourself scrambling to find enough equipment to supply everybody (but you can work around this with Leaked Experience and the Bag of Sharing) Compare Party Scattering , when the party splits up involuntarily, and The Fellowship Has Ended , when the team permanently splits up after fulfilling their mission. These splits tend to last longer and allow the writers to maintain multiple plotlines at once . When just one person suddenly leaves the party without warning, it's a Sneaky Departure Here is a with a lot of examples

A Sister Trope to Celibate Hero , where a character declares that they've no intention of having sex just for the sake of sex. Either they're waiting for "The One", or they think they've found them, but the timing isn't right (and if it's Their First Time , they want it to be special) A common thing in many religions, which declare that sex is sacred and must be saved for the wedding night. In fact, pre-marital sex used to be a taboo topic, but nowadays it seems to be a more common standard If the character who wants to wait is male, it's usually to show him as a romantic or old-fashioned (often both). If female, there's about the same chance it'll be because All Women Are Prudes A frequent variant is an engaged couple deciding not to have sex again until after the wedding to make their wedding night more "special" Compare Good People Have Good Sex , But I Would Really Enjoy It . Contrast Nature Abhors a Virgin , Everybody Has Lots of Sex Occasionally paired with Insatiable Newlyweds to show that the couple weren't waiting out of prudishness

When two people fight because someone manipulated them into the struggle, it is an example of Let's You And Him Fight. The phrase probably first comes from the Popeye comic strip, as a catchphrase of Wimpy , who often gets Popeye to fight big tough guys he's wronged. "Let's You and Him Fight" is also the title of a Fleischer Studios Popeye short revolving around a boxing match between Popeye and Bluto. It also appears in Eric Berne's 1964 book </ as one of the identified behavior patterns used to manipulate others. This trope is particularly overused in Super Hero comics and the movies and shows spawned from them. In that genre, it long ago became cliched, not even excused by Genre Blindness . It's now reached the point of being an Undead Horse Trope and is just as often parodied, averted, lampshaded, and mocked as it is played straight. In video games, this is one way of setting up a major character (i.e. the Deuteragonist) as a Climax Boss , as defeating them clears up the misunderstanding that was fueling the initial conflict, and makes the character more unambiguously heroic from it. Sometimes leads to a Lighthearted Rematch . See also Why Isn't It Attacking? . Comparable to We ARE Struggling Together . Happens constantly</ with Headbutting Heroes Contrast Fire-Forged Friends , Defeat Means Friendship , and Fighting Your Friend . If more than one heroic character is involved in a Ultimate Showdown of Ultimate Destiny , a misunderstanding a la this trope may occur to justify why the heroes are fighting. Compare the video-game trope Set a Mook to Kill a Mook , when you make enemy forces fight each other. Tropes about umbrellas, parasols, and their various uses in fiction.

Often, when a female character is particularly serious or uptight, her hair will be serious and uptight too — pulled back in a tight bun, or something of that sort . When a woman gets a love interest and starts to loosen up a little (as such characters almost inevitably do), she will start wearing her hair down, or at least in a looser style Unlike the hair-letting-down that is part of Beautiful All Along , this is never part of a makeover and is not necessarily commented upon by the other characters. The hairstyle in this case is more of a quick visual indicator of the character's relaxation. If the new style is noticed, there will be comments along the lines of "you should wear your hair like that more often." This is a subconscious appreciation of the heroine's new state of relaxation A variation of this can be seen in shows for younger girls. If the girl has low self esteem, she will wear her hair down and over her face . At the end of the show, when she has gained some confidence, she will pull her hair back to signify the change, opening her face and no longer hiding Sometimes the letting down is actually done expressly to make the character look more attractive, with existing admirers having their desires heightened while those who hadn't noticed them before suddenly find them to have been Beautiful All Along . This is likely related to the medieval notion that long hair was an indication of the owner's sexual prowess and concupiscence, and in fact incited others to arousal if it were not hidden, concealed, or worn up in some fashion A Sister Trope to Important Haircut , The Glasses Gotta Go Compare Slipknot Ponytail (one's hair goes au naturale</ because they are being badass), Wild Hair (where it is normally worn loose), Shaking Her Hair Loose (a more aggressive way of

Things are going great for the heroes! They are being lauded as the greatest thing since sliced bread, people are throwing them parties and giving them medals, and nothing can knock them down now! But then—something goes wrong. The background music, which had been sounding triumphantly along suddenly falters and peters out. Sometimes the music slows from its normal upswing to a bass line and finally silence. Other times, the various members of the band seem to realize something is going on, and one by one randomly stop playing until it's only the one guy — and then he gets it and stops, too (for comedic effect, the last member may be so ignorant they need a whack on the head to stop, or doesn't stop for anyone</, leading to a rather apt moment of Soundtrack Dissonance) Letting the Air out of the Band is a variant of the Record Needle Scratch . Instead of swiftly pulling the needle across the record album, the people running the background music pull the plug on the record player, allowing the turntable to slow until it finally stops rotating. Sometimes the two tropes are used together Ostensibly, this trope shouldn't be played straight anymore because most (if not all) music players these days are digital, and when you pull the plug on a digital player, the music just stops abruptly (sometimes after a short burst of unmusical noise) rather than just fading. Yet it persists due to The Coconut Effect . And because (as suggested above) sometimes the music is non-diegetic and therefore wouldn't necessarily stop instantaneously Occasionally, a non-musical variant is used in science-fiction movies involving marauding robots and world conquering computers . When they are smashed, their voice synths goes from "DESTROY! DESTROY! DESTROY!" to "DE-struuuunh" . The same thing happens with answering machines loudly playing back an embarrassing message and any other electronic thingamajig As much of a Comedy Trope as the Record Needle Scratch . It's occasionally been used in serious situations, as an indicator that something</ has gone wrong See also Musicalis Interruptus , for the instant version. Hilarity Ensues because a character must perform an act that is either against their nature or which they have vehemently and constantly protested against doing. Said action can also be just plain humiliating or all of the above—to all parties, perhaps When this act is aided or witnessed, a character insists that either they must all never speak of this again, ever</ ; or that a specific person who is guaranteed to ride them never hears of it. Or to put it another way, "What happened here stays</ here." This trope can be used to introduce a Noodle Incident , with one character reminding the other they promised never to speak of that again. Alternatively they may have just completed the action, make some passing reference to how unusual or interesting it was, and then pull this line. Subversions can occur when the character(s) kept in the dark reveal themselves to have known all along or if the character who would have used the incident as ammunition, against all expectations, chooses not</ to do so. Sometimes that somebody will bring it up again, earning the reaction "I thought we agreed to never speak of it again" or something close to that. It can be parodied by the person(s) who are told to never mention it again being genuinely unaware of what

happened for whatever reason, leading them to ask something like "Speak about what again?", which is then taken by the person wanting the secret kept as a joke implying compliance with their wish. Prequels occasionally resort to this trope as a way to justify their events not</ being mentioned in works that were written earlier, but set as a later date in-Verse. Compare You Didn't See That , Never Say That Again , That Didn't Happen , and Big-Lipped Alligator Moment .

"Level breaking" is a term used mostly by drama- geeks to refer to an event in a script or an uneven portrayal in acting that wrecks the intended emotional tenor of a scene or an entire piece. In portrayals, when actors take it too big (start Chewing the Scenery , rending the wardrobe, inserting pratfalls, etc.), they are level-breaking by going " over the top ." If they play it too flat , they are breaking by way of " phoning it in ." It is much easier to level-break by going over the level than it is by going under the level: a person not displaying their emotions is less challenging to the viewer's Willing Suspension of Disbelief than a person... well, behaving like an actor . You can, given the proper medications and directorial blandishments, eventually get an actor to either calm down or wake up. (Well, most of 'em, anyway.) In scripts, the problem is a little harder to pin down. The most common level-breaker in a script is a Mood Whiplash , a jump from way-sad to way-ridiculous. The 'breaker is in the "way-" part, in the degree of emotion. Having a détente scene, something to break the tension a little after a sad bit is not a bad move, but it has to be done with some care. This can also apply to other media, such as an immersive game being interrupted by an intrusive user interface, or a serious Deconstruction Game about shooters being interrupted by an achievement notification after mowing down dozens of Mooks in a row Compare Narm . Not related to Sequence Breaking or to a Game-Breaker , though these things could end up being a self-inflicted cause of this trope. </

These things were first described by archaeologist Alfred Watkins in his 1925 book The Old Straight Track</. He claimed that in ancient times when Britain was very densely forested, people built roads in geographically convenient straight lines. He believed that the lines had been called "leys" because so many of them passed through towns with "ley" in their name. He would later claim that these "ley lines" existed in many countries all over the world, especially in Europe . His theories were generally dismissed by his peers, however Then wacky occultists heard about it, and decided that they must</ be magical Now ley lines (sometimes written as leylines) are hypothetical alignments between places of power , which may be magical , magnetic, or psychic in nature. These places of power are where two or more ley lines cross and are often known as Ley Nodes, Nodes, or Nexuses. Nodes are often regarded as spooky or unearthly. Stonehenge is said to be built on one such intersection They are often invisible conduits of magical power that flow through the earth and air. Mages can tap into them to gain their powers. Places where multiple lines intersect at nodes attracts wizards and other supernatural beings like moths to a flame In reality, there are MANY English villages and towns that end in the syllable "-ley". So it isn't surprising that any line drawn on a map would fall close to at least one such place. The Anglo-Saxons were in the habit of building their villages in forest clearings. "Ley" is simply the Old English word for a forest clearing, which is why so many places end in the syllable "-ley" Often related to Rule Magic in Functional Magic . Sometimes they are a form of Geometric Magic . May function as a necessary Magic Prerequisite in some settings. A sister trope of Place of Power There's an exploration badge in City of Heroes </ that mentions Ley Lines. Paragon City is referred to more than once as a place Ley Lines cross, which is used as the explanation for why so many magical things happen there. The city zone Dark Astoria lies on top of a Ley Line, it is theorized that some of the ghosts that can be seen walking around in the fog may be visions of people in an alternate universe where the place was not taken over by Banished Pantheon cultists and their zombie servants

When a story (or a character within the story) resonates strongly with the LGBT community without being specifically made for them The reason for this is not always known. Maybe it's intentional Fanservice , maybe it's merely unintentional fetish fuel, or maybe just relatable Character Development of an Audience Surrogate (whether intentional or not). Not all LGBT Fanbases are unintentional; quite a bit revolves around canon LGBT characters or relationships. It could be "acceptable" Homoerotic Subtext by creators who are otherwise straight, as with Samurai Jack </. Libation is the tradition of pouring some drink, usually alcoholic, on the ground as a sort of offering, perhaps as part of a Grave-Marking Scene . Sometimes for the gods, sometimes to the dead. This trope is mostly about doing it in memory of dead friends. Traditionally, one pours on the ground before drinking oneself. Will often involve Talking to the Dead as well. The typical Hollywood Lie Detector is not like a polygraph. It is instead equipped with red/green lights or a loud buzzing/dinging to indicate truthfulness, which it decides accurately and instantly. The victim is usually betrayed by the machine to comic effect. The only way to beat it is through Exact Words , despite the fact intent to deceive should have the same physiological effect regardless of whether what you're saying is technically</ true or not. While Perp Sweating an especially naive criminal, the cops may employ a fake</ lie detector, often a photocopier with an ominous paint job. The device really is</ a photocopier, secretly loaded with pages that have been preprinted with the words "TRUE" and "FALSE". The cops use the machine's answers (sometimes along with a warning that this is a new and experimental model of lie detector that could cause cancer or erectile dysfunction) to coerce the perp into a confession. (Note: some people claim this has happened in real life, but Snopes </ has) A real life polygraph test typically works by asking you a mixture of embarrassing "control" questions in which everybody is expected to lie (for example "Have you ever lied to a loved one"), and relevant questions ("Did you do it"). If your physiological response on the relevant questions is the same or higher as on the control questions, you are deemed to be lying. Ironically, this means that being perfectly honest makes you more likely to fail the test. In real life, there is little to no evidence that polygraphs perform better than chance. Interpretation of the results is highly subjective and usually biased by prior suspicions And even if polygraphs did work, it is trivial to beat them using measures such as biting ones tongue or thinking exciting thoughts to increase responses on the control questions. Most polygraph operators know this; the polygraph is a distraction, and it's the operator

who's really watching you. For almost all cases, real life polygraphs are simply "Unreliable, Unscientific and Biased", according to the National Academy of Sciences, their findings not being admissible in court. Despite this, they are still given great weight by both the media and various governments. Interesting note: The polygraph was invented by William Moulton Marston, who also created the character of Wonder Woman ... who happens to wield a magic lasso that forces</ people to tell her the truth! Compare with Living Lie Detector , when someone can discern falsehood as a superpower.

This well-known saying is part of a phrase often attributed to Benjamin Disraeli and popularized in the U.S. by Mark Twain : " There are three kinds of falsehoods: lies, damned lies, and statistics.</ " Numbers and formulas are supposed to represent "objective scientific data" you cannot deny which have been examined by intelligent and experienced experts. The Consummate Liar wants his forgeries to look undeniably "scientific", so why not use the magic of numbers that the not-so-math-literate masses could never deny? They say that statistics don't lie, and while that may be true, liars do</ use statistics. This trope covers all instances of Artistic License – Statistics where someone manipulates statistics to present a misleading picture of the truth. The problem is, people do not pay attention to the context, just the numbers. For example, the statement "Brand X is 84% fat-free" sounds good until you realize that this means the food product is 16% fat by weight. Also, "fastest-growing" could mean that there used to be one customer and then there were five more, making a five-hundred percent increase. You should also notice Absolute Comparatives : it's fastest-growing, but specifically compared to when/what? The whole business of throwing percentages at people in advertising, politics, and other forms of propaganda is almost destined for this kind of abuse. Relative measures are more likely to be understood accurately, and thus are less likely to be used in advertising. The bogus uses of statistics are intended to imply a causal link between two elements when they are not linked, the link is questionable, or the link is opposite to what is implied. A beautiful example? "Coca-Cola causes drowning" . By looking at statistics on drowning and Coca-Cola sales, you can see a link — more people go swimming on hot days, and more people buy Coke on hot days . Likewise, birth rates per head of population are higher in areas where there are more storks — because birth rates are always higher in rural areas, which is where one finds the Delivery Stork . Correlation does not equal causation ; if it does, then we might also conclude that global warming is caused by a decline in pirate population and that 100% of Homo Sapiens who consume dihydrogen monoxide will cease vital functions and decompose . Be aware of the Law of Very Large Numbers. Any fraction of a very large number is likely to be a large number, no matter how small the fraction is. It is estimated that 2,135,000 Americans have used cocaine (including crack) in the past month. But that's only 0.7% of the population! So, is this a lot of people, or not? You should also be on the lookout for the related effect where things are made more remarkable than they really are. The odds that any given ticket will win a raffle may be very small, but it is certain that one will be a winner. You'd notice being dealt a royal flush in spades at poker, but the odds of it happening are exactly the same as those for being dealt any other hand of five specified cards. Then you can get the kind of statistical abuse in which you are careful to

define the question to get you the answer you want. What is the most popular book in the world? Depends if you mean most copies in existence (Quotations from Chairman Mao), most copies ever sold (The Bible) or fastest-selling ever (Harry Potter and the Deathly Hallows </). Statistics are like studies: who made them and who paid them matters a lot. Want to "prove" that video games cause violence ? Get a group of scientists that are already savvy about this and don't mind the lack of ethics. Have them draw from a very small pool of test subjects that are known to display violent behavior. Mental hospitals, prisons, schools for children with behavior disorders, what have you. Do some generic tests that are guaranteed to show up positive, come up with numbers, and presto, instant headline. "Recent test shows 77% of subjects become more violent after playing Mortal Kombat </." Most people won't bother with reading the article the whole way through and will just look at the headline. This works with anything from comic books and rock to watching Brokeback Mountain </ or voting for specific parties, basically anything. See Push Polling for a specific form of this. Confirmation Bias , or the tendency for people to search out statistics that support their preconceived notions and ignore statistics that don't, is the reason for many of the entries on this list. The forgery mentioned above is also the reason most scientific and medical studies are done double-blind (meaning it's all anonymous, neither the researchers nor the participants know who's in the experimental group nor who's in the control group) and should allow for a chance at being falsified by Real Life (see also The Scientific Method). But you should beware of any advertisements touting a "double-blind" study, especially late-night ads because they tend to violate the truth-in-advertising laws. In the end, statistics are not lies and statistics don't lie: people lie about the statistic itself or how it is interpreted. Some don't lie, they are simply ignorant, as are most members of the public in terms of statistical interpretation. See Logical Fallacies and Critical Research Failure . Put another way, by baseball announcer Vin Scully: See also Nine out of Ten Doctors Agree , which is much a sub trope to this, and Absolute Comparative , where the use of statistics is avoided entirely by comparing the product to nothing. When adding examples, please remember that this trope is not about amusing statistical fallacies, but about using statistics to misrepresent the truth.

A spell or other mysterious effect is placed on a character to make them look and sound like a completely different person, to select people. The user is usually unaffected, meaning that the character hears and sees their true form at the same time as they are deceiving others A type of Glamour and related to Weirdness Censor . This character maintains immortality by consuming some vital force from their victims. This is often Life Energy , but can also be their souls , or youth or blood. If such an immortal doesn't feed, they will eventually die There is often some sort of conservation of lifespan where the victim's life is added to the immortal's and the victim dies so that the immortal can continue to keep living. This form of immortality usually grants eternal youth and the feeding process may cause the victim to grow older because the victim's youth is being drained into the immortal. Sometimes,

it might extend the drinker's lifespan on a 1-to-1 ratio for the number of years stolen from the victim, but oftentimes it's quite inefficient and draining a victim who could potentially have another thirty or forty years of life only provides an extension of months or even weeks. No Immortal Inertia is often the result when this type of immortal is destroyed. May overlap with Vain Sorceress if it's used to restore their beauty as well Although this type of immortality could be described as vampiric (and indeed it overlaps with Vampiric Draining), only sometimes does it apply to actual vampires . Vampires usually</ won't die from a lack of blood - at most they will become weaker and suffer from Horror Hunger . May overlap with Blood Magic (especially Blood Baths) and Liquid Assets . Might also involve an Artifact of Doom or Evil Weapon Subtrope of Soul Eating and Immortality (and also Immortality Immorality). Contrast The Ageless , in which the immortal doesn't age to begin with and doesn't have to bother with taking others' lifeforce, but can usually still be killed conventionally

"Life Force" redirects here. For the NES game, go here . For the 1985 film, go here . Spiritual fuel that runs the body and mind, generally invisible to ordinary folks (but not those with Aura Vision). Life Energy may be the same thing as the spirit, or rather just some sort of spiritual Life Meter . Even the hardest of television Science Fiction can't seem to help but use this trope at one point or another. In anime , is often the vampire alternative to drinking blood , but also is often used to explain why human blood is better for vampires than non-human or why they can't feed on the dead. It just sates their Horror Hunger better. Many anime antagonists, especially enemies of Magical Girls , are thaumovores : they feed on Life Energy or use it to power their evil plans . A clear sign that a character is a life-force sink is the spontaneous death of flowers around him or (usually) her . The victim of Life Energy theft may recover if only a little of it is taken, or else may end up in a coma that is unexplainable to mundane doctors. Other results include becoming older , becoming a walking Empty Shell , or outright dying as the body becomes a skeleton or even crumbles to ash . In the west, stealing Life Energy tends to be less common than giving Life Energy. Infusing someone with Life Energy (or sometimes Generic Energy) can be used to revive those who are critically injured, or to grant temporary superpowers, or even to create lifeforms . Watch out for Phlebotinum Overload , however. It's connected to souls , Hermetic Magic , Ki Manipulation , Psychic Powers and other superpowers; see also Mana . In Role-Playing Game terms, it's the combination of Hit Points, Magic Points, and Experience. Transferring it may cause physical changes that are Liquid Assets . Occasionally, part of an Equivalent Exchange to power an Artifact of Doom or Evil Weapon . It should be noted that somehow many spacecrafts' Everything Detectors can scan for it, and yet somehow only pick up humans or things like humans. Bugs, rats and the vast trees of Canada-in-the-Pegasus-Galaxy do not make the grade, so obviously life signs automatically imply sentience (or at least really-bigness). Anyone whose life energy is especially Supernaturally Delicious and Nutritious is in for a hard time. See also Aura Vision and Anatomy of the Soul . A version of the Sadistic Choice when a person is forced to make a terrible choice — they need to remove one of their appendages in order to escape with their life. Sometimes a villain or '90s Anti-Hero imposes this choice as a punishment, but in other cases, a character is simply trapped Many animals will do this to escape traps in real life. Note that even if a person manages this, realistically they will bleed to death (which might be just what the villain has intended) in a few minutes unless they are able to close the wound, so only try this if you have a plan for doing that. If you're lucky (in a sense), one of your Artificial Limbs is the limb that got trapped, so you can pull off a Fake Arm Disarm without any real injury to yourself and then get a replacement later Amputation Stops Spread is similar but to stop poisoning or infection instead of escaping. Compare Disposable Vehicle Section , when a similar thing happens with vehicles, as well as the somewhat less drastic Giving Them the Strip , where escaping requires abandoning at least one article of clothing

A genre of Made for TV Movies , also known as "Women in Jeopardy," that feature similar plots and thematic elements — mainly aggrieved women and their struggles to find empowerment of one sort or another . The Trope Namer is Lifetime , a cable TV channel in the United States with programming geared toward female audiences

(or, at least, female audiences who conform to Lifetime's conception of its target demographic), which is well known for giving rise to the subgenre. Original movies are such a bedrock for the Lifetime brand that it has a spinoff network devoted entirely to them (LMN). Despite being the Trope Namer and Trope Codifier , Lifetime didn't invent the genre. Starting in The '80s , the major US networks added stories in this fashion to their Made-for-TV Movie lineups, and saw them get phenomenal ratings. Hollywood even got into the act with films like Not Without My Daughter</ and Sleeping with the Enemy </ Lifetime itself got into the business with the 1990 movie Memories of Murder</, starring Nancy Allen as a victim of Easy Amnesia who gets stalked by a deranged man. Its success pushed them to make more movies. Meanwhile, The '90s also saw NBC revamp their Monday Night at the Movies</ series to appeal more to young women. The result was a whole slew of ripe Melodrama movies loaded with familiar TV faces, including the immortal Mother, May I Sleep With Danger?</, starring Tori Spelling . As the other networks began to move away from TV movies, Lifetime became the home of the subgenre, adopting the other networks' movies and the theatrical films and airing them frequently, to the point that "Lifetime movie" is now a generic description (Indeed, only two of the movies in the page image above were actually produced for Lifetime). The four basic plots of the Lifetime Movie of the Week can be summarized as follows: In all cases, she must fight not only against her problems, but also against the Uncaring System that refuses to believe her or even accuses her of being the villain. Anyone on her side is unable or unwilling to help her, except for one person, typically male, who comes to believe in her or her plight and comes to her rescue at the end , but not before she's been put through a Trauma Conga Line . One reason for the films' similarities is that they are designed to play on the fears of their target demographic. Thus, the themes of violent or uncaring men , female rivalries, smothering mothers , difficult children , and absent support systems are prevalent. Though notionally intended to send a message of empowerment by having the female triumph , it can seem like they have the opposite effect , as the world is depicted as harshly uncaring and even antagonistic toward "good" women, and rarely does a protagonist succeed without help from a male ally . For the same reason, expect Ripped from the Headlines and Very Loosely Based on a True Story to come into play (and be heavily advertised). For the opposite, see A Hallmark Presentation , named for the Hallmark Hall of Fame </ series of films which, appropriately for a greeting-card company, tend towards the other end of the scale .

In stories, characters are usually protected from dying . They tend to live Happily Ever After . If they do</ die, it's in a murder or disaster or big disease or something . Whatever, as long as it's something spectacular or dramatic or at least surreal, something that we don't have to worry so much that it could happen to ourselves These are the exceptions Sometimes death is sudden and mundane and comes for no reason. A sudden brain aneurysm or heart attack, quietly drowning or suffocating while unconscious; any simple accident. While a Life Will Kill You death is very undramatic in itself, it's always very dramatic on an emotional level Sometimes this is contrasted to the character having lived through much worse before something mundane got dangerous to a fatal level. The character does NOT have to be heroic or powerful

in any way. It's enough that the character lived in a setting that wasn't clearly marked as Anyone Can Die . Since the trope is about how death is portrayed, it can in special cases (see the The Onion example) also cover deaths caused by aging or whatever Truth in Television . Many people who live to the age of 90 (or even 100 and beyond) remain in astoundingly good health, to the point that their friends and family members may jokingly call them "immortal"...before suddenly dying of old age/natural causes. Even animals</ who live much longer than usual often die of old age Sometimes played as An Aesop about appreciating your loved ones while you still have them Contrast Death Is Dramatic , Surprisingly Sudden Death , and Death Is Cheap . Contrast Dropped a Bridge on Him , which usually is violent and/or takes death lightly. Compare Deadly Distant Finale , Shoot the Shaggy Dog , You Can't Fight Fate , and We All Die Someday For literal element of life with lethal effects, see Holy Hand Grenade and Revive Kills Zombie

Warning: This is a death trope, .

Long ago, this Stock Joke involved mocking other groups, but today it is used almost exclusively for playful Self-Deprecation of the idiosyncrasies characteristic of (or associated with) one's own social group or hobby group. The common format is "How many (group of people) does it take to change a light bulb? X+1. 1 to change the bulb, and X to (humorous caricature of group)." Another is a means to accuse them of Pride : "How many (people) does it take to change a lightbulb? One. He holds it up, and the universe revolves about him to screw it in." Take ourselves as tropers: Another example: Or even: It also has many variations (including noting the pun of " screw "). The original joke is in some danger of being a Forgotten Trope : Of course this joke shows up in fiction as well, and examples here should be limited to such. It's generally acknowledged as being a Stock Shtick , and thus usually a sign that the character doesn't know any better jokes. It's also a good candidate for an Orphaned Feed Line . In Speculative Fiction , the exact format of the joke may be altered slightly to allow for the lack of light bulbs . Compare "Knock Knock" Joke .

Want to show how good and just your hero is? Want to show the elemental forces of evil exactly why they need to Beware the Nice Ones ? Then just use this counterpart to Casting a Shadow : Light!</ This frequently involves healing and divine powers , although this can mean literal light as well. This may overlap with Holy Hand Grenade if the powers in question are used to attack (and are explicitly divine rather than merely being light). Like most other types of elemental manipulation, the laws of physics give way to Rule of Cool . Users of light powers may be able to project Hard Light or fire Frickin' Laser Beams , or use a more subtle approach such as using Holograms to become a Master of Illusion Light has many similarities to fire, producing both illumination and heat. Thematically, however, fire is often presented as a primal or destructive force, whereas light is a protective force that literally illuminates the darkness. In some cases, light and fire overlap and sometimes intersects with electricity as well. All three of these powers may also possess qualities of purification or total destruction, depending on the work in question. See also The Power of the Sun , as, in fiction, a solar power is occasionally a mixture of the powers of fire and light The Hero is likely to

use this, and if so, is likely to be a saint . The hero is likely to learn this from the Big Good or the The Mentor , who will be the master of this. Alternately, a work may instead use Light Is Not Good , in which case, this may be used by the villain . In that case, similar to how The Sacred Darkness illustrates a way to portray Casting a Shadow in a pure and holy fashion, a villanous or "corrupt" form of light may involve such lovely things as light so bright that it burns out the victim's eyes, causes his flesh to be brutally melted off, or making his light come with other harmful radiations etc A Sub-Trope of Elemental Powers . Usually trumps darkness , though the reverse is also possible. Or both, even . For double the fun, see Yin-Yang Bomb This trope is Light purely acting as its own element A Sister Trope to Holy Hand Grenade and Holy Is Not Safe (also overlaps with Light attacks when fueled by good) Contrast with Power of the Void , Casting a Shadow . Has nothing to do with Fall Out Boy

The light twin of Darker and Edgier , when something is Tone Shifted to be more family friendly and frothy than the original source. This can either happen to a show over time, or it can be the result of deliberate Executive Meddling . It could be a deliberate throwback to a pre- Cerebus Syndrome incarnation. Thus, a Lighter And Softer reboot may often follow an incarnation which made a point of being Darker and Edgier. Finally, if an adult or more serious TV show or movie has a spin-off aimed at children, this can be the result. Just like its brother extreme, Lighter and Softer can leave just as bad of a taste in longtime fans' mouths as Darker and Edgier if handled poorly At its most extreme it can turn a previously vibrant cast into Flat Characters and remove a lot of the show's appeal or even cause fans to abandon the work entirely. If it shoehorns Black-and-White Morality into the work and makes everyone clear heroes and villains, then expect people to complain about the loss of subtlety in the setting, or feel like the writers are talking down to them In music, this may result in an artist merely recording a Surprisingly Gentle Song , or it could lead to the artist having a complete Genre Shift to a lighter genre Often found alongside Denser and Wackier , and Younger and Hipper . Also often signaled by an increase in wacky humor Just like with Darker and Edgier , please keep in mind that Tropes Are Tools . When something is lighter and softer than its initial source material, it doesn't mean it's automatically worse. It usually depends on who creates/writes said material as well as how subtly they make the transition. Executive Meddling may of course be at fault; "We gotta appeal to the kids!" But other reasons include trying to be more mainstream, to change an unpopular run, to appeal to another demographic, to recognize and dispel Too Bleak, Stopped Caring etc. The Lighter And Softer run can end up being positively remembered for years to come. It just depends on who's behind the product and how they execute it Compare Bowdlerise , Disneyfication , Menace Decay , Badass Decay , Reverse Cerebus Syndrome , W.A.F.F. , Denser and Wackier and Tamer and Chaster Contrast Darker and Edgier , Bloodier and Gorier , Cerebus Syndrome and Hotter and Sexier

The lights flicker on and off . In the less-than-a-second of darkness, the character the camera was previously focused on has

disappeared. After another flicker, he will reappear, closer to the POV camera/ other characters. Can be done repeatedly to great effect if the camera doesn't move. Usually done by villains, though it can be done by a Terror Hero wishing to scare some mooks. Sometimes the "flicker" effect is achieved by the POV character's eyes closing, usually involuntarily Related to Offscreen Teleportation . But then the Big Bad reappears, and the two heroes have to team up to fight the evil , save the day, yada yada And now that that's</ off their plate, they turn, smile, and have a rematch for fun's sake Related to Ironic Echo in that the first fight or competition is always serious — in deadly earnest, even — and the last fight is more lighthearted , with practically no stakes involved. It is almost always the ending to the Evasive Fight-Thread Episode . As such, the outcome is rarely ever actually shown — both to save from having to film/draw/animate the fight, and to show that whoever wins this particular fight no longer matters between them See also Fire-Forged Friends and Let's You and Him Fight , which can be precursors

Yugi and Joey in Yu-Gi-Oh! It may be worth it to note that Superman and various Flashes have raced no less than seven times in the comics, almost always ending ambiguously, or on a tie, with the promise of a future rematch. Flash won both the clear ones: in the first, Flash (Barry Allen) won by a couple feet, after they crawled across the desert without the use of their legs. It's implied that Superman is less used to running as compared to flying, while running is what the Scarlet Speedster does all the time. In the second, Flash (Wally West) won by mere inches, and Superman confirmed that Wally was The Fastest Man Alive .

In Fantasy of Utter Ridiculousness 's </ post-ending scenes, it's suggested that Coop and Suika have one of these later, this time taking place in an unknown location and refereed by Yukari The Magic Blade </: The second movie has this occurring in the rematch between Fu Hong-hsueh and Lu Xiao-jia, two master martial artists, after Fu won the first duel and allowed Lu to live. However, they ultimately ends up working together to defeat a far more powerful villain which is their common enemy, and after all is said and done, they decide their Duel to the Death to be changed... to a contest where they try removing each other's pants with their swords instead

In the finale of Kamen Rider Kiva have been trying to have a fight to the death that Bishop kept interrupting for several episodes, have already made up and become loving half-brothers again. But they still want to fight, if only to fully get rid of their stress, decide who will be the new Fangire King and bring them a bit closer together . Of course, how "close" they become is anyone's guess.

Given the limited nature of most rosters and the comparative frequency of the Heel–Face Turn and Face–Heel Turn , most, if not all, bitter rivals will eventually find themselves competing without

In the Warhammer 40,000 </ universe, the Space Marine chapters of the Dark Angels and the Space Wolves have something of a rivalry, essentially due to a perceived injustice between their primarchs. The DC Animated Universe is quite fond of this one:

The Light seems like a good, kindly thing , especially compared with that bad old Darkness : Whereas Darkness is usually concerned with kicking puppies , eating children , and laughing its head off , the forces of Light generally worry about nicer things, like singing with the birds , helping little old ladies cross the street , and... well, you know, being a Hero . Whereas the Dark is sexy and alluring and tends to dress that way , the Light (while often quite attractive in its own way) tends to be a bit more conservative when it comes to clothing. Women serving the Light tend to really appreciate this, considering what the Darkness usually makes its women wear . Whereas the Darkness seems to revel in lawlessness and chaos, the Light tends to prefer law and order , providing for properly maintained roads, a court system, and safe cities. Yet despite all of this, the Light is not always a bringer of good and hope. It can, in fact, be just as vicious as the Dark, if not worse</ . In one of those instances where you shouldn't judge a book by its cover, the Light isn't always what it appears to be . Sometimes, a battle with an obviously Light-wielding character will not result in Defeat Meaning Friendship or an Epiphany Therapy , but will just end with a laser-scorched corpse and the shiny happy killer skipping off to continue using their sunshine-fueled powers to wreak decidedly holy havoc. There is a reason why the word Lucifer </ in Latin , literally means "Light Bringer". Anti Heroes generally fall under Dark Is Not Evil rather than this Trope unless they're a Knight Templar , like for instance, a ruthless Church Militant who works with the good guys. Light Is Not Good is when a character is directly bad, directly villainous — and still</ has Light powers. Depending on characterization, they might be sympathetic , perhaps well-intentioned but horribly misguided . Or the person could be the most gleefully twisted bastard imaginable. The mildest form of this Trope involves beautiful, charismatic villains dressed in white and surrounded by religious symbols. A step

further features a villain who wields Light as an elemental power . Whether by technology or magic , they can bend physical light to their whims, displaying such powers as beauty-enhancing sparkles or an angelic glow, optical illusions and holograms , Mind Control through Laser-Guided Amnesia , blinding flashes , and laser beams . For artistic contrast and further deconstruction, they might be opposed by a hero who uses shadows and darkness as Elemental Powers . Commonly used with Fallen Heroes and Knights Templar . Often used together with the Path of Inspiration or Corrupt Church . Perhaps might even go so far as to cast aspersions on a Council of Angels . At the most extreme, it declares God and Heaven Above are a bunch of evil scumbags. May well occur in a villain's Yin-Yang Bomb , in which case the heroes probably need to produce one of their own to combat it. Crapsaccharine Worlds are often depicted as highly polished, brightly lit, and cheerful almost to the point of cloying Of course, the true nature of the society is gradually revealed over the course of the narrative, making it an instance of this trope. In some settings, this trope can manifest in the form of Ascetic Aesthetic , as the latter not only gives the impression that something rotten hides under that shiny white exterior, but is also the aesthetic of choice for societies that value absolute order and conformity a bit too much . (e.g. the city from Mirror's Edge </). This trope is an inversion of the standard that " Light = Good ". Like with Dark Is Not Evil , Light Is Not Good can subvert or avert a number of other Tropes depending on how it comes into play — usually Beauty Equals Goodness and Good Colors, Evil Colors , among others. By now you get the idea that, just like how, sometimes Dark Is Not Evil , sometimes Light Is Not Good. Some will view the Light itself as natural, and darkness as nothing more than an absence of it. Others will see Light as a destructive force , a perversion</ of the infinite all-encompassing Darkness. Light and Dark are both oversimplified metaphors for Good and Evil, not truly synonymous terms. Looking at the matter rationally, too much sunlight causes burns, sunstroke, skin cancer, and drought, which is bad; whereas nightfall and sufficient shade provide relief and rest, which is good. So, neither physical brightness nor physical shade can be all good or all bad. Elements are properly value-neutral. This trope is not</ about an Obviously Evil character such as a Bedsheet Ghost wearing white, although they may fall under Bright Is Not Good . To qualify a character must fit with what is culturally thought of light. An angel wearing bright clothes with White Magic or simply a classical unicorn as the villains are good examples; a simple Corrupt Church cleric or a white-haired handsome youth simply using their attractiveness to get away with misdeeds is pushing it depending on who you ask; a Monster Clown wearing white makeup but otherwise not brightly coloured, not attractive or not possessing holy powers is most definitely not. Someone who is beautiful but otherwise not light related in any way is definitely out. Add a sun (powers , jewelry, name, whatever), however, and we're listening. And an Eldritch Abomination with light powers is definitely in. Divinely Appearing Demons are demons who look angelic in apperance. Keep in mind that stories where Light Is Not Good do not automatically enforce Dark Is Not Evil . In fact, stories where Dark Is Evil and Light Is Not Good are commonplace to show that the light can be just as foul as darkness. In addition, some stories may use BOTH Light Is Not Good and Light Is Good at the same time, with good light-based characters calling the evil ones Hypocrites . In the context of Order vs. Chaos , Order Is Not Good serves as this trope's counterpart, the former which Light Is Not Good tends to go hand-in-hand with as mentioned

above. See also Pure Is Not Good , Face of an Angel, Mind of a Demon , Villain in a White Suit , Albinos Are Freaks , Ethereal White Dress , Lawful Stupid , Good Is Boring , Dangerously Garish Environment , God Is Evil . May result in Good Powers, Bad People . Often overlaps with Light 'em Up and Holy Hand Grenade . Oh, while we're at it, Frickin' Laser Beams are made of light too. Fire can be applied to this as well, as well as electricity and ice , as well as the blinding flash provided by Nuclear Weapons or an gamma-ray burst or asteroid/comet impact . In this case, see also Bright Is Not Good , which only applies to colors. Not related to Good Is Not Nice , though the borders can be fluid. If combined with a touch of Red Is Violent , you'll get White and Red and Eerie All Over . Related to Daylight Horror . Occasionally the Sun expresses this trope in fiction, generally either as sun-powered villains or as evil or creepy disembodied heads representing the Sun , but sometimes the sun (or sun god) itself is seen as malevolent . Even more common than the Sun in this context is the full moon , especially when werewolves are involved. See also Hiding Behind Religion , which can be considered a more realistic

Lightmare Fuel is when Nightmare Fuel is Played for Laughs or your genuine laughter is coming from the scariest of places. In short, it is the perfect combination of the truly scary with the truly funny. This often happens in comedy works, typically Black Comedy , but can just as often occur in horror stories A work of this nature will sit around the center of the Sliding Scale of Comedy and Horror A Sub-Trope of Mood Dissonance . Compare Faux Horrific , Bloody Hilarious , and Bathos , which similarly involves a juxtaposition of the serious and the silly but with less emphasis on horror. Not to be confused with Daylight Horror , which is when genuine horror happened in broad daylight

The Lightning Bruiser is an Archetype that sets itself apart from the competition in that it is able to take and give a lot of damage and can move quickly. When considering strength, speed, and toughness, the Lightning Bruiser does not trade off one advantage for another the way, say, the Fragile Speedster trades off durability for speed, the Glass Cannon trades durability for power, the Stone Wall trades offense for defense or the Mighty Glacier trades mobility for power To prevent the character from becoming a Game-Breaker or Story-Breaker Power , the Lightning Bruiser may have weaknesses beyond strength, speed, and toughness: a lack of range , technique , intelligence , magical capability , or magical resistance are some of the challenges these characters can face, as would be a high resource cost that prevents them from seeing much use. Sometimes, the Lightning Bruiser may be balanced by being less interesting than its counterparts : it hits fast and hard, and it can take a punch, but it doesn't do much else. In fighting games, they are typically balanced by poor or situational approach options and inadequate or nonexistent defensive options; they struggle to actually get in, and they can take a hit, but they can't do much to keep themselves from getting hit. If it's a strategy or MOBA title, they typically either plateau at higher levels or start out weak , and usually have minimal utility or kits that don't lend themselves to alternative roles. If it's a game that incorporates Combat, Diplomacy, Stealth , they may be locked into combat and rely on their teammates to fulfill the

other niches. On the other hand, The Hero might be one of these, and is simply much more powerful than everyone else. Lightning Bruisers are relatively common as video game protagonists for this very reason - it explains why they're capable of taking down hordes of enemies single-handedly Either Faster Than They Look or Stronger Than They Look may apply if the Lightning Bruiser more like a Mighty Glacier or a Fragile Speedster , respectively. The resulting surprise factor is useful for getting an edge on unsuspecting opponents Like the Fragile Speedster , the Lightning Bruiser is well-suited to Confusion Fu ; unlike a Fragile Speedster it can also use a more direct approach without needing to rely on Hit-and-Run Tactics to stay safe. The classic Flying Brick Super Hero archetype is usually a Lightning Bruiser. Compare and contrast Acrofatic and Master of All , with which it may also overlap. Compare and contrast also Jack-of-All-Stats , which is similarly well-rounded but not exceptional in any particular area in the way a Lightning Bruiser is When adding examples, keep in mind: A statement that a character is strong, fast, and durable does not define them as a Lightning Bruiser; most Action Heroes already demonstrate those qualities. A character is a Lightning Bruiser if they are explicitly stated to be strong than most of the other characters, or if it is stated explicitly that another character of comparable speed or strength is a Fragile Speedster or a Mighty Glacier Note that being a Lightning Bruiser has nothing to do with using lightning-based attacks or magic , though they can overlap to the same character

In Real Life , for electric current to flow there must be a difference in electrical potential. There must be negative and positive termini for current to flow between. Not so in fiction. Quite often, it will be possible for some device or some person to simply fire a lightning bolt more or less straight forward toward another presumably electrically neutral object, with no sign of building up charge separation beforehand. It is rare to see lightning weapons or electricity-based Elemental Powers that have electricity behaving the way it does in Real Life This trope is primarily about electric weapons or attacks that appear to throw electricity around as if it's some sort of branching laser beam , rather than a system of electrons moving in response to electric potential, and sometimes hitting multiple enemies simultaneously . Aversions are electric weapons or attacks that actually follow the rules of how electricity works When this is an actual gun, it can be regarded as a cooler version of the basic Ray Gun or flamethrower. No matter how outlandish the idea is, adding Nikola Tesla as (the inspiration for) the creator will immediately suspend any disbelief a reader may have Science shows like Mythbusters and others have explored the possibility. The general consensus is that it's possible in a couple of ways, but requires so many conditions/complications that the chance of creating a practical one is virtually zero Recently there have been a few examples of lightning gun technology deployed in real life, though it obviously doesn't function the same as in fiction

No, not a novel composed entirely of beams of light, although that would be awesome While related to Manga and Anime , light novels are actually prose, written in short paragraphs and conversational language for fast reading. Light novels are very popular in

Japan, chiefly among teenagers and young adults. Back in the 2000s and early 2010s, very few of them had made their way to English-language markets , but this changed around 2013 when Yen Press created a successful strategy of marketing them to the people who read novels and not just anime/manga fans. There are also a relatively large number of translated yaoi light novels. Due to the nature of the illustrators , many Light Novels out at the moment are Ecchi to capitalize on their talents The term light novel is a misnomer. While many people believe that the word "light" in the name means the novel is , the truth is that this actually refers to the text inside. Modern light novels use simpler, easier-to-read everyday kanji as opposed to "hard" novels, which generally contain much older words which, even for Japanese readers, may necessitate keeping a dictionary on hand to understand. The closest parallel in the Western world is probably the distinction between mass-market popular fiction and higher level literary fiction Light novels commonly get adapted to Manga and Anime , and more often than not are promptly displaced </ by said adaptations outside Japan for the reasons stated above. This is so common that some light novels are mistakenly believed to be anime or manga even if they don't have such an adaptation, or, oddly, that every Japanese-derived book adapted into anime/manga is a light novel regardless of text simplicity . Legend of Galactic Heroes Sometimes it may be the other way around, and a manga or anime project may get a Tie-In Novel or Novelization in the form of a light novel. Either way, due to the close-knit relationship between the media and their habit of sharing illustrators, light novels have come to be seen as manga and anime's text-based cousin The light novel genre is Older Than They Think , existing in some form at least since The '80s , when authors like Hideyuki Kikuchi and Baku Yumemakura made a career out of light, fantasy-oriented short novels. With the rising popularity of Hajime Kanzaka's Slayers </, followed by Kouhei Kadono's Boogiepop Series </ a decade later, light novels started taking their established format, which eventually took a jump in the 2000s with Shakugan no Shana </ and A Certain Magical Index </, the point in which the genre became inextricably joined with the anime and video game business. The peak of the wave came in 2006 with Haruhi Suzumiya </, after which light novels basically skyrocketed in popularity and number. Some of the last seminal works, like Sword Art Online </, still redefined the genre in new ways, popularizing elements like the Harem Series and the Isekai sub-genre, which are near-ubiqutious in the light novel market today Chinese-language literature has a somewhat similar phenomenon, particularly in Taiwan, though there is also a growing online force on Mainland China. Although the term "light novel" is not typically used in China for such works, for convenience they will be listed here, though expect them to be listed under the Literature namespace (because most, if not all of them are Web Serial Novels) The rough Western equivalent would be Young Adult Literature , which is typically aimed at teenaged and up readers (with the upper age, depending on the authority, ranging from 25 to 34), or Pulp Magazine due to its escapist plots and Beige Prose style. However, publishers are making efforts to market light novels to adult readers, while there are several Young Adult and even Children's books that aren't "light" by any stretch of the imagination (the later Harry Potter </ books come to mind) See also Stock Light-Novel Everyman and Stock Light-Novel Hero

Lightworlders are skinny, delicate people from low-gravity habitats, or orbital colonies without artificial gravity (see Space People). They aren't nearly as common as their opposite, the Heavyworlders , since such delicate creatures are unlikely to be Big Damn Heroes . Like their heavy-gravity counterparts, though, they may be either human or alien. Low-gravity characters are often female, fragility being more forgivable in women to many writers Ordinary humans who visit</ low-gravity planets, and seem much stronger there than on Earth becoming Heavyworlders in comparison, are a Humanity Is Superior variant dating back at least to the 1912 novel A Princess of Mars </. While this variant is common in vintage scifi, the natives of such worlds are seldom portrayed as skinny, fragile versions of this trope. That's probably because it makes for poor fanservice if the Distressed Damsel rescued by the "incredibly strong" human hero makes Olive Oyl look like Pamela Anderson In real life, astronauts who spend significant time in low-gravity situations rapidly suffer health problems, especially muscular and bone degeneration, such that men and women who were healthy upon liftoff may have trouble standing up under their own strength when they get home. This is the reason why becoming an astronaut has such strict physical fitness requirements. Astronauts working without artificial gravity have to strenuously work out and alter their diets to reduce the effects of this; there's a reason why the International Space Station has inside For the opposite, see Heavyworlder

Two characters who seem very comfortable with each other to the point that it seems like they have been married for a long time, though obviously it doesn't apply to couples who actually have</ been together for a long time. Usually it is done through constant arguments with each other, as only people who are so closely bonded can have such open communication between them (whether they will admit it or not). Someone is apt to comment that they behave just like a married couple. Typically the argument will be a back and forth of opinions, such as a "Cavemen vs. Astronauts" Debate . It is likely to get heated but neither of them are willing to just leave. In extreme cases it might start getting ugly with insults about personal issues being flung about. If not an argument based, it is often tied with Heterosexual Life-Partners where domestic issues are a common topic. The two bickering characters in question do not have to be romantically involved with each other as the trope can apply to any two individuals such as best friends, siblings, military comrades, and a couple of strangers who don't know much about each other and are not romantically or sexually involved but their situations make them bicker as if they knew each other for a long time Often applied to those with Belligerent Sexual Tension and Unresolved Sexual Tension . Compare Slap-Slap-Kiss . When this leads to an outsider concluding that they're really a couple, one of them will say " She Is Not My Girlfriend ". See also Vitriolic Best Buds . Sometimes, two characters of the opposite sex are very close — so close that you might expect them to be dating. Except they're not. They admit that they matter a great deal to each other, that they would die for each other, that they can't imagine life without each other. They aren't just any pair of friends. They're as close as family. They're like brother and sister! Often, other people don't believe this. They assume that the couple must be dating — or at least that they secretly wish they were . When the couple say they are like brother and sister, they will point out the one tiny but debilitating flaw with their theory: They are not</ brother and sister. The couple are at pains to explain that their love is completely platonic with no sexual attraction on either side. No matter how other people view them, they can't see each other in that light. They love each other, like siblings love each other, but they're not in</ love. They really are "just" friends. The Greek word for this love is storge<, as explained in detail in C. S. Lewis ' book on the subject, The Four Loves </. The fact that this doesn't stop everybody is a whole other can of worms all together. Relative Error would be somewhat the inverse of, but definitely comparable to, this trope. Platonic Life-Partners is a sub-trope in which the characters are not only close, but their relationship is the primary one in their lives. If you can imagine the same-sex versions of the characters being Heterosexual Life-Partners , then they belong under Platonic Life-Partners . Of course, almost all instances of Platonic Life-Partners fall under this trope, but to avoid redundancy they should not</ be listed on this page. Simply being friends doesn't make a pair an example, nor does just being True Companions . Because most childhood relationships are inherently platonic, friendships between children do not qualify unless they continue into adulthood and remain platonic. Contrast Just Friends for when this does actually blossom into romance. Not to be confused with Unlucky Childhood Friend , in which one side does have feelings for the other. Compare with Stupid Sexy Friend . The trope may be averted if the relationship becomes a Childhood Friend Romance or (for actual siblings) subverted by Brother–Sister Incest . This trope is sometimes the result of the No Hugging, No Kissing rule. Fanfics may confer such a bond onto characters for one of two reasons: to make up for the characters' lack of actual siblings, or to justify unwanted attachments for the sake of shipping ; the unwanted character needs not die for the ship .

Children tend to take after their parents in one regard or another and stories often drive home this point by saying "Like Father, Like Son", or "Like Mother, Like Daughter", or like any relative like any other younger relative. This causes everything from comedy to angst to dramatic tension. This trope is Truth in Television . Obviously, often happens to any character with a Truly Single Parent . A Sister

If there's a love triangle with a man and woman of the same minority race and another person who's white, the people of the same race will be meant to be together. Differs from a Token Minority Couple in that there the only races that matter are white and non-white but this is about the two people matching White women always like black men and white men want Asian women but some times couples are just happier with someone who's the same race, nationality, or even religion. It might be a conscious choice of the characters saying that they feel obligated to be together because they're both the same. They might feel entitled to be together but a white person tries to keep them apart but fails and so we see the strength of their relationship. To emphasis the difference between the white person trying to keep them apart and the black people, the white one is probably blonde. It might be done as a black on black Token Minority Couple as the Token Black Friend making a Beta Couple with another black person This is one trope we can partially blame The Hays Code for. Prior to the code, interracial pairs (particularly Black/White) had been done before (not perfectly, but done nonetheless), but the Hays Code forbade</ any form of interracial relationships until 1956 The belief of white going with white will be found under Where da White Women At? . He then tries to have a duel with Bell (who is badly outmatched) to settle it, but is forced to flee from Tiona's advances before he can do so In The Princess and the Frog </ , black Tiana gets together with dark-skinned Prince Naveen, even though her friend Charlotte, who is white, was interested in him

the school and is the only black female student (in the same year as the main characters anyway). She and Kyle share a mutual crush but Cartman insists on pushing her together with Token since Token and the black girl, Nichole, are the only ones at the school of their race and gender. At the end of the episode, Kyle ends up alone since Nichole is with Token. Cartman even points out that the only two Latino students in the school are dating as proof, but it turns out that Cartman had been responsible for them getting together as well.

Freudian psychology has a theory that children who have a close relationship with their parents tend to look for those properties in a mate It happens that the first example of the male gender that a baby girl encounters is her father, and that forms her impression of maleness in general, up to and including the mate she connects with and, if she's anywhere near the Christian religion, her impression of God as "our Father in Heaven." If she has a negative father, she'll often grab up negative boyfriends as well, so it takes a certain amount of awareness to be able to break out of that tendency If her father is absent and an older brother (or another male father figure) is present and actively involved in her life, she bonds with him the same way and looks for men much like him Straight women look to their fathers as a template about what to expect and desire in a man. Sometimes if they have a really bad relationship with their father, they can go the exact other way and choose a husband opposite to their father. Either way, their father remains a very important influence in the choice of a spouse The same goes for straight men using their mother as a guide when choosing a wife. Lesbians and gay men are likewise influenced by their same-sex parents, and people who grew up without knowing their parents at all will likely find themselves subconsciously looking for other templates Some people find this squicky , but it's just as common in Real Life as in Fiction. A character who proudly and often loudly proclaims their preference for an older female romantic partner. The exact reasons can be anything from liking a more intellectual woman to simply wanting someone with a bigger cup size . This preference is most obvious in Shōnen and seinen , which otherwise tend to concentrate on women of a younger age bracket In comedy, this character is inevitably set up with a somewhat childish female character who doesn't feed into this taste at all, and is told so. Oh no! The poor Ill Girl with cancer is being menaced by the Serial Killer ! No one has survived his attacks yet , and it's going to break her fiancé's heart, and after he finally got up the courage to propose to her! This is when the audience turns to the writer and says, "Like You Would Really Do It"</. Despite the author's best efforts, the audience doesn't buy the suspense or anguish that the character is being menaced with. They know</ the Sorting Algorithm of Mortality has this particular character dead last (pun intended) in terms of who's gonna die, and so they're just counting the seconds before the door is smashed open and The Cavalry charges in, or the bad guy goes "You're Not Worth Killing ", or (if the character should actually appear dead) for the failed Fake Kill Scare to be revealed. This reaction extends not just to children or infants , but to any hero or character with thick Plot Armour in a setting where things Could Have Been Messy . Even the Heroic Sacrifice , capable of felling the mightiest of heroes, falls short of really killing them. It's always worth remembering that in any kind of collaborative work, such as a comic book or long-running TV series, even if one author really does sincerely mean to kill off Captain Astonishoid for really reals</ this time, it's usually only a matter of time until another writer comes along and brings them back if the character is popular enough. As such, the notorious phenomenon of Comic Book Death is more due to this problem than to individual authors regretting their previous decisions. Often overlaps with a Disney Death . If the story attempts to convince you that the main character is killed off even though they obviously can't be or the story would end, see Our Hero Is Dead . If this applies to lesser good characters who might otherwise be killed off, it's Immortal Hero . The Good Guys Always Win is the most common cause. A rather common thing for British actors and those of other nationalities to do: decide that they could be better served in their career by going to Los Angeles . It's the most influential and pervasive film industry in the world. If you want to be not just a national but an international star you pretty much have to spend at least some time there. In addition, you can always come back to the U.K. and use the money from the States for British TV, indies, and theater. The popularity of British actors is also due to the fact that they are a) cheaper, b) less likely to be doing films (though that's less and less the case) and c) less likely to be barred from gay roles by their agents. And then there's this final selling point for the Hollywood studios, probably the most important: They speak English! Oddly, Brits and Europeans seem to have an above average chance of playing villains or jerks ... See Fake American for when they put on the accent as well.

Real Life Successful ones are listed below; in fact, thousands of non-American actors go over each pilot season hoping to make it big, to the point documentaries get made about it. Three Older Than Television examples: Charlie Chaplin in the silent era, and Boris Karloff and C. Aubrey Smith in the early talkies.

A powerful attack or technique available after some requirement during battle is fulfilled. In video games, this is often indicated by a refillable or chargeable gauge on the menu allowing the player to gauge when it will become available, how strong it will be, or so on; and the most common requirement is taking (and/or or giving) damage in combat. Thus, it's usually a kind of Evolving Attack . May overlap with Super Mode , or may be a form of Desperation Attack It may be accompanied by a Super Move Portrait Attack The popularity of the trope, and its assimilation into numerous forms of media is a testament to the widespread effect that Final Fantasy VII </, the originator of the term , had in making RPGs more mainstream. Although a nearly identical game play mechanic appeared a few years earlier in Lufia II: Rise of the Sinistrals </, the concept has become synonymous with the Final Fantasy </ games series and the term is now widely used as a catch-all term to describe such attacks The inverse of Break Meter . Despite the fact that you're watching the finest CSI lab/Police Department/Emergency Room/ Military Regiment in the country, no one working there can seem to move on, even though they may talk about it frequently. The New Guy whose first day may have coincided with the Pilot of the show is the only one who ever receives any sort of career advancement. There's a good reason for this: the producers don't want to rip apart the cast, but they want to exhibit professional growth in the show One reason that The Captain stays in his position so long (the other being that he would never</ give up his Cool Ship). Never mind that such activities are rather frowned on in real world armed forces, where commissioned officers who cannot or will not be promoted after a certain preset number of years are basically forced to retire Note that in police forces, as opposed to military, this tends to be Truth in Television . A low-level police officer has much</ more authority and responsibility than a military private, and retiring at officer rank is not considered a disgrace Contrast Rank Up , when a character does get promoted in-show

The practice of using mix-and-match parts in animation, rather than having a completely new drawing for every new frame. This trope also covers using deliberately abstract character designs and backgrounds that will not obviously clash with the low production values. The technique was popular in the early days of animation and can be seen in J.R Bray's first animations and early comedy shorts like the Colonel Heeza Liar</ series, since it had very stiff animation and they're moving comic strips. The more detailed and realistic animation of Disney and Fleischer Studios would eventually take over and dominate the field, until the 1940s and 1950s, when two things happened: Chuck Jones 's The Dover Boys </ short over at Warner Bros. and John Hubley's... everything at United Productions of America . John Hubley from UPA was a well-known advocate of limited animation as art. He encouraged animators to experiment with primitivism and expressionism in the 1950s and 1960s, leading to the development of some pretty trippy stylized backdrops and character models that would became a major influence in the following years, with most Western television animation owing something to UPA shorts like Gerald McBoing-Boing </ to some degree. Speaking of television, its place in the widespread reemergence of limited animation definitely cannot be forgotten. While Chuck Jones and John Hubley were playing with limited animation from an artistic standpoint, studios like Hanna-Barbera and Filmation quickly recognized it as a way to save time and money . Television work had much smaller budgets and required quicker turn-around times for a finished product than theater, and limited animation provided a much-needed middle ground between expensive "full" animation and the motion comic style of previous television works like Crusader Rabbit </. This didn't stop Jones, who believed that the best animation can be watched without a soundtrack, from being extremely critical of Hanna-Barbera 's cut-rate animation style though, dubbing even this more comparatively lively approach "illustration radio." The radio comparison isn't entirely inaccurate, however: limited animation leans heavily</ on its writing and voice acting due to the rather limited visuals.

While most works live and die by the strength of their story, limited animation especially forces the creators to write well and for the voice talent to have excellent delivery, as the spectacle of fun cartoony or flashy action-packed animation will not save them... because there isn't any. Unless you're Studio Trigger , anyway. You see, Japanese anime also uses limited animation, but in a different way than the West. Alongside reusing drawings, things like less-frequent eye blinks and "lip flaps" in lieu of lip sync (i.e. characters open and close their mouths like puppets, rather than mouth shapes matching dialogue) keep down costs even more, while speed lines with abstract backgrounds, rendered long shots of incredibly detailed backgrounds, and a long list of visual tropes keeps the audience more visually engaged in a manner that is often lacking in Western productions. Finally, in a certain sense, all</ animation is limited in one particular way: with very</ few exceptions, it's foreground animation over static backgrounds. Or, for something like a train passing behind some buildings or trees, background animation over static foreground. In very early animation (e.g., " Gertie the Dinosaur "), the environment was redrawn for each frame. In very short order, it became clear that drawing your characters separately and laying those drawings over that environment/location (that might not change for minutes at a time) was the best way to do things. Today, this technique is so universal it scarcely bears mentioning. Scenes where the background is notInteractive environment is the reason for the Conspicuously Light Patch in traditional cel animation, for the record. Though, because there is a difference between Limited Animation and fully produced animation, it can become used for an Art Shift as contrast for the main work, which is especially popular for exposition or flashback narratives. As technology has progressed, the ability to produce animated storyboards became more common with the advent of software like Flash and Toon Boom , which may be released to the public as promotional material. Its primary use is being able to use crude CG or hand drawn images on top of a similarly crude background for the more detailed animation to use as a guideline for final editing and vocal timing. The same process has been used for "animated comics" where genuinely hand drawn comics are animated via voice over, use of The Ken Burns Effect or simplistic effects plug-ins like smoke and fire. Video Games also use it by necessity. See also The Dark Age of Animation . One extreme form is Synchro-Vox , which involves live-action lips mixed onto unmoving cel drawings. Compare Lazy Artist (which is sometimes associated with this trope), Stylistic Suck (when this trope is invoked as an intentional Shout-Out to low-budget cartoons). Contrast Disneyesque .

Works are sometimes released in two versions: the Vanilla Edition , and a better, souped-up Ace Custom edition with exclusive Bonus Material . With movies, you can expect deleted scenes, filmmaker interviews, never-before-seen footage , commentary tracks and so forth. Video games tend to offer a shiny metal case, developer artwork, bonus characters or the Strategy Guide . Newspapers might have supplementary articles based on national events, like elections or notable sports (Olympics being held in the country? Expect a lot of press!). Concept art, a "making-of" featurette, background story information, character biographies, alternate endings and trinkets are common with any media. All yours, if you pay some extra money Worth it? Depends on the individual work, and who you ask. In any case, this is a good marketing strategy,

because it feeds into many people's compulsion to own the "best" version. It's particularly clever if you can get people to buy the "ordinary" (some more " ordinary " than others) version, discover how cool it is, and then go shell out again</ for the Limited Special Collector's Ultimate Edition Occasionally the souped-up edition is the only</ edition for the first few months of a new release (or may be received as a Pre-Order Bonus). Conversely, the special edition might not be released until a couple of months after the regular edition to squeeze more money out of die-hard fans Another practice is releasing films both separately and in a Boxed Set with sequels. As more sequels come out, more editions with the entire series come out. The box sets traditionally come with extra features. This is also done with TV series — four episodes will be on one DVD. Then another four. Then another four. And finally the whole sixteen episodes of the season in a neat little box set. Done to excess, can become (and sometimes is) an example of Crack Is Cheaper Just because a product has a "Collector's Edition" or "Limited Edition" printed on it, it doesn't mean it's actually rare, valuable for reselling, or even something actual collectors desire. The comic book industry suffered heavily in the 1990s thanks to a collector bubble, when products like these were mass produced to exploit people who actually believed they would become valuable items in the future—but those so-called "Collector's Editions" are still worth nothing to this day Note that, with regard to video games, this should not be confused with an Updated Re-release , because that's when a game is rereleased with brand new content and significant alterations to the gameplay. The Limited Special Collector's Ultimate Edition comes out alongside the regular edition and just adds bonus content separate from the core game Remember that Examples Are Not Recent

The character always wears the same outfit, regardless of the setting or season (this includes backpacks and other accessories). Winter (or at least a Christmas Episode) may sometimes see the addition of a heavy coat, but circumstances will conspire to put the character in a situation where they must shed the coat, at which point it is never seen again. A more likely choice is a hat, scarf, and perhaps mittens, which imply colder weather without obscuring the character's trademark wardrobe. Sometimes, they'll even be shown to have a coat with the exact same color and patterns as whatever is being covered by it Even characters whose very nature should prevent them from having such a Limited Wardrobe (read: fashion nuts) may still have one. A common Lampshade Hanging is revealing the character's wardrobe to consist entirely of multiple copies of the same outfit, doubly so if another character points to an arbitrary item and explains, "That's their favorite" One benefit to this trope is that characters are recognized by their clothing . Their clothing becomes just as much identified with them as their hairstyle and personality. Always wearing a plain T-shirt, shorts and sneakers can indicate a relaxed personality; an expensive business suit is the hallmark of any Corrupt Corporate Executive . A more logistical reason is that whether something is filmed or animated it is rarely done in a sequential order. Even though character models are rather simple to produce and alter and in live action rather easy to change clothing, making such changes on a regular basis requires a great deal more effort to maintain continuity from scene to scene. This is kind of the same reason main characters have a Dirt

Forcefield and have little Clothing Damage unless dramatically necessary This trope is especially prevalent in shows with heavy merchandising tie-ins, where it is considered important to maximize the resemblance between the characters and their action figure counterparts . A rotating and varied wardrobe would counter that. In animated works, this can be the mark of cheap animation, and is deliberately done so as to allow the studio to recycle as much Stock Footage as it possibly can (See Filmation). It happens with broadcast TV anime, due to having smaller budgets than movie /</ OVA works. This also cuts time, since many series are produced on a deadline, too This trope is extremely</ common in video games, RPG's especially, to the point of having its own sub-trope, Informed Equipment . Often, characters will wear only one primary outfit throughout the entire course of the game A variation in Live Action is to have variations on the same outfit scheme,</ such as Hawaiian shirts, polo shirts, the color mauve, etc. See Consistent Clothing Style Compare Same Clothes, Different Year . Melee classes gain power at a linear rate as they level up. Magic users gain power quadratically as they level up.</ A quirk some Video Game and Tabletop RPG game systems share is that melee classes are more powerful, versatile or useful at lower levels than casters or magic-using classes. However, the trend reverses at higher levels, when the magic users gain a breadth of both versatility and pure power over simplistic hack and slash heroes. The divide is usually exacerbated by the ease with which a young warrior can go wading into combat compared to a novice mage. The fighter just needs decent armor and a weapon, and with their marvelous Hit Points , they can get into the thick of things and do reasonably well. Magical weapons aren't required but can (usually) be used immediately and give amazing bonuses. Wizards, on the other hand (especially young/low level ones), have no such easy shortcuts to massive magical power; they have to study, find or invent spells, and discover magic items that aren't so powerful they cause them to go into a Superpower Meltdown . In the meantime, they are nearly defenseless in a fight. Yet the trend reverses at higher levels. As the trope name says, the power of a warrior is linear. It grows at a steady pace whose increase can be predicted by simple arithmetic. But a wizard's power is quadratic or even exponential : as it grows, the rate of growth also gets multiplied. For example, learning something such as a spell leads to multiple, often unpredictable, varieties of more things to learn, in a manner similar to how a single infected person can infect multiple people unpredictably, or how a Wiki Walk on TV Tropes or The Other Wiki forces you to follow more links which lead to discovery of more varieties of knowledge and tropes which have lots of interesting links themselves that lead to more countless instances of discovering tropes, and so on. Thus, in the end wizards must at some point become the more powerful class. For example, while warriors are still stuck at physical hacking and slashing, wizards have discovered how to warp reality itself . Whether it's the game designers intentionally "making up" for

lots of frailty for many levels, or a quirk that comes up during play, the wizard simply outpaces all but the most Min Maxed and Munchkined out warriors. This isn't just a Sour Grapes complaint against Squishy Wizards or a lack of Competitive Balance throughout the game, but can be a deliberate thematic choice. First off, the idea that Surprisingly Realistic Outcome occurs for warriors at some point. They hit the limits of human (or near-human) ability and can't bend physics any farther. Since warriors don't have magic, how is physical force supposed to beat, say, an intangible ghost or some supernatural baddie with the magical ability to ignore it? Basically, warriors can only be so fantastic, so even as they improve, those improvements mean less. Secondly, in such a setting, there may be dozens if not hundreds of small-time mystic dabblers, but they quickly thin in numbers, only to resurface as potent adventuring wizards, culminating in the classic mystic powerhouse like Gandalf or Elminster , or the Evil Sorcerer in the Evil Tower of Ominousness . Meanwhile, the Conans and Beowulfs have the run of the place, being able to both solo and group. In essence, the mages study under the promise of a dull and complex path with great profits at the end. Thirdly, there's more than a bit of Wish Fulfillment here. Gamers, and by extension game designers, tend to be nerds by definition. The notion that a wizard (generally something of a brainy bookworm) may start out weaker than the Dumb Muscle , but surpass them entirely in the endgame, proving that knowledge is power that can modify the environment itself, thus making large muscles redundant in comparison? This account holds a lot of inherent appeal to them. However, if this results from a development mistake, or enough complaints convince the author/programmer to change things, there are ways to limit the awesomeness of wizards. These include restrictions on magic itself , the two classic examples being the Mana mechanic or the even more restrictive Vancian Magic . Both of these serve to cap how often a wizard can cast spells. Preventing casting spells while wearing armour is another, though this is often partially countered by providing a range of protective magics that work much like normal armour only better</, but of course for a limited time. Other restrictions also exist; a common one is simply to make the wizard Squishy . Others involve sanity and corruption systems, or making the casting of a spell a tactically debilitating act. As you can imagine, players who specifically chose wizards and worked hard to keep them alive with the promise of great power for their effort can be...upset by this game balancing Nerfing , unless (and sometimes especially because) it also beefs up wizards at low levels. The solution is rarely to power up warriors while only slightly depowering wizards generally because, at least in the West, there's an expectation that the warrior be a Badass Normal that you can more easily imagine that you could become with enough effort. These fixes can result in or from some pretty strange logic and situations. Sure, the wizard can do more amazing and effective stuff than the warrior can, but the warrior can do his less impressive things indefinitely! That makes up for it, right?... Well, sometimes. A tough flurry of Random Encounters can suck a mage's supply of game breaking magic, which will force them to save a bit of juice for that final boss, and not waste their power. But in some games, wizards can recover their magic faster as they level up, and other games have infinitely available elixirs that recover magic quickly. Still other times, you end up with the opposite problem, wizards whose capacity to fight is so restricted that you wonder why the warriors even bother to bring them along (when this makes sense, it's because of the Inverse Law of Utility and Lethality being applied). In games that involve

both PvP and singleplayer vs AI gameplay, especially the ones that require you to play both to advance on either, the base game theory and thus Metagame can be completely different from if they were separated, which makes fanbases even less pleasable. Tropes Are Not Bad is still in effect however, and some well-thought out games encourage a party to have Warriors to pull them through the early levels and then sit back and watch the mages repay them later on and neither a all-warrior or all-mage team would have succeeded. The problem largely lies in how many times the Mage overshoots the warrior rather early on, rather than say, halfway through. Attempts to keep warriors' capabilities "normal" are far less prevalent in works of Eastern origin which are more likely to give their warriors Charles Atlas Superpower , and so the trope has weakened slightly in the minds of the younger generation. Other character types, such as the Magic Knight , the Kung-Fu Wizard , and practitioners of Full-Contact Magic , mingle both styles of fighting to their own advantage by either using magic to augment raw strength or training their physical abilities to "power up" their magical attacks. There are quite a few cases where this is the inverse: "Wizards don't need equipment to be more useful" turns into "Wizards can't use equipment to be more useful", and Fighters with their attack speed, critical strikes, weapons that deal higher damage, and so on, eventually outpace Wizards, whose power comes simply from the spell's level that cannot be increased any further. A curious recurring inversion that's exclusive almost entirely to JRPGs owes its existence to the concept of a damage cap: in attempt to help the Fighters overcome this trope, games sometimes (if their Agility or a similar stat is high enough) allow them to deal several attacks in one turn by pressing "Attack" once—and if every instance</ of damage is capped out at 999 , it doesn't matter how powerful and flashy a Wizard's spell is, since it only hits once, compared to a Fighter's twenty attacks. Another reason why the inverse can occur is when the warriors and wizards are compared entirely on account of their destructive power. Rarely in a debate on the presence of warriors and wizards will the healer come up, for example. Outside of tabletop games and some video games, the warriors and wizards only really can be used to defeat monsters; abilities that circumvent obstacles, such as flying between mountain peaks, are never used or considered, meaning that the wizard's versatility, often their greatest strength, essentially means nothing when they can't apply it outside of combat. A subtrope of Changing Gameplay Priorities . See also Magikarp Power for cases of weak things that become stronger after enough effort, like the wizard in this case. If the game itself scales alongside the quadratic wizard growth, then it can sometimes result in a Parabolic Power Curve for other classes, since they'll fall further and further behind the more levels they gain.

Line boil is the wobble of hand-drawn lines, particularly noticeable when characters are redrawn in every frame even though they are standing still. Early 20th century animators that should be minimized. Limited Animation deals with line boil by using the same drawing for parts of the character that aren't moving and only re-drawing the parts that move, though this may make the immobile parts seem frozen in place, a problem that occurs in computer animation as well. To avoid this "freezing" effect, line boil and other types of wobbling and jittering are sometimes purposely used and even exaggerated. Anime and Manga Commercials Eastern European Animation Film

Sometimes a military commander has a dangerous or even suicidal mission, but being a nice guy he will not order his men to go on the mission. Instead the commander will ask for volunteers to step forward. Generally all of his men will step forward Alternatively, if the mission is to stay put and defend a hopeless position , he will offer an escape route. Generally, no one will move A common inversion is to have most of the men step backward</, except one, who is considered to have volunteered for the mission Sometimes the offer is presented as genuine — "Some of you have families . No-one will think any the less of you for going home to them" — and sometimes The Captain will even try to persuade</ people to leave. He may even precede it with Releasing from the Promise so that no one feels bound to stay. If not all of the characters are needed, he may have to select those who go, and those who can't, or who gets to Bring News Back Other times, it is more of a rhetorical Rousing Speech , as with Shakespeare's Henry V saying that anyone who's scared can leave because he doesn't want to die in the company of cowards Sometimes the volunteering is gradual, with characters being shamed into it by seeing the others volunteer. In which case, the least experienced character leads off , and the most is usually the last A Sub-Trope of Opt Out . The villain occasionally gets a version, with the exception that anyone who opts out is Thrown from the Zeppelin . And some soldiers, on either side, will just say " Screw This, I'm Outta Here! " and leave without their general's permission Note: in the wake of Saddam Hussein 's occupation of Kuwait in 1990, US President George H. W. Bush announced that Saddam would not be allowed to go on to invade Saudi Arabia , saying "I have drawn a line in the sand!" Rather than a call for volunteers, his meaning was You Shall Not Pass! ; since then, real-world usage has mostly followed that

A character is in disguise, undercover, or otherwise lying their ass off about their identity and must come up with a fake name on the spot. Their eyes bounce around the room, land on one object, then another, then another... ...and by assembling the names of these objects one after the other, they have an instant pseudonym! Sometimes their eyes will land on writing, which may supply them with a plausible name. However, the trope most often results in ridiculous aliases that somehow still fly. This also applies to details that may embellish a fake story such as accomplices, other Invented Individuals , or locations, as long as the goal is to lie on the spot by line-of-sight naming. One possible is that the items they see somehow combine to sound like their real name anyway, and they have to quickly find a new one. There are two Stock Parodies that contribute to this: works may riff on Jan Brady's fake boyfriend "George Glass" from The Brady Bunch </, or a scene involving Keyser Soze from The Usual Suspects </ . Subtrope of Line-of-Sight Name . Other ways to invent a quick alias include Character Name Alias , Sdrawkcab Alias , Sue Donym and This Is My Name on Foreign .

Basically, creators have two ways to interact with their fans: The official channels, like the official Web site/forum, Twitter/Facebook/Relevant popular media Web site (IMDb for

movies, GoodRead for books, etc.). These are easily searchable on using a search engine. These are usually maintained by their promoter/agent. Some of the unusual haunts, like a creator-made blog/LiveJournal/WordPress/ DeviantArt etc, or in a One of Us moment, visiting and interacting with fans on a popular site like Reddit or a fansite. This is becoming more and more common as creators embrace New Media . They allow some level of interactivity, like allowing fans to place comments that are read and maybe even answered by the creator. These are NOT their personal accounts, just their public accounts which they themselves reveal to fans, and are known to interact there. Please respect their privacy. Links to examples goes on the trivia page of the Creator/Work, not the main page. Contrast Why Fandom Can't Have Nice Things .

A blog that focuses primarily on cool links that the author has found, as opposed to original content such as essays. Arguably the original form; Jorn Barger, the coiner of the term "weblog," intended it to mean a log of his Web surfing. Barger's blog , one of the oldest, still follows this format. Many Power Law Blogs have this form, often embellished with commentary. (The most pronounced example may be who has a habit of potholing his links with cryptic descriptions like) Not to be confused with Link's blog .

A common system for distributing clues in any genre where the heroes must investigate something (this includes not only Crime and Punishment Series but also many Action Series and Science Fiction series). In plots which use the Linked List Clue Methodology, each clue tells the heroes where the next clue should be found, and the next clue leads them to the clue after that, and so on until they get to the solution This is named after the concept of a "linked list" in computer science, where each element in the list contains a "pointer" to the next element, which can be anywhere in the memory. The only way to find a specific element in such a list is to look at each individual one that precedes it The Linked List Clue Methodology is extremely common in video games, particularly role-playing games, where it provides a convenient mechanism to force the player to follow the predetermined plot without appearing to put overly contrived restrictions on the player's actions. Compare Fetch Quest and Chain of Deals When the clues are being actively supplied by someone who thinks he's a Chessmaster , see Criminal Mind Games . For when there's a really weak connection between the clues see Plot Coupon

This is a Comedy Trope where a character or characters try to buy some item (which is normally at least somewhat expensive), and tries to do so with nothing more than a few pennies of spare change, or lint, or some sort of ineffectual barter. Usually this trope is invoked just after the seller has told the character all he has to offer, all the options and all the flexibility in deal making. Either out of desperation or out of a literal interpretation of the idea of making a deal, the character then makes his own pitch, almost ALWAYS starting with the phrase, "What can I get for..." Generally, the seller then either kicks them out of the store, or sells them something that wasn't in his list of options he gave before, and the item in question is either of questionable quality or is a poor facsimile of whatever product he was selling. Not to be confused with lint as an actual, valuable commodity.

A form of Applied Phlebotinum where it's possible to, in effect, "drain", or "transfer", or "reverse" physical conditions The usual form this takes is related to Life Energy — if you drain someone's life energy , they start to show the physical signs of aging. Transferring life energy ages the victim and youthens the recipient . This treats aging as if it's the presence or lack of a substance. With the right set of in-universe rules, this becomes both possible and reasonable with the right kind of Functional Magic or Applied Phlebotinum A variation simply has characters "aged" or "youthened". There's no actual drain or transfer, but age is still treated as a substance, where it can be added or removed and you'll automatically get a whole host of physical changes. This can be extended to where someone is youthened into a baby , or a baby aged into an adult . There are also other kinds of Physical Attribute Swaps that can get triggered this way, such as by draining someone else's height, weight, or musculature It is sometimes used for Fairest of Them All . It may also be a Power Source to some villains or powers, or as the food for Horror Hunger . If the character is using this to live forever, it's Life Drinker . It helps when you use Powers as Programs . Empathic Healer is a more heroic inverse of this trope, where someone heals</ another person by transferring the other person's wounds to themselves. The assets may be acquired via a Blood Bath . Supertrope to Level Drain , Life Drain , Mana Drain , Soul Eating and Transferred Transformation Not to be confused with Pooled Funds

Are you an artist? Well, here's a list of pages that, if you illustrate them well enough, you might have your picture used as the illustration of that trope. Artists: See also .

A character is subjected to a Long List of their sins and transgressions, often impossibly long. The list may be presented in person, or written out (perhaps on a "Wanted!" Poster). Alternatively, a character is placed in purgatory or otherwise judged for their crimes, with a convenient long list of crimes at hand, possibly because the Powers That Be have Surveillance as the Plot Demands Arson, Murder, and Jaywalking (or Bread, Eggs, Milk, Squick , if you're delving into Black Comedy) is typically invoked, making this a sister trope. This can also invoke a Dissimile if the defense or accuser remarks that the target's record is pretty clean aside from the list. On the other hand, it can be subverted if it becomes Arson, Murder, and Lifesaving . The details on the list may qualify as Noodle Incidents Can lead to Longer-Than-Life Sentence

Welcome, students! This is Prof. Seymour Tropewell's literature seminar, "Troping in the Literary Field!" TV Tropes is a great place to learn about literary techniques, but most of the tropes on this wiki aren't quite accepted by the literary field. These ones are. Straight from the textbook, these are the tropes you will</ learn about in your English class. This index is designed to be a quick go-to guide to various literary terms. Similar to the We Are Not Alone Index , which indexes tropes that also have pages on The Other Wiki .

Alliteration

The implication of qualities or ingredients in a product that aren't there because of certain words or spellings of words that vary from the standard. This is usually done to get around government regulations on truth in advertising laws. This is how you end up with products like fruit "punch" when a drink contains no actual fruit juice, "choc" or "choco" when something contains little to no actual chocolate, and "creme" spread that contains no dairy cream. The intent of the law was to prevent advertisers from using words like "chocolate" and "cream" to describe products that didn't contain the ingredients mentioned, but the feds didn't count on consumer illiteracy; too many people now assume that "froot with choco creme" is the same thing as "fruit with chocolate cream", and assume they're getting vitamins, minerals, and flavor they really aren't. And advertisers happily take advantage of it. Generally speaking, added quantifiers indicate lower amounts of an actual ingredient. If the product also uses Xtreme Kool Letterz , any nutritional value and unadded flavors are likely an unintentional side-effect. You're probably better off eating Soylent Green . (Much</ more nutritious and tasty than Soylent Yellow and</ Red!) Consumers during the age of mass food production in the 19th century lobbied against artificial foods being sold alongside "normal" food and demanded such food be distinctly labeled; margarine, for example, received a push to be dyed pink so consumers would not confuse it for actual butter, and for a while it was illegal in some places to sell margarine that was dyed butter-yellow (it's naturally white, and even today, margarine is dyed bright yellow whereas natural butter is pale). Company lobbyists learned using Lite Creme was an easy escape, as no one wanted an ominous "artificial" label on their product. Official nutritional labels on products are somewhat</ more informative, though overly technical writing can obscure this for the same reasons. Ingredients being listed in decreasing order does not specify actual amounts, nor does the use of several names to indicate variations on essentially the same ingredient. Lite Creme products may in fact taste like "normal" foods anyway, and brands being sold directly</ as food replacements (such as vegan) directly advertise as such. In general, as All-Natural Snake Oil can tell you, there's nothing particularly wrong with something being a processed food in and of itself, and things that are "natural" can be just as unhealthy as Froot Choco-Cheez. Generally though, Lite Creme in the public image brings to mind bizarre concoctions of usually unhealthy additives. See also Asbestos-Free Cereal and The Coconut Effect . Compare Bland-Name Product , when your Froot'n'Nutz Choco-bar is made by "Cadberry's."

For some reason, Slapstick comedy often seems to involve a character injuring their butt. Possibly it's just because it's humiliating, making this essentially the rear-oriented counterpart of the Groin Attack Especially common in cartoons, where this often takes the form of one character sticking a long pin into another character's behind, making them jump away, or straight up in the air, with a yell Another form of this old slapstick trope has someone sitting on something unexpectedly hot . Yet another is getting bitten on the backside , usually by a dog or some similar animal. Might be part of literally Getting the Boot and forcefully removed from a location. Then, of course, there's the old " Thumbtack on the Chair " gag. And certainly not least, that perennial favorite, The Pratfall The unlucky recipient's reaction

is likely to be a Pain-Powered Leap Related to Ass Shove , which happens when something goes into</ the butt, and Shot in the Ass , the specific case of, well, Exactly What It Says on the Tin and Pain to the Ass Contrast Ass Kicks You . Kinky Spanking is the titillating variant. Comedic Spanking is a related concept

Like Literal Ass-Kicking , certain rear-end related sayings aren't always figurative. Often used as a form of embarassment, Literal Ass Kissing is a rather ultimate form of humiliation and submission A commmon variant is the Literal Genie version, when someone isn't familiar with the idiom and assumes it's an order See also Literal Ass-Kicking . Compare I Kiss Your Foot , which is a somewhat more dignified gesture of submission

You're on a cliff and fall off. Unless you're a wily coyote , there will be a ledge or branch below that you can hang from. For some reason, the standard cartoon canyon has dead trees growing out of the sheer rock face. It's what Cliffhanger is named from Being a dead tree, it will break. Perfect timing for Take My Hand , or falling to another branch. Another variation is to have another character join you, only to overload the branch. A third variation is having an irate eagle or vulture there guarding its nest. A fourth, scaled up variant, is for it to be a Bus Full of Innocents tilting precariously on said cliff This also includes the urban version: hanging from a flag pole. Another way to stop the fall is with a Blade Brake . If the character's items or equipment fall while or before they fall, you're being given a Plummet Perspective . This is one of the building blocks of Climb, Slip, Hang, Climb . Sister trope of The Precarious Ledge . See Teetering on the Edge when it is a vehicle that is hanging over a cliff

You have to Be Careful What You Wish For , because oh boy</ are you gonna get it More often than not, a wish-granting entity (genie , vengeance demon , holodeck , leprechaun , and so on) has some sort of contractual clause stating that they have to give you exactly</ what you ask for — but maybe not in the way you were thinking of when you made the wish. Ask for a ton of money, and it will appear. Right in front of you, weighing exactly one ton (and if you're lucky, it might even be in your preferred denomination). On the other hand if you ask for X-ray vision, your eyes might start shooting harmful radiation, or you may end up being able to only see in the X-ray spectrum. In other cases, you may have wished for one half of something; wishing for the knowledge to cure all existing illnesses will be rendered null and void if you didn't wish for the means to access the medical ingredients that may or may not exist yet. The entity wasn't trying</ to screw you over, it's just that your understanding of the wish's words and theirs didn't match. If you're lucky, they may give you a do-over. Otherwise, you may have to burn another wish to undo the damage What makes this worse is how characters in this situation are now ten times as likely to make a Rhetorical Request Blunder and blurt out a "wish" without meaning to, while the Literal Genie is around. It's almost a mystical effect, as people who have never uttered "I wish" prior otherwise will do so . And you definitely do not</ want to use Malaproper In various forms, Literal Genie wishes are very old; specific examples (e.g., immortality without

eternal youth , as in the case of Eos and Tithonos) go back to Greek Mythology , while the actual genie trope was known in Arabia by the 10th century A more modern variation is when the wisher asks for something using slang, colloquialisms, or Ambiguous Syntax , and the Genie, having not been outside for at least a century, grants it literally because that's the only way they can understand the wish. In this regard, even a Benevolent Genie can become a Literal one. So you can only blame yourself when the genie gives you a </ that's a foot tall While the genie claims</ that they're being literal, or even that they're Just Following Orders , in practice, it tends to come off as if they're simply always choosing whichever interpretation of your words is the most disruptive , the most likely to teach the character An Aesop , or at the very least what you least wanted</ to happen. If this goes beyond the point of plausible interpretation, they become a Jackass Genie You get around this by wording your request as carefully and explicitly as possible. Or wish for the genie to grant the following wishes according to your interpretation , if you are allowed three wishes. Of course, there's remarkably little plot conflict when things can go this well , so don't expect very many characters to actually think of this Not to be confused with Exact Words . A more mundane version is Literal-Minded . A highly specific, villainous version is Unhand Them, Villain! . Compare Zeroth Law Rebellion and Blunt Metaphors Trauma . Super-Trope to The Genie in the Machine and Gone Horribly Right . If a genie goes out of their way to fulfill the spirit and intention of a person's wishes without any careful wording required, they're a Benevolent Genie . See also Reality Warping Is Not a Toy . Compare Jackass Genie . Generally involves some form of Double Meaning . If the wisher decides not to play the game, and wishes for no wishes (or some other paradox), it's Wishplosion

This is the technique of putting a sarcastic twist on the more plain meaning of something. Though literal-mindedness is often associated with not understanding sarcasm , in some cases snarking and literal-mindedness can go hand-in-hand Often involves a Mathematician's Answer . See also Grammar Nazi , whose more snarky varieties are prone to responding to misspoken statements as if they were what the speaker meant to say. If one acts</ on the sarcastic twist, it's a Jerkass Genie . If the snarky twist is the intended</ meaning, it may be a form of Literal Metaphor

The protagonist and the neighbor fall in love with each other This neighborhood love interest can overlap with the Girl Next Door who is average and wholesome femininity personified. He might not be able to resist the urge to take advantage on the situation and spy on her or he might visit her by Enter Stage Window Obviously, not really that rare in Real Life . It's been said that one of the more unusual side effects of the steam engine was that for the first time people weren't limited to marrying their neighbors Compare Childhood Friend Romance

Mary Jane was the girl next door to Peter Parker's Aunt May in Spider-Man </. Also unusually for this trope they didn't meet through being neighbors but through Peter's Aunt May's and Mary Jane's Aunt Anna's attempt to set them up. Played much straighter in the movies where MJ was Peter's neighbor since childhood.

In Harold & Kumar Go to White Castle </ , Harold has a crush on his neighbor but is too shy to tell her.

Alice and Bob meet up at a bar. Alice is dressed very provocatively and is acting rather seductively towards Bob, which Bob is obviously enjoying. Things start to heat up between the two and they exit the bar and slip out to somewhere nearby that's dark and quiet. Things start getting intimate. Alice seems Ready For Love Making , and Bob is ready to comply but suddenly things take a horrible turn for Bob. Alice's mouth gets inhumanly wide as she seizes Bob before he can run away. Bob lets out a final scream as she eats him whole and alive Bob has fallen prey to a Literal Maneater. She is some sort of monster (alien, demon, vampire, etc.); who (at least superficially) resembles a beautiful woman, in order to attract obliviously unlucky men and then devour them. She (and they're usually a she</) is a very popular type of evil creature to appear on Monster of the Week style shows. Expect her to be Ms. Fanservice , because that's how she lures in victims; although it's not too surprising if she turns out to be a hideous shapeshifter who's only pretending to look like a beautiful human Sub-trope of To Serve Man , Consuming Passion , I'm a Humanitarian , and Death by Sex . Despite the Animal Motif involved, not inherently related to the Black Widow trope, though a Literal Maneater who legally weds her victims before consuming them would be an example of both. Compare Horny Devils , who have sometimes been portrayed as seducing people before eating them Also see the Femme Fatale and The Vamp , who may also use their sexuality for evil purposes, but they don't eat their lovers (at least not literally). For a type of female monster that preys on women rather than men, see the Lesbian Vampire

Alice uses a figure of speech. Bob reiterates the usual metaphorical meaning. Alice says no, she meant it literally. There's also a variation in which Bob questions the metaphor, and Alice responds sarcastically </ that she meant it literally. See also Visual Pun (when a play on words is given literal visualization), Not Hyperbole (where what seems like an exaggeration isn't) and Made from Real Girl Scouts (where the literal meaning is true... and you really wish it wasn't). A common way to lampshade the trope is "I've heard of [X], but this is ridiculous!". Compare Double Meaning , Not Hyperbole , No Longer with Us , Exact Words , Metaphoric Metamorphosis . The following tropes either have Literal Metaphors in their name or are about common Literal Metaphors:

A literal-minded person just doesn't get figurative speech , instead interpreting instructions, idioms, understatement , sarcasm , and so forth completely literally. Some of the ways this trope is played: Bothering by the Book and Exact Words , where somebody deliberately uses a literal interpretation in order to gain an advantage, make a point or "win" an argument, perhaps using Obfuscating Stupidity . Often used in Loophole Abuse . Compare Metaphorically True for similar manipulation tactics. Characters who have this as a primary characteristic will occasionally be The Comically Serious . Compare Literal Metaphor , Shaped Like Itself , and Double Meaning . Frequently results in Comically Missing the Point . This trope does not</ mean tropes being taken literally, contrary to popular belief

When a character asks for a million bucks, what they usually mean is a million dollars. Pesos. Dough. Lettuce. Glorious Green. However, when they win a million bucks, either through inheritance, a contest, a game show, or a Literal Genie , they will instead end up finding themselves on the receiving end of a Literal Metaphor A person is told that they are to inherit or acquire a million bucks; "bucks" in this case refers to a herd of deer that has been waiting just offscreen to trample the greedy contestant. A person says they want bills (meaning bank-notes) and instead of money, they find that their house has been stuffed full of ill-tempered geese. They ask a magic witch for a spell that gives them "a ton of dough" and that witch tries to bake them into a pie Stories that apply this are either light-hearted cartoons chock full of violence cushioned with Toon Physics or horror stories that punish the avaricious, the story's moral being about the two-faced nature of Greed . This causes some questions on why they didn't just ask for literal money instead Sub-Trope of Exact Words , Literal Metaphor and Visual Pun . Compare Duck!

So, you know how we call the Tracking Device a bug, since we all tend to speak American and are therefore too lazy to say more than one syllable? This is what happens when a clever writer realizes that hey, maybe it actually can</ be a bug! A robot bug, with cameras and laser beams ! Awesome! You can even replace the Sci-Fi with Magic , if need be. All of this on top of the fact that bugs themselves are rather unobtrusive, and people don't usually shriek in horror when there's just a random bug hanging around, minding its own business . And whereas people might begin to get suspicious if the telephone sprouted helicopter blades and followed them into the next room , an insect flitting from wall to wall is entirely uninteresting. As a result, they tend to be both cool and practical. It's hardly surprising that this trope appears in Science Fiction , Fantasy , and everything in-between . If someone does — usually out of sheer force of habit, rather than suspicion — swat the bug in question, expect anyone in headphones on the other end to get a painful dose of screeching feedback . Sure enough, it will prompt the one spying to deploy another bug. This trope isn't just restricted to fiction, either—it turns out that can be manipulated in such a way that they work as great surveillance, although full applications of this are still in the works. These studies also discredit one common appearance of this trope—robotic bugs. It turns out that they're Cool, but Impractical , since making them work pretty much requires that scientists make them as much like actual beetles as possible. All of which gives a whole new meaning to the phrase "Fly on the Wall" . Subtrope to Animal Espionage and Mechanical Insects Compare Surveillance Drone .

This is a thought experiment that occurs in many Fandoms — that the work in question is a Dramatization of real events. The theory goes something like this: While the fan accepts that what they are watching is a television show (or book, etc.), they theorise that events somewhat like it occurred in real life . Essentially, the fan surmises that the story is a covert re-telling of real events. Fans will sometimes claim to believe this wholeheartedly, even though it is more often just Willing Suspension of Disbelief , or

even a Running Gag that members of the fandom try to take as far as possible for the fun of it. Following from this, the theory normally takes one of two routes: Dramatization : The writers of the series are demoted to the roles of literary agents or ghostwriters for the characters. They are charged to transcribe their adventures, tasked to make only such changes to actual events as are required by the practicalities of the medium and to protect the confidentiality of those involved. Which is to say, "The story you are about to hear is true: only the names have been changed to protect the innocent." In this version, the characters whom the story is based on essentially want their story told but don't want anyone to know that they were involved. Loose Retelling : For whatever reason, the creator has taken someone else's story and retold it in a way that won't come back to them and won't be recognised as real. This point of view is a middle-ground between supposing what we see on-screen is absolutely real and admitting that it is just fiction. It may be claimed that several stories have been mashed together and certain people have been merged into single characters. The Literary Agent Hypothesis opens up a huge range of fannish possibilities. Perhaps the most important of these is that we can easily dismiss small continuity errors : the literary agent just cocked up a bit. It also allows us to easily dismiss certain production elements, such as a Special Effect Failure or The Other Darrin , or, most especially, the Translation Convention : it didn't "really happen that way", but it's a convenience for the production crew and an Acceptable Break from Reality. Without this notion, it's difficult to talk about how it really happened as, strictly speaking, it didn't really happen at all. This is often invoked when a visual effect is changed by the production team: the phasers didn't really change colour, the filmmaker has just worked out a more accurate way to depict what they always</ looked like. While this line of thought has advantages for speculation and is somewhat less silly than supposing that what we are watching is real, it walks a fine line: beyond excusing production mistakes, this hypothesis is occasionally extended to allow for Fanon Discontinuity , supposing that the parts we don't like are the bits that are outright fabrication, and therefore allowing those fans to discard those parts. Within fantasy gaming circles, this is also the distinction between "Lore" and "Canon": "lore" assumes certain facts are In-Universe historic records and beliefs, making them more easily subject to change, while " canon " is a definitive statement regarding what happened, but can be seen as constricting to creativity and vulnerable to Retcons . Similar notions are Direct Line to the Author (where the creator</ is the one claiming the work is a Dramatization of Real Life), Fiction as Cover-Up (where In-Universe fiction is published to cover up the bizarre reality), A True Story in My Universe (where characters</ are claiming that a previous version of the work is a Dramatization of In-Universe events), and The World as Myth (which supposes that all fictional universes are equally real, are accessible to one another via interdimensional travel, and moreover, that our universe is included in this).

The latest trend in the world of professional Fan Fiction . It is a truth universally acknowledged that a leader in possession of a sufficient fandom must be in want of followers — at least, so it has proven with Pride and Prejudice and Zombies </, starting an epidemic among public domain classics that currently shows no signs of waning . A Sub-Trope of Literary Necrophilia (no pun intended). A Christmas </ — which is a self-admitted Affectionate Parody of

This is what happens when you write a sequel to a series that was finished long ago, or continue the work of a dead author without his or her permission. Not to be confused with literal necrophilia or Literary Mash-Ups that involve zombies. Some authors, such as J. R. R. Tolkien and C. S. Lewis , are famous for avoiding this by virtue of a throng of fanatic fans . (Not in Russia though.) See also Outlived Its Creator and Sequel Gap . Franchise Zombie is when the franchise was supposed to die</ , but against the creator's blessing continued.

A true artistic work is "revealed" to have been created with some other purpose in mind. Perhaps some god or devil had a hand in it. Perhaps it was a summoning ritual, a la The King in Yellow </. Perhaps it was part of a ritual to attain godhood, which is why everyone's so enraptured by it. Either way, someone, or something</ , other than the author had a hand in it, and we're just finding out for the first time Like Beethoven Was an Alien Spy , but applying to the artistry rather than the artist

Genres of Literature .

Many tropes originated in literary works. Literature being nearly as old as writing itself, most of The Oldest Ones in the Book date to the classics, most Public Domain Characters appeared in print well before the first TV broadcasts, and even today, with the supposedly dwindling popularity of books in favor of more modern media, there are books with enough cultural impact to spawn TV Tropes Trope indexes: Lit. Class Tropes , Literary Tropes , and Literature Genres . See also Authors , Magazines , and School Study Media

As a fictional character, your time on screen is short. Plus you're often dealing with dramatic or important events. You don't have time to bin your unwanted items. It's much more convenient to just drop them in the street or do a Blind Shoulder Toss . And it's much more dramatic to fling them aside (or into the ocean). In fiction land it seems, littering is no big deal. Other characters are very unlikely to call the litterer on this, unless they are already established as the Granola Girl , or do it as a parody . Also note that attitudes towards littering have changed over time. In older works, it's not likely to be considered an issue. As more people realise the impact that littering has on the environment, the more noticeable this becomes. Related to the Rule of Drama . It's usually much more dramatic to physically cast off the hindering item than to conscientiously carry it over to the nearest waste disposal unit. Also related to the Law of Conservation of Detail . Is it really

worth screen time to include shots of the character traipsing to the bin? Can overlap with What Happened to the Mouse? , when people start wondering what the consequences would be of the discarded item lying around for someone else to find. Note that life or death situations don't apply here (e.g. Throwaway Guns), since in those cases it's really not sensible to worry about littering. Presumably in the character's universe there aren't too many people doing this (or they have a fantastic street cleaning service) because you rarely see the inevitable result of widespread littering . Contrast Jaywalking Will Ruin Your Life . See also Money to Throw Away . Calvin and Hobbes </: Subverted when the pair go to Mars, on the ground but picks it up when Hobbes points it out to him. In Frozen (2013) </, during "Let It Go," Elsa throws her cape and glove into the wind after embracing her ice powers and admitting that the cold never bothered her anyway. Those two things are never seen again. She also tosses her tiara away just before the third running of the chorus, and during the post-credits stinger, Marshmallow picks it up and dons it himself .

It's almost expected that any badass character is going to flick away a cigarette butt at some point in a show of his disdain for the world in general.

Averted in the opening credits of The Odd Couple </ (the TV series). Oscar throws his cigar on the ground and Felix spears it with the end of his umbrella, returning it to him. The credit sequence ends with Oscar & Felix in the park eating lunch; Oscar tosses his sandwich wrapper on the ground and Felix starts to complain about it.

Played straight in Sleeping Dogs </ where usually after eating Wei Shen just throws aside whatever package or can he's holding. Often in front of whoever sells it.

In Blood & Smoke </, Detective Carson has no issue with discarding cigarettes wherever he pleases, whether it be in a or .

Surprisingly averted in Banana Man </ . As Eric eats a banana and undergoes his transformation, the banana peel magically disappears (possibly into his pocket).

Many people do this in real life, presumably invoking the Law of Conservation of Detail in relation to their life.

Little girls kick people in the shins when they're angry. There doesn't seem to be any particular reason for it (sometimes it's that tiny rugrats can't kick much higher, but bigger kids still tend to go for the shins), but fiction writers everywhere seem to have agreed that when little girls are violent, the ideal expression of this violence is to kick people in the shins. Girls' lashing out violently at everyone about them is treated as cute and adorable or as hilarious rather than as brattiness or as jerkassery A standard tactic of the Bratty Half-Pint , regardless of gender. A girl who does this is going to grow up to be a Kick Chick (in fact both tropes might come from a similar line of thinking) Compare with Agony of the Feet . Related to Girl Scouts Are Evil when it is invoked. Compare Groin Attack , in which the kick happens...a bit higher up. Also compare Dismissive Kick

It's something that tends to happen with particularly advanced mentor-like alien species, Sufficiently Advanced Ancient Astronauts and the like. You don't want to be something as uninspiring as a Rubber-Forehead Alien nor something as unphysical as an Energy Being while also maintaining some sense of secrecy and wonderment, so you take the "astronaut" idea and run with it. The aliens end up wearing large all-enclosing hazmat-like encounter suits that shield their frail physical selves from the elements The great thing is that because you don't know what their encounter-suited butts look like, they could be anything ! The variety of abnormal suit shapes that can be worn by a performer is also greater than the variety possible with rubber faces. People in Rubber Suits still need the full detail and design of a whole new species, while this trope leaves things to the imagination. A permanent life in an encounter suit can also be justified a lot more than Humanoid Aliens : they have Bizarre Alien Biology that can't stand our atmosphere, they're physically very frail by comparison, so it works like Powered Armour and similar things May overlap at times with Mobile-Suit Human if the "can" is human shaped. Contrast with Exposed Extraterrestrials . Sub-Trope of Enclosed Extraterrestrials

There's a big war going on. Lots of people are going to fight, many will die. It's the setting of a big epic. And in the midst of all this is...? Some ordinary guy who can't fight really well, doesn't necessarily get involved in the war, and spends most of the story going on solo adventures while the war rages mostly in the distance, far away. Say what? This is a very common type of plot used mostly in fantasy. Fantasy tends to involve main characters who go on adventures of their own, traveling the land and seeking out what they look for. Yet, to add an interesting backstory and create the feeling that the hero is part of something much bigger, a conflict is usually used as the backdrop. This means that while the hero is snooping around and seeking out clues, dealing with individual perils and being chased by mostly minor villains, a big war will eventually be shown. The hero will usually not partake in it, yet, to make the hero's actions feel important in the long run, the hero will often be the one who somehow defeats the villain or whose actions result in the side of good winning, even if someone else ultimately kills the villain. Sometimes leads to The Greatest Story Never Told . A

Pinball Protagonist story takes it further, by not even letting the character make a major difference in the outcome. When this happens on a smaller scale, it means The Meddling Kids Are Useless , especially if the main character isn't the one who actually solves the problem in the end. Contrast The Chosen One , who is committed to single-handedly Saving the World .

You would think that if the US had people like and fighting against Hitler, WWII should had been over in a matter of days, but no. WWII superheroes always fought against WWII supervillains, or fought alongside the common troops. Superman is not allowed to fly to Berlin and end the war single-handedly, as he could do , because Status Quo Is God .

Even the Evangelions are tiny compared to the scale of Aeon War in Aeon Natum Engel </. Most evident in Operation CATO where after the initial beachhead assault they get a little Out of Focus .

The Gods Must Be Crazy </ : There's a border conflict happening in the second movie's backdrop, which is represented by two isolated enemy soldiers trying to take each other prisoner before they end up helping Xi rescue his children In roleplaying games like Dungeons & Dragons </ this is the explicitly recommended way to run games in a wartime setting. Mostly it's because with the given systems large battles are an administrative nightmare</ Video games which have a war in the background usually put the player character in this role. By letting the player be the one to take out the crucial target which lets the Red Shirt Army advance, the player feels like they won the battle, the game maintains its large scope, and the story can be made dramatic. In military shooters, this partially explains part of the reason why the player is so often part of a special operations force; those groups usually get those kinds of missions Schlock Mercenary </ focuses on a few dozen mercenaries in a galaxy of trillions. Of course, they do have more of an impact on galactic affairs than a random sample of a few dozen sophonts, and wind up getting caught in the middle of many important conflicts. It's worth noting that the page quote continues..

Across the various storylines of Red vs. Blue </ , the Red and Blue simulation troops aren't even fighting in the war against the UNSC and aliens. They're just the bottom-of-the-barrel failures they've asigned in backwater planets to test out various combat scenarios. As a result, the amount of aliens the Red and Blue teams have actually encountered can be counted on one hand, and most don't even realize the war's been over for a few years in an uneasy peace. While the super soldiers that took part in Project Freelancer were combat-ready troops outfitted with armor enhancements and AI implants, they're still only a costly fringe experiment that are dealing with inter-human infighting and not actually part of the war either. Through implication, they did act as the blueprints for the later Spartan soldiers and thanks to the Director drastically changed Artificial Intelligence testing, so not entirely a footnote in human history at least. Even when the Reds and Blues do get involved in a proper war, it's still on the extremely remote colony world of Chorus. The civil war that's been going on for a generation has killed off much of the already small population and it's now a few thousand exhausted men and women locked in a tired cycle of vengeance. One of the most well-known examples: Avatar: The Last

Airbender </: A century-long, genocidal conflict between every nation on Earth/wherever (admittedly, there are only four, well, three, now). The main cast? Teenagers riding around having magic adventures on a flying bison . The Hero ? Twelve years old (at least, biologically). Avatar</ is an interesting case; part of the premise is that Aang really needs</ to get involved in the war in order to bring it to a desirable conclusion, but he needs to master the four elements before he can really make an impact on it, and needs to stay out of the way of the major fighting until he is ready for it (not to mention his personal hang-ups about being the Avatar.) The beginning of the second season even has an Earth Kingdom general showing Aang wounded soldiers and trying to convince him that he needs to partake in the fighting. As the series progresses, they get more and more directly involved with the war effort (with much of the second season revolving around getting vital intelligence to the Earth Kingdom high command, and the third season revolving around implementing each side's endgame strategies.) There is some semblance of truth in this. In the medieval era, it wasn't uncommon for travelers from one nation to interact with citizens from another nation that they're ostensibly warring with. The rise of nationalism and industrialization mostly put an end to this, so it's a strange idea for modern readers.

Little Jimmy is a young character without any distinguishable traits other than complete unawareness related to the subject at hand. Most likely found in educational films, commercials, and public service announcements (or parodies thereof). Their only job is to represent the young and unaware viewers of the film who know nothing about common sense and would very well get into a car with a stranger offering candy unless some superhero or other fictional character comes along and tells them that it's wrong He's typically young, white and freckled Compare Constantly Curious and Curious as a Monkey , both of whom have an insatiable curiosity and are quite willing to indulge it on their own. It is often said that truth is stranger than fiction But it is never as strange as lies . Little Known Facts are much too strange to be true. These improbable legends may be explained by the Know-Nothing Know-It-All , The Ditz or the Cloudcuckoolander , or just by someone trying to take advantage of the gullibility of some person, usually a child. If any questions are asked, the answers will only compound the absurdity For the record, snow comes from up</ , not down. That's why you never trust a quack like Lucy Van Pelt Compare The Blind Leading the Blind , Don't Be Ridiculous , "Common Knowledge" , and Lies to Children . If said facts are true, it's not this trope. It's probably Reality Is Unrealistic , or one of its subtropes

She has skills that far exceed what you'd expect from her appearance. Maybe it's because she is a bit strange, mature for her age , or doesn't look like her age at all . Vaguely similar to a Tyke-Bomb save she isn't necessarily groomed by a Big Bad , and may well be a Big Bad in her own right or at least The Dragon . Might be the fighting powerhouse on the good guys side and can be mistaken for just the Tagalong Kid until she unleashes the

Waif-Fu The character may be quite cute and is often smart enough to use that to her advantage , quickly manipulating anyone stupid enough to fall for her act . Her actual personality will usually be very clever and cynical, though. She may also be more innocent or good-natured, but no less charming so that she generally gets her way. Often extends to what she's wearing , if she cares at all If put into serious danger she can often show an absurd amount of power and will easily deal with any annoying perverts in the most casually devastating way possible. Often a practitioner of Waif-Fu , and can be an example of Small Girl, Big Gun or Girl with Psycho Weapon . Can be a Cute Bruiser and/or a Pint-Sized Powerhouse , but doesn't rely on brute strength. If she doesn't have ridiculous strength, she would be Weak, but Skilled . Most noticeable in characters who look very young, since many characters tend to catch on to overpowered teenagers much quicker Compare Enfant Terrible . May belong to a Badass Family . May grow up to be a Lady of War , although often with a touch of Femme Fatale . If lacking in charisma, she would be an Action Girl , or possibly Dark Action Girl Contrast Badass Adorable and Tyke Bomb ; the distinction being that the Little Miss Badass is never restricted by a guileless disposition and can occasionally be found reveling in her own badassery, veiling her ruthlessness only when it suits her See also Troubling Unchildlike Behavior , which some of these characters engage in

The polar opposite of Big "NO!" . The Little "No" is a "no" that is very soft-spoken, yet extremely powerful and defiant. A character who uses it is indicating complete certainty. They do not view whatever is happening in front of them as any sort of serious threat or challenge. It is a threat to be swatted like a fly, or a plea to be dismissed like the trash, an expectation of submission that is met with absolute refusal. May be used as an Armor-Piercing Response An alternative use of the Little "No" is used by characters who aren't quite as badass as the first type who have just realized something really bad is about to happen , and say a soft 'no', their voice being a single syllable of clarity right before something blows up Third use, and the little brother of the Big "NO!" : a tiny, pathetic "No", almost as if begging for the reality in front of the speaker's eyes to not be real. Disbelief and denial, with a blank or horrified look on his/her face. When being hammed up, this little "No" will often be followed by the usual hysterics and a resounding Big "NO!" . Done effectively, conveys utter and complete vulnerability from characters too badass to break down weeping and screaming. The Stoic will be the one to use this "No", in a moment of Not So Stoic . Also found in the midst of many a Tranquil Fury , or at the beginning of a Rapid-Fire "No!" A subtrope of Dramatic Deadpan . Compare Blunt "No" , Stage Whisper or Blunt "Yes" . Compare and</ contrast the Precision F-Strike — for a character who swears a lot , this can have the same effect

There's a subgenre of Mystery Fiction called " Cozy Mysteries ", a prevalent trope of which is the little old lady investigator. She is an older lady, usually retired, usually a Cool Old Lady , who has a knack for solving mysteries and who is always solving murders wherever she goes. She's usually an Amateur Sleuth , but occasionally she works for an agency or is a registered PI . The fact that people seem to keep dropping dead around her often

makes her a Mystery Magnet . This sub-genre is also known as the "tea cozy mystery" This trope makes a perverse sort of sense. Old women are to be nosy, and attract little attention when they are. A grandmotherly type may be a lot better at prying relevant but embarrassing details from suspects than the gruff policeman. They're easy to underestimate; who suspects that the doddering old local gossip is capable of unraveling their cunning master-plan? Finally, she is frequently protected by Even Evil Has Standards : who would dare to off the nice old lady? Not that the perp thinks she's nice.. More realistic takes on the concept have her solving minor misdemeanors and crimes which the police are too busy to solve. The most famous Little Old Lady Investigates character, and the Trope Codifier , is probably Agatha Christie's Miss Marple . Where family is present, she's usually why you should Never Mess with Granny . Compare Kid Detective , which could be considered the other extreme of this trope (but unlike it, is not Always Female)

The Little Sister Heroine is a trope common in — usually but not always Japanese — media that combines the idea that little sisters are cute and that cute things are to be fetishized. It goes like this: Little sisters are cute, right? And cute girls draw in viewers. And cute can be sexy. Take a few more logical steps down the line, and suddenly little sisters are love interests in anime, video games, and visual novels. It is in fact one of the</ most popular types of heroine or love interest in Visual Novels , branching out from there into anime, perhaps surpassed only by the ever-present tsundere </ and childhood friend. Like the similarly ubiquitous Childhood Friend Romance , it is extremely prone to lampshade hangings . As a Love Interest trope based on the little sister/older brother dynamic, the story will usually dwell on the romantic tension between them. Despite the name, Little Sister Heroine attempts to mitigate the obvious incestuous fallout; they're usually either a step-sister, adopted or, more rarely, technically a cousin or distant relation . In almost all cases, the younger sister is going to be either some degree of tsundere</, childish and clingy, or simply highly devoted to their older brother . Finally, the relationship between the two will likely be noticed or exaggerated by the rest of the cast. If you don't notice at least several of these general characteristics, it's probably not this trope. If the relationship remains incestuous, the sister usually completely takes the initiative, in order to allow the author to save the main character from the moral responsibility and use thematic fanservice in the work. Thus, in the majority of plots concentrating on the incestuous relationship with the little sister, the sister takes an active role throughout the story in seducing her brother, while "protecting" him from all the other girls. If we are talking about siblings with little difference in age or Half-Identical Twins , then her childish traits tend to be less pronounced, tending toward greater borrowing from Childhood Friend Romance tropes. In this regard, it should also be noted that—similar to other such plots—the main character and his sister will in most cases be represented as a kind of duet, as a result of which the other cast members will mistakenly take them for twins, even in the absence of kinship or the presence of a difference in age. However, this trope works only if the little sister-ness is central in this work. It may include elements of him needing to protect her, a fear that someone else might hurt her or break her heart, or that other guys just aren't good enough for her. It is also related to the idea that

this sibling is theirs, and they don't want someone else to "steal" them. In this regard, a great many little sister heroines feel aversion to all other men than their brother, in order to emphasize their devotion to him. In other cases, it may also mean that an outsider guy can become a couple with the little sister only if he can be equal to or better than her brother, which is often used for harmless resolution romantic tension between brother and sister. It rarely works like this in real life. Those who have younger sisters themselves and hear about this trope often claim that they're annoying rather than cute, making this trope more wish fulfillment than anything like an accurate portrayal of sibling dynamics. Thanks to the Westermarck Effect , it is far more likely that the idea of any kind of romance with your sister would be either laughable or even outright disgusting. Also known in some circles as an imouto</ heroine. Accordingly, the works having an imouto as main romantic interest, marked as Imouto-titles. Note that Brother–Sister Incest is not exclusive to Asian media, but that when it is portrayed in Western media it tends to be between twins or the woman will be the older sibling. Western media sometimes doesn't bother to minimize the Incest Subtext , though if it does the excuse will usually be that one of the siblings is not actually human (or neither of them is).

In fiction, children have a habit of hiding on ships, airplanes, spaceships, etc., whenever they decide to go on an adventure When they are discovered, the adults are frequently unable to leave them behind, usually because of sympathy and/or because it would be too expensive, difficult, or time-consuming to return them

In the West, many animated series have to run against the Animation Age Ghetto ; one way to get around this and attract a wider audience is to do a live-action version of something originally animated. Even if it utilizes CG and special effects, this will sometimes strip the show of its perceived "cartoonishness". This is also a common device when a live-action movie</ adaptation is made, which will already be accused of leeching ideas from an older show Depending on how the adaptation is done, it may be successful. However, some suffer from Special Effect Failure and end up the film equivalent of a Porting Disaster A noticeable example is the Super Hero genre, where the outlandish, colorful nature of the genre seems most fitted for animated form. Yet despite animation gaining a bit more respect nowadays, most theatrical adaptations of superheroes are live-action, with varying levels of success One thing that has dramatically changed since the CGI creation of dinosaurs in Jurassic Park </ is the ability to visualize things that would have only been realistically possible in animation, such as Humongous Mecha Contrast Animated Adaptation

Sometimes, a live-action TV show or movie starts doing cartoonish things, such as characters not getting injured or killed from something that would normally injure or kill someone, characters getting flattened, or characters engaging in over-the-top cartoon-style violence. A Live-Action Cartoon relies on tropes commonly found in zany cartoons , although some may use tropes that originate from anime , being somewhat of a live-action equivalent of Animesque . The style was itself inspired by Slapstick , which has inspired several early animated shorts. Watching old silent comedy

films you'll notice a lot of elements reminiscent of Looney Tunes or other old-school animation. Not to be confused with Roger Rabbit Effect , which is when live-action or realistic human characters interact with cartoon characters. For actual</ live-action cartoons, see Live-Action Adaptation . In the process of Demonic Possession , Grand Theft Me , or similar Body Snatching abilities, a Living Bodysuit is a type of Meat Puppet and Host that acts somewhat like that of a Soul Jar , as it allows the hijacker to act from within the character/victim via mental or spiritual projection The purpose of a Living Bodysuit varies just like when regarding other forms of Meat Puppets . Usually, the L.B. is used for a disguise, however, sometimes it is also used as a way of gaining immortality, or power via the intellect of the host's mind and experience Unlike the average meat puppet, the Living Bodysuit is also completely under the hijacker's direct control (though there are exceptions to the rule); this can usually leave the possessor's real body (if any) prone to attack, due to being comatose without a soul, or mind, which can in itself lead to a Demonic Possession from another</ Body Snatcher Also, should the body of the possessor be destroyed, the hijacker either becomes a permanent resident in the Host (usually the occurrence when regarding soul possessors), or dies along with its physical presence, (this usually happening to mental possessors) thereby freeing the host of control. If the L.B. suffers physical damage from being possessed, it's because of Possession Burnout Not to be confused with Living Clothes

Immortality is no picnic: living to see all your childhood friends and great grandchildren die, having to drift from place to place or be chased out of town as a witch , and having to crawl across the Sahara for three weeks without food or water with a broken leg because you can't die </ . But hey! You're alive! And you know what? Life is awesome! Want to learn to speak Swahili and six other languages? You have the time! Care to take up bungee jumping? No fear! Literally, your pain and threat reflexes will be burned out by the second century. Speaking of: all that stuff about eternity being boring? Have you seen the last one hundred years ? </ It was pretty eventful . The future sure isn't slowing down either . If you still get bored, you can jump to another planet (you'll be there for the development of Faster-Than-Light Travel after all) or even to another dimension. Money can come and go, but will mostly come since you have an infinite time horizon over which to accumulate wealth and make investments, and you'll always be around to enjoy it! As for the ones you'll love and lose — well, " Kiss today goodbye, and point me towards tomorrow. " Try not to forget your old friends, but don't let that shut you out from the amazing people you can and will meet! There are also cases in which the drawback of the loved one dying is removed by them becoming immortal as well. There can even be a Society of Immortals where even your neighbors and coworkers live forever. Besides, in some universes, death is more boring than life could ever be, or is too terrifying to consider. Basically, rather than Sour Grapes griping, the immortal character decides to see the upside of immortality and enjoys it. It may not be a bed of roses, but life can</ be good. Because really, how can life ever get boring if it's always changing?</ This trope is the goal of the Immortality Seeker . See also Eternal Love , which may be a contributing factor to enjoying immortality. Contrast Who Wants to Live Forever? and Living Forever Is No Big Deal . Rarely overlaps with Immortality Immorality (even though the "immoral" character usually expects that living forever will be awesome), because the focus is generally on the immoral things the character does to prolong their immortality rather than the experience of it.

In the Standardized Sitcom Housing that Dom Com families live in, things are always well organized, clean and tidy: no open books are ever left on the coffee table, and no shoes are ever sitting randomly by the front door, no clothes are strewn on the floor (unless Chekhov left them there). You'd almost think that they were living in a furniture store Oh, sure, there'll be arguments about doing dishes or housework, and they may demonstrate this with excessive waste, or just allude to how messy it is. But beyond that, nothing clutters the place up, and the junk is at least in one place, out of the way — possibly in an Exploding Closet . Sometimes the place may be doused in grime and stains, but will still probably be free from mess This is especially noticeable when the inhabitants are stated and shown to be lazy, slobbish, or disorganized. It's also more common in cartoons, as it takes a lot of effort to draw convincing clutter. In Live-Action TV , the actors still need to move about the set safely, the director will want to enforce The Law of Conservation of Detail , and too much stuff can cause shooting errors quite easily See also: "Friends" Rent Control , The Beautiful Elite , Hollywood Homely , Product Placement . Some people become famous. They're well known, even if not very much is known about them. The Living Legend attained fame during his life (as opposed to posthumously) Some famous people are famous for specific things. Some are infamous. Regardless, they actually did, can do, or were present at specific events. The Living Legend is famous because of where he's been, who he's been, who he's been with, and/or what he can do The Living Legend is respected for these things. Wherever he goes, people recognize him and buy him drinks. They ask him if he really did all those things. They want to know what it was like being where he was. They ask him to demonstrate his prowess This is a person whose reputation makes him larger than life even in his own time. The Living Legend can run the gamut from hero to villain, truth to lie, professional to amateur. The point isn't whether his reputation is deserved, but that he has it For those who remember the legend before he was and still don't see him as one, see No Hero to His Valet . If he deliberately plays up a false reputation, he's Miles Gloriosus . If someone else is doing this for him, he's the Fake Ultimate Hero . If his reputation inspires fear rather than adulation, he may very well be The Dreaded If his reputation is based on having just been in the right place at the right time, he's the Accidental Hero . If he's a random guy thrown into it, he might be an Action Survivor Sometimes the Living Legend's reputation is non-specific and he's Shrouded in Myth . Sometimes it's very specific and everyone calls him "The Butcher of X" When a character's deeds are remembered in subsequent works, he's Legendary in the Sequel When he shows up to ruin a protagonist's day, The Ace will often be hailed as a Living Legend by his legion of squeeing fans

In real life, programs are lines of code and data made to execute a function; in fiction, they tend to be something more. The Living Program itself is completely made of data, but it possesses a physical form in which it can wander around Cyber Space . They can touch, hear, and even speak. As a rule of thumb, an Artificial Intelligence inside a robotic body is NOT a Living Program; that's just a robot with sentience. A Living Program's physical body is made up of data and may not even be able to wander outside of the system it inhabits. While there are obvious exceptions, this trope tends to appear in two different categories: The Helpful Program: A program which is helpful, or necessary, to the system's functions. An example would be an Anti-Virus Program given form. The shape and form the programs take highly depends on their role in the story: humanoid programs are much more likely to be important, mostly due to Most Writers Are Human . More inhuman or monstrous-looking programs are much more likely to be malicious and antagonistic. Compare Digital Avatar , Digitized Hacker . Contrast Mechanical Lifeforms . They're most likely to be found Inside a Computer System . Subtrope of Anthropomorphic Personification .

Cities, countries, even civilizations rise and fall through the ocean of time, becoming myths in the millennia that follow. All their triumphs and failures becoming little more than gravel and sand beneath our feet. There is one bright spot to this though, in the form of a surviving Living Relic. Somehow, a human, computer AI, robot, or immortal homunculus has managed to survive the destruction of their home and lived to tell the tale Though their existence can be due to a fluke of fate, they may represent an attempt to Fling a Light into the Future as a warning, guide , or

defiant marker of their existence. All well and good, except the Living Relic is probably feeling like a Fish out of Temporal Water at the least, and has likely been suffering a case of Survivor's Guilt . Which can get gruesome if they've been alone , awake and immortal the whole time . Quite a few Living Relics are insane because of this and become an Outside-Context Problem , though a few may become sane from the boredom Their role in a story is likely that of giving exposition to heroes who are anywhere between months to thousands of years Late to the Tragedy . After they finish expositing, they might ask to be killed. Or join the adventuring party. Really, it's a toss up Rarely, the living relic has managed to join and live among normal human civilization (or an alien equivalent) and tries to live on, sometimes successfully hiding their origins. Despite the emphasis on immortal survivors of ancient civilizations, the Living Relic isn't always ancient or immortal . A derelict in space might have the Robot Buddy shut down and get started up again by the heroes thousands of years later, or a Human Popsicle can be woken up from a sleep inducing spindle. Sometimes, they might just be the last descendant of a group of survivors Sub-Trope to Time Abyss . See also End of an Age and Götterdämmerung for two frequent causes. Compare Living Memory

You're sitting by the fire one night, reading your book, when suddenly there's a gust of wind. The light flickers and you see your shadow move... except you're</ not moving. You get up and see that there are actually two</ shadows — one is yours and one, well, that one's moving independently of you. How (creepily) amazing! This is the Living Shadow. Sometimes it's evil, sometimes it's good , sometimes it's merely mischievous . It may be a ghost , a person with the power to become a shadow, a shadow magically animated and separated from its person (who often Casts No Shadow), an alien that only appears to be a shadow, or something much, much worse . Regularly, they're used as Nightmare Fuel . Voluntarily separating yourself from your shadow is one of the more dangerous things you can do. It usually has the obvious corollary that you Cast No Shadow but that's merely the obvious. Not to Be Confused with a Shadow Archetype , which isn't usually a Living Shadow, or with Fighting a Shadow , or Loving a Shadow (which may happen with a Living Shadow, but is not necessary). Also not to be confused with Casting a Shadow , though it's not uncommon for the two to overlap.

In My Hero Academia </ Fumikage Tokoyami's quirk Dark Shadow is a shadowy entity connected to Tokoyami's body. It's Weakened by the Light , but is also more controllable — in the darkness, Dark Shadow will start disobeying him and going on rampages.

You know what's cooler than a Cool Ship ? A cool organic </ ship. A ship that lives and grows and heals any space battle damage as you go These ships can run the gamut from being completely non-intelligent (generally comparable to plants) to having animal like instincts (the crew often serves more as handlers than as pilots, in this case) or being completely intelligent and self aware The exact nature of the ships ranges from being merely Cyborgs , to fully Organic Technology . How organic they actually look varies greatly. These types of ships tend to be grown more often than made in a shipyard. Sometimes they'll even go so far

and have the ship be a Space Whale The great thing about both the organic and semi-organic living ships is that they're a very easy way to make your series seem ultra science-fictiony by encasing organic bodies in sleek metal shells. If you want to go for something more alien, then you can take the Organic Technology route and have corridors that look like great big arteries The idea of a living ship also opens up plenty of story opportunities, simultaneously funny and serious. Imagine a show where the biological ship catches a cold, runs a fever, and keeps sneezing its occupants into space Not to be confused with Setting as a Character where the ship is only treated as alive by the cast. Or Mechanical Life Forms which are living machines. If the ship is a machine except for a "brain", it's Wet Ware CPU . Can overlap with Sapient Ship , though a living ship isn't necessarially sapient and a sapient ship isn't necessarially biologically alive. If it's a Living Cool Airship , then it's probably also a Living Gasbag Super-Trope to Tree Vessel

Here at TV Tropes , there are a lot of tropers, and a lot of tropes. As a result, In Jokes arise, and Tropes about Tropes begin to form As a result, certain words, terms, and patterns come to carry implications when used in the names of tropes. When creating a new trope, one must consider whether the resulting trope name invokes such implications. Sometimes, use of these words in other contexts is justified, while in others, it only causes confusion, in which case changing the trope name to remove the Loaded Trope Word may be preferable. When used intentionally where not appropriate, these can become problematic snowclones Note that, where Loaded Trope Words appear in very common English phrases, such as Masquerade Ball , Game Face , or, say, "Noodle Soup", they may be used without becoming problematic snowclones Here, such words, terms, and patterns are identified, as a reference, with their trope etymology identified

A show that has so many regulars that you can't fit them all into one episode. Therefore, one week some characters will appear, while some different characters will appear in another. You'll rarely get the same combination twice. This is especially common in Long-Runners , as characters tend to accumulate over time. Shows with this many characters tend towards one-dimensional characterization for many of them (but not always , if the writers

will put in the effort), and often make filler easy to create Similarly, some video games involve collecting as many distinct, unique soldiers for your army as possible. Other video games, such as fighting games, start with just a few characters but keep adding characters to the roster as more sequels come out, until you eventually have enough characters to populate an entire Verse Creating a Cast of Snowflakes with these loads is an achievement and will make the story lively and colorful. If the writers are smart, they'll start making a Cast Herd . The Love Dodecahedron is a way to spice things up, the Geodesic Cast makes use of the characters through variations on a theme, and The Clan happens when the loads are related. A Character-Magnetic Team can sometimes create this effect. Gets really</ convoluted if everyone is somehow related Please note that this is for extreme examples of regularly occurring</ characters. It's really not all that uncommon for a story to have ten or fifteen characters, especially with a Villain of the Week format This can cause crediting issues for shows with an OBB (opening billboard), leading to Fake Guest Star or being shunted into the Closing Credits for logistical reasons See also Crowded Cast Shot , Ensemble Cast , and Loads and Loads of Races . May result in/from You All Share My Story . Can contribute to Continuity Lockout in Long-Runners . Compare Revolving Door Casting and Heroes Unlimited . The inversion of this trope is Minimalist Cast . We have an article on how to write this variety of character roster

One common way of cementing the grand scale of a fantasy or science-fiction world is to include a wide variety of different sapient races. As is often the case in speculative fiction, "race" in this trope actually means species, or sub-species — we aren't talking ethnicity or skin color here. And rac is right out. When you have 15 or more, not counting hybrids, you have Loads and Loads. Note that this trope can't be an Informed Attribute ; the creator needs to give each race at least a little description, screentime, or artwork. In science-fiction, Loads and Loads of intelligent species may be a way to distinguish planets from one another and display the diversity one might expect to see traveling across the galaxy or universe . For example, one world might be inhabited by a group of reptilian aliens while another could be full of Starfish Aliens or even Eldritch Abominations . Fantasy works might be more inclined to have Beast Men - species that are essentially humans with some added fur or scales - into their diverse world, but the fantasy and science-fiction uses of this trope tend to be fairly similar overall. (Compare Beast Fable .) One Gender Races are not uncommon in works with Loads and Loads of Races. Some of the races included in such works may be Always Chaotic Evil or serve as Evil Counterpart Races to another group known for being more heroic. Having many different races tends to involve Hats , though highly detailed Multicultural Alien Planets can be an effective way of mixing things up. The differences between each race also need not be incredibly large, and they might not even be entirely separate species. So long as the creater of a work makes a point of distinguishing between them in more than just culture, all of the races could be similar-looking Human Aliens . Sometimes a race is less a biological species, and more of a mutation or modification (such as werewolves, zombies, cyborgs, vampires). Some works treat these as mere variants of whatever they used to be, but in other works they are treated, for all intents and purposes, as separate species. Compare Monster Mash . A subtrope of Loads

and Loads of Characters . May be a sign of a Fantasy Kitchen Sink . Compare Standard Fantasy Races , which can occasionally overlap with this trope. When a game lets players choose their character or team from a great number of playable races, it has a Massive Race Selection instead. Note that card games do not involve "playing" a race, so their examples are listed here instead. Older Than Steam : This happened to chivalric romance in The Renaissance , when Italian romancers like Ariosto and imitators like Richard Johnson and Lord Berners started stirring Greek Mythology into the mix. The non-human cast of medieval romances generally consisted of dwarfs, giants, and fairies; a Scandinavian author might add trolls, a more devout one angels and/or demons, dragons would occasionally be sentient, and there might be the occasional wildman or mermaid, but seldom anything else. Ariosto and Co took this selection and added satyrs, cyclopes, centaurs, nymphs, dryads, harpies, and sometimes even gods (coexisting unexplained with the Christian God on a Rule of Cool basis).

Creating works of media and fiction is anything but easy. From sustaining plot development to proper trope usage (and avoidance), it's no wonder why the whole field, in general, is perceived to be an ongoing minefield. But every once in a while, a concept comes along that is much too big for one or two people to handle on their own, particularly a soon-to-be Long Runner . At this point, the only plausible solution is to hire a group of writers to help you out with it, since the main creator's own writing isn't always going to be up to the expectations of the viewers and fans. Since literature, manga, and webcomics are almost always fully written by one or two people, don't expect any examples of this to exist from those media (though see Round Robin) British Brevity in sitcoms is quite often dictated by the fact only one or at most two people write the scripts. Very few British TV comedies are written by committee in the American style

"Welcome to Bedlam House . Before we get started, I'll plunge this icepick into your eye socket . Mwahaha ." One moment you'll see a character, chirpy, energetic, and arguing with the nurses. The next day, they're quiet and compliant, drooling, emotionless — in short, Empty Shells . What took place? A lobotomy. A lobotomy is a (thankfully, now rare) medical operation that cuts into part of a person's brain in order to treat mental illness. Lobotomies and similar drastic brain alterations are still used as last-ditch treatment for intractable epilepsy, but that's about it. In Real Life, there was little evidence that it did anything therapeutic. The most often performed procedure rarely helped; it simply destroyed random brain matter and caused the patient to suffer loss of motivation , loss of assertiveness , loss of creativity , difficulty in social situations and incontinence and could cause seizures in those who had not suffered from them in the first place. This trope includes all instances of messing with human brains and removing brain matter and it refers to any sort of brain-tampering effect that diminishes intellect or willpower. Once seen as a perfectly humane thing to do, now treated in fiction as the standard example of medical science Gone Horribly Wrong . Lobotomies in fiction are almost never presented as an actual therapy</ , but rather as a threat held over people or a means of rendering an inconvenient subject compliant and unable to threaten the one who performs it. Very rarely does it appear as a genuine

attempt to treat the patient. See Electroconvulsive Therapy Is Torture for another mental health treatment that is often demonised in fiction and depicted as having similar mind-destroying effects, although unlike lobotomy, it is believed in real life to be genuinely helpful in certain cases. Contrast with Laser-Guided Amnesia which is a relatively mild thing in fictionland you can do to inconvenient witnesses. See also Brainwashed , Brainwashed and Crazy , Death of Personality , and Mind Rape . Mad Scientists and Deadly Doctors are likely to perform it, and the Psycho Psychologist is another deadly figure who may suggest this procedure. Realizing that a character underwent a Lobotomy might very often come off as a Spoiler Trope . Beware!

Different news entities serve different constituencies. As one might expect, that has a marked effect on the focus of the organization in question. An American newspaper like The New York Times</ serves an international constituency. The paper's management can make no predictions regarding the location of its readers. As a result, its reporters are free to write stories detailing how a given issue affects — well, the world. On the other hand, consider The Normalsville Argus,</ serving the fine citizenry of Normalsville, Kansas, population 27,000. Unlike The Times</, The Argus</ knows exactly from where it draws its readership. As a result, the paper's reporters need to write stories of interest to its readers: the good people of Normalsville. If Congress passes a sweeping bill, a citizen of this small Kansas town can go to The Times</ or The Washington Post</ for the national impact of the legislation. He only has one place to go for his local news, however. Expect any story on the sweeping national legislation appearing in The Argus</ to focus on its impact, however minimal, on Normalsville. This isn't automatically a bad thing. In fact, journalism schools preach the concept of the "Local angle" to their students. After all, who else is going to report on Normalsville, KS if not the local paper? It does, however, tend to produce some uncomfortable dissonance with readers, insofar as the local press can seem to dismiss the lives of billions of people who don't live in their city, state or country. So if a ferry capsizes off the coast of Great Britain and 200 people drown, it will get a couple of inches in the Kenyan tabloid press. Spanish papers will give it a couple of pages. In Britain, it's "front page, get the black background out" news. However, if there was a Kenyan citizen upon that ferry then it will get more press with a caption along the lines of "One Kenyan man dead with 200 others in Ferry tragedy." A subtrope of Creator Provincialism and A Million Is a Statistic . Can overlap with Worst News Judgment Ever when it's particularly egregious.

Localization is when things are changed in a work in order to help other cultures be able to better understand and enjoy a work. Names may change, genders can shift, and themes that are "too foreign" may be altered wildly to be more acceptable and enjoyable to their new audience. Some people see this as a creative workaround, while others see it as a creative excuse to justify cultural appropriation This index holds tropes and pages that have something to do with localization For tropes that have to do just with translation itself, see the Translation Tropes Index

Every once in awhile, someone manages to overcome Creator

Provincialism and make a show that takes place in a foreign country or other exotic locale and focuses on foreign characters. However, they often can't resist making some reference or connection to their home country. This can be as small as an offhand reference or as large as arbitrarily including a character from that area Basically, this is about stories that take place in other countries and focus on characters from other countries, but still mention the author or audience's home country in a non-plot-essential way. Basically a Shout-Out to the home country Related to But Not Too Foreign (foreign character has a "local" connection) and Foreign Correspondent (viewpoint character is a foreigner to the story's setting) Delicious in Dungeon </ takes place on an island that seems like your average Medieval European Fantasy , except there are also characters who come from the "East". Which is basically medieval Japan, giving the creator an excuse to use some characters from her own country. One even joins the party later on so we have four Western-type fantasy characters and one Japanese Cat Girl ninja

in Bad Santa </, Willie is asked by a kid what the North Pole is like. As the movie takes place in Arizona, Willie replies: " Apache Junction ," which is commonly associated with rednecks and trailer parks.

Jules Verne was a French author who wrote in French. Many of his stories had minor (at least non-protagonist) French characters alongside protagonists of other nationalities. Examples are Michel Ardan in From the Earth to the Moon </ and Jean Passepartout in Around the World in 80 Days </ .

Rome </, despite being a BBC co-production with an almost full British cast and using different British accents to denote class differences between the characters, was notoriously devoid of references to the British Isles... except for one. When Agrippa declares his love for Octavia, he says that he would willingly travel to Hell, or even worse, Britannia , for her.

Da Yoopers are fond of making references with strong ties to Yooper culture (i.e., the Upper Peninsula [UP] of Michigan). For example, "Rusty Chevrolet" references IGA grocery stores (which are numerous in the UP) and Shopko, a discount department store chain prominent in the Upper Midwest.

In Fiddler on the Roof </, Tevye has a brother-in-law in America, and several Anatevkans set off for there at the end. When Tevye hears that his daughter Tzeitel and Motel have pledged marriage to each other, he goes into an angry monologue in which he turns directly to the Fourth Wall and asks: "Where do they think they are? America?"

The Sakura Wars </ games set in France (3</) and New York (Sakura Wars: So Long, My Love </, Kimi Aru ga Tame</) always include one Japanese party member besides</ the always-Japanese PC (the player is supposed to identify with him, after all).

Around the World with Willy Fog </, a Spanish Animated Adaptation of Around the World in 80 Days </ , adds a Spanish character, Tico, to the adventurers' party. At one point the heroes also encounter a Spanish balloonist, whom Tico enthusiastically greets as a compatriot.

Every contact leaves a trace. Every time one object comes in contact with another object, it takes something from that object or leaves something behind.</ Principle which underwrites modern forensic science. The reason that criminalists look for fingerprints, DNA, soil samples, fibers, and all the evidence that falls into the category of "trace". In real forensics, this is a very general principle from which we learn nothing more than that it makes sense to look for trace evidence. In TV, it is always literally true</. Every crime scene has an abundance of fibers, soil, DNA, bodily fluids, and fingerprintable air . This representation of the Locard principle is one of the reasons for The CSI Effect . In works that portray Functional Magic , Locard's Theory is a subset of the magical principle known as the Law Of Contagion .

Similar to the Training Montage , it consists of the hero (and his optional team) gearing up for the big fight, preparing a multitude of weapons in anticipation of the need for More Dakka , usually taken from a Wall of Weapons . Usually features close-up shots of guns being loaded, knives being sheathed, headbands being tied, etc. Never</ complete without a veritable symphony of metallic clicking noises Whether or not all the weapons are used or whether the hero is held to the limits of what is shown is up for grabs Frequently there will be one "special" weapon, a small and somewhat unusual one normally, which will play a critical role in the upcoming battle As the use of firearms is a modern contrivance, works such as The Iliad </ and Beowulf </ often depicted warriors donning their arms and armor in scenes heavy with ceremony and ritual The A-Team Montage might be seen as a variant. The Transformation Sequence is a close cousin, and the Extended Disarming the opposite. Sometimes ends up as Technology Porn , and in military or law enforcement-themed media it frequently happens during Red Alert . The Activation Sequence could be considered a technological equivalent A Sister Trope to Fighter-Launching Sequence , Lipstick-and-Load Montage (the Distaff Counterpart)

See also Learned From the News , where a character finds out about both the secret itself and that they were Locked Out of the Loop because the news media found out and published it. Can lead to It Seemed Trivial , when someone who knows something is Locked Out of the Loop and doesn't know the importance of his knowledge. Compare Unwitting Muggle Friend , We Would Have Told You, But... , and "Could Have Avoided This!" Plot . Often goes hand-in-hand with Poor Communication Kills . In Amazing Fantasy </ , Mayday never knew her father was Spider-Man until she overhears by accident from her mom and Lyja Storm, being upset by this. Embarrassed of the bitter things she thought of them and angry they lied to her about the truth. Even more so when learning that she is not allowed to be involved in the investigation of her father's disappearance. The title of Better Off Not Knowing </ applies not only to the viewpoint character, but to her adoptive parents as well: Thanks to the information being deliberately withheld, they're no more aware that their daughter is the biological child of Zaheer and P'Li than Hakini herself is. Given the more action-packed nature of the Calvinverse , Calvin's parents' disbelieving nature gets taken to extreme lengths. In fact, a Fortune Teller calls them out on it in the Series </ episode "Dark Laughter Part 1"!

A seemingly impossible crime. The standard example being that of a murder victim found in a room with only a single door, securely locked from the inside. Can be the basis for a single plot, or an entire show. A well-designed Locked Room Mystery provides pleasure from trying to figure out the puzzle before it is revealed, from moments of dawning realisation, and from a satisfyingly logical solution. A poorly designed Locked Room Mystery only provides a feeling of having been cheated. Contrary to the name, Locked Room Mysteries don't necessarily have to be murders or take place in locked rooms, just to be crimes that seem to be impossible at first glance (e.g. contemplating how it's possible for someone to travel from one part of the island to another within minutes). The question of who</ is rarely as interesting in this kind of plot as how</ Originally from crime fiction, John Dickson Carr being an acknowledged master. It is noteworthy that Edgar Allan Poe 's short story The Murders in the Rue Morgue </ , widely considered to be the first detective story, involves a Locked Room Mystery Appears on television in a number of forms. The relatively pure form as a sub-genre of crime television (e.g., Monk </, Jonathan Creek </) where the puzzle is eventually unraveled by an eccentric protagonist using subtle clues and pure reason The part of the show where the solution to the mystery is explained is The Summation . One common trick used is the Time-Delayed Death — for others see the Analysis page. Expect the police to have found that The Key Is Behind the Lock when the crime scene was discovered. This is a Trope Trope . Some tropes have a logical extreme that: Note that sometimes a trope can have more than one Logical Extreme that fit the trope in different ways. For example, the Logical Extremes of Reclusive Artist include artists who no one knows who they are, artists who no one knows where</ they are, and artists whom no one knows whether they're alive or dead. In other cases, two distinct tropes can have the same logical extreme: for instance, Science Fantasy serves as the logical extreme for both soft science fiction and Sufficiently Analyzed Magic . The number 69 is slang for a particular sex act (specifically, two participants performing oral sex on each other at the same time, as detailed in the original Kama Sutra</ as the Congress of the Crow), which is why it's often used for jokes - it certainly doesn't help that the modern/Arabic numerals used for the number themselves forms a very self-demonstrating symbol that is amusingly accurate to the positions of both partners. It's also a good source of Getting Crap Past the Radar and Demographically-Inappropriate Humor since most children won't get it. If the number is mentioned by a character, the other character is likely to react with Heh Heh, You Said "X" . Not to be confused with 6 Is 9 . London, England. In case you confused it with London, Ontario. </ There are a great many American cities and towns named after places from Europe: mostly British places, but French, German, Spanish, Portuguese and Dutch names crop up across the USA, not to mention numerous variations and simplifications of Native American spellings. This reflects the USA's origins as being colonized by people from across Europe. Interestingly enough, lots of major American cities are far bigger than their European counterparts ever were (Cleveland , Boston , Stockton, Rochester, York/New York, and Portland are the most obvious examples, and the only two major exceptions are Birmingham and Manchester). But let's look at a number of American places in comparison to show how common this is. Odessa, Ukraine and Odessa, Texas; Vienna, Austria, and Vienna, Virginia; then there are duplicate cities, e.g. the much older and smaller city of Las Vegas, New Mexico is almost completely ignored compared to Las Vegas, Nevada, while Wilmington, North Carolina is about the same size as Wilmington, Delaware. There are so many examples that some non-examples are often confused for examples, such as the independent (ex-Soviet) republic of Georgia and the U.S. state of Georgia, which was actually named for King George II. Unfortunately, this results in some confusion and frustration for many Americans. Since the USA is big and—though sparsely-populated—home to quite a few cities, and many of these cities have similar if not identical names (for instance, there are thirty-two</ states that have a city named " Springfield " and twenty-seven settlements named "Canton"), Americans often describe an American location as " City NameCome on, did you really expect Americans to know about other countries' first-level subdivisions and what cities they have? . This works well in the USA, but becomes rather jarring and annoying for foreigners, who find it annoying that after being shown Tower Bridge (itself not to be confused with

the same named, but golden bridge in Sacramento, California), the Houses of Parliament, and St. Paul's Cathedral all in one shot , they still need to say " London , England". In France, the tendency is to ram the identifier into the town name itself, so one gets places like Sainte-Marie-sur-Mer and Sainte-Marie-de-Ré and Sainte-Marie-des-Champs, etc. However, there are also over a dozen places called just plain Sainte-Marie in France alone; here you would have to specify in which département the one you mean is situated. The English equivalent would be, say, "Springfield-in-Massachusetts" and "Springfield-on-Black-River". Some British towns, such as Newcastle-upon-Tyne, Stratford-upon-Avon, Ashton-under-Lyne, and Kingston-by-Ferring, follow this scheme as well, as do German-speaking towns and cities Neustadt an der Aisch, Neustadt am Rübenberge, Neustadt in Holstein, and Neustadt an der Weinstraße (four places called "new town" named respectively after a river, a hill, a province, and a scenic route). Canada follows the British model in a few places, notably Niagara-on-the-Lake and, by extension, the original Geneva (both the canton and the city) in Switzerland , which, of course, is helpfully on a lake (Lac Léman) . The Japanese equivalent is to rename a town or city that shares its name with a more famous counterpart so that it also includes the name of the ancient province. Nagano City in Osaka had the same name as that other</ Nagano (the one with all the skiing, in the prefecture of the same name), so they changed it to Kawachi</ -Nagano. Happens a lot with similarly-named train stations, too. A slightly different form is sometimes used: Americans from small towns will usually specify their state simply to give a general idea of what region they're from. If someone says he is from Miamisburg, Ohio, it isn't because there's another Miamisburg out there (there isn't, as far as we know), but because people from other states have no idea where in the world Miamisburg is. The foreign equivalent might be for someone from a small town to give the name of the nearest major city. Gets used in the Title In a lot. An example of Creator Provincialism . Often mocked, although it's still a popular trope. Named by Bill Bryson . has a list of the most-commonly-used city names. In case you were wondering, aside from London, England there are at least 26 cities, towns, or villages whose full name is "London". There are many more such communities with "London" as part of their name and at least 2 London Islands (both in Chile; one is also known as Cook Island to alleviate confusion).

For the best reading experience, play the music from while reading on. Is the hero in a losing battle against the villain and on the receiving end of a No-Holds-Barred Beatdown ? Has he or she been broken down ? Does the grief of the realization that In the End, You Are on Your Own overtake him or her? Cue the lonely piano piece. Basically, this is a piece of music that plays in a scene that represents that someone is left all alone and is stuck at a dead end with no allies or means of solving the problem at hand. The music is usually slow paced and the notes are often lower pitched to show that the character has run out of momentum or that he or she has hit rock bottom. While this can be done with just about any instrument, the piano just seems to be a common instrument to do it with, perhaps because if there's ever a piano being played, there's rarely a second piano. The violin or acoustic guitar are usual replacements. Subtrope of Simple Score of Sadness . If a character is constantly lonely, or even an entire cast, this may be a Leitmotif. The Lonely Piano

Perhaps Alice and Bob started out dating while they lived close together and one had to move away (at least far enough away where they can't see each other in person on a regular basis); perhaps they began the relationship through the mail (or, in more modern stories, over the Internet) and never met in real life at all (but may be planning to at some point) At any rate, a story that has a long-distance relationship often deals with its pitfalls, the #1 being that Absence Makes the Heart Go Yonder . If they've promised to reunite but one party takes his / her (generally his) time, it may result in I Will Wait for You ; if outside pressures force the waiting party to be with someone else, this then becomes You Have Waited Long Enough . For when someone pretends</ they have a long-distance relationship as a transparent cover-up for actually being single, that's Girlfriend in Canada

Bob commits a crime or (more likely) a series of crimes. The jury convicts him and thus the judge must determine an appropriate sentence. The Judge decides to sentence Bob to 400 years of prison or eleven life sentences, essentially rotting in a cell. Bob has just been served a Longer Than Life Sentence. Such sentences can be set sentences of a ridiculously huge amount of years (typically three digits) that, while theoretically having an end, can never be fully served by any ordinary person. They can also include multiple consecutive life terms, a single life term where the time before being eligible for parole is ludicrously long, or a superficially nonsensical sentence such as "one life term plus 40 years". Sometimes it is not explained what the sentenced person did, just that they have X amount of years left that go beyond normal human life expectancy. This is Truth in Television , as real sentences like all of the above examples exist. As shown in the Real Life folder, some of these examples exceed even the most exaggerated of fictional portrayals. </ While in general no real-life sentence for a single</ crime can exceed 'one' life sentence or around 99 years for a fixed-length sentence, a person who has been convicted of multiple crimes at once can easily receive triple-digit sentences or multiple life sentences if the sentences for each crime run consecutively. An alternate possible consideration is that an extremely long set-length sentence can prevent a criminal from becoming eligible for parole in jurisdictions where the rules require

them to serve a given fraction of the sentence first. This trope can be used by an author to indicate that a judge is a Hanging Judge or a jurisdiction is ruthless toward criminals or could show to the readers and/or other characters that this criminal is truly hardcore and dangerous. Alternatively, it could be used to highlight a corrupt judge in cases where that fact is or becomes relevant. Of course, if the prisoner is ageless or otherwise Long-Lived , they may be faced with the daunting prospect of actually serving out the full sentence. Basically, this trope is There Is No Kill Like Overkill applied to sentencing. A subtrope of In It for Life . See also The Old Convict and Disproportionate Retribution . Brain Uploading counts when the brain is downloaded into a clone or other biological body, but not if into a machine. Long hair tends to be among the Tertiary Sexual Characteristics used to establish a character as female. Long, luscious hair is regarded as an archetypal feminine trait in quite a few cultures and commonly accompanies other such traits . One of the few exceptions seems to be the Barbarian Longhair , which has been a masculine trait at least since the Bible Times ; and its descendants, the hippies and heavy metal rockers . Another, of course, is that some groups of people are largely incapable of growing long hair without much scalp work. A Super-Trope to:

Bob has feelings for Alice, and reveals those feelings with a soulful look, tender gesture, or verbal cues that Alice rarely ever notices . There are a lot of possibilities, here are some of the more common ones: Bob's expression changes when he looks at Alice to one of love (though only if she isn't looking). Of course, this may also indicate less than noble love when Bob is a Stalker with a Crush . Usually his expression will be envious or darker, or he might look more intensely than he should. In either case, if caught and Alice (or Charlie) asks why and for how long he's been looking, Bob will either deny the accusation or answer with "I wasn't looking at you, idiot! I was just distracted!" or the like. The reciprocated version, most likely between Star-Crossed Lovers , is the Held Gaze . Compare Beautiful Dreamer and Long Last Look , which may overlap with this. A comedy trope where a person rattles off or displays an absurdly

long list of things . For example, someone goes into a shop and asks for a sandwich. The person at the counter asks what type they desire. The customer asks what they have available. Cue the person behind the counter running off a huge list of variations on sandwiches. Might make the character start longing for Freedom from Choice . If the list is actually spelled or read out to the viewer, it becomes an Overly Long Gag . For added comedy, the list will often contain one or more of: Parodies of the second type of " Side-Effects Include.. " are generally a kind of Long List. A slight variant is to present the list as a visual gag rather than an Overly Long Gag : a character might present a document containing a "small list of suggestions" which soon unfolds itself all the way down to the floor. Someone unaware of a list's length might also ask for examples and be asked in turn how they want the list sorted, especially if it's a List of Transgressions committed by the person asking. See the List Song for a musical version, Rhyming List , which well, you know... , and see also Overly Long Name . Amusingly Short List is the exact opposite. Contrast Epic Catalog , which is equally long but quite serious. A Sparse List of Rules may or may not be one of these. This is often used in Oral Tradition . Everything Except Most Things is a subtrope.

One way of making a character look bizarre or comedic is to give him a long neck. He/she/it can be born with it as due to some strange birth defect. Or when the character is anthropomorphic and has a long neck because of his real life animal counterparts like giraffes, geese, swans, sauropod dinosaurs, snakes, tortoises,.. In comedic stories a long neck is usually stretched out by accident. The neck is either fully erect and only able to rise and down or it can be bent into all kinds of shapes like a snake. Long necked characters are usually able to oversee things from great distances. Or when swimming, he is able to use his neck as a periscope. Disadvantages of this condition are that the character's neck will frequently be tied in knots or bump against lower objects or people Also a frightening type of Body Horror in horror movies, because it is such an unusual sight. Compare other creepy long body parts: Creepy Long Fingers , Creepy Long Arms , Sinister Schnoz , Thin Chin of Sin , Villainous Cheekbones (sometimes.) In a Long Runner series set in the Present Day , contemporary technology quickly becomes dated as Technology Marches On , and the writers quietly bring in new gadgets appropriate to the year. This normally works fine until you start watching reruns of early episodes and notice how dated everything is to what was</ the present when they first came out. If the storyline is still meant to be set at roughly the same time as the early episodes, then this can trouble the viewer or reader's Willing Suspension of Disbelief . In Real Life when these episodes were written, tech that we now take for granted was just appearing, and the show would reflect this, showing everything from big desktop computers, CD-ROMs, the Internet, cell phones and what-have-you as the latest thing. Fast forward years later, and in order to keep up with the real world, the characters are now using laptops, iPods, broadband Internet, smartphones, etc. But wait, that episode that came out fifteen years ago was set only a year or two ago in the series' storyline</. How is it that the characters were touting tape decks as the next big thing, yet only a short time later older members of the cast are reminiscing about their old Walkmans, and younger members have no idea what a cassette even is , </ even though they were the ones lugging them around back in the first few seasons? The trope only counts when the characters of the series don't obviously age, and/or it is shown that the series is set around the same timeframe throughout. Drawn media (such as comic books and animation) and written media are the primary culprits — live-action shows normally let time progress as it does in the real world, e.g. events from four seasons ago are stated to have happened four years ago in-universe. Tropes listed in the Wiki Tropes index are being discussed at the Trope Repair Shop . Click the link to join the discussion Some titles for tropes are short and easy to type (even with

the double-braces in one word titles). Some titles are long and annoying to type, since we have to make sure to capitalize every word, which involves a lot of attention to the Shift Key. Some are even hard to remember, such as Sssssnaketalk (that's 5 consecutive uses of the letter S) But in some cases, the long name is necessary. Some titles just don't properly convey what a trope is if they are too short. This has led to a lot of confusion with some tropes. Take Xanatos Gambit , which many have confused with any brilliant scheme. It isn't and now it has Plan A Plus Plan B and All Paths Lead To A Victory as a redirect (We even added The Plan as a supertrope for generic use). They're a bit more to type, but it makes the meaning of the trope clearer (although Xanatos Gambit is still the main name for it) Since the WikiWord system works the way it does, this may not be a problem that just goes away. The best thing is to have shorter redirects for long titles, or more clear redirects for titles some find confusing. However, a few have decided to throw out the baby with the bathwater by removing all long titles Compare with the TABLE debates See also Naming a Trope , Clear, Concise, Witty Not to be confused with Long Title and Short Titles

The character indulges in an endless series of one-night stands and impulsive sexual encounters. Consciously or unconsciously they use such promiscuous behavior as a substitute for a lack of parental love and affection (either actual or perceived) Looking For Love In All The Wrong Places differs from The Casanova in that the Casanova is a predator indulging his desires and sating himself with his conquests while Looking For Love is desperately searching for someone who respects and cares for them. This does not mean that Looking For Love is necessarily clingy or "wimpy"; they can appear to be as aggressive and self-centered as The Casanova , and the two can easily overlap A variation on this trope is the unlucky variation of Single Woman Seeks Good Man ; the character (nearly always a woman) who is permanently on the lookout for Mr. (or, more rarely, Ms.) Right. Whilst she might settle for Mr. Right Now if things are particularly bleak on that front, she'll go into every relationship convinced that "this is The One!" — however, unfortunately for her, every relationship she engages in will result in hilarity ensuing as every single man she dates either turns out to be a Romantic False Lead , has some small imperfection or otherwise turns out to be a complete jerk , thus leaving her right back where she started. It's often a complete waste of time anyway, since a bit of close self-examination would probably reveal — much to her shock — that she's in love with The Hero anyway See also Casanova Wannabe — the two character types complement each other. Out of all of the world's Improbable Piloting Skills , the most improbable of all is the ability to fly without a plane</ It has been shown in movies again and again that anyone who can fly in an unusual way (whether it be a superpower or just some nifty invention) will fly very close to passenger aircraft, which will either A) annoy those on the plane or B) scare the crap out of those on the plane. Sometimes they'll only be seen by one</ passenger; usually either a kid who tries in vain to get his

parents to look , or a lone alcoholic who stares bemusedly at his miniature of Scotch A variation is that, if it is a military aircraft instead of a jetliner, the pilot is likely to demand identification and/or attack Probably every flying superhero has done it at least once. Female ones occasionally blow kisses at or otherwise flirt with the pilots. Be careful of the plane's engines , though

This trope describes none other than the hubris of mankind itself. Mankind, being the self-centered species it is, has a tendency to think that the world revolves around themselves and that they at their current time period have reached the true apex of civilization, the pinnacle of culture. In celebration of their glory, humanity builds monuments to itself. Architecture becomes grandiose, Crystal Spires and Togas become the hot new fashion trend, and pomp and splendor reign throughout the land. This is the pride before the fall . On a smaller scale, however, this can also mean any work of fiction where people blindly build or otherwise invest huge amounts of energy into a pursuit, confident that their ambitious scheme will succeed, only to have it backfire spectacularly, and end in catastrophe and devastation, with a cautionary tale emerging from whatever records survive. In the end, nothing is left but ashes and the ruins of a great effort gone to waste — and ironically, the reason to despair, not because of their inability to compete, but because they realize they too will fail in the long run. Humanity learns a painful lesson. How the Mighty Have Fallen ! At least, for a while</. As a trope in literature, this oftentimes comes up as An Aesop about Pride and humility, and, dating back to even Old Testament tales about the Tower of Babel , is Older Than Dirt . If it involves science or magic, it will often cross into Gone Horribly Wrong because the undertaking violates one or more items on the Scale of Scientific Sins . Compare with And Man Grew Proud . A sister trope to How the Mighty Have Fallen . On the other hand, things may not be all doom and gloom for the country in question, and with some effort and luck they may well even come Back from the Brink . The Trope Namer line (see the 'Poetry' folder) is frequently misremembered or misquoted as "look ". Even more frequently, it is simplified to "Look upon me, O world, and despair!"

May involve a lot of Felony Misdemeanor or Disproportionate Retribution .

Someone — typically a Rules Lawyer — does something outrageous by finding a loophole in the rules, which were too narrowly written to consider such possibilities. This allows the agent to get their way while claiming they were technically following the rules Sometimes the loophole doesn't really exist, but the competitor is convinced it does based on his own misinterpretation of the rules. If the loophole's existence is explained, one justification sometimes is that when the rule was designed, the Loophole Abuse seemed absurd enough that no one would ever be stupid enough to try it. This is a form of Refuge in Audacity In games, this may often be the result of some kind of oversight by the creators. A programming oversight can cause someone to do something they did not intend, such as killing a mob intended to be invincible In Real Life , this is more difficult for two simple reasons: First, loopholes are quickly closed once discovered, sometimes by an Obvious Rule Patch . Second, many systems have Rule Zero : some designated referee, judge or authority figure has the absolute final word and can simply throw the argument out wholesale, usually by claiming that the "spirit" of the rule never intended to allow what the "letter" of it seems to say. On the other hand, some "loopholes" were actually exceptions put in the rule for a reason and as such are (or have become) part of the rule Also note that before you add an example here (especially under Real Life), loopholes are different than exemptions and provisions. These two are intentional</ exceptions to the simplified version of a law. For example if a government taxes pools and a pool manufacturer starts manufacturing large hot

tubs to get around it, that's a loophole. If that same government decides they don't want to tax hot tubs, they will add a provision that says hot tubs are not pools. The former pool manufacturer is now using a provision to manufacture hot tubs and is following both the letter and spirit of the rules but this may not be readily obvious to an outside observer Several examples refer to the old name of this trope, Ain't No Rule (named for a specific situational loophole). Compare No Man of Woman Born

This is where an actor is called back to do the lines again, Thusually because their dialogue was not recorded satisfactorily Thon location. Officially known as "automated dialog replacement" Th(ADR) e fun part? Now the actor gets to do the line with the Thintended emotions while lip-syncing to the video footage of Ththemselves. Alternatively, the actor in question may not be Thavailable or the role calls for a different voice from that Thof the on-set performance. Requiring another actor cast to Thfill in as either a soundalike to the original, or to dub over Ththe original if deemed unsatisfactory. Another way this can Thhappen is if the actor was simply a reference placeholder or a Thstuntperson, stand-in or puppeteer on set, a common practice Thfor people operating puppets, acting in bulky costumes, or if Ththey are playing The Faceless is is much more common than you Thmay think. Japanese voice recording tends to use both Thstyles at the same time – all the actors are in the same Throom clustered around three microphones, but 98% of the time they Thare acting to pre-made lip flaps (very few anime are recorded Thpre-lay style; AKIRA </ is the major exception)

Either you're hallucinating after eating too much radioactive pizza last night, or you're reading a trope page about rhetorical comparisons like this one. Sometimes, as a means of humour, or simply to argue for one possibility through ridicule of all possible alternatives, someone will frame a description or explanation as "either it was X highly unlikely set of circumstances, or it was Y straightforward apparent conclusion." (However, the X and Y can be reversed.) Often associated with Deadpan Snarkers and/or First Person Smartasses . Most often "Y straightforward apparent conclusion" is obviously the truth and the dichotomy is employed as means of snark or lampshading. However on occasion, this trope will be subverted

to comic effect when the more bizarre conclusion turns out to be precisely correct instead , perhaps sometimes as An Aesop about not being too sure of yourself about what is possible and what is not. If the characters decide that the mundane explanation is actually less</ plausible, it may be an Impossibly Mundane Explanation . Sometimes also overlaps with False Dichotomy , when the ludicrous explanation isn't really the only alternative to the implied one. Talks Like a Simile is related. See also Occam's Razor . Not to be confused with an Asymmetric Dilemma , which is also about mundane things being contrasted with extreme things, but in more of an "and" way than an "or". When a translator provides translations of this nature, it is the Either "World Domination", or Something About Bananas subtrope.

If a game designer wants an NPC to be invulnerable, they'd better make sure that it truly is</ The Lord British Postulate was coined in WoW Insider</ post, and is the cornerstone of the creativity and ingenuity of the more cunning player. In short, if a Non-Player Character cannot be killed through normal means, then there must</ be some abnormal</ means to do the job. Quite often, if a character's weapons fail to do the duty, then the task falls upon other NPCs, world objects, or the environment to assassinate the relevant target with some prodding from the player characters. The Lord British Postulate is not restricted to MMORPGs , but can be applied elsewhere: C RPGs , FPSes , even Tabletop RPGs The name references the fact that there is a way to murder Lord British in nearly every Ultima </ game, famously including Ultima Online </ , where Lord British was killed by a fire spell because his invulnerability flags hadn't been set properly after a server crash. That said, the Lord British Postulate has less grounding in reality than one would assume. A great number of NPCs are free to walk around unmolested, safe in their invulnerability. However, the more important the NPC is, the more likely it will be the target of a creative assassination attempt. A king is a bigger target than the common baker and much more satisfying to dispatch This trope can be an applied form of Loophole Abuse with how you go about killing Lord British (or any other normally unkillable NPC). Does not apply to an character who is not clearly</ intended to be unkillable. Just because no reward is offered for killing an character does not mean the developers intended them to be unkillable. This only applies when they are invulnerable to all normal forms of attack, or the developers have stated they are intended to be invulnerable. It also doesn't not apply to techniques used to solo kill bosses that are intended to be killed by larger groups Savvy developers will code in what happens if you do</ manage to kill them Compare Murphy's Law , a similar caution regarding the misuse of technology, and Defeating the Undefeatable , the story/plot counterpart of this trope. Contrast with Invulnerable Civilians , which simply can't be killed, if they can even be engaged in combat at all. A Hopeless Boss Fight or Invincible Minor Minion is seen as a challenge to these people. Can lead to the game being Unintentionally Unwinnable if the loss of the NPC screws you over. This has nothing to do with the other ship from Gradius </

It's all come down to this. The quest is almost over. One by one, the people on the quest have dropped out , died , or been magically transformed into trees . The final battle is approaching. The Hero

turns to see the who is left at his side, only to find... Bob, the Mostly Incompetent Comic Relief Sidekick? Yes, somehow, the rookie, the Plucky Comic Relief , the Butt-Monkey , The Load , the Mauve Shirt , the... well, you get the idea... is the only person who still has the hero's back. This happens most frequently in a Dwindling Party situation. Expect the hero to say "I never thought you'd be the last one at my side." Alternately, the Hero wangsts that he has been left all alone, so that Bob can remind him that he's still there. Frequently include Heartwarming Moments . A common variant on this comes when members of a police squad, any type of procedural, military band, or True Companions have been replaced for one reason or another over the course of an entire series. Towards the end, especially in the finale, the hero and the last remaining member of the original band reminisce about how things have changed. In particularly grim versions, everyone else is dead, and the Hero wonders how Bob is the only other survivor. Sometimes its the first step on Bob's road to being a badass. See Least Is First for when the loser is the first to volunteer for a dangerous job. May also result in the side character getting dangerous . Happens to Sheilla Horowitz in Knights of the Dinner Table </ during the "Grudge Match" arc. Following the elimination games, one member of each of the gaming groups is supposed to belly up to the table for the final showdown. Sheila expects to be backed up by the power players from the other 'evil' groups: the other players being supposed to take the fall to allow them to progress. Instead she finds herself Surrounded by Idiots .

In Red vs. Blue </ , when the Blood Gulch Crew stop arguing and band together, they're actually fairly successful losers.

In the Goofy cartoon "Double Dribble", Polytechnical University's team keeps losing players until the only one left is Merrithew, a pipsqueak who is only knee-high to the others. Surprisingly (or not) he wins the game.

It's not easy being the mascot of a school sports team. While the Dumb Jocks and cheerleaders get all the attention, you're stuck wearing an itchy, stinky costume that really isn't designed for running around in a gym or field. You may be the one pumping up the crowd, but you'll also be stuck on the sidelines, giving out high-fives and t-shirts while the real members of the team win the championship and get all the love. And it's not like you can just move up in the ranks, either, because chances are you only got the spot because you failed at tryouts — after all, who would want to be the mascot? Well, if anyone's going to get stuck with the job, it's probably not going to be someone with any real social status or athletic ability. It'll be someone with no skills to bring to their team beyond running around like an idiot with their face covered; or at best, someone crazy enough to actually find the role fun</, despite the mockery they'll doubtless receive. This of course means the person stuck in the mascot costume is likely to already be considered a loser, and if they've avoided that fate so far, getting the position will be what makes</ them a loser. It's a self-fulfilling prophecy: if it's the losers who play the mascot, then that makes the mascot a loser. The natural habitat of the loser mascot is a high school or middle school setting, though they are occasionally found at the elementary or university level, or out in the wilds of professional sports. In middle/high school, they're more than likely to get unwanted attention in the form of The Bully , be a source of embarrassment to their friends, and suffer humiliation that will last them the rest of their lives . Even if they're not actively mistreated (such as in works where High School Rocks rather than being hell), they're still not likely to be a treated as a "real" member of their team. Whether luckily or not, people may not even know who</ is inside the costume... meaning that even if there's any genuine praise to be given for the mascot's performance — such as if their newfound anonymity grants them a confidence they lack while out of costume — the poor sap in the costume may still be considered a loser regardless, right at the bottom of the Popularity Food Chain . Subtrope of Goofy Suit , Bad Job, Worse Uniform , and, of course, Mascot . Dreaded Kids' Party Entertainer Job is similar, but with kids' parties instead of sports.

A beheading can be a messy and extremely painful thing to see, let

alone experience. While it's been said that, theoretically (it's understandably hard to confirm), consciousness may continue for a few seconds after decapitation, It has been shown that random brain activity can continue for many minutes, ending in a flurry of activity reminiscent of a brain seizure . in fiction , </ consciousness after decapitation can last much, much</ longer... or even indefinitely . The severed head generally possesses the ability to audibly speak despite their mouth no longer being connected to their lungs , and may or may not even be capable of independent movement</, either by bouncing, rolling or levitating. Sometimes the body will still be functional and capable of moving on its own, resulting in the head trying to tell it to pick it up and reattach it This trope can be justified for robots, which may have a power source in their skull that keeps them going after it's been separated from their shoulders : they may not have their core processor in their head anyway. The Undead and other supernatural beings may also exhibit an ability to have a functioning head separate from their still-functioning body. Robots could also have their entire vocal system located in their head, but any biological creature should only be able to mouth words When multiple heads/brains/souls/CPUs/etc. are removed and then reinstalled in working order at the same time, this will almost always result in them being "returned" to the wrong bodies, giving a Visceral "Freaky Friday" Flip See: Alas, Poor Yorick , Brain in a Jar , Helping Hands , Your Head A-Splode , Cranial Processing Unit , Detachment Combat , Oracular Head . Related to Headless Horseman , Pulling Themselves Together , Appendage Assimilation , and Having a Heart . Contrast Decapitation Required , when it's the only</ way to kill them successfully. For decapitation in general, see Off with His Head! . Not to be confused with Talking Heads , which is a stylistic convention

A human colony on another planet experiences a disaster which destroys its tech-base, and for some reason the rest of humanity never checks up on that colony with which it suddenly lost all contact. Alternatively, a spaceship having nothing to do with colonization experiences an emergency which forces its crew to land on a planet in an uncharted star system, and for some reason they never get rescued Either way, not only do their descendants' politics, economics and culture regress to match their pre-Industrial Revolution technology level , they also forget that their ancestors ever came from another planet, making the story at first glance seem to be set in a pure fantasy world . Oftentimes whatever remains of the old technology will be mistaken for magic by the colonists' descendants. Sometimes there is genuine supernatural magic happening, or something that can pass for it , and all advanced technology has been lost. And sometimes the old technology and genuine magic are used side by side And of course, it's always popular to reveal that Earth</ was really a lost colony and that Humanity Came From Space , though genetic evidence that humans and other Earth organisms are biologically related, all the way back to the first bacteria, has made this increasingly hard to sustain. Of course, the theory of panspermia, that the first bacteria were dropped on Earth from space, still enables a scientifically plausible "Lost Colony" in a far more general sense These worlds are a popular venue for Planetary Romances Compare with After the End and Space Amish . Contrast Transplanted Humans . Usually comes after Settling the Frontier Has nothing to do with the eponymous level : These examples necessarily contain spoilers

A specific form of Berserk Button and/or Minor Injury Overreaction A character is about to sit down to their Trademark Favorite Food , when it gets stolen, eaten, made less appetizing or damaged beyond edibility. No matter how calmly they may ordinarily behave , at this point you can expect them to Gasp! , scream , fly into a rage , start to cry , get excessively violent , some combination of these things, or otherwise Comically Overreact . To them, this particular food is Serious Business This is understandable for children, who can treat sweets very importantly , and not much else (see Evil Is Petty for literally taking candy from children). It's also understandable when characters lacking an Improbable Food Budget seeing their hard-bought meal going to waste might be a bit peeved, and also understandable if they are poor and lose the only Poverty Food to fill their stomachs. A Supreme Chef quite naturally wouldn't be pleased with seeing their work destroyed, and any reasonable person could react this way when they're preparing to dine on that chef's Impossibly Delicious Food . And this is completely understandable when enjoying some Comfort Food , or Post-Stress Overeating is involved, since this happening atop other stresses can only end badly . Then there's the whole matter of food offering some sort of tactical advantage . It's when grown adults have a similar reaction to normal food they aren't responsible for that the trope might come into effect This can conceivably happen during a Food Fight , Food Slap , Kitchen Chase , Bar Brawl , Diner Brawl , or any time good food is used as Edible Ammunition . Will often be paired with and complement Denied Food as Punishment , Enemy Eats Your Lunch or Filching Food for Fun . It can overlap with Food as Bribe if a character reacts poorly to Their Favorite being indirectly threatened by the ramifications of the plot. This may also result in a Fight for the Last Bite , as nobody wants to be the one to lose their snack A Big Eater or anyone Obsessed with Food has a good chance of having this reaction to any of their food being taken away or destroyed. They can still qualify if they flip their lid over a specific food, but the main point is that they become distressed in a proportionately larger way than they would normally The eater and complainer aren't necessarily required to be the same person, but the food has to be acknowledged as good-tasting or well-liked by the eater, whether they have Bizarre Taste in Food or enjoy some Foreign Queasine . Situations where a Cordon Bleugh Chef becomes annoyed at a Discreet Dining Disposal happening to something they made distinctly wouldn't</ count This has a tendency to involve confectionery and pastry . Could be seen as an in-universe reaction to They Wasted a Perfectly Good Sandwich . Also see The Alcoholic , for whom wasting is another angry reaction entirely. Compare My Favorite Shirt

Gambling seems to be a natural human activity. We have friendly bets on when Margaret's baby will be born. Not-so-friendly bets on which sports team will be victorious this year. Sometimes we stake money and sometimes the stakes are less tangible In fiction, however, it's perfectly okay to bet people</ in a game of chance. Typically a comedy trope, although you might find it in serious fiction with a setting where slavery is accepted Often (especially if this is used to resolve a Love Triangle), whoever it was who thought the person was theirs to bet in the first place will

"lose" them, whatever the result of the wager itself. That doesn't necessarily mean that the other party will "win" them, however This happens a lot with employers betting employees for whatever reason, yet the Justification — betting their employment contract rather than the employees themselves — is almost never used Most often the card game is poker , but theoretically any form of game that allows The Bet would work. A comedic form of the Absurdly High-Stakes Game . Compare the Bachelor Auction , which is consensual on the "traded" person's part

New adaptations of an original work — generally a work which has inspired countless imitators — tend to resemble the imitations more than the original. Sometimes the changes are subversive, or done because the original themes are no longer accepted by the audience , but often it's just because the writers think that it's what the audience is used to seeing at this point . It is especially prone when there is a Pragmatic Adaptation in play, with a belief that a truly 100% faithful adaptation is not possible in another medium. Done properly, though, you have Character Development like no one's business Usually started by a Trope Codifier . May involve Dueling Works , where The Film of the Book of an imitator inspires a studio to film the original. Also often a result of Adaptation Displacement Lost In Imitation can propagate itself in time, in which case what was not lost in the imitation will suffer from severe Pop-Cultural Osmosis . Compare Truer to the Text , in that what is actually Lost In Imitation is actually being more faithful to the source material. But there are pitfalls there, removing the expected</ elements while still keeping much of the same framework may lead to being accused of changing it for the sake of being different A common cause of the Unbuilt Trope . Compare Ret-Canon , "Seinfeld" Is Unfunny , Audience-Coloring Adaptation . Since the first imitators change things from the original work, this is strongly related to Sadly Mythtaken and Beam Me Up, Scotty!

There's just something about a field of corn that spells creepy. Maybe it's the fact that corn stalks grow very tall and seem to go on endlessly, preventing anyone who happens to be wandering among them from seeing more than a few feet ahead at a time. Also, each stalk looks exactly the same, so good luck finding your way out. Combined with the fact that they are only found in rural areas, this means that you could be out in the middle of nowhere and no one would see you disappear, or even be around to hear you scream on the off chance that you are not alone If characters find themselves in a cornfield, they will almost always get lost. Frantic chases through cornfields are popular in the Horror genre, and double points if it happens to be at night Note that despite the trope name, scenes like this don't necessarily have to involve corn. Long grass is also popular, especially in wilderness settings, and this trope can apply to other kinds of vegetation where it's hard to see anything below neck level. Compare The Lost Woods , where non-domestic plant life is overwhelming or spooky This is also the place to find Scary Scarecrows or Crop Circles

A variant of the Falling-in-Love Montage where the love in

question is in the past. Sappy music is playing while all of the wonderful scenes are shown from the now severed relationship, as the person in question realizes how good they had it Contrast with Falling-in-Love Montage and Sad-Times Montage . If the person has a particular item or keepsake of their lost love's that they kept, this may become a Cradle of Loneliness When the character watches home videos of their past life, see Happier Home Movie , which is closely related. The Ancient Roman legions made up one of the most Badass Armies known to history. However, as powerful, disciplined, and successful as they were, they weren't invincible; on multiple occasions, they were defeated in battle, and sometimes an entire legion was destroyed in a single dramatic battle, or else simply disappeared while on campaign with none returning to tell what happened. Of course, people are free to speculate on what happened to those legionaries who went missing in action. That is where this trope comes into play. There are usually two distinct ways this trope plays out: The story follows another Roman legion which has been sent to find out what happened to the lost legion and (if possible) recover its Eagle Standards. This one tends to appear more often in Historical Fiction . Many stories that use this plot are inspired by any of three particular cases of actual "lost legions" in Roman history: Marcus Licinius Crassus ' defeat at , the destruction of three legions in , or the mysterious case of .

You want to watch some TV, but can't find the TV Remote. Time to turn the room (and probably the building) upside down looking for it. Which brings the question, why not use that same effort in changing the channel manually? Although typically used as the punchline of a joke concerning a character's perceived laziness , this trope is slowly falling out of favour as many modern entertainment devices really can</ only be operated using their designated remote controls. There are ways to work around a lost remote, but they are for the most part not practical in the immediate sense — ordering a new remote takes days, for instance. Compare Dead TV Remote Gag . Jim Gaffigan has a bit about this: "Have you ever been sitting on the couch and you suddenly lose the remote? How does that</ happen? 'I haven't even got up! And I don't remember throwing</ it...'"

In Click </ , Michael is just trying to find the TV remote, but accidentally ends up using a remote for his kids' toys and a remote that controls the garage door. He decides that he's just going to go buy a universal remote so that it won't take forever trying to find the one that they need. And so it all begins...

This was the basis for a skit from Blue Collar TV</. Probably comes from one of Jeff Foxworthy 's standup jokes: "... and it's always in the last place I look" "well duh."

Garfield </ In Sluggy Freelance </ , vampires kidnap Torg, and he had the TV remote in his pocket. Getting back the remote is the only reason Bun-Bun is willing to help rescue him.

The Codename: Kids Next Door </ episode "Operation: C.O.U.C.H." involved the TV remote getting lost in the sofa, prompting Numbuh Four to go down and retrieve it, only for him to find an entirely

Greek-influenced civilization (which is populated by Animal House -Esque frat boys) in possession of the remote.

Joseph's Machines </ : Defied in "5 inventions that are surprisingly useful" when Joseph creates a machine to ensure that the remote is never lost.

The wedding ring has gone missing — eaten by an animal, dropped down the drain, accidentally sold in a garage sale — and convoluted machinations are needed for its safe return. A common complication is that the ring loser can never, ever</ tell their spouse it was lost, afraid that they will get mad at the fact/assumption that they took it off in the first place This can also be any other token of love, a photo of a wedding, set of love letters, etc. A common replacement is a lost engagement</ ring that must be recovered in time for the well-planned elaborate proposal (or, in time for the wedding itself) In Western culture, losing one's wedding ring is considered extra bad because it's bad luck for both the marriage and everything else, not the least of which would be proving one's marriage in the days before certificates and legal records This trope appears in lots of Dom Coms Compare with Broken Treasure and Returning the Wedding Ring , when the ring is intentionally given back to signify the end of a relationship

Some people just can't die in a neat and orderly fashion. Their wills, the listing of their last wishes, have gone missing and as a result, the heirs are fighting over the deceased's possessions. Sometimes the will has been intentionally hidden to keep it out of the wrong hands. Sometimes it's been stolen by someone who wants to get something out of it. Sometimes it's just been misplaced A complication arises when the character had actually left a will, but there is another, later one, which would of course supersede it

A character has a very loose grasp on the idea of "necessities", bringing along towering mountains of suitcases filled with a year's supply of clothes and other frippery they probably don't even need at home. Two waffle irons, for example, so that there is a choice of waffle-dimple patterns. This, for a weekend trip. Special points awarded if the trip is a camping trip , where the idea is to get back to nature Often leads to Human Pack Mule and Fancy Camping . Compare City Mouse . May also be a flaw of the Alpha Bitch . Can overlap with Rich in Dollars, Poor in Sense if the character is wealthy

A character is knocked out, or goes to sleep, and wakes up in their own personal paradise . Whatever they wanted most all their life is finally theirs. The truth, however, is that they're being held prisoner by another character who is using something—a machine, a Platonic Cave , or other phlebotinum —to cause very intense and very realistic hallucinations. Some monsters even weaponize the ability to project Your Heart's Desire to snatch up easy prey. Sometimes the lotus-eater has no idea it's all fake. Sometimes they do know but don't care. In order to escape, the dreamer has to figure

out they're dreaming, if that isn't already known to them; then they have to break the masquerade and give up their life's dream. If they're in too deep, friends (or even characters from the fantasy itself) hoping to mount an Orphean Rescue have to force the hero to Battle in the Center of the Mind in order to escape. More often than not, a Dream Apocalypse occurs. Might involve Artificial Outdoors Display . Bonus points go to the villains if they attempt to drive the protagonist to despair by turning the dream into a nightmare or otherwise play on the protagonist's emotions. Because of the nature of this trope , it often lends itself to doubts after the characters 'escape'. Sometimes it isn't clear whether their escape is genuine or not. This can range from Epileptic Trees theories by a handful of viewers, all the way up to extreme canon cases of a Dream Within a Dream . In this tone, a particularly Fridge Horrific ending for a villain (or a hero) may see them fall under the spell of the Machine, but only for a second before Shattering the Illusion , defeating their enemies, and re-making the world in their image. Cut back to reality, where they're still under the thrall of the Machine. Often lends itself to anti-escapism aesops against spending all of your time in a virtual fantasy world . In the majority of these cases, Your Mind Makes It Real . May also be an exitless Happy Place or not-so-happy Ontological Mystery or Psychological Torment Zone . If the place isn't happy, but the hero is still made to believe it's real over his old life, it's a Cuckoo Nest . May be equipped with a Dream Emergency Exit . May be used in conjunction with the "Leave Your Quest" Test to create The Final Temptation . May be used to set up an Epiphanic Prison . If an entire society lives in one, it's a Terminally Dependent Society . May involve Mind Rape at some point. Possible to involve Victory Is Boring . May overlap with cases of Artificial Afterlife , where the afterlife in question may take place in some digital paradise. The trope name comes from The Odyssey </, where Odysseus meets a society living off narcotic plants, to the extent that anyone who eats of the lotus no longer cares about anything else, including going home. This makes the trope Older Than Feudalism . Contrast with Psychological Torment Zone . Bleach A Certain Magical Index Cardcaptor Sakura

Loud of War is when a character harasses another through the use of sound or music. Perhaps Alice has pointed her speakers at the annoying neighbor and is playing Beethoven's Fifth at full blast. Or an exasperated Bob uses a megaphone at point-blank range to tell Carol he's not her boyfriend . If the neighborhood is especially unfortunate, Deathtöngue and Toxic Vomit will be locked in a band practice battle of ever-escalating volume Usually refers to playing music at loud volumes, though not always. The important criterion is that the sound is (1) loud, (2) annoying, or (3) both. Often played for laughs (especially if bagpipes are involved). Any risk of hearing loss will be ignored as an Acceptable Break from Reality . The Lovable Jock differs from the Lovable Alpha Bitch in that while the Alpha Bitch can still be a bully to everyone except the main character to count, the Lovable Jock will be a nice guy by default. Though sometimes connected to one, he is rarely the main man of the high school and will usually be in contrast to an actual Jerk Jock . Expect the Jerk Jock to be blond while the Lovable Jock is brunet or redheaded, though blond Lovable Jocks are common too. But that isn't a license to try anything funny on him or anyone he cares about; he will</ wipe the grass with anyone who dares A variation can come where the Jock is merely too stupid to be genuinely spiteful , in which case compare Kindhearted Simpleton . At other points, the Jock is a Genius Bruiser and Academic Athlete , and gets on with nerds and other sorts because he's capable of holding a conversation with them, and may himself be geeky about the sport he plays. A person who breaks the law, for their own personal profit, but is nice enough and charming enough to allow the audience to root for them, especially if they don't kill or otherwise seriously harm anyone. It helps that none of their victims are anyone we know or that they've made sure the audience knew they were jerks , which makes it "okay" to steal from them . For extra points, he may even give some of his takings to the poor . The most legitimate way to make this trope work is by making the rogue a Justified Criminal who steals only to survive in an uncaring world that leaves him with no other option, ESPECIALLY if the laws are unfair and benefit a select few at the expense of others including the rogue Note that while morally a click below your average antihero in the sense that they might not be considered a hero at all, the Lovable Rogue is strongly associated with highly Idealistic series on the Sliding Scale of Idealism vs. Cynicism , as Cynical series tend not to place value on the concept of a Code of Honor , which is usually what makes the Lovable Rogue, well, lovable Their loyalties are often played with, particularly if they show up to rescue the hero . If they end up being the star of the show, expect a straight-arrow Supporting Protagonist to be the audience viewpoint character. Complicating matters further is the fact that this person is usually chased by a Sympathetic Inspector Antagonist A click above</ the Lovable Traitor , who is definitely not a nice person, but wins by lowering the audience's expectations so much, that he charms them with a few token Pet the Dog moments (which

usually include helping the hero. It's amazing how much fans will overlook if they help the hero). Usually male, but female thieves tend to be considered Lovable Rogues by default; i.e. they are not "rare" The g comes before the u , ladies and gentlemen. That is, unless you're talking about Rouge the Bat , who just happens to be a good example of this trope, in more ways than one. If the charming person is a villain instead of an Anti-Hero , then they are described as being Affably Evil . The audience will usually not</ root for a villain, even if he or she is Affably Evil . Alice and Bob are in love with each other. However, they belong (or are considered to belong) to different factions that are locked in some kind of war with each other. This may be nations or civilizations in a regular war, the factions of a civil war, Feuding Families , or whatever The lovers are likely to not</ be Star-Crossed Lovers : In some works they are, but in others they are never kept apart. Instead, the drama is about how they have to fight for their love or what a high price they have to pay for it as people shun at least one of them as being some variety of Category Traitor . Or simply the internal struggle of hating one nation/faction/family/whatever while loving one member of it. Don't be surprised if some Straw Loser antagonists goes all Entitled to Have You While the love is usually sexual and monogamous, polyamorous and non - sexual love may also be included as long as it's portrayed as love Compare Ethical Slut and Maligned Mixed Marriage . If Love Across Battlelines is combined with Troubled Sympathetic Bigot , also compare Sex Is Evil, and I Am Horny as well as Love Redeems . If the lover is an antagonist rather than a citizen/relative/whatever of the enemy nation/family/whatever, see instead Dating Catwoman if she remain a villain and Defecting for Love if she makes a Heel–Face Turn / High-Heel–Face Turn . War Ship covers fanon versions Note that a Love Across Battlelines plot often doesn't have a division into a good side and a villainous side - it is common that Both Sides Have a Point and that the protagonists view the conflict as a senseless Good vs. Good

A character uses an allegory to describe his romantic relationship with his significant other. Said allegory is usually rather up there , yet provides precious insight into said relationship from an unusual angle and is often positive Although this trope is titled "Allegory", metaphors are also included Cooking Master Boy </ qualifies. Pretty much everything cooked has metaphorical elements. For example, in one episode Mao meets an attractive (but shallow) woman who wants to use him to make the dish her

ancestor made, but much like her, the dish has the sauce on the outside while Mao shows it being cooked with the sauce inside (inner beauty). This particular theme is a recurring one

From Annie Hall </ : "A relationship is like a shark. It has to constantly move forward or it dies."

In Paul and Storm 's song "Your Love Is (Love Song With Metaphor)", the singer's love is variously (and nauseatingly) compared to a butterfly, a sailing ship, and a tiny puppy, while his partner's is respectively likened to an entomologist, smallpox, and Christopher Walken </ in The Deer Hunter </ .

HK-47 of Knights of the Old Republic </ has a very unusual definition of love:

The vocal counterpart to Love at First Sight . Bob instantly falls in love with Alice when he hears her singing Brings to mind creatures of Classical Mythology like the Greek Sirens , who have a specialized Compelling Voice that instantly makes men unable to resist them. This trope can be compounded with Love Before First Sight if it is solely the voice that causes the attraction. Compare Duet Bonding and Love Theme

Sometimes Love at First Sight ... hurts. They say you never get a second chance to make a first impression, but if that first impression involves you insulting, smacking or punching anyone with an arrogant personality, then you'd best watch out. You may have just made yourself a cruel and brutal enemy… ...and if they don't</ become your enemy, they may become something even worse . Yes, that's right. The snobbishly Bishōnen Student Council President , the hulking school bully, the stuck-up Alpha Bitch —admire them, grovel before them, and they'll barely take any notice of you. Make a snide, cutting remark about their attitude or launch your foot into their face, and they'll be putty in your hands. It is not known why people with Jerkass tendencies tend to go gaga over the people who stand up to them — maybe because it is so rare for someone to stand up to them, and when someone does they don't just become worthy of respect, but often the only ones they are able to perceive as an equal partner . The hero or heroine who puts the bully into their place very rarely</ appreciates his or her amorous attentions. This is because bullies are usually villains, and villains tend to have a rather perverted and/or amoral approach to most aspects of their lives, including love. Bully Love tends to be a rather obsessive and one-sided affair, which can be played for comedy if the object of their affections is equally strong and aggressive (and if they're not, the whole thing can just come off as damn creepy). Some heroes find themselves completely flustered by a bully's attentions, especially if the bully is female and the hero is a male who has qualms about hitting women . An aggressive heroine with no such qualms against violence may likewise find it hard to launch into a bully who is less physically strong than she is—and even if he's a gigantic brute, the heroine may</ find herself feeling just a little</ bit guilty about tossing him into a wall if he's approaching her with hearts in his eyes and a bouquet of flowers in

his arms. Occasionally, the bully may try to reform in an effort to win the heart of his beloved . In series where Status Quo Is God , this oftentimes will not go very well. If the villain becomes pathetic enough in his or her endeavors, the hero/heroine may start to love them out of pity. This can lead to a Slap-Slap-Kiss type of situation wherein the protagonist and the bully enter into a period of bickering which may eventually bear fruit when they graduate to Belligerent Sexual Tension . Death might be preferable . In a number of situations, it is a form of Meet Cute — haloed in light and slightly out of focus , she's the first thing you see upon waking up from the horrific beatdown she just inflicted upon you. What better way to meet the love of your life? The stronger version of Defeat Means Friendship , and the lighter version of You Got Spunk! . Love at First Sight. It's a staple of Fairy Tales , love songs, and the Disney Animated Canon . Two characters meet, and fall deeply, madly, passionately in love with each other immediately. This is one of the most common and oldest story archetypes Depending on where a story falls in the Sliding Scale of Idealism vs. Cynicism , Love at First Sight is either a recipe for Happily Ever After or eventual disillusionment and heartbreak. Of course, even if the characters really are perfect for each other, they can still be Star-Crossed Lovers who are destined to be apart, or simply can start a relationship based on this trope and develop it into a deeper and more sincere one Note that this trope is compatible with Oblivious to Love . In a Love Epiphany , it can suddenly dawn on the character that he is in love and has been for some time, from their first meeting Sometimes, only one character falls in love at first sight . That character usually spends the rest of the story trying to win the heart of the other one. If the character is a hero or heroine, you usually get a pleasant courtship. If the character is unattractive or otherwise repellent to the other, they're an Abhorrent Admirer . If the character is a villain, he or she becomes a dangerous Stalker with a Crush , because Love Makes You Evil Compare Chic And Awe , Fourth Date Marriage , The Dulcinea Effect , and the vocal equivalent Love at First Note . The Serial Romeo is a character who falls into this over and over again. Engaging Conversation happens when two acquaintances hit it off and one jokingly proposes marriage. The opposite is Hate at First Sight Not to be confused with the manhwa , the fanfic , or the kinetic novel with the same name, or the Chinese drama Love At First Fight</

When a character is in love with someone they haven't met yet The character knows what their beloved looks like, or knows their name, or sometimes both. But for one reason or another, the infatuated one has never seen the person they love in real life. They know that they'll meet someday, Because Destiny Says So , and they'll wait for their beloved to make an appearance Traditionally, the beloved was seen in a dream or premonition, was foretold by a fortuneteller, described by a third party, or seen in a portrait,

sculpture, or drawing. New technology has added photos, videos, e-mail, phone conversations, chat, or online gaming sessions, and radio, tv, or movies to the possibilities. Rarer methods involve finding an item of clothing, a book, or some other personal possession of the beloved one. May result in the character becoming a Stalker with a Crush Can be the result of a Reincarnation Romance . Girl of My Dreams is the subtrope that covers specifically dreaming of the beloved</ before actually seeing them

A romantic moment in anime is often accompanied by a pastel background with lots of bubbles. Nobody knows who wanders into all these series with an invisible bubble machine, but maybe they should stop before they get soap in somebody's eye.. This is a technique taken directly from manga, and often accompanied by a Bishie Sparkle for one or both of the characters involved Alternately, the background may have a floral pattern rather than a bubble pattern. In yuri </ manga, the flowers may be lilies, because yuri</ literally means "lily". Roses are common otherwise, although any kind of flowers may be used, at the artist's whim, including odd things like passionflowers and clematis The origins of this are fairly obscure; as some of the examples below illustrate, it's been around for at least half a century and examples can be found dating back to Osamu Tezuka 's post-war contemporaries, making it nearly as old as World War II. Examples in older Japanese popular art, though, tend to be harder to find, not aided by the significant destruction of such works, particularly potential immediate predecessors, in the war. The inspiration for the idea seems to come from the concept of one's vision blurring when you see someone you care deeply for and the human tendency to focus only on them - though who "invented" the trope is a fact probably lost to history See also Cherry Blossoms and Flower Motifs

Parodies/Examples Played for Laughs :

Warning signs of a character about to become Gonk with love include floating hearts , dislocated jaw bone , profuse sweating, panting, noodleing , redness of the face , and the heart attempting to escape their chest at high velocity. If you or a loved one have become gonk with love, do not be alarmed. These symptoms are often momentary and the affected individual will return to their usual artistic style soon. In extreme cases, it has been known to last for a full montage , but will undo itself as the character becomes tired Compare Love Makes You Dumb , when the character's brain is the one that starts malfunctioning instead of their body

Usually, the hero will go to great lengths to protect his Love Interest from the dangers involved in what he does, from keeping secrets from her to breaking up with her for her own good . Sometimes, however, the hero will choose to be honest and tell her everything, trusting her to make her own decisions about what's best for her. Usually when that happens, the love interest will bravely and loyally stay by the hero's side But sometimes, the love interest will decide the hero was right: she really can't handle it Maybe all that stuff about ghosts, witches, and demons is just a little too scary. Maybe she's sick of being kidnapped by the villains. Maybe the stress of the long nights waiting for the hero to come home from his missions is just too much. Whatever the

reason, loving the hero just isn't enough to overcome everything that comes with being part of his life. She's out of there This is not necessarily a very "romantic" trope, but in some situations it can add a tremendous note of Truth in Television . This is when one character makes a declaration of love to another. How it's done, and the reactions to it, will vary. It usually happens with a sense of drama, particularly with shy characters, who are mortified at the thought that they could be rejected by the object of their affection. It carries extra weight if the confessor has been a longtime admirer or has been carrying a secret crush. It's generally seen as a big risk with a guy confessing to a girl, but when a girl confesses to a guy it is seen as a triumphant moment. With all significant declarations there is The "I Love You" Stigma that follows, it's meant to be a big moment. Crush Blush may occur for either person, or both. Unresolved Sexual Tension is often at the core of the confession, especially if the two parties are known for being Vitriolic Best Buds or Like Brother and Sister . The reaction may either be to accept the confessor's affection and reciprocate, or acknowledge the affection but turn it down . If the person is a Jerkass , expect it to be done in such a way for maximum humiliation. In those harsh cases the end result is Did Not Get the Girl ; yet the person being confessed to may say that they're Better as Friends or I Don't Want to Ruin Our Friendship , in order to spare the confessor's feelings . If the two parties have known each other since childhood and the confession is accepted and the love reciprocated, what you have is First Girl Wins and Victorious Childhood Friend . Be careful, though—if the confession is refused (whether kindly or brutally) and the confessor is a bit unhinged, it may lead to an " If I Can't Have You... …" situation. As many of the examples listed below attest, a love confession does not</ require the actual utterance of the phrase "I love you," nor even the word "love". Subtropes include: Compare The Four Loves .

A Love Confession is when a lover declares his love to his beloved. But sometimes the lover can't or won't tell the beloved. There are a few reasons this could be: The beloved is unavailable for hearing the Love Confession . There is, however, another option : The lover confesses his love to a third party . Instead of "I love you</," the confession becomes "I love them</ ." Dramatically, this serves a few different purposes. It lets the audience know what the lover's feelings are, and/or confirms that the lover is aware of their own feelings. It creates new dramatic potential since the lover and the third party now share a secret that the beloved is not in on. Most importantly, it buys time for writers who want to delay the

Love Confession till later, though it is possible for the object of affection to overhear the declaration. Note that the lover must make their confession to another character</; an inner monologue or soliloquy to the audience would be a Love Epiphany . Note also that the confession is made to a third party, instead of</ to the beloved. That means, at the time of the confession, the lover should not</ have revealed their feelings to the beloved. They may, of course, do so later. Or the third party may decide to take matters into their own hands, becoming a Love Informant .

Lovecraft Country is a dark, twisted version of rural New England as used as a setting for horror fiction. Named for the author H. P. Lovecraft — a native of Rhode Island, where there were no places named after him until 2013 — who wrote a number of tales set in a New England milieu, usually small isolated towns that look boring and mediocre at first but are actually dark and foreboding on the inside , populated by hostile and corrupt (in several ways) hicks that often are not quite human, twisted by the influence of ancient horrors and extradimensional aliens (and generations of inbreeding) Milder versions of this can be found in other types of horror. The setting trend was then continued by Stephen King , a more contemporary famous American horror writer, although he sets his stories in Maine as opposed to Massachusetts and Rhode Island. In fact, you could divide it into southern New England being Lovecraft territory and northern New England as King country. If you don't want as many New England accents, upstate New York or the Pine Barrens will do, although it probably won't be quite as Eldritch. New Jersey variants are particularly likely to be lighthearted or played for laughs, because, hey, Joisey . As for why this area seems to attract so much horror fiction (aside from Lovecraft and King writing what they knew and other writers following the leader)... if you ever go to New England in autumn or winter, you'll find it quite scenic during the day (the fall foliage is a major tourist magnet, as are the region's abundant ski resorts), but the sun sets early and it gets dark, cold, and spooky fast. Not so coincidentally, upstate New York is the birthplace of the Spiritualist movement. The Salem Witch Trials probably also have a role to play (cf. Salem Is Witch Country). Expect a New England Puritan to show up, drawing on the region's history as a hotbed of religious fundamentalism This setting has certain common points with the Deep South — despite stereotypes, the New England hills house plenty of billies with necks as red as you'll find anywhere south of the Mason-Dixon Line. The depiction could be construed as condescending and offensive to those who live in such environs, but there are two important differences: In Lovecraft country, evil and corruption is mostly supernatural (and racial) in origin, and the setting is solely used for horror stories. American TV can depict a rural New England that is not Lovecraft Country, but the rural South is almost always the Deep South , unless the author is a Southerner themselves For analogous settings outside of New England, see Campbell Country , Southern Gothic , Sinister Southwest , Weird West , and Überwald . Oh no! The Cult of K'rzy has read from the Book of Darned Awful Things and unleashed the dreaded might of Yog-Sofserve , the Black Goat of the Cream with a Thousand Flavors! Yep, it's end of the world time . But wait! Those big darned heroes showed up and shoved old Yog back into his book . Crisis averted! And nobody went gibbering insane! Where the traditionally Lovecraftian Cosmic Horror Story tries to unleash an emotional whammy of despair and hopelessness on the characters and the audience, Lovecraft Lite — also referred to as "Post-Lovecraftian" in analyses like — has a more modest aim. It uses the toys and themes of Trope Codifier H. P. Lovecraft to tell a different, more optimistic kind of story in the genre of Speculative Fiction . In a traditional Cosmic Horror Story, hope is gone. Lovecraft Lite, though, doesn't have the same hopelessness and ends up being more of an adventure story that just so happens to take place in a similar setting. It's basically a Cosmic Horror Story on anti-depressants . May sometimes cause cases of Vile Villain, Saccharine Show if said abomination clashes too much with the tone of the work. Since part of the definition</ of the Cosmic Horror Story is that mankind has no chance at even comprehending the hideous Truth of the universe , let alone fighting it; any series where someone can defeat Eldritch Abominations is usually closer to Lovecraft Lite than Cosmic Horror Story; it can still be a CHS if it can be defeated, but at great cost , especially Sometime this is done by having bigger fish on the hero's side, possibly as a Big Good . Other times the monsters might be powerful and dangerous, but still vulnerable to humanity's weapons and abilities. Everything from Powered Armor to Eye Beams to Functional Magic to even just a plain sword or a gun can help even the odds. Two tropes that commonly overlap in Lovecraft Lite stories are Did We Just Have Tea with Cthulhu? and Adorable Abomination , which respectively refer to benevolent and cute Lovecraftian monsters. It may perhaps be objected that "Lovecraft Lite" is a bit of a misnomer , since the man himself actually wrote more than a few stories where the monsters can in fact be thwarted, sometimes even with mundane methods. But then again, Lovecraft is such a formative influence on Cosmic Horror that his name has become metonymous for the whole genre. See the Cthulhu Mythos for more. Often overlaps with Two-Fisted Tales .

How can The Hero balance his love life with saving the world, especially when Love Hurts and Love Is a Weakness ? Some heroes conclude that the only solution is to leave the love life out of the equation and become a Celibate Hero . Others (usually of the reluctant or adolescent variety) take the opposite approach and Always Save the Girl whenever love and heroism conflict. Finally, others Take a Third Option — this trope: love, even marry if you want, be fruitful and multiply, but always put your higher calling first Instead of becoming a Celibate Hero , heroes who say "loved I not honor more" enter a committed relationship and accept the strain that their role will put on that relationship. They allow themselves to fall in love, but the romance must take a backseat to duty. They'll dislike having to leave the wife or girl home alone to go save the world, but they won't hesitate (long) to do it. Making a Heroic Sacrifice to save the girl is perfectly acceptable, but turning to the Dark Side isn't. There

will be times when the lovers can't spend as much time together as they want, when the girl will get jealous of her non-human rival, and when he will have to make a Sadistic Choice . There will be tears for his safety on her part, guilt on his part for making his beloved suffer, and periods of believing that she would be better off without him. But in the end, she will have to admit that his devotion to a heroic cause is one of the things she loves and admires most about him, and they will have the satisfaction of knowing (but not necessarily making sure their enemies know) that withstanding so much tension and danger, especially with The Lady's Favor as an indicator, makes their love all the stronger Many writers, naturally, take a more cynical view of such cases, and are not averse to depicting such heroes as selfish jerks who are not only too weak to handle their burden alone but willing to make others miserable instead of declaring I Want My Beloved to Be Happy . Note that cynical and more optimistic approaches to this trope both sympathize heavily with the girl. And, sorry, Aeneas , but sleeping with the girl and then splitting the morning after to continue The Quest doesn't count; try that, and you're asking for a Woman Scorned Classic gender flipped cases usually revolve around the girl being more sensible in a struggle with passion, telling the guy that since it's impossible for them to be together, whether due to an Arranged Marriage or a Virgin Power , they should be practical and accept that instead of sacrificing everything</ to satisfy their passion. Reason and morality are higher callings than love to her. Modern variants of this trope often cast the hero as a soldier kept away from his/her family by the demands of the service The most obvious modern solution to this trope is for The Hero to pick a girl who can be his partner (or who has at least lived that lifestyle, i.e. a soldier marrying another soldier) rather than be forced to sit at home waiting for him, but this wasn't always an option throughout history. Not that many Violently Protective Girlfriends haven't said, "Screw it, I'll go with you anyway!" to that Double Standard , of course This trope can be particularly hard on villains who make a Heel–Face Turn while in a committed relationship. They'll have to rely on Love Redeems to get their significant other to understand why he suddenly left her to side with the enemy Doesn't overlap with The Masquerade Will Kill Your Dating Life because your significant other has to be in on any masquerade in cases of this trope. May overlap with It's Not You, It's My Enemies but not necessarily, unless the hero leaves his love interest to protect her (then it becomes It's Not You, It's My Enemies); if the hero could recite Lovelace's poem in context, it's this trope (too). Compare Married to the Job and Wet Blanket Wife

Love Triangles are stressful and often heartbreaking. Add five or ten more people to the mix, and instead they become comedy : Characters A, B, C, and D all love character E, who might love any of them, but can't commit for reasons of honor or basic wishywashiness. There's also character F, who might</ love E, and whom he might love back, but they get on each other's nerves so it's hard to tell. Meanwhile, G is sweet on C while H and I both love A. Except on alternate Tuesdays, when H's third cousin from Osaka expresses her intent to marry Character F's dog, who has an odd thing for D… You get the idea. Many series have official diagrams so the fans can keep track of the Loads and Loads of Characters . Up Romantic Loose Ends isn't a shoehorn but the soul of the plot: Start with at least 3 ideal relationships; The Villain (or Hero) acts as a Fisher King , casting a darkness and confusion across all the relationships until his Heel–Face Turn , which frees up the main couple to get together and that, in turn, frees up everyone else. The Love Dodecahedron A dodecahedron being a geometric object with twelve faces (or for the Tabletop Games enthusiast, a d12 is a superset of the following tropes: The Unwanted Harem Also, see Gambit Pileup , which is similar to this trope, but with gambits. Though Love Dodecahedra can be the cause of such pileups. The opposite of this is No Loves Intersect . There are three kinds of stable Love Dodecahedra:

This character is madly in love. How does the author of the story show it to the audience? One possibility is to have them doodle their beloved's name and symbols of love It often includes Mrs./Mr. Crush's Lastname , both names in a heart, initials plus initials equals love, banal love rhymes, hearts struck by arrows or Umbrella of Togetherness . The person they are crushing on has no idea they're an object of their affection. It can also involve even more daydreaming, like doodling about one's Celeb Crush or Perverse Sexual Lust The person in love is likely to be doodling in a random piece of paper, in a diary or a journal. It's a way of expressing one's feelings privately, in a place nobody else is intended to see what they drew or wrote. Except for one's closest friends. If the journal with the drawings gets lost, the character gets embarrassed and ashamed. No one is supposed to see those silly, kind of embarrassing doodles, but to drive the plot further, it often happens that someone is going to see it Sweetie Graffiti is a sister trope. Unlike doodles, graffiti is public, and as such, it is almost always the result of two lovers wanting to express their love publicly and permanently. They document their childhood or teen love on walls, or they carve the symbols on a tree or pole Compare Secret Diary

When a character realizes they are in love with another character. This is not when the character confesses this love to that other character or anyone else , but when the character realizes it themselves. Often this can be when a character had feelings already and realized this has blossomed into love, or when a character has been in denial about these feelings until this moment. Now this doesn't necessarily lead to a relationship. In fact, it can even be when the object of affection is with someone else. If not, this can be a way to add a new dynamic to Will They or Won't They? . This is especially the case in Belligerent Sexual Tension because the realization will amp up the tension. Sometimes occurs when the character analyzes his own tendency to the Green-Eyed Monster , or his protective impluses , or even tendency to feed this person . Subtropes include: They Do and Last-Minute Hookup are the natural extensions of this. Compare/Contrast Love at First Sight . Not to be confused with having an epiphany while making love.

Love Father, Love Son is a love trope in which a person who can't have the person that they love for one reason or another winds up falling for their progeny (or descendant)—possibly because there's a strong resemblance in looks or personality, or maybe just because. The inversion is that the progeny develops an attraction to the person in unrequited love with their parent (or

ancestor). Despite being primarily a love trope, this relationship may as easily be friendly or parental whilst retaining romantic undertones or a constant reminder of the unrequited love In mundane settings, this is often preceded by Absence Makes the Heart Go Yonder and some manner of Time Skip (the person and their object of attraction were once romantically involved, were separated, then reunited years later) or adultery (the progeny's other</ parent was being cheated on). In fantastical settings, this is often a result of a Mayfly–December Romance , Human Popsicle or Time Travel . It may involve a Jail Bait Wait (unless the person who settles for the progeny was a younger person that had a Precocious Crush on the progeny's parent) See also Settle for Sibling , Wife Husbandry , and the Sub-Trope Squaring the Love Triangle . Compare My Grandson Myself , Identical Grandson and Generation Xerox . Contrast Parental Incest Invoked in a Daria </ tie-in book, where Daria has to write a story for English class, and our orphaned protagonist goes to meet a mysterious nobleman: "Rumor has it that my mother (whom I resemble to an astonishing degree) had spurned his affections years before. But what was his interest in me ?" Of course, since Daria </ is writing this, the protagonist quickly realizes that the nobleman is a vampire, kills him and loots the corpse

A man and a woman are shown in an embrace, they are both smiling, happy and content. As the camera backs away, we see that their feet are a few inches above the ground, but they are both so enraptured, they don't even notice their sudden lack of gravity. This is what is known as a Lovitation (a portmanteau of love and levitation). This is usually shown in fantasies, science fiction stories and occasionally romantic comedies to show that there is an overall magical quality to The Power of Love . No not that one . You know when someone is said to be In Love with Love ? These people take it to a literal</ level The Love Freak is obsessed with the very concept of love. Often spouting dialogue about The Power of Love and justice , this character is naive and lacks common sense ; her (it’s usually a her) determination is usually the only thing keeping her from being completely incompetent (even if she is potentially very powerful) How satirically this character is portrayed depends on the mood and personality of the lead, although writers typically design her to be somewhat sympathetic. Nonetheless, it is difficult for the other characters to really dislike her because she is honestly nice and a loyal friend Somewhat like the All-Loving Hero , but not as charismatic or as effective, placing this character in a supporting role 99% of the time. May admire the Knight Templar at first and continue to do so if the Templar is not portrayed negatively. Occasionally, she may even be</ the Knight Templar who's determined to spread love , all around the world , at any cost . Worst case scenario, she's an outright hypocrite who's just as sneaky and/or outright violent as the wickedness she supposedly fights See also The Pollyanna , Naïve Everygirl , Stupid Good , Shipper on Deck . Occasionally has problems if they're forced to be a Reluctant Warrior Not to be confused with the other type of Love Freak

This character is regarded as a deity of love (which, more often than not, includes sexual lust as well). Most likely a member

of the setting's ruling pantheon, but could be any character (including a mortal) who is regarded by other characters as a goddess of love. Male love gods are included in this trope. It is called "Love Goddess" rather than "Love Deity" because the females are much more common The Matchmaker is her God Job ; her role in any given plot is most likely to put characters into a relationship. Thus, she is a walking defiance of tropes such as Will They or Won't They? and Twice Shy . Naturally, this does not preclude a Match Maker Crush . She may also be a Fertility God , who either has a bunch of babies herself or encourages others to make them As a character, they're likely to be an Ethical Slut , Good Bad Girl , Hot God , Sex God , or all of the above. If she is like Cupid, then she will have archery skills. Often overlaps with a Food God as well to associate different types of fertility Historical Domain Characters like Aphrodite and Freyja count as separate examples when they appear as characters</ in separate works of fiction. For example, Hercules: The Legendary Journeys </ and Xena: Warrior Princess </ count, since Aphrodite is a character in some episodes, while The Order of the Stick Aphrodite, on the other hand, has made a cameo appearance, but that's just it: a cameo appearance in which she and her entire pantheon were unpersoned Contrast War God , this trope's polar opposite. Or so you’d think. Ishtar might disagree. Mythology and media in general tend to pair these two up regardless , in a sort of cosmic example of All Girls Want Bad Boys These deities will often need The Power of Love to live and function while The Power of Hate can outright kill them. Subtrope to Stock Gods Strictly speaking in terms of historical cultural significance, gods of love were often considered one of the most powerful members of the pantheon . God of love does not just cover romantic love; it covers all types of love , including love for violence, war (especially with the War God) and alcohol (hence why Aphrodite wandered about the battlefield at Troy), and the obsessive kinds that make you stupid , evil or crazy . This makes them gods you never, ever want to cross Compare Cupid's Arrow

It's hard</ to have anything approaching an adult relationship in Japan. Especially the Japan of anime. Once you get past the obstacles of attracting any attention , actually getting around to encountering an amenable romantic interest without blowing it from the get-go , running the gauntlet of finding true love , and sidestepping typical anime romantic obstacles , there is still one surprisingly difficult issue. Japan is crowded. Japan is expensive (well, Tokyo's expensive, and nowhere else counts , right? Actually, the rest of the country really isn't a lot</ better as far as property prices go; see the Anime and Manga section of "Friends" Rent Control .). As a result, even if you're of age to engage in certain physical activities, you probably don't have any private space in which to do that and not get caught. You may even be living with your parents, which is a whole other level of uncomfortable . Even if you can manage a rendezvous, your six- tatami</, underlit, cluttered room with the one-person futon isn't likely to inspire romance. And unlike your North American counterparts, you likely don't own a car and only advanced, highly acrobatic positions tend to be possible on a bicycle, even with the kickstand down. So, what's a couple to do, at least without acting like a Hentai pair (i.e. Making Love in All the Wrong Places) and using any location within two minutes walk of where the mood strikes? Enter the love hotel. Over the last number of years, the love hotel

industry has become quite profitable. They are locations which specialize in providing a place for a couple to have sex. In the West, hotels of this sort tend to be seedy, quasi-criminal affairs frequented by prostitutes and populated by unsavory characters, or motels far, far</ outside city limits, reachable only by car and the location of choice for affairs and civil servants (or at least, people who claim to be civil servants). However, classic Japanese discretion and love of commercial pomp have made the typical Japanese hotel a combination of a well-run Holiday Inn, Disneyland, and an upscale adult toy store. Some are quite gaudy on the outside, while many are distinguishable from the outside only by the reduced number and size of windows facing the street. Some of the innovations that might be seen: Multiple separate entrance and exit points, to reduce the chance of running into someone you know. Needless to say, love hotels get portrayed with that equivocated attitude that necessary but scandalous things usually inspire. For that reason, the Yakuza sometimes have a habit of camping outside the entrances with cameras, then demanding payment to keep the pictures confined .

Love is something best given freely, not demanded; it's something that has to be earned and worked at to keep alive, not a one-sided thing. However, the Love Hungry character apparently never got the memo. They are too insecure, starved of affection , or even greedy: they want absolute, unconditional, and perpetual love, and feel that the ends justify the means. They won't settle for being merely loved by others, but in having their love enslaved to always do so. Even a genuinely kind person may become this out of fear of losing their love, anger at rejection , jealousy of another's love , or a narcissistic desire to be the most-loved This character may try to gain love through sabotaging other's relationships , deception , manipulation , propaganda , or even murder </. If they lack this finesse or get really</ desperate, they may kidnap the person(s) that they want to love them and try to create Stockholm Syndrome . Of course, this Tragic Dream usually gets the opposite result, with the target becoming angry or fearful and rejecting the Love Hungry. The presence of magic and powers usually means that Love Is in the Air , Charm Person , and Glamours will be used to create this forced love This plot usually ends with An Aesop about not forcing others to love you, and many characters who try this either regret doing so before long and work towards a more genuine love or go crazy in their attempts Compare Yandere , who is violent about keeping their lover. Forget life-threatening superheroism, acting Too Dumb to Live , and Tempting Fate . The dumbest, most insane and dangerous thing any hero can do in any media is... falling in love. Dare to love someone else and you set up yourself and your beloved for a plethora of emotional griefs. Love in Real Life is responsible for vast quantities of anguished poetry and tragic literature; factor in all the crazy stuff that happens on TV, and drama and disaster are practically guaranteed. About to commit permanently? Look for an Anyone Can Die to put a permanent end to the Will They or Won't They? issue. Forget

to say goodbye to your beloved that one time ? It'll haunt you for the rest of your life. And let's not forget that becoming emotionally attached to one person leaves you open to the stress caused by the villain abducting your beloved or them even being killed off senselessly just to shape you into the Anti-Hero out for Revenge, or at the very least a Heartbroken Badass . Your love is hurt but alive? Don't You Dare Pity Me! — they will shove you away. Or perhaps you'd be their Second Love — if only they and you didn't think Silly Rabbit, Romance Is for Kids! . Love will make your heart go soft and pitter-pattering into the path to be crushed by the cruel forces of fate against Star-Crossed Lovers . Small wonder that so many try to protect their loved ones by dumping them . If you've got more than one love interest, you've got a headache-inducing Love Triangle or even Love Dodecahedron on your hands. Tread these waters very</ carefully, lest you be on the receiving end of a Yandere 's poisonous affections or a Tsundere 's Megaton Punch . Pick one lover and you can look forward to either a Thundering Herd of jilted rivals or the silent shattering of many other hearts . All in the name of comedy, you say? Comedy never became as twisted as it does when dealing with lovers crazy enough to beat down your door, commit trespassing, glomp you, and refuse to let go. And remembering the love interest anywhere you go makes it worse. Could also result in the character being Not Good with Rejection . And heaven forbid if your love turns out to be one- sided . You'll become a crazy Love Hungry psycho stalker if you don't choose to nobly sacrifice your love . Sometimes you'll even go all the way into a full-fledged villain with a grudge against humanity because humanity was not kind enough to let you have that one person. Sometimes it's even your own creator who decides that you can't get them because he couldn't get her in real life ! Such a fragile illusion... Isn't it? In the right/wrong genre, even when you win, you lose. Little wonder why many a pessimist believes that Love Makes You Dumb , and many a hero has chosen to be a Celibate Hero . Compare Destructive Romance , Hope Is Scary , The First Cut Is the Deepest . A consequence when Love Redeems goes with Redemption Equals Death . However, if you do</ manage to get it right , love can be the purest and most powerful thing in the world . Another way to resolve this is through Cleaning Up Romantic Loose Ends . When one or more characters invest a lot of love and energy into an inanimate object, it comes to life in response thanks to The Power of Love . It's usually a Pinocchio type situation where it's still not an organic, living being, but it's now animate in the Living Toy or " Disney talking furniture" sense. Living Toys usually have this as the backstory for why they're, well, living</ toys. Usually the newly animated object doesn't need more love in a Gods Need Prayer Badly sort of way, but they all usually reciprocate the feeling of love with their "parent" and would be saddened if they stopped being loved (or worse, were treated as freaks for being alive). The now living object/person may want to Become a Real Boy , but usually doesn't suffer from all-out Pinocchio Syndrome . In some cases the newly living object/person stays on the level of Empathic Weapon , never outright sapient, but now a character in their own right. Compare Spontaneous Generation . This trope is just like it sounds. A particularly insidious type of Romantic False Lead , this character is built up to be the Love Interest of the (or a) protagonist, but eventually The Reveal comes that they’re Evil All Along , and possibly even the Big Bad or The Dragon , or both! This character is almost always female, and while she may pull a Sex–Face Turn (often by revealing that she became the mask and genuinely fell in love with the protagonist), they rarely if ever get back together. She is occasionally a Honey Trap as well as The Mole , but not always; sometimes the fact that she's a love interest and the fact that she's a traitor have nothing to do with each other. This can be an Ass Pull if the betrayal comes out of nowhere. Was It All a Lie? See also Big Bad Friend . Compare In Love with the Mark , Marrying the Mark , and Dating Catwoman . As a Betrayal Trope , many if not all spoilers will be unmarked.

Romance and love can outrank magic, technology, or even a Physical God , in influence on the progression of a story. But how it influences the story is a crapshoot Love acts as a Fixer Sue or Deus ex Machina , overcoming all Love is an Artifact of Doom , corrupting even unambiguously good people who lack the willpower to sacrifice their relationships for their morals into a Face–Heel Turn . Murder mystery series seem to love this one Love is an Artifact of Death , bringing doom and pain to all who encounter it Love is an embodiment of the Rule of Drama , making life unnecessarily complicated

No Hugging, No Kissing , No PDA of any kind! The penalization of romance stems from the idea that The Power of Love either Makes You Evil , Crazy , Uncreative or just plain Dumb . Love just seems like a bad idea , so what better way to better the human condition than just banning love altogether? This is a strange, if-not impossible law to regulate and enforce in real life , so those that enforce it

are foolishly idealistic at best , unreasonable and tyrannical at worst , inspiring various rebellions of various shapes and sizes in the process. The Evil Overlord behind it could have a variety of reasons for doing so. They could have had a personal experience with failed love, thinking that if they can't have love, then no one can, or maybe they feel that they are committing a service to others and preventing heart-break. If completely eradicated from society, people could ask " What Is This Thing You Call "Love"? " Should the love banned be physical, then it's No Sex Allowed , or at least No Heterosexual Sex Allowed to keep the population down or because of a Persecution Flip .

When Ian Dury sang about Sex, Drugs and Rock & Roll , he covered not only the Rock n Roll lifestyle but also the majority of musical lyrics. There are songs about sex , songs about drugs and songs about dancing to and appreciating music itself However, it seems Dury was getting into the Department of Redundancy Department because so many songs treat sex or love as though it is a drug. Well after all there are only so many appropriate metaphors out there so the ones that work will turn up a lot Certain lines recur in these songs. The love gets the person high, it elates them, being away from it will make them crave it, they will be addicted to it, they feel like they are floating, they have a loss of appetite and so on. A bit of Truth in Television , as the early stages of romantic infatuation will</ mess with the brain's dopamine levels in much the same ways opiates will Sometimes these songs can throw the interpretations into a tailspin with people thinking that songs that are actually about drugs are this and vice versa Sister Trope to Love Is Like Religion

Love can make you do stupid , irrational things, and if you happen to be a good person, can make you susceptible to the Dark Side . Things you'd never in your sane mind do. Whether hero or villain and whether or not they can actually have the object of their affections, if they can't have them , or if they even try to , love is forsaken because it's an undesirable weakness. These people often try to separate themselves from their loved one, try to remove the feeling, or, in an extreme case, a villain may choose to kill off the one they love . If the object of their affections loves them anyway knowing their turmoil, they become a Love Martyr . Unlike a Celibate Hero , this person can be someone who does</ fall in love—but doesn't want to This trope is invoked to avoid any number of Love Hurts tropes — especially if a villain decides to take advantage of it in the meantime . If a villain decides to finally accept the love and it's not reciprocated , it might be Sex Is Evil, and I Am Horny , Stalker with a Crush , or Mad Love . Requited, they may also be redeemed through the Power of Love , or an Unholy Matrimony may be born. If a hero was wrong about love, a Happily Ever After might be in store While gender-neutral in terms of occurrence, this trope often has a very different flavor if the subject is male or female: a male character believing this is often a Celibate Hero or an asexual thinking poorly of romance in general and usually has never been in a relationship. By contrast, a female is usually a Broken Bird who was shattered so hard by previous relationships that she doesn't want one anymore. If the character is a villain, gender usually has no impact on their reasoning A variation of Allergic to Love . Related to It's Not You, It's My Enemies , where a hero gives up

Love Potions are finicky, delicate beasts. It should come as no surprise that especially poorly made or potent ones combine the far reaching effects of the Hate Plague and the Love Potion into a deadly smog that makes even the most Chaste Hero and throngs of Innocent Bystanders fall for the drinker When Love Is in the Air, you may see a decentralized "Love Flu" that makes everyone who comes in contact experience a rebirth of the sixties and free love. The other possibility is it acts as an amped up airborne Love Potion , making anyone of the opposite gender fall in love and sometimes those of the same enter a murderous jealous rage (or unexplainable attraction) Has a friend in Smells Sexy ; and the role of sex Pheromones , the purpose of which (in Real Life , that is) is to communicate one's biological availability to other members of the same species (and only that species), primarily useful if you only go into heat for a few days per year and don't know whether you'll survive the other 364 days to get another chance later. Compare Living Aphrodisiac , where a character emits Love Is In The Air naturally and Glamour , when this is caused by an alien or supernatural creature. Contrast Hate Plague , which goes in the opposite emotional direction

The inverse of God-Is-Love Songs , Love Is Like Religion is a trope commonly found in pop songs and other romantic works where religious imagery and terminology are used to talk about love as though it itself were a faith or as though the beloved were a celestial being Romantic love and religious faith are often portrayed as very similar states of mind in fiction. Like Property of Love and Love Is a Drug , it's a common romantic desire to worship or be worshipped by ones beloved. (See the split etymology of "passion".) This interplay can be complicated, since many major religions now and historically have involved suppression of sexuality and supported power structures that make Marrying for Love almost impossible, especially for women and LGBT people. This means it may overlap with Protest Song , and using it may reflect a character's Crisis of Faith . It can also give it a similar effect to Interplay of Sex and Violence . A common Motif . Sub-trope of Blasphemous Praise ; Sister Trope to the non-romantic Like a God to Me and Not Christian Rock (though it is also common in actual Christian Rock). A Love Confession in written form. When characters aren't brave enough to come out and say they like someone, the accepted way around a direct confrontation is a love letter, usually anonymously left in a shoe locker or prominent area, with a request to meet at a predetermined location. The intent is better known than the identity of the person; the letter is often pink, in cute handwriting, and smells like perfume. Bonus with lipstick marks.

Traditionally, a love letter is quietly placed in the recipient's locker, or even handed to them in person. But due to teens being unsure when it comes to love, things can start getting... weird. Such as by giving the letter to the wrong person, forgetting to sign the letter, signing the letter with the wrong name </ , or maybe deciding that lockers are outmoded, and shooting the letter at the recipient instead. Or it could be a fake letter and a cruel joke, a la Twelfth Night And that's just the insanity on the sender's side. The recipient might mistake the letter for a death threat, miss finding it altogether, or even just assume the letter couldn't have possibly been addressed to them, and give it back Subtrope of Mistaken Message . Compare Obsessive Love Letter , where everything goes according to plan, except the letter is crazy</. Also see Irrevocable Message

Being in love can cause a person to behave strangely and irrationally , a tendency which is often exaggerated in television and film. Usually played for laughs in Sitcoms and anime, it can be used as a motivation for villainous (or at least uncharacteristic) behavior in more serious stories. However, it can also result in behaviors that are presented as being noble, though unusual A special case of this is the Stalker with a Crush , who often shows other irrational behavior as well. Mad Love , Love Hungry , Psycho Lesbian and Yandere are other special cases, meeting obvious conditions. All of these can overlap, and often do, even ones which seem contradictory. May involve dancing The Masochism Tango when the love is requited (or actual masochism of the psychological sort when it isn't) If the writers have a deeper understanding of relationships, they may have "true" love not cause this effect, contrasting it with the crushes we've seen elsewhere in the series. This is relatively rare, though If two characters are the romantic rivals in a Love Triangle , one may become a Rival Turned Evil . This is especially common in daytime soaps The Chick Magnet and Head-Turning Beauty make everyone</ they meet crazy. Usually For people who hold this as their viewpoint about love, see Silly Rabbit, Romance Is for Kids! Of course, things could be worse... or better. </ For the Romantic False Lead going crazy to make the relationship easier for the Official Couple , see Derailing Love Interests

When falling in love leads to the death of a character's brain cells. No matter how smart they might be, the right boy or girl will act as their personal Idiot Ball . They'll attempt to look cool or impress their crush, only to inevitably make a fool of themselves in front of others Being in love is dangerous for a character. Occasionally, an (usually) main character, who more or less pulled his weight at the start of the series, starts to feel affection for another, and the writers like the idea. Suddenly, their own personal plot starts to become almost exclusively </ about that , and we have nothing to balance out the inherent goofiness and clumsiness that occurs dealing with their emotions. This has an extra layer of trouble if the Demographic of the viewers isn't too heavily interested in the romance, or romance in general. On the other hand, other demographics can relate . This can send someone on the edge of Can't Catch Up straight into a

ditch and relegate them to the sidelines of a story, especially if it's fairly clear that the writers haven't used the character for a while because they don't know what to do with them If it isn't focus where they're hurt, it'll be their common sense. The Love Interest might even turn out to be manipulative or opportunistic, if not outright abusive. When friends of the character try to snap them out of it, they will be accused of jealousy by the lovestruck victim Extremely common in Shōnen . Female characters, in particular, often turn into a Faux Action Girl this way. For people who hold this as their viewpoint about love, see Silly Rabbit, Romance Is for Kids! . For a specific form, see Cannot Talk to Women Subtrope of Took a Level in Dumbass . Granted, Dumb might be better than the alternatives . Can (and probably will) lead to Gibberish of Love . See also Love Can Make You Gonk , Distracted by the Sexy Very much Truth in Television : if you don't have at least one story about being a monumentally dumb jackass on a date, when trying to attract the attention of a crush, or around a spouse or married one you just aren't even trying (and it's all the more reason to keep trying when you do</ make a complete fool of yourself. We've all done it)

The Power of Love ain't always a good thing . How many times have we heard this? "I did this for you!</ So we could be happy together! " Love can be a strong motivation for good . But if you are in a Love Triangle , or your loved one is dying of cancer , it can also be a great motivation for murdering the hypotenuse , making a Face–Heel Turn , embracing The Dark Side , selling your soul to the devil , raping your love interest , or cursing yourself by opening the Tome of Eldritch Lore , up to causing The End of the World as We Know It . And if that person should die, they are willing to go to horrific lengths to bring them back . This often happens when a simple love spirals into a dangerous obsession ; the love goes out of control, becoming their number-one motivation beyond everything else, including their reason, morals, and others' well-being , and they self-destruct in the end. A common, yet, severe manifestation of this is usually cries of " If I Can't Have You... Then No One Will." If both</ lovers follow the downward spiral, you may end up with the Outlaw Couple or Unholy Matrimony . Sometimes, it's not quite "love" but the lack thereof that drives a rejected suitor to serve the Big Bad for revenge. The object of their affections will probably think whatever damage they cause is All My Fault . Sometimes, the person who will go to extreme, evil lengths for love is a villainous Stalker with a Crush who has no grasp of the true concept of love , and emulates it as best he can . With knives Sometimes, it's a genuinely well-meaning, severely Genre Blind Love Martyr who wants their beloved to be happy or protect them from their enemies , even if it means damning themselves in the process. They will hear endless rants of What Were You Thinking? before breaking out in cries of My God, What Have I Done? and dying nobly , using their last breath to assure their beloved, "I still love you. I always will love you." Frequently, the motivation for the sympathetic Fallen Hero to fall. The belief that, had he been a little less lenient, a little less forgiving, that special someone who was Stuffed In A Fridge might still be alive. Leads into Well-Intentioned Extremist territory. An especially unpleasant extent of how Love Hurts and Makes You Crazy . Might start with, or end in, Destructive Romance . Since this is both a Love Trope and a Betrayal Trope, . See Yandere for a version of this trope that is mixed with, or

camouflaged by, Moe tropes. If the character who is in love was evil before falling in love, it's a Villainous Crush . Contrast Evil Virtues , where a villain has love as a good trait, or Love Is a Weakness , where a (usually villainous) character avoids love for fear it will spoil them.

What happens when someone involved in artistic or other creative endeavors enters into a relationship with a person only for his work to seemingly go downhill as a result? That's the question raised by the Love Makes You Uncreative trope In stories involving this trope, the (usually male) artist in question may be in an extremely happy relationship, but his significant other functions as the opposite of The Muse (i.e., an anti-muse). In some cases, there may be nothing wrong with this person — in fact, she may be perfectly charming and likable — except for the fact the artist's relationship with her has somehow caused him to start producing inferior work or no work at all . In other instances, if the artist character is a musician in a band or part of some other type of creative team and his object of love causes strain with the other members and alienates fans, there can be overlap with the Yoko Oh No trope. There also can be overlap with the Dungeonmaster's Girlfriend trope if the artist begins involving and displaying overt favoritism toward the significant other in his projects — often to their detriment. This situation is made even worse if the other person is an untalented Golddigger who's latching on to the artist for the purposes of gaining fame and/or money Related to True Art Is Angsty : an unloved, lonely and depressed artist is more likely to create "true" or "compelling" art than one in a happy relationship. Creator Recovery would be a supertrope. Compare Love Makes You Dumb . Contrast Creator Breakdown and Creator Couple which, when combined with this trope, can lead to a Couple Bomb . If part of a series, expect the couple to eventually break up, reverting the artist back to his creative self while the woman is never seen again . And if the couple doesn’t look like they’re going to break up any time soon, the artist’s friends may try to "fix" him themselves Love Makes You Uncreative is a trope found in both fiction and Real Life . However, in the case of the latter, the decline in someone's work after his or her hook-up with someone unpopular with the Fandom is often subjective. Thus, this trope is limited to In-Universe Examples Only

Alice is devotedly in love with Bob who is highly troubled or dislikable, the kind of person very few in real life would stick with. Bob isn't merely a Jerk with a Heart of Gold or even Troubled, but Cute : he (or she; both sexes can play either role) has serious psychological issues, an utterly Jerkass personality, or both, all of which makes a healthy, happy relationship unlikely. Alice is fully aware of Bob's faults but willingly endures the insults and troubles he dishes out because she believes her unconditional love is strong enough for both of them and/or will eventually reform Bob . What separates the Love Martyr from the Mad Lover is that, in this case, Bob and Alice are</ in a relationship, albeit a twisted one , and the love is ostensibly mutual, but he pays so little attention to her needs that his "love" for her verges on Informed Ability . Very often, others will ask " What Does She See in Him? " or point out to Alice that Bob is a bad boyfriend, but she invariably ignores

or dismisses their concerns. Expect her to say, "But you don't know him like I</ do." The Love Martyr is supposed to showcase the kind of pure and selfless love that can bring out the good side in even the most damaged and embittered people . If Bob has formerly shown signs of potential goodness and believably develops into a decent person because of Alice's love, the relationship can change into a genuine Love Redeems scenario. However, the less</ evidence that is given of his basic goodness or the potential to reform, the less convincing the Rule of Romantic becomes, and the more it seems that Alice is sacrificing herself to sustain an unhealthy relationship . When the martyr is a girl and her beloved is a troubled boy, this is often All Girls Want Bad Boys taken to extremes. Frighteningly common on Police Procedural shows especially if it involves teenagers. One that comes up frequently is a teenage girl with bad self-esteem who's head over heels in love with a guy who treats her like a doormat. Often, he's also involved in something highly illegal and will drag her into it or possibly use her as a fall guy. The police often know that the guy in question is bad news, and try to offer her a deal in order to try and catch him, but she'll frequently wail out "He loves me!" and will take the fall or cover up whatever he's done, digging herself deeper in the process. More often than not the core of most fanfics written by teenage girls putting Draco in Leather Pants for their self-inserts to redeem with the power of like-OMG twu lub . (Or the power of like-OMG good sex — or, more accurately, the power of Ikea Erotica). On occasion, Alice becomes Bob's Morality Pet , and, when she dies, it prompts him into a Heel–Face Turn . But at other times—and this is Truth in Television more often than not—Alice never succeeds in reforming her beloved , not even if she sacrifices to the point of death. The Love Martyr trope is not exclusively found in romantic pairings. Hero-worshiping younger siblings who look up to their jerkass (and sometimes outright evil) brothers or sisters as the best of role models, children who desperately try to please notoriously obstinate parents , and parents who blindly indulge and make excuses for their spoiled-rotten offspring prove that familial love can be just as blind (and hurt just as much). Cases even exist for best friends/ Platonic or Heterosexual Life-Partners who put up with far more unkind behavior than almost anyone would expect. Compare/contrast Mad Love , where the person in love is depicted as hopelessly blind if not outright Ax-Crazy ; his or her affection is clearly</ wasted upon someone who doesn't care one bit (but is sometimes happy to take advantage of the situation). Don't Take This Risk </: You</ can become this for the man on the phone, entering a relationship with him for the sake of giving him a reason to live. There's basically no</ way that relationship can be healthy, for either party.

Once, long ago, Alice shared special moments with someone she loves She's moved on, but that won't stop her from singing a bittersweet song about her fond memories of that time. Often it takes the form of a ballad recounting specific details e.g. " the sound of the stereo, the dim of the soft lights, the scent of your hair that you twirled in your fingers ..." Being built on bittersweet emotions, a Love Nostalgia Song has a kind of emotional universality: it can be depressing to one listener and happy or hopeful to another. This can help it to resonate with a wide audience. A Music Trope . Compare

Love Will Lead You Back , when the narrator has not moved on and still believes their lover will return.

So your character has got himself a girlfriend and life is looking pretty sweet. We mean, it's just a matter of time until the relationship progresses naturally, right? Not so much. Here come the Love-Obstructing Parents, friends and family of the girlfriend whose job from the writers is to ensure that for the progression of the relationship, Failure Is the Only Option . They will, of course, insist on moving in with the both of you. Being the Moment Killer is their job title. There are two kinds of Love-Obstructing Parents. If your character is lucky, he will eventually gain their respect, and maybe even count them as True Companions . Unfortunately, this does not aid in relationship building as their friendship means he will never</ be alone with the girlfriend. Naturally, the girlfriend never</ sees this, to the point of Comedic Sociopathy . It's just so nice that everyone she likes is under one roof. One wonders if she even has a sex drive or possesses any plans for the future. It's technically her job</ to address Love-Obstructing Parents about this since it would not be proper for the main character to do so. She will have Selective Obliviousness towards this duty. Your character better be a Chaste Hero or else be prepared to take cold showers for a long</ time. Sometimes, the In-Laws include a sensible 'neutral' party, like an aunt or grandmother. Unfortunately, they rarely ever get involved in any useful way. See Harem Nanny . See also Obnoxious In-Laws , Meet the In-Laws , Parental Marriage Veto , and Dating What Daddy Hates .

In Real Life , breaking the law and being caught doing so would label you a criminal and if you are caught and arrested, force you to probably go to court depending on where you live. However, in Fictionland, either the law doesn't work like that , or no one cares because this character is in love The character can safely bypass the law without being made to face it. Those enforcing the law might even completely forget their jobs and give them a helping hand! Ah, the Love Potion. Not since the Eskimo Freezer was patented has there ever been such a useless invention. Not that love potions are ineffective</, mind you; it's just that they rarely ever work as intended</, to the point where one wonders why a character would even bother to use them at all. When you see someone employ a Love Potion these days, you almost expect</ it to fail. It should be a Discredited Trope by this time, but for some reason, characters continue to use Love Potions, with said potions continuing to cause far more trouble than they're worth. If the plan for using the Love Potion is actually well thought out and shouldn't</ go wrong, expect some Contrived Coincidence to ensure that it does. The Love Potion comes in three general forms: Of course, no matter which type of potion is used, the chances that the right people will actually drink the potion are less than .00001% on average. Even if the potion is put into a drink that's placed directly</ into the hands of the people for whom it's intended, some</ kind of mix-up is always bound to occur. For instance, if the Love Potion is given to the princess

in an attempt to get her to fall in love with the hero, you can bet your life savings that she'll slip and fall, causing the potion to splash up into the open mouth of the hero-hating Tsundere . When folks imbibe a "drink it and fall in love with the first thing that you see" type of potion, then despite how miraculously good they always seem to be at avoiding children or family (on the rare occasion where this sort of Fridge Horror is even addressed</, that is), it is virtually guaranteed</ that the first face the hero will see upon sipping the mixture is that of his own horse or that of his Plucky Comic Relief Sidekick. Even if it's only an aphrodisiac, a lot</ more people than expected are going to unknowingly chug it and engage in activities that put the raunchiest teen parties to shame. Villains don't usually have all that much luck with Love Potions either, as they're often all-too susceptible to being rendered ineffective through that annoyingly pesky " Power of True Love " thing. No matter how strong a Love Potion might be at first, it will almost invariably fail once the entranced heroine sees her True Love lying bleeding and battered on the floor, seconds away from doom. In most cases, this will lead to a tearful reconciliation between the heroine and their Love Interest and to the hero picking herself up and kicking a lot of ass (as well as to the villain wondering just where he can get a refund on that stupid wonky potion). An even more chaotic backfiring is when the villain her/himself accidentally drinks said potion. Hilarity Ensues . Villains may employ other means besides potions for winning someone's love (spells, brainwashing, illusions, and the like) but these usually have a comparable success rate (i.e: none</.) If it's particularly potent, it might cause Love Is in the Air and affect not just the intended drinker but everyone.</ Even on occasions where a love potion works exactly as intended (most often in the case of Love Only Person X), with the right target falling for the right person, the whole thing has a tendency to work a little too well . The user will find, to their chagrin, that being obsessed over to the point of absurdity either destroys what they found attractive about the love interest in the first place or is simply too much to handle . Or they might come to realize that they'd rather their love remain unrequited than be artificially</ requited, thus learning a valuable Aesop . Every once in a blue moon, you get a Shipper on Deck type who wants to use a love potion not for their own benefit, but on behalf of two people who would be "so perfect together", if only they just had a little</ nudge towards each other. But even the purest of intentions can lead to disaster, and it's a safe bet the would-be matchmaker will be desperately scrambling to undo their handiwork in short order. The morality of magically forcing someone to fall in love or have sex with another is often overlooked, but occasionally explored — depending on how thoroughly someone's will is overridden by the effects of the potion, use of these things has the potential to make consent rather... dubious... if the story goes beyond PG-rated shows of love. It's becoming more common for a Magical Society to have declared love potions illegal because of this. Frequently comes as a perfume rather than a drinkable. In these cases simply replace "drinks" with "gets sprayed with", as all the same mishaps tend to happen. Compare Slipping a Mickey , Hypno Ray and Hypno Trinket . Contrast Hate Plague . Say Bob and Charles are not family, but are close to one another. Really</ close. Bob is younger than Charles, and Charles is quite happy to take Bob under his wing . He guides Bob to his place, whether in the world or simply in one social circle. However, Bob and

Charles' affection for each other is a bit more than fatherly . This dynamic applies to a gay couple (or simply an ambiguous one) in which one partner is much older and acts as a mentor to another. In this dynamic, Charles is most often powerful and successful, and Bob is most often attractive in one way or another . This trope originates in ancient Greece, with their custom of pederasty. The Greek words for this trope are "erastes" (lover) and "eromenos" (beloved). A very similar system developed independently in Japan, where the partners are the nenjawakashu</ technically covers any boy between early childhood and adulthood, and was also used outside of relationship contexts, but by the end of the Edo period it pretty much meant " uke " . High-ranking Chinese courtiers and Buddhist monks also took younger male "lovers" fairly often, but in a less formal system than in Greece and Japan. All but a Forgotten Trope nowadays, especially since some of these relationships involve underage teens. It may, however, show up in The Twink 's Coming-Out Story , and the social circle the older partner leads the younger into is likely to be the gay community . If there's a significant age difference between them, see Age-Gap Romance . If the younger one has a preference for older partners, see Likes Older Men and Likes Older Women . Love is as (or more!) addictive as The Dark Side . These two forces interact very curiously, Love can just as easily lead a Knight in Shining Armor into the Dark Side, as it can drag the most committed , bloodthirsty , puppy-kicking villain kicking and screaming into being redeemed . Whether they're a Fallen Hero who starts Dating Catwoman , a Professional Killer who fell In Love with the Mark , or the Necessarily Evil who gains a Morality Pet that gives them something to live for, love tends to corrode evil like lemon on popcorn (and it tastes so good !) even if it frightens at first . By and large, Love tends to subvert rather than aid evil, Unholy Matrimony not withstanding. If it isn't Heroic Resolve it's Heroic Willpower , making even the most soul corrupting evil as weak as a sickeningly sweet kitten Some characters consciously invoke it in order to try to invoke Single Woman Seeks Good Man — or its Gender Flip Beware Redemption Equals Death but they may decide it's worth the price and Go Out with a Smile . Alternately, a spurned evil genius is that much more likely of Jumping Off the Slippery Slope and Nuke 'em . If the villain manages to hold on to enough of their evil (or love), they become an Anti-Villain . Sometimes, this comes about when the villain ends up Becoming the Mask , the love they get so freely sorely tempting them to change sides and do a Heel–Face Turn It's worth mentioning that this is what the Love Martyr wants to happen, as does the Monster Fangirl and many shippers who put Draco in Leather Pants . In Real Life , this attitude often leads people to The Jerry Springer Show </; "But he really loves me! Those bruises will heal!" On the other hand, it may very well be the hero who bruises the baddie , channeling the power of love through violence and thus bringing redemption If the redeemer

dies, it's possible their memory and lessons they taught their beloved will stick . On the other hand, the deceased could have been simply holding back the person's evil and they now revert with a vengeance. There's also the possibility that instead of curing them , love may very well never change or addict </ the intended beneficiary It should be noted that romantic</ love isn't the only type of love that can redeem someone. Familial and Platonic Love are both capable of this Naturally, Love Makes You Evil is the counterpart to this trope, where love leads you into</ evil instead of out of it See also I Can Change My Beloved , where someone tries to invoke this trope but fails

Two characters have had some sort of Ship Tease , but there's no sign of it progressing to a Relationship Upgrade . Likely, one character will have feelings for the other but are resigned to All Love Is Unrequited — until the other character somehow hears (from another person directly or indirectly or from a Love Confession) they have feelings for them. They're shocked. All of a sudden, they begin to look at the other character differently, resulting in them beginning to have feelings, too! We all want to be loved after all, and someone loving you</ is a very attractive trait. This trope comes in two flavors: This often is a cue for a long-overdue Relationship Upgrade in a She Is Not My Girlfriend or Unresolved Sexual Tension situation. A common variation is to have one fall for the other after hearing that they have feelings for them despite there not actually being feelings involved; often this set-up is Played for Laughs . A subtrope of Love Epiphany . If Alice realizes her feelings for Bob after he confesses to Cheryl instead, that's Green-Eyed Epiphany . The inverse of this is Entitled to Have You , in which Bob loves Alice and expects Alice to love him back. If the timing isn't right and Alice realizes her feelings after Bob has moved on, it's Unrequited Love Switcheroo .

Most guys would give anything to have the girl of his dreams literally</ want a piece of him. But it can get painful if more than one girl wants that to happen . This classic Harem Anime scene consists of each young lady in this tug of war grabbing an extremity (usually an arm) and literally</ trying to take her man away from her rival(s), in a grotesquely hilarious exaggeration of wish fulfillment . The girls in competition will likely shout this: The poor guy in question is effectively Made of Iron for the duration of suffering under this trope, especially when the contestants have Super Strength . This trope is unrelated to Love Hurts , even though it may hurt literally. This trope also shows the chivalrous side of a guy — he Wouldn't Hit a Girl even to protect himself from this trope. For this reason, a girl is rarely fought over this directly in Distaff Counterpart harems. See A Lady on Each Arm for the less violent version of this trope. Cock Fight is a rough Spear Counterpart .

A monarch's romantic choices are directly linked to everything in the kingdom going to hell thereafter. Usually, this is for one of three reasons: The monarch is having so much fun with their paramour that they neglect their duties of ruling and governance, possibly creating a power vacuum for an Evil Vizier or similar to take over. Rebellious Princesses are completely immune to love-related repercussions outside of deconstructions . Compare Fisher King .

A character plucks something in order to predict something. The character is usually a girl , but doesn't have to be. This trope comes in two flavors: As humans are more inclined to start with the affirmative (in this case "Loves me"), and since Real Life flowers are slightly more likely to have an odd number of petals, probability indicates that of all the people who did this the majority of them ended with "Loves me". In the land of fiction though, the Rule of Drama skews this and fictional characters tend to end with "Loves me not".

So your favorite couple is in the middle of a deeply romantic scene. The camera zooms, the lighting is perfect, and the music swells up. Chances are, the music playing is the couple's love theme. May also be designated as such in official soundtracks This music can take on several forms, depending on the characters involved, the setting, and the story moment when it is played. It may play over a deeply romantic scene like The Big Damn Kiss or a Grand Romantic Gesture . However, it may also be played over a breakup, a Last Kiss , or when one lover dies in the other's arms . Many themes end up as both a CMoH and a tear jerker at some point. This villain trope is for the characters we love to hate "Love to hate" is a term used to describe villains we enjoy. We love them for various reasons, such as excellent character development, being hilarious, getting the best writing, having a memorable personality, or being lucky enough to have a top-notch performance by their actor. But at the same time, the fans still want to see the baddie get their comeuppance in the end. There is still hatred, after all. Also named Heel Hate Faux Affably Evil , Affably Evil , Laughably Evil , Magnificent Bastard , and Card-Carrying Villain are sub tropes for different reasons. Being a Large Ham definitely helps (see also Evil Is Hammy). An Anti-Villain is often one of these due to the character development they often get. A villain who's The Scrappy or Creator's Pet is typically not eligible for this trope as are some villains who cross the Moral Event Horizon Not to be confused with Draco in Leather Pants , which is when a villain's fandom will gloss over the actual nastiness of a villain and insist that he or she is just misunderstood, i.e they throw their sympathy to them</ even though they don't deserve it ; in this, fans acknowledge the atrocities the villain has done but they like them for their villain traits</. Also not to be confused with when the heroes</ would love to hate the villain, but just can't manage it This is someone whom the fans enjoy and even maybe respect because</ of their unapologetic evilness. Their shamelessness is cathartic to us , and they retain their awesomeness as time goes by without Villain Decay In order to be eligible, a villain must be generally well-regarded/well-liked by said fandom while the same fandom still acknowledges they're a villain. Being here means that said villain is part of the pantheon of great villains. Therefore, it is possible for a Complete Monster to be listed here (for example, The Joker , Pennywise and Red Skull) Compare Hate Sink , where a character's intended role is to be hated for their evilness. This is Truth in Television , and can be particularly tragic when Bob is not merely gone, but actually dead. Done well, this can evoke a sense of sadness and an admiration of the character's dedication. Done poorly, the pining character may leave the audience saying "get over it! A standard delaying or misleading tactic of Romantic Comedy that depends on the vagueness of language In English we have love</ for deep romantic love ("I love you, Alice."), or deep platonic love ("I love you, man"), or shallow love of foodstuffs ("God, I love pastrami"). There's also times where romantic affection occurs but is not as deep as love, in which case "love" is considered deeply inappropriate. So you have like</, or the rather pubescent like</-like which is different from just "like". Confused? Well, it carries over into other languages too. The French can be confused by copain</ and ami</. The German language has a single word Freund</ for male friend or boyfriend and a single word Freundin</ for female friend or girlfriend, while daisuki</ (or the plain, less emphatic form, suki</) is a popular word used in anime for affection, but it can be very nebulous out of context (aishiteru</ , on the other hand, is very clear in its meaning and more or less cannot be taken any other way) The standard gag is to have a character say this, while the others are shocked at the directness. Or, if it's the person in love with them, near euphoria. This is followed by the original character mentioning all the other people they love A variant: a character is thrilled to receive what appears to be something very special and personal (often a valentine or a Christmas present) from the person they have a crush on — only to learn that the entire cast got them One big problem in adaptations for other languages is the subjectivity in deciding which kind of affection is the proper one. In some cases this is played for humor, while in other cases the classy character is</ denying the confession but feigning ignorance to avoid causing the other person embarrassment See also The Four Loves . Compare The "I Love You" Stigma

The nature of emotional relationships often overlaps in confusing complications ranging from the simple crush to Freudian oddness. If this causes the writers to accidentally build things like harems , the easy way to get around this is to reveal the basal nature of a relationship. This is a form of Wishful Projection . In the character's mind, one type of relationship was simply confused with another . This has some basis in reality, where some potentially romantic relationships are actually people seeking "figures". (Hell, who hasn't</ done this at some point ?) They spend time with a person because he or she reminds them of someone else </. For example, some characters attracted to older characters often have an absent parent or older sibling. This situation is often the inherent role of an Unwanted Harem's Unlucky Everydude . In some other cases, it turns out that the character was only in love with the idea of being in love and applied it to the first suitable person they met; and in others, a character falls in love with another character… or more specifically, some defining feature of that character. For example, Bob falls in love with Alice because she is incredibly beautiful, or a brilliant fighter, or incredibly smart, but he fails to actually comprehend Alice beyond that trait. This is easy to do to The Lost Lenore since she's not around to contradict an idealized version of her. Doing this poorly can feel incredibly cheap if the "explanation" doesn't make sense or potential evidence wasn't presented beforehand , as it feels as if the writers are just going down the list of romantic opposition and checking them

off . Like Death of the Hypotenuse and Ron the Death Eater , this trope serves as a subtrope of Die for Our Ship in fanfic , to clear the way for the author's preferred ship . If a character is Really 700 Years Old , this can keep the writers from having to deal with a Mayfly–December Romance . The trope name refers to Éowyn's unrequited love for Aragorn from the Lord of the Rings </ trilogy, from the line "It is but a shadow and a thought that you love. I cannot give you what you seek."</ Accordingly, compare and contrast with All Love Is Unrequited . Compare The Dulcinea Effect Not to be confused with Fighting a Shadow . When someone bullies someone else because they have a crush on them. This is usually because they aren't sure how to convey their feelings properly. Often the bully is a Type A Tsundere . There is actually a sub-type known as "sadodere", combining the words sadistic and sweet. The target of the bullying is generally under the impression that the bully is simply mean and has no clue the bully has a crush on them This is generally Played for Laughs and won't normally get into serious violence unless the target is Made of Iron . This sometimes overlaps with Double Standard: Abuse, Female on Male . Romanticized Abuse and Domestic Abuse are the significantly less innocent Sister Tropes , and Bastard Boyfriend is the Darker and Edgier one. Contrast Mad Love , a generally comedic trope wherein the one in love fails to realize that abuse is not</ the sign that their beloved returns their affections Truth in Television for some small children who lack the concept of relationships and usually</ grow out of it. However, it may slowly be on its way to becoming a Discredited Trope as in more recent times, critics, parents, and child development specialists have been increasingly voicing distaste for it, due to what they see as the role that "he (or she) does it because he likes you" has played in causing some people to take real-life bullying less seriously

This trope happens when a character in love recite (or otherwise show knowledge of) tiny details about the object of their affection, showing how well they know the other. The amount or obscurity of the detail suggests the intensity of feeling on the part of the speaker, although practical circumstances may limit the amount of information that is available. A common variant is when the speaker lists every tiny detail about a past experience with the beloved, especially about the day they first met: the weather, what each of them was wearing at the time, what they both ate, and so on. This is usually played as romantic, but it can take on a creepy tone if the person reciting detail is a Stalker with a Crush . However, there should be affection of some kind involved in order for this trope to be in play. (Non-romantic love may also qualify, though this version is less commonly seen in media.) Overlaps with Ludicrous Precision when precise numerical details are given (such as calculating down to the minute or second how long it's been since the couple met), especially when it's Played for Laughs . Not to be confused with Description Porn , though they may overlap if the speaker gets really carried away.

This sort of joke subverts the audience's expectations by revealing that the amount of something is much less than typical. A band or TV show or movie's fanbase might be accurately referred to as "both of them", or a nation's air force might turn out to be just one person. A political party consists of three people. A prepackaged meal advertised as full dinner in a big container turns out to be just a single piece of fruit. This is usually hilarious. Or sad. While you don't need to know how a gun works to know how to use one, the society as a whole must be able to support the thinkers and builders of such a device for it to see widespread and sustained use. Not so when you have Low Culture High Tech; this is a faction, culture, or race that uses technology far in advance of their scientific and cultural knowledge, often for warfare Usually this group has pirated the technology from someone else . It may be Lost Technology that they have recovered and use, often very sturdy, self-replicating lost tech that only requires raw materials be input, if even that. Or it could be a Black Box tech that none of their existing machines can do without. There may instead be a group of "thinkers and builders" who use the primitives as shock troops or even as a Slave Race . It's also possible the tables are turned and the primitives have either taken the builders hostage or killed them all and taken all of their goodies (without bothering with the instruction manual). If the original source of the tech is Shrouded in Myth , they may become a Cargo Cult Typically, the primitives will only use a fraction of the technology's potential and not know all of its abilities. At

best they will be able to maintain the equipment without knowing how to repair it should a major malfunction happen. It's highly possible that the original creators, or a group with sufficiently advanced science (even just curiosity and a working knowledge of the scientific method), can pull the rug out from under these primitives by either confiscating, hacking, or better using their pirated tech against them It's worth noting that a civilization doesn't have to be at stone age or Medieval levels of technology for this trope to apply. They just have to routinely use tech far in advance of their ability to comprehend. A story set in 21st-century Earth could have this trope apply if the planet were given Imported Alien Phlebotinum . Even space faring peoples can have Low Culture, High Tech if they use stuff they don't understand Lastly, we want to draw attention to the following from the first paragraph "far in advance of their scientific and knowledge". It's important to point out that not only are they using things they don't understand technologically, but for which they haven't considered the cultural, social, or ethical ramifications. It's one thing to give a hunter-gatherer society an Energy Bow , but giving them a cloning device? Their society may crumble from the onset of massive Cloning Blues , not to mention the ecological disaster of the massive population growth. It's because of this that many aliens (and future humanity) tend to subscribe to an Alien Non-Interference Clause or a You Are Not Ready attitude Related to Insufficiently Advanced Alien , which is about a race that's interstellar, but every other tech they have sucks comparatively, and</ they probably don't understand it. An organization that has always had strict standards about who is allowed in their ranks has suddenly decided to become more lenient about who it recruits The most frequent reason for this change of policy is a need for more members. If the organization is combating some rival group or other force, then extra numbers , even as Cannon Fodder , become extremely valuable This change in policy is also most frequently how our main character becomes a member of said group when before that the best they could have hoped for was to fanboy from afar. This decision is also often a cause of friction between the those who support the new arrangement and the Old Guard who resent the "riffraff" coming into their midst This trope is specific to when an organization changes the rules to allow more people to join, as opposed to situations for the elite organization making a special exception for an especially talented individual who otherwise wouldn't have been able to join As anyone in, well any Armed Forces can tell you, this is certainly Truth in Television , as seen with Boxed Crook (when criminals are hired, often forcibly), Child Soldier (when recruits are taken younger) and Old Soldier (when older appliants are considered)

In mathematics, the </ is the smallest number to compare the bottom part of the fraction, which is called the denominator</ When applied to fiction, the term Lowest Common Denominator means appealing to as many people at once as possible There are varying interpretations on what this implies. Taking an upbeat viewpoint, it might be admirable; making stories that most people can relate to, stories that all human beings can understand in relation to their own lives . If we think of media as communication between the creator and the audience, the most successful communication would be the one that is understood by the most people From a more elitist, downbeat point of view, if we assume that a significant percentage of Viewers Are Morons , it can mean a work that is made to appeal only</ to the Great Unwashed. Instead of more "worthy" audiences, it is marketed to Joe Sixpack and all his family out there in Flyover Country , taking out everything that anyone more educated might appreciate, reducing it to its most shallow parts The trope is Older Than Steam . William Shakespeare , in particular, was a master of combining both Genius Bonus and Lowest Common Denominator Frequently blamed for Critical Dissonance

The Low-Level Run is a variant of the Self-Imposed Challenge , and more specifically a variant of the Minimalist Run . The goal is to complete the game with your characters' levels as low as possible. The player does this by avoiding or fleeing as many Random Encounters as possible, reducing experience gain in any way possible, and still finding a way to beat every required enemy and win the game. The challenge can be expressed either by a specific character's level (usually the lowest level in your party) or by all characters' levels in aggregate Character Levels only really appear in RPGs and games with RPG Elements , so you can only do this in that kind of game. Even within that sphere, this challenge is just impossible in some games, but others are well-suited for it, particularly games where tactics or reaction time can outweigh raw power, as well as games where characters' stats can be raised to a competitive level without Level Grinding . Occasionally, staying at low level would actually provide you advantages Most Speedruns of RPGs are Low-Level Runs by necessity, since speedruns often require skipping parts of the game, which naturally means skipping many occasions to level up. Exceptions tend to go to the opposite extreme, using glitches to ridiculously overlevel the player characters Compare Minimalist Run , where the objective is to finish the game using as little equipment as possible. Compare Weak, but Skilled , which is what your character will need to be to get through the game with such comparably low stats and resources. Frequently overlaps with Pacifist Run in games that lack the ability to manipulate EXP gain Chrono Trigger </ is well suited for Low-Level Runs: characters gain no experience while knocked out , and the battle system is designed in such a way that statistical bonuses gained from equipment far outstrip those gained from Level Grinding . There's also a piece of equipment that converts EXP gained into cash (but you don't find it until late in the game), and it's possible to use Tabs to upgrade character stats and use higher-level techs without gaining EXP. It's possible to beat the game with the main character's level as low as 1. That said, "possible" doesn't mean "easy", and there's only one specific party who will give you any hope of beating the final boss

The High Speed Chase Scene has been a staple of action movies

for decades, and the most obvious way to parody it is to remove the "high speed" part, and have the action take place below 5mph With that simple change, all the usual staples — the Sheet of Glass , the Lemming Cops , the Wronski Feint — become ridiculous, while tropes like Slo-Mo Big Air and Every Car Is a Pinto become downright surreal. Expect heaping helpings of Overly Long Gags as characters desperately brace for an impact that's a long time coming. Relies heavily on Mundane Made Awesome , and usually an Unconventional Vehicle Chase While it might be hard to believe, a dramatic variant also exists. Just make the pursuer a terrifying Implacable Man with an Ominous Walk and the pursued a broken wreck trying to crawl away from a No-Holds-Barred Beatdown . Or make the two persons extremely injured or tired, as a variation of Combat Breakdown . This has to be done carefully, or it can easily slip into Narm territory Note that Slow Motion chases don't count — the characters should actually be traveling</ at that speed. In the land of fiction, if you need to find secret passages or switches in your Temple of Doom or Haunted Castle , Leaning back for a breather or punching the wall in frustration can end up with pushing just</ the right brick. If The Fool falls over in the ancient mansion, odds are the first candelabra , andiron or statue they'll grab for support will be the all-important lever to the hidden safe. If you are trying to search logically, step back and assess the situation occasionally: you might just step on the important collapsing floor panel. Bonus points if you or your friend have been searching for a while. Watch out, though: this is also a good way to find traps . This basically comes about because someone looking for mysterious passages is kinda boring to watch, and finding them normally isn't much more interesting. Related to Bookcase Passage .

According to , sometime in the late 18th century or early 19th century, a man named Ned Ludd broke into a factory and destroyed two machines. A movement to oppose the industrial revolution was named after him, spear-headed by those who saw their jobs being done more efficiently by new machinery. They claimed that inventions such as the Spinning Jenny would lead to mass unemployment, since where would the spinners go? The Luddites failed to understand, or were simply too poor to take advantage of, the fact that increased efficiency in Part A of the economy leads to increased economic activity — and therefore theoretically more jobs — in other parts of the economy, who now can buy cheaper machine-made products from Part A and therefore can spend the saved money elsewhere. It's worth noting, however, that this didn't really apply in late 18th/early 19th century Britain, which saw the unqualified under-classes in rural areas almost entirely dependent on the manual labour provided by the mills due to the agricultural industry having mostly moved off-shore. Moreover the phenomenon outlined above is typical of capitalist

economics and as such relies on such a system already being in place, while at the time of the industrial revolution the country was still in transition between mercantilism and early industrial capitalism. This was much less of a problem in the much-larger and already proto-capitalist United States, which always maintained a strong farming industry in the west and as such survived the industrial revolution without major incident. Sometimes, a work will portray a Luddism (or an obvious or flanderized stand-in for it) as having been right all along — in other words, Science Is Bad on a societal or even global scale . This can take many forms, including but not limited to the following: If a community that traditionally has made everything painstakingly by hand switches to robots , magic , machines , etc. to make goods, expect trouble. The goods produced may turn out to be unusable , or the robots, machines, etc. will become dangerous and turn on their creators . A common end result is that the tech/magic-reliant society will be forced to return to the old ways, with An Aesop about the value of tender loving care. Ironically, an actual economic problem will result from the hordes of people who have no jobs and will no longer have the power to purchase the goods produced; it is called a consumption crash. But despite being an obvious argument in favor of Luddism, for some reason it's seldom brought up in these scenarios. As has been pointed out, this</ was the driving factor behind real-life Luddism — less about a dogmatic anti-progress stance , and more about simply not wanting to starve to death. Very often, this trope is reliant on the Appeal to Tradition and Appeal to Nature fallacies. See also Artistic License – Economics , Green Aesop . May be the (sinful) Discipline in Harmony Versus Discipline . May be enforced by Status Quo Is God (and in extreme cases, a Reset Button). The (usually) video game equivalent of the deliberately ridiculous splatter seen in Peter Jackson 's early films. Video game makers who include gore and dismemberment effects (commonly known as "gibbing" or "gibs", short for) will often go overboard with them and make relatively simple weapons create far more grotesque splatter than you would expect from their real-world equivalents. This can be especially jarring, as the default handling of violence in most media is to err the other</ way— undersized or nonexistent entry and exit wounds are more common than ones that properly match the weapon used. Crosses the Line Twice is the key to this trope: Seeing a person realistically take a bullet to the jaw would quickly veer into Nausea Fuel . If their head instead explodes into a cornucopia of viscera and grey matter, we have a harder time taking it seriously and can relax some. Compare Made of Plasticine (this is the video game equivalent) and Bloodier and Gorier . Compare and contrast Pink

Mist , a tamer, more realistic phenomena usually associated with real-world head shots. See also the Chunky Salsa Rule , Overdrawn at the Blood Bank , and Gorn . And, of course, Bloody Hilarious and Not Enough to Bury . By the way, in case you want to avoid possible fan backlash , it's pronounced "jibs" , not "gibs" with a hard G sound. (For the record, "giblets" is also pronounced with a "j" sound.)

A parent-child relationship between two characters who were previously thought unrelated is revealed, usually with generous dollops of melodrama—blood is, after all, Thicker Than Water . Beloved of soap operas, made famous by the Star Wars </ films (from which the trope takes its name, though as you can see, it isn't an exact quote) Whether or not this is a good thing or a bad thing for whoever is being given the reveal mainly depends on who is giving the reveal in question. Sometimes an ally, a Mentor or a non-romantic Mysterious Protector will turn out to be the parent of the person being given the reveal, but other times, the reveal of who a character's parent is will be cause for serious anguish , such as someone who just gave his or her life for him , someone who could have been a Love Interest , or worst of all, a villain working for the Big Bad or even the Big Bad himself, as in the most infamous Star Wars </ example In cases when villain and hero turn out to be parent and child, count on at least one scene where the hero worries that he or she will eventually end up like the parent Sometimes it's a bogus revelation, and at the end of the episode or plotline the Reset Button is pressed to restore the previous relationship — or lack of one Though the trope itself is too fundamental to become Discredited , any permutation of the actual line ("No, X. I</ am your father.") nowadays will be met with a groan and a "Not again!" from the audience. Also a popular insane fan theory Compare with Mysterious Parent , or Family Relationship Switcheroo where the characters were thought to be related, but are not parent and child. Frequently, it's a father-son relationship revealed this way This trope was already being mocked back in 1790 by Jane Austen in Love and Freindship </ (with four grandfather-grandchildren relationships revealed in under a page</) This is a specific variety of The Reveal . The flip-side is Luke, You Are My Father . Compare Long-Lost Relative , Luke, I Might Be Your Father , Everyone Is Related . Contrast with I Am Not Your Father . Sub-Trope of Connected All Along . A compound surname that implies something like an action or an attribute (in the form of something like "Nounverber", "Adjectivenoun(er)" "Adjectiveverber" or "Nounnoun(er)"), but the name has no logical reason for it given in the story. It's just there for Rule of Cool This was very rarely done in Real Life . Such names were actually epithets given to people for notable things, as in there was a reason . Scandinavian kings often acquired cool epithets during their reigns. Their actual surnames were of the patronymic variety (like Gunnarson, meaning "Son of Gunnar"). But their real surnames were often eclipsed by their epithets in posterity So in fiction, a guy could be called Olaf Skullcrusher and have that be treated as though it's a normal surname. In reality, if a king was called Olaf Skullcrusher , it

was because he was literally known for crushing skulls in battle . Now later on, that name might ascend to a surname , but fiction rarely gives such justification Tabletop fantasy games have two well known subsets of this rule, known in fandom as "the AxeBeard Law" and the "PineSol Law". The first states that all dwarves must have some reference to either axes and/or beards in their name, and latter states all elves must have a reference to a plant and/or celestial body somewhere in their name. Throughout Tolkien's works this is a Justified Trope : Dwarves personal and clan names (Firebeards, Ironfists, Stiffbeards and so on) are nicknames given by Men, as their actual names in the Khuzdul language were regarded as sacred and could not be spoken in the presence of strangers. As for elves, they just really like trees and stars and compare lots of things to them. a lot of elvish words are actually "star-something" or "tree-something" If the name is based on an actual action or attribute of a character or at least his/her ancestor — like, again, this tended to work in real life — it's Earn Your Title , not this trope It should also be noted that some names look like this, but are actually mistranslations or corruptions of non-English names; Poundmaker is a perfectly normal Cree Indian name, for one. Interestingly, first</ names of that nature are common in Indo-European languages — Sophocles means "famed for wisdom", for example, and Alfred is something like "elf-counseled'' A Sub-Trope of Awesome Mc Coolname . Finding out parentage in a story can be shocking to characters, but so is finding out they are a parent. A character comes along, and suddenly turns out to be either a long lost child , or a child a character never knew he had. This is what you get when a Missing Mom or Disappeared Dad had no idea they were one in the first place This is of course the flip-side of Luke, I Am Your Father . Compare Separated at Birth , Luke, I Might Be Your Father . May result in Sink-or-Swim Fatherhood . Subtrope of Connected All Along . Supertrope of Your Son All Along , in which the character learns that they are the parent of a particular will be coming your way

Sometimes newspapers of a more questionable level of veracity publish news that is clearly bunk, in the case of Alien Abductions , yetis being found and women giving birth to animals. Other times they'll print that which might be true but seems to be kinda loopy and of questionable newsworthiness - toast burned in the likeness of historical figures for example. These stories are of course either complete fabrications in the former case (either made up by journalists or via bored Alan Fridge -esque submissions), or are just questionable coincidences The news industry calls this type of "news" 'Man Bites Dog', a name that seems rather more mundane than some of these stories actually tend to be. This sort of publication shows up in fiction from time to time too, especially ones which heavily feature either journalists or well known people (within their universe) frequently or where weird happenings really do occur and these stories are true - or sometimes these stories are bizarre even for the setting Not necessarily related to Doomy Dooms of Doom , although it might overlap with If It Bleeds, It Leads . A Clickbait Gag is sometimes a comedic depiction of online examples

Kind of the kinky older sibling to the Love Interest . A lust object

character thinks about holding their Love Interest 's hand , and
shows a Luminescent Blush in their presence, he or she will regard
a lust object with dreams of improbably risqué situations ,
and more often than not, The Nosebleed . It's possible for a Love
Interest to also</ be a lust object. However, this is usually not
the case , as a lust object is rarely regarded as anything other
than that — an object to lust over. : A character who simply
thinks "sexy" thoughts about their Love Interest is not regarding
them as a Lust Object. </ For a character to be a lust object, they
must be thought of as "objects" to fulfill the sexual or proto-sexual
desires of the luster, outside of (or in addition to) any romantic
feelings. A good indicator is whether or not the Object speaks during
the waking wet-dream . If they don't, or if they only use "stock"
sex-scene phrases, they're probably a lust object. If they hold a
conversation, or even just speak in coherent sentences, they are
probably closer to a Love Interest . They are often the object of a
Stalker with a Crush . A guy who is Mr. Fanservice or a girl who is
Ms. Fanservice is almost always this, on both sides of the Fourth
Wall. Compare Head-Turning Beauty for when the character is a lust

Male Gaze / Female Gaze is a way for the author/artist to emphasize
that the Object is being fetishized.

A big-time crook gets sent away to prison, but the forces of law
and order can't sever all their outside connections. The character
in question has the wherewithal to bribe the guards , walk freely
through the prison, have their plumbing and his bedsheets upgraded,
eat caviar in their cell instead of baked beans in the lunchroom,
etc. Sometimes, the prisoner may actually have all the resources
necessary to escape, staying "imprisoned" because there's a
particular reason to do so , or because they can run their affairs
perfectly unhindered from right where they are . Or it might be

because they actually do something that benefits the authorities. Usually occurs with rich crooks; they'll do anything to retain as much as they can of their former big-spending lifestyle This is actually Truth in Television ; notorious felons like Al Capone , Adolf Hitler , Pol Pot, Pablo Escobar, and Augusto Pinochet were kept under house arrest or housed in very, very nice prison cells (at least until Capone got transferred to Alcatraz). This also happens in cases where the prison is designed to rehabilitate the prisoner into Heel Realization and keep them away from normal people rather than simply punish them, in a forcible aversion of Had to Come to Prison to Be a Crook Compare the Gilded Cage , where an innocent is deliberately confined in an abode luxurious enough not to look like a prison. Contrast the Hellhole Prison , where the environment in the prison is cruel and horrible

Tropes all about the many ways people can show off wealth, just to make things nicer for themselves These can be used just because the people want to show off their wealth, or because it's socially required of them to spend their money that way Such tropes can be functional (like a mansion for shelter, limo for travel, or fur coat in cold weather), or strictly sybaritic (like wearing lots of jewelry, gold-plating items, or wearing a fur coat in warm weather) Note some tropes here are not strictly for the most wealthy. Even middle class people can afford the occasional luxury (which shows off the aggregate wealth in a culture as well). It's just that wealthy characters are more likely to have several of these instead of one or two, and of a much higher quality Compare Garnishing the Story Contrast Poverty Tropes

Sometimes the creators of a story just plain lie</ about what's going on. Maybe it's so the wrong information will spread around, leading to a Wham Episode effect when the true events come out. Or maybe it's just a bad attempt at explaining something they clearly didn't anticipate Sometimes difficult to tell whether it's willful misdirection or the creator having no idea what's going on either Of course, this can be justified . Authors face a dicey challenge in today's brave new world, where fandom and social media intersect. Lots of clever, dedicated fans, putting their heads together, can puzzle out even the twistiest of twists way in advance of when the creator planned for the grand reveal. Will the creator throw up their hands and admit that the fans outfoxed them? Will the creator avoid certain questions and change certain subjects, in a totally-not-suspicious-at-all fashion? Or, with just a few well-placed and harmless little lies, could they get their fans to drop the issue with no further questions or even set them to work following a Red Herring ? Sometimes the best (and easiest) way for a creator's big surprise to be remain in place (or be put back in place if fans are getting too close) is to hide or deny that there even is one Sometimes, an author will skirt the edges of this; expect Exact Words to come into play Closely related to Superdickery and Teasing Creator . When they're doing it to rile up the fanbase, it crosses with Trolling Creator . See also Foiler Footage , Never Trust a Trailer . When the creator is misquoted, rather than actually lying, it's a case of God Never Said That . If the creators meant what they said but then changed their minds, or new creators came along with different ideas, it's a Flip-Flop of God . If it's deliberate in-story</ lying, that's an Unreliable Narrator . This trope can be a reason for why Writer Conflicts With

Okay, so our protagonist is minding his/her own business, usually walking around the town of his/her birth and/or recalling memories of a fonder time. Then, he/she sees the Worthy Opponent / The Rival /the Anti-Hero /etc. doing the same. Naturally, upon seeing each other, they decide to duke it out, more for the sake of recalling old times or bonding than actual fighting over good and evil. After exhausting themselves (because they're so evenly matched that neither can defeat the other), the two rest on the ground and just talk and bond, temporarily forgetting that they're supposed to be enemies or on different sides This is related to Go-Karting with Bowser ; however, it is an exact</ moment that occurs several times in a similar fashion in different shows/videogames/novels, rather than the act</ of bonding with an enemy. The single thirty-something woman is addressed as "Ma'am" for the first time, as opposed to "Miss," and freaks out at the cruel reminder that she is now only a teenager emotionally and mentally . Note: This may be a regional American usage. In the American South, being addressed as "ma'am" is an ageless sign of respect, merely the feminine form of "sir". In fact, the inverse</ is sometimes true there: "Miss" is reserved for young girls, and referring to an adult woman as such can be seen as very condescending or just plain rude. The trope itself occasionally plays off this. For example, a young woman from New York may be called Ma'am</ by a Southerner who only means it as a sign of respect. This trope does not apply only to the English word "Ma'am", it applies to any honorific used mostly for adults. In many cultures, terms like "aunt" or "uncle" serve the same purpose. Thus, in anime you often see younger characters pull out the Hyperspace Mallet when called " Oba-san " or "Ojii-san." Of course, sheepishly answering "Yes, ma'am" to a kind request is usually immune to this trope. Males will occasionally have a similar reaction to "mister." replying " Mister Siht is my father Compare Don't Call Me "Sir" , where a character objects to being called "sir" or "ma'am" due to the unwelcome sense of authority or social distance that the honorific implies.

Male example. In Yakitate!! Japan </ , both Kuroyanagi and Pierrot gets offended when Azuma calls them "uncle" when they're only 22.

"MacGuffin" (a.k.a. McGuffin or maguffin) is a term for an object or element in a story that drives the plot, but serves no further purpose. It won't pop up again later, it won't explain the ending, and it won't do anything except possibly distract you while you try to figure out its significance. It usually takes the form of a mysterious artifact, package, or weapon that everyone in the story is chasing, though in some cases it won't even be shown. To determine if an object is a MacGuffin, one can ask certain questions: If it passes both of these criteria, then congratulations - it's a MacGuffin! A common MacGuffin story setup can be summarized as "Quickly! We must

find X before they</ do!". While a MacGuffin is technically a kind of Plot Device , that term actually encompasses much more, referring to anything that motivates a character to get from point A to point B and beyond (an important distinction to make): This could be as simple as an invitation to the party; the invitation gets the plot going but is not the goal of the characters. Compare Magnetic Plot Device , which is an explanation of why the characters are getting into repeated adventures. The term " MacGuffin " was popularized by Alfred Hitchcock , who credited one of his screenwriters, Angus McPhail, with the creation of this concept and the name for it, citing a particular school-boy joke: Hitchcock and McPhail were not the first to formulate this concept: Silent-film actress Pearl White starred in cliffhanger serials (most famously in the film The Perils of Pauline </) in which the characters spent most of their screen time chasing each other for possession of a roll of film, or some other doodad. This device occurred so often in White's serial films that she routinely referred to the coveted object as a "weenie", using the term precisely as Hitchcock would later use "MacGuffin". In academic circles, MacGuffins are sometimes called the Golden Fleece, after the artifact from the myth of Jason and the Argonauts. The Fleece was first mentioned by the Greek poet Simonides, which makes this trope Older Than Feudalism . If you want to start arguing that your favourite series' most awesome magical thing isn't a MacGuffin, remember that Tropes Are Tools . Having a MacGuffin is not necessarily bad writing, depending on how it's handled — concretely defining or giving a central role to the object of a chase can detract</ from a work, if the point is to focus on the characters. See also It's the Journey That Counts , Your Princess Is in Another Castle! , All That Glitters , Chekhov's Gun , and Magic Feather . As you might have guessed from the sheer number of sub-tropes , this is a very common trope in fiction. So common, in fact, that it on The Other Wiki . Do not confuse with Plot Device . Please, don't. Also not to be confused with the tribe from Brave </, or anyone of Scottish descent. Also not to be confused with a breakfast sandwich served in McDonald's restaurants.

These trope names contain the word "MacGuffin". This is a potential source of confusion. For example, listing X as a Dismantled MacGuffin may cause someone to think that X is a MacGuffin , even if X is really not</ a MacGuffin. A MacGuffin must be a device that does nothing except drive the plot. The Dismantled MacGuffin trope doesn't care whether X did something more than drive the plot. "MacGuffin" can appear in a trope name for different reasons: The trope really does require a MacGuffin.

Machinima are movies made with video game assets. The word is supposed to be a portmanteau of "Machine" and "Cinema", but the guy who coined the term, Hugh Hancock, misspelled it. Since Hancock misspelled it while coding </ , the term stuck. Since machinima is a form of scripted video narrative, it could employ any of the Tropes from the main list, and there are also tropes specific to the medium. From a scriptwriting perspective, the technological limitations on the action are the only difference from other media. Some common plots include: Machinima are almost always Web Originals , but they have even appeared on television in some form. "Machinomics" are comic-styled narratives that combine video game screenshots with player narrative to tell a story. They're like Machinima , only they're the static Webcomics version. They may crossover with other genres of media, or may be played straight. A straight-up Machinomic is one in which all the characters, backgrounds, etc. are created INSIDE of a video game or similar medium. However, a Machinomic may also import video game characters into Photo Comic backgrounds or may even place Real Life actors inside of video game backgrounds. bears an early example of this term being used. However, the term has now been adopted elsewhere, including on A Machinomic differs from a Sprite Comic because the characters are fully 3-D, as opposed to using sprites like those in early video games Reasons run the gamut for why someone would choose to make a Machinomic instead of simply making Machinima. Perhaps you are a lousy editor, or your video card is inferior. Maybe you're planning to do stuff that isn't possible in-game for the sake of telling a better story. Or maybe, you just don't have good audio recording equipment. Or, perhaps you have bandwidth issues. Or perhaps you're hand-making every model and prop in 3D editing software, instead of a 3D engine released with a game. Regardless your reasons, Machinomics can be a good substitute for dozens of other Webcomics formats and for Machinima. Machinomics may use a variety of Webcomic publication formats, from being straight-up comic strips to formalized (a.k.a., DSHW, inspired by storytelling exchanges on game websites and by DVD menus) to basically anything Machinomics bear some flexibility over Machinima in the simple fact that the user only needs to assemble images and text using screenshots and manipulating them with image software. A live screenshot may be captured from any work, but scripted shots are just as possible. Games that allow a user to pause gameplay without obstructing scene view are particularly useful. Quick machinima video clips may also be paused, with clips from these videos assembled into Machinomic material Popular sources of Machinomics include Rainbow Six </, The Sims </, F.E.A.R. </, Halo </ and Garry's Mod for Half-Life 2 </ Not surprisingly, there's a lot of overlap between this trope and a Let's Play , particularly

the narrative type rather than an illustrated fanmade walkthrough Not to be confused with machine economics

A tactic wherein a military vehicle or craft — often a Humongous Mecha — launches a massive salvo of missiles at a target (sometimes more missiles than you'd think the craft would be able to hold). The missiles often follow artistic curving trajectories for no apparent reason, though strategically it may simply make them more difficult to dodge (or intercept, if there's any usable point defence). Occasionally, this is explained in Space Opera as the effect a ship's energy/force/gravity field has on the missiles. In some cases, this is justified by having the missile silos oriented up (or down) to allow for more surface area-and, in turn, more missiles. If More Dakka is about spamming bullets, then Macross Missile Massacre is the missile equivalent of it A High-Speed Missile Dodge is usually an effective counter. A slightly more proactive solution is to launch your own missiles or, if you have the option of More Dakka , shooting them down. Trying to lead them away and crashing into an enemy is usually reserved for Ace Pilots . Can often be rendered into a Worf Barrage . Missiles may engage in Roboteching (which should not be confused with Macross Missile Massacre , even though Macross</ is part of Robotech</) Named after the Humongous Mecha in the Macross </ metaseries who fire swarms of missiles (specifically, 'micromissiles') that behave in precisely this way. It has also been called after animation director Ichiro Itano, who pioneered the most common aesthetic look of the MMM There are several actual weapons that fire a Macross Missile Massacre. In fact a whole lot</ of real-life weapon systems are either designed or can be adapted to use this tactic, and if nothing else you can just gather a whole bunch of one-shot launchers together Hamas or Hezbollah-style; see Real Life examples below In fiction (other than Video Games), it will often overlap with a Worf Barrage , especially if it's used against a single target A form of Death In All Directions , There Is No Kill Like Overkill , and Impossibly Cool Weapon . May overlap with Fatal Fireworks . If this is fired from another missile in the form of a cluster or multi missile, then it's Recursive Ammo . See also Beam Spam and Magic Missile Storm . A Made-for-TV Movie, also known as a telefilm, is a one-off two-hour (usually) story, made to be shown on television as opposed to in cinemas . Also, a Mini Series can comprise two (or several) two-hour long installments. They will be approximately ninety minutes long on DVD because of the lack of commercial breaks Compare Direct to Video

Overseas products and works have a (sometimes unfair) reputation of being utter crap, as they tend to have looser (or nonexistent) quality assurance standards, are made by underpaid, overworked laborers, and are composed of even cheaper raw materials. Depending on the time period, the country in question will shift, but it's generally a Second/Third world country. People from these countries often joke about their products as a form of Self-Deprecation On the other hand, certain countries boast high quality products stemming from their superior work ethic and/or starting materials (only the best</ , hand-picked Whatevers for Product Awesome) A Sub-Trope of Public Medium Ignorance . A character is speaking, usually referencing a tragedy or other unfortunate event, and maybe even joking about it. After finishing his story, the character takes a beat , then adds a comment that they just depressed themselves by bringing up the tragedy. Alternately, just their facial expressions and body language say it Sometimes a "Funny Aneurysm" Moment is enough to start one of these. Also a possible self-inflicted Misery Trigger . Compare Explain, Explain... Oh, Crap! , where a character attempting to reassure others that nothing is wrong realizes mid-sentence that something is very</ wrong. In Black Comedy , this can lead to a Driven to Suicide moment that is Played for Laughs . May also lead to Cry Laughing

Everything Is Better with Explosions , isn't it? Well, if you spice it up to maximum, you have Stuff Blowing Up in complete defiance of science and logic In the wonderful world of fiction, nothing ever just breaks. If it's even slightly mechanical or electronic, its destruction is loud and accompanied by Impressive Pyrotechnics . Apparently, circuit boards , moving parts, and Tokyo are the most volatile substances in the universe And that's just in serious works. Said of something that embodies an abstract property or literally is

made exclusively of some material.

Damage is frequently done to characters that should hurt or incapacitate them, but is easily shaken off. Nobody ever breaks a rib or other bones unless that specific broken bone becomes important later on This isn't Super Toughness or Nigh-Invulnerability , where the character is</ supernaturally protected from harm. This is the ability to shrug off blows that would disintegrate a human body when you technically shouldn't be able to do so. Robots, Mutants, Mages, Ki using Martial Artists , etc. do not count.</ Having a story-enabled reason for not being a bloody smear immediately takes one out of the running for this trope Certain Required Secondary Powers may also induce this and it is particularly true for Super Hero characters to have "increased strength and endurance" in their portfolio, even if never outright explained or stated. How else can someone whose sole power is throwing flame take being thrown off a multi-story building as no big deal? The line gets fuzzy between Badass Normal and Charles Atlas Superpower where somehow a "normal" person has become invulnerable to the effects of injury by willing themselves uninjured . Modern special effects are somewhat to blame for this, as they frequently up the forces involved to look more dramatic. This sometimes approaches cartoon-esque extremes, such as a person getting smashed through concrete or brick walls and being able to get right back up again with only negligible injury By extension, blunt damage, concussions , and other side effects of "non-lethal" fights or a Tap on the Head never have unintended fatal consequences — death can only happen with intentionally-lethal weapons, like swords or guns. Even with normally-lethal weapons , the hero may intentionally inflict flesh wounds instead of shooting to kill This trope also enables our hero to take a bullet in some critical area (chest, shoulder, etc) and continue to fight as though nothing had happened , even if they should be Overdrawn at the Blood Bank It makes you wonder why, for all the supposed beatings they have received themselves over the course of a show, the hero/heroine never suffers any long-term scarring or lasting physical injury . One especially tenacious example is the lack of punch drunkenness. Indeed, unrealistic lack of damage from head injuries leads to the widely prevalent Sub-Trope : Hard Head Punch-drunk boxers are the classic Real Life example of what happens to someone who takes repeated pummeling damage in many fights year after year. However, the American National Football League presents a better sampling. To survive more than a couple of seasons in the league is a guarantee of a lifetime of painful, lingering damage to battered joints, bones, and connective tissues. That life is also going to be about ten years shorter than that of the average adult American. The heart and body organs build up scar tissue likely to fail when the athlete is in his fifties and sixties. This condition is known as Dented Iron Between them, Made of Iron and Hollywood Healing cover the two main varieties of action hero — the Terminator-type that can walk unscathed through a bomb-blast, and the hero who does</ get hurt badly but somehow always comes back to triumph in the end The polar opposite of this is Made of Plasticine . A character who doesn't just shrug off extreme damage, but doesn't sustain any damage at all, is Nigh-Invulnerability . Characters who are Made of Iron, if they die at all, often die Rasputinian Deaths . If two Made of Iron characters go up against each other, it often

leads to How Much More Can He Take? fights A character who is Made of Iron isn't necessarily literally made of iron . If he happens to sink in water and die as if he were, that's Super Drowning Skills If a person has this kind of durability as a superpower, it's Super Toughness . When the character does</ sustain grisly, incapacitating injuries but keeps going anyway, it's Normally, I Would Be Dead Now . If the character's durability is justification for putting them through a lot of physical stress for the audience's amusement , you probably have an Iron Butt-Monkey See also Charles Atlas Superpower , as being Made of Iron is one of its more common effects Not to Be Confused with Maid of Iron in any variation

But then some settings...are different. They have nothing but</ Phlebotinum. That City of Adventure the heroes are exploring around? It's completely floating in the air; not one building is touching the ground. Why? Phlebotinum! In fact, the whole planet is probably bound together with some sort of magical or super-science energy, without which it would simply explode . Every single thing around requires whatever the local flavor of Phlebotinum is to run in worlds such as these, whether it's magic , nanomachines , The Force , or something else similar The main dividing line between a world that simply has a lot of Phlebotinum and one that's made of the stuff is this litmus test: if you took away the Phlebotinum, would your world still exist in any meaningful sense, or would it more or less just collapse ? If it would, your world is just plain Made Of Phlebotinum There is actually a great deal of evidence that Real Life re-create The Great Depression </ If something is literally made of Phlebotinum, see Made of Magic

All things considered, the human body is a pretty tough little piece of biological machinery. It's made of complex organs, protected and supported by a strong skeletal structure (four times stronger than concrete), boasts tendons and muscles capable of exerting dynamic strength upon objects it interacts with and has the ability to heal and regenerate most kinds of damage over time. Humans, especially athletic ones, can take a lot more punishment than most people think. Don't Try This at Home , but it is a fact that human beings can walk away from catastrophic accidents and savage attacks with little sign of external damage and occasionally survive wounds that should have been fatal by conventional wisdom Writers of violent fiction sometimes forget this The polar opposite of Made of Iron , this trope manifests when the human body is represented as being much flimsier and more easily dismembered than it really is, or when its internal structures are depicted as a mass of bloody, spongy goo, with no sign of supporting bones or recognizable organs. Like Made of Iron , it is a poster trope for a class on the Super Weight scale, being -1 In Real Life , it requires considerable skill and force to, for example, cleanly sever a human limb with a bladed weapon. It does happen, and there are historically known incidents including at least one case where both legs</ were severed by a single blow with a large sword. In fiction, however, heads and limbs may be instantly, cleanly severed on contact with anything resembling a bladed weapon or sharp-edged object . A bleeding wound will create a spray of so much High-Pressure Blood the victim ends up Overdrawn at the Blood Bank . Accidental contact with a pointed object leads to out-the-other-side impalement. Pulling on someone's arm with any amount of serious force will yank the limb from the socket.

Bones snap like twigs, flesh rips apart like wet paper, contact with fire burns a body to a charred skeleton within moments and at worst, the entire body is simply splattered by whatever force hits it like an overripe tomato The implied force just does not jibe with the visible effect Vampires and zombies in any media are great examples of this. (Some) zombies at least have the excuse of being, well, rotten, but the ease with which vampires can be staked through the heart and pristinely decapitated makes one wonder if they even have</ bones. Also very common with characters who have a Healing Factor so they can be shown recovering from all manner of brutal injuries on a regular basis On the other hand, sometimes the physical forces at work are just too much for the human body to endure, making this one, when handled correctly, a particularly gruesome Truth in Television Oddly enough, this always seems to be played deadly straight with Mecha-Mooks who, if anything, should avert this trope even further. It is, however, almost always averted with their bigger, deadlier counterparts: Mechanical Monsters Compare Bloodier and Gorier , which almost always involves this, and Made of Bologna , an Animation Trope in which a body's lack of bones and internal organs is used to avoid</ showing gore. Not to be confused with Claymation , a form of Stop Motion animation that commonly uses Plasticine models over a wire skeleton. Contrast Made of Iron

So, this guy has been a total Jerkass to you and you've finally had enough and snap. You stand up to him, give him a "The Reason You Suck" Speech , and tell him off for everything he's done to you. Should be a Moment of Awesome , right? Well, guess what? You were so harsh on the guy that you hurt his feelings . Even worse, your display was witnessed and the only thing that everyone saw was you being mean to him! Congratulations . Everyone thinks you're the jerk instead of the guy you just told off ! This can lead to a Broken Aesop , except that Values Dissonance makes it widely accepted, where being a jerk back is even worse than what the original Jerkass did to you. Can result from being a Bully Hunter . A villain, especially a Villain with Good Publicity , may use this to give a hero bad cred . If the victim of this trope were friends with anyone who witnessed this scene prior to this moment, it probably triggers an Et Tu, Brute? and We Used to Be Friends situation. In some cases, the ones who believed the retaliator is in the wrong may force them to apologize to the insulted jerk , and end up finding out that the calling out they were given was justified after all . Contrast Engineered Public Confession . Can also happen with Hypocrites who don't like being given A Taste of Their Own Medicine . When it's the viewers that feel this way, it's Rooting for the Empire and Accentuate the Negative . If your own pet turns against you along with everybody else, that's Even the Dog Is Ashamed . Common constructors of the trope are those with Head-in-the-Sand Management especially with a Villain with Good Publicity , or Principles Zealots by blindly preaching peaceful options especially when they are not the solution . This trope is Truth in Television . Sometimes bad timing means only the retaliation and not the original Jerkass behavior being witnessed by peers or authority figures; other times it's because they don't care</ what wrongdoings are going on so long as things stay quiet, or there's a Bitch in Sheep's Clothing at work. There are some tropes that are comparable to this:

When Alice loves Bob and there is nothing anyone can do — not even Bob — to persuade her that their love isn't mutual This is not just All Love Is Unrequited or Oblivious to Love . Bob is well aware of this one-sided crush, but his protests fall on deaf ears. He can tell Alice he isn't interested, sometimes violently</, but she invariably fails to catch on . Her behavior often straddles the line between Clingy Jealous Girl , Stalker with a Crush or even Psycho Supporter , but she generally means no harm to Bob and also respects his ideals. If she does start becoming an actual threat to Bob or other people close to him though, then beware .. If Alice has terrible taste in suitors (and she usually does), then her "hubby" or "wifey" will abuse that unconditional love to further their crazy schemes and never hesitate to betray her if they fail , or if she gets too whiny. Y'know, because whining can cause headaches and stuff. And of course, the innocent (or more like oblivious) Alice will come trotting back for more punishment . If she has two neurons bobbing around in her skull, she'll be puzzled that her hubby/wifey has a "funny way" of showing love. If she has more than three, she'll eventually realize that Mr. Troubled, but Cute is just plain Trouble and move on , but she'll find it hard to resist falling back to him Expect Alice to be a headache for anyone in the center of a Love Triangle or Love Dodecahedron involving Bob. Third parties trying to convince her that she should move on will face replies like " You're Just Jealous " and other psychological barriers to reality and sanity Either gender can be a Mad Lover, for a beloved of either gender. It's just more common to have females in the role because a clueless woman clinging to an exasperated man is much funnier than a clueless man clinging to an exasperated woman. Some writers adore this trope and like to keep the tension going by throwing in the occasional moment where Bob reveals some love for Alice , just to leave the viewers wondering what's really</ going on See also Hopeless Suitor and Rejection Affection , for less crazy examples of unrequited love from which this trope borrows some elements from. Compare with the more serious Love Martyr , a character in an unhealthy relationship whose love is meant to be selfless and noble (or at least sympathetic) instead of crazy, funny, and/or stupid. May overlap with Abhorrent Admirer . Compare Minion Shipping and Unholy Matrimony . Contrast with Vitriolic Best Buds , where this involves friends and may be mutual Not to be confused with the short-lived TV series starring Jason Biggs and Judy Greer . Not to be confused with the 1935 film Mad Love </ , which doesn't use this trope

Characters who are having a mental breakdown sometimes become fixated on a certain phrase that they repeat and repeat and repeat and repeat and repeat and repeat and repeat until everyone in the world is sick of it Sometimes, this chanting allows the character to snap out of their insanity. Sometimes, it becomes their life-long theme song as they rock back and forth in a cozy padded room.

If they aren't locked up, expect a room with every square inch stating the phrase . When combined with As the Good Book Says... , the ominousness goes through the roof Just about every mental institution scene has someone chanting some sort of non sequitur in the background. And woe betide us all if this non sequitur should be significant May result in the terms becoming meaningless and possibly descend into a strange form of Mondegreen thanks to the human knack of picking up patterns out of nothing Contrast the Talkative Loon , who at least varies the chatter. Compare to Cluster F-Bomb and Rapid-Fire "No!" . If this involves singing, see Tuneless Song of Madness A Survival Mantra is an attempt to master fear and pain, but when it doesn't work, you find the point where that trope crosses over into this one Must trope. A pattern of thought that divides female humanity into two mutually exclusive categories : Madonnas and Whores. The respectable and honorable Madonna figure, possessing and protecting social virtue (and deploring sexuality) is an object of worship and everything that all women should aspire to be. However, sex is not part of this; any woman who fails to live up to the Madonna standard is a disgusting and contemptible Whore driven exclusively by sexual desire and (therefore) lacking in morality and humanity. An active sex life makes one a Whore... unless one is married, and sometimes even then The Madonna-Whore complex is a notable contrast to The Three Faces of Eve , as it ignores the Wife archetype (one who is sexually active and</ morally good/"pure") and creates a False Dichotomy between the Child and Seductress. That said, many Madonnas are</ wives, though they are more often mothers or sisters, or other women with close emotional ties to whoever considers them a Madonna. The Madonna-Whore Complex (AKA "Virgin–Whore Complex") was described by Sigmund Freud on the basis of some of his clinical work. Specifically, he noticed the difficulty some men had in having sexual relations with their wives because they differentiated women into these categories Those men were aroused by prostitutes and mistresses but not their wives because, paradoxically, they respected the latter too much (they viewed them as fellow humans; i.e., not whores) to be sexually attracted to them. Occasionally this is enforced by The Scourge of God . A direct Sub-Trope of Sex Is Evil . Compare Slut-Shaming , Sour Prudes , Light Feminine and Dark Feminine , Betty and Veronica , My Girl Is Not a Slut , Sensible Heroes, Skimpy Villains , Good People Have Good Sex . Sometimes may be seen as a sign of Black-and-White Insanity . Closely related to Mama's Baby, Papa's Maybe , Heir Club for Men , and Altar Diplomacy , as demonizing female promiscuity is one way of ensuring political marriages only produce legitimate heirs. Contrast Ethical Slut , Good Bad Girl , Heroic Seductress , Hooker with a Heart of Gold , and My Girl Is a Slut . Not to be

confused with Madonna Archetype . Not to be confused with someone thinking Madonna acts like a whore... though that would probably be an example of this. : :

The Science Hero was once a staple of adventure fiction, overcoming the Evil Sorcerer and awing the superstitious natives with the power of Science! But somewhere between the invention of the Gatling gun and the atomic bomb, fiction-creators deconstructed the archetype to create a new kind of villain: a villain who believes that the conventional scientific community are fools! Needlessly constrained by their petty "morals" and their self-limiting "logic"! The Mad Scientist fulfills many needs for a story's creator, allowing the Scientist to fit into a wide range of stories. This is a mentally unsound type which allows the story's creator to cover a weak motive or Bond Villain Stupidity with a Hand Wave . This also helps the creator of the story explain why mad scientists kept all their incriminating records and yet don't have a duplicate monster or at least a blueprint lying around . Secondly, they're scientists, which in fiction means they can invent whatever strange device the plot requires . Thirdly, their insistence on weird experiments gives them artistic license to invent those devices. And lastly, a mad scientist is almost certain to violate the Scale of Scientific Sins : expect An Aesop (even if it's a preposterous one.) The Mad Scientist accumulates certain tropes effortlessly. Gadgeteer Genius and the Mad Scientist Laboratory (or "la- bore</-a-tory") are almost obligatory, the scientist’s conversation is likely to include the phrases For Science! and They Called Me Mad! , and the Labcoat of Science and Medicine (classically, the Howie-style lab coat that buttons diagonally across the chest and has a Mandarin collar) can be expected. Most Mad Scientists are Large Hams : some employ Sesquipedalian Loquacity , while others specialize in the Evil Laugh . Mad Scientists tend to be freely interdisciplinary — often omnidisciplinary — but some fields of science are especially well-represented.

An increasingly common take on this trope is that Mad Science is a dangerous superpower or even a mental disorder </, either hereditary in which case the afflicted may come from a long line of mad scientists, or transmissible through contagious ideas or experiences At times scientists will show signs of madness, but remain at least loosely allied with the heroes. In this case they may be somewhat demented smart guys , extremely</ Eccentric Mentors , Conspiracy Theorists , Professors , Playful Hackers , Psycho Sidekicks , Innocent Prodigies , Genius Ditzes or even Demolitions Experts . These 'tamed' mad scientists are emphatically not 'safer' than their diabolical brethren . If otherwise-(mostly) sane scientists start behaving crazily while they're in the throes of creativity, they're visiting The Madness Place If a work has several Mad Scientists, you can expect them to be distinguished by their particular field of interest. While the classic Mad Scientist relies on electronic or mechanical engineering (such as the Robot Master), there are others who become an Evilutionary Biologist , Psycho Psychologist , Sociopathic Soldier , Mad Bomber or even The Cracker . If a scientist wants</ to concentrate on ordinary science but is being coerced into producing terrible things, this can be a Reluctant Mad Scientist or even a Kidnapped Scientist

The place where Science! </ happens. Usually pronounced "lah-BOHR-ah-tor-ee" in ominous, stentorian tones. Every Mad Scientist has to have a lab. This is typically a refurbished dungeon of some sort, with aging stone walls. It also must contain most of the following lab equipment: An operating table . Two if the Mad Scientist does brain transplants. Optional, though, is the winch for raising the table up to the roof. Never mind that real science does not generally call for all of these things at the same time — or within the same discipline! — the Mad Scientist doesn't specialize . All the same, most of what he does will at least look</ like chemistry, since nothing shouts "science" to the casual viewer more than a guy in a lab coat fiddling with a beaker of colored liquid . Laboratory glassware frequently shows up in period settings that predate their invention. Erlenmeyer Flasks, glass retorts, Griffin/Berzelius beakers, separatory funnels, Leibig condensers, and even test tubes date back only as far as the late 18th century at best; some of these were clearly developed in the mid to late 19th century. Dedicated laboratory equipment did not truly exist prior to the early 1800s and even then would have been primitive bearing little resemblance to familiar modern glassware. Prior to that, much chemistry was done with whatever bowls and jars were already available. Other equipment (such as alembics) was made of metal. Also never mind that modern chemistry has very little use for the big impressive glass-sculpture thing with with a lot of burettes, condensers, and funny coils of glass. (These actually were useful constructs at one time, but they're the chemistry equivalent of doing differential equations on an abacus. Also, even when they were used, a typical experimental setup would have consisted of three to six of the pieces put together; never dozens of pieces, all connected, as shown on the screen.) Most of these glassware setups appear to be inspired by random fuzzy pictures of the classic Miller-Urey experiment which can actually be simplified once you understand what is actually going on. But you need this stuff because otherwise, the audience won't realize that Science</ goes on here. A significant portion of mad scientist laboratories are not low budget small scale DIY projects that take up no more than a spare table in a corner. Instead, these labs are very elaborate for someone who usually does not appear to have anyone funding them, let alone working for them. Often the equipment is huge, bulky, unweildy, and difficult to transport and assemble for just one man, even with an assistant. It's worth remembering that many mad scientists are older men (or physically weak men) who would definitely not be able to manage such a feat on their own. While not a mad scientist, Batman fans will recognize a modern iteration of this dilemma whenever the question is posed of how Bruce Wayne (maybe with Alfred's help) managed to build the Batcave, Batmobile and all his equipment by himself in secret . The archetypical movie Mad Scientist Laboratory probably came from the classic silent film Metropolis </, though Universal's Frankenstein (1931) </ added a fair amount. Both were probably strongly influenced by a real-life example that was a staple in popular media between 1900 and 1940; the various laboratories of Nikola Tesla , which actually did feature gigantic incomprehensible machinery, scary robotic devices, Tesla coils, and lots of gaudy electric-arc effects. All of the film, TV, and comic versions of the Mad Scientist's Lab derive originally from Gothic horror stories of the 18th and 19th centuries, the most famous of them being Mary Shelley 's novel Frankenstein </ and H. G. Wells ' The Island of Doctor Moreau </ . The concept developed from older stories about the lairs of alchemists and sorcerers. The Enlightenment put paid

to many kinds of mystical dabbling by dilettantes, tinkerers, and wealthy eccentrics, but these characters were replaced in the public imagination by gentleman scientists — many of them self-taught, many very eccentric — who built laboratories and observatories in their homes and made a number of important discoveries in the new disciplines of chemistry, physics, and biology. The age of the gentleman scientist was ending by the 1850s, when the most famous of them, Charles Darwin , published his Theory of Evolution. More and more, experimental research became associated with facilities provided by universities, foundations, museums, governments and industry. However, the romantic image of the mad scientist — isolated from his fellows and angry with a world that would suppress his ideas — has deep archetypal power. It's also dramatically compact , needing only the scientist, an assistant, and a faithful servant or two as characters. The meme 's emotional energy and enactment efficiency has kept it alive into the 21st Century, and it's even routinely projected into future scenarios via television shows like Star Trek </ and The Outer Limits (1963) </ . This is edging toward becoming a Discredited Trope , at least in the classic beaker/Jacob's Ladder/operating table configuration. For the more-modern variations, see Hacker Cave .

This is when a character with mental problems and/or physical deformities is locked away because they will never fit into society, usually either in the attic or in the basement. The more of a Big Fancy House , the better; in fact, the smarter ones will sometimes have a secret system of peepholes and secret passages so they can move around as they please. There are two basic plotlines for this type of character: This trope is named for the landmark work of feminist literary criticism by Sandra Gilbert and Susan Gubar, referring to Mr. Rochester's wife in Charlotte Brontë 's Jane Eyre </. The analysis indicates that this trope first popularly appeared, of all places, in Victorian women's literature, where depicting some women as crazy people was an easy way to make female villains with whom readers would be unlikely to sympathize. Obviously, this plan was not a complete success. Of course, it can be the case that there was a very good reason this person was locked away in the first place. Maybe they're Ax-Crazy , maybe they suffer from an extremely contagious form of illness, or perhaps the person is being hidden for their own safety to keep them from being kidnapped or murdered. Usually Ax-Crazy and/or The Grotesque , and sometimes Inbred and Evil . Compare Man in the Iron Mask . Non-consensual sub-trope of The Shut-In , and one possible form of being Sent Into Hiding . If the madwoman is instead a monster, see Supporting the Monster Loved One . Not to be confused with the company involved with the first season of Smash . </ Or the episode of The Sarah Jane Adventures </ which also borrows its name from the book (but isn't an example). And even more so, don't confuse with the Basement-Dweller , who is free to come and go as he pleases, and is not (usually) a danger to himself or others.

A Mage Born of Muggles is someone who is born with powers despite their muggle parentage in a setting where Magic and Powers are passed on genetically or are the birthright of a Witch Species .

Of course, they will still need training in how to use their power , and so they will quickly meet someone from the Magical Society , who will take them as The Apprentice , lead them to Wizarding School , or otherwise ensure that they're introduced to their new life This is a common trait in a protagonist for several reasons. It means that they begin as a Fish out of Water , which can be kept up and milked for comedy or drama for as long as it remains entertaining. It means that, as the viewpoint character, they can be slowly introduced into the customs of the Magical Society . It means that they can be the target of any Fantastic Racism that exists between mages and muggles . And since their initial values and sympathies are likely to be different from someone raised in magical society, they're almost certain to be a disruptive influence on it - especially if, as often happens, they're also far more talented than most people from magical bloodlines If they're not The Protagonist , the character may instead serve as The Watson , likewise allowing the audience a chance to learn about the magical world. In this case, they may or may not be shown in contrast to a protagonist who's more of an insider In a world where Randomly Gifted individuals are the norm, being muggle-born is unremarkable, and therefore doesn't fit this trope unless there are exceptional circumstances (such as Fantastic Racism against muggle-borns, even if that makes no sense). It's only this trope if a character's birth outside of magical society is abnormal, or seen as abnormal, compared to how magic usually manifests An inversion of Muggle Born of Mages . Sister Trope to Randomly Gifted ; here, the point is that the gift is usually</ predictable, but sometimes, life throws you a curveball. May result from Recessive Super Genes . Works heavy on speculative elements, such as Science Fiction and Fantasy , often have an assortment of fantastic intangibles we cannot even dream of encountering in Real Life — yet act in a completely consistent way, as if governed by imaginary rules of physics; or at least, they do if the writer knows what they're doing. No matter how fantastic the events in a piece of fiction, their Internal Consistency is what makes or breaks the Willing Suspension of Disbelief . You can have the tech guy of La Résistance explain in oblique terms involving the word "nano" why The Empire 's fairy dust superweapon needs an hour to recharge after activation, and the audience will nod its collective head and smile; but if you later have that superweapon fire twice in succession, you just made a Plot Hole and they'll all be at your throat Internal consistency is often a superior alternative to attempting to scientifically explain every fantastical element in the story. Without it, any instance would quickly degenerate into an Info Dump of quasi-physics and pseudo-science In a related trope, a common response by fans of a fantasy series to plot holes is, "You're talking about a story which literally involves magic.</" The answer is that while the audience can accept the existence of magic within the context of the story, that doesn't automatically explain every contradiction within that story. Using the mere existence of fantasy elements in a story to justify continuity errors is A Wizard Did It It's possible to break consistency without damaging the Willing Suspension of Disbelief . It takes work; basically, the work of making a believable case that the violation did not happen out of nowhere. One way is to have the characters themselves notice the inconsistency ; this only

reinforces that it is</ unusual and there might be an explanation for it somewhere . If none ever ends up being offered, at least it relegates a glaring Plot Hole to mere Fridge Logic . After all, if Magic is actually like science , then the theory will likely be wrong sometimes and will have to be revised in the same way as earth science Related to Wrong Context Magic , when someone explicitly has the ability to circumvent it, Unequal Rites , where there's more than one type of magic, each with their own rules, and Your Magic's No Good Here , where the rules change in a different dimension or world. See also Beyond the Impossible , where internal logic is deliberately broken. If the rules are the same as the rules governing real physics but the energy source and methods are different that's Scientifically Understandable Sorcery See also Minovsky Physics , which is a fictional physics with extremely detailed laws that makes it look like real physics as well as the Cool of Rule . Contrast New Rules as the Plot Demands and How Unscientific! ; also contrast Gameplay and Story Segregation , which is an entire category</ of notoriously common Video Game violations of this trope

Like in nature to the Convenient Miscarriage , a Magical Abortion is what happens when a female hero on a supernatural series becomes pregnant, but the writers—terrified of addressing the issue of actual abortion and dissatisfied by the idea of doing a simple miscarriage—find a way to get rid of the unwanted fetus that involves magic in some way, thus making it less controversial. It differs from the Convenient Miscarriage in that the pregnancy is directly and deliberately terminated, rather than naturally miscarried Almost always involves a Fetus Terrible plot, where mundane abortions logically wouldn't work anyway. Doesn't apply to the Face Full of Alien Wing-Wong , which doesn't really resemble a real life pregnancy at all Contrast Plot-Relevant Age-Up and Soap Opera Rapid Aging Syndrome , where the inconvenient infant is born and then matured to a more usable character. A particularly common piece of Magitek . A handheld device which captures an image is immensely useful, and so it's not surprising that in a fantastical setting, someone will come up with a way to provide such a device, using the magical means at their disposal. Similarly, magic-users in more modern settings can hardly resist using their powers to soup up the technology around them, and cameras are particularly disposed to this kind of tinkering Expect the Magical Camera to have traits far different from those mundane pieces we enjoy, and probably to work by a very different means. Or, it may be just like any other with only a slight twist. But at the end of the day, it is at its core a device which exists to preserve the image of a moment in time On a related note: it is a superstition of some Real Life cultures that cameras and photography are harmful, with many believing that being photographed may steal their soul and taking great pains to avoid it (This is ostensibly the Soul Jar variant of the Phantom Zone Picture). This is a handy excuse for shy individuals or people wishing to remain anonymous, usually because of some criminality or witness protection system. Nevertheless, the claim that cameras steal souls is a functional form of the Magical Camera, and one you'll occasionally encounter in straight fantasy as a reasonable fear Magic employing a photograph itself also counts. Not to be

A defibrillator is a remarkable device which can help revive a patient who is in cardiac arrythmia threatening to turn into a cardiac arrest by administering an electric shock and inducing the conditions needed to begin CPR. This alone makes it a valuable and potentially life-saving tool. On TV, however, the defibrillators must be magical, because they work quite differently and have a much higher success rate than they do in real life. A Magical Defibrillator works in a distinctive way. The rescuer encounters someone who has suffered a Hollywood Heart Attack . He grabs the paddles and rubs them together dramatically. Then he removes the victim's shirt , shouts "Clear!", and presses down on the patient's chest while the device makes a satisfying "CHUNK". The patient will jerk violently, and you may even see visible sparks. This will revive the patient on its own; if not, he will perform CPR, which will be clean, pretty, and reliable . For Rule of Drama purposes, though, they don't always work the first time; characters will need two or three dramatic tries before it works. This trope implies that defibrillators work by administering an electric shock to the patient which gets the heart back to doing what it needs to do. Unfortunately, this is not the case; in Real Life , a defibrillator stops</ a dysfunctional heart rhythm, and CPR is needed to get the heart doing what it's supposed to do if it doesn't restart on its own. Therefore, shocking an asystolic (flatline) patient will do absolutely nothing of value, which is why a flatlined patient will first be given a round of drugs such as Epinephrine (not with a Shot to the Heart) to jumpstart the heart into any</ kind of activity, which can then be shocked. The quasi-logical extension to this protocol is that any</ electric shock can do what a defibrillator can; as such, a Magical Defibrillator could also be the use of lightning-based powers to revive people (which may be justified

depending on how those powers are explained to work). Alternatively, TV victims might be hooked up to what's known as a "suicide cord" — a wall plug with nothing but two bare wires, which is incidentally a good way to induce</ the need for a defibrillator in real life. Additionally, the lightning-based power of a TV defibrillator provides characters a chance to Defibrillators commonly appear in Medical Dramas ; whether or not they're magical depends on the series. Unrealistic medical dramas have a tendency to use them on a flatlining patient, which is not how they're used in Real Life ; again, a defibrillator creates</ a flatline so that you can use CPR to get the heart doing what you need it to do. Another common thing dealing with Defibrillators is showing someone rubbing the paddles together to spread the gel. Nowadays adhesive pads are used instead, and rubbing the paddles could ruin the equipment. This is a sub-trope of Worst Aid and a sister trope to CPR: Clean, Pretty, Reliable , another medical technique that works very differently on TV than it does in Real Life . It's often used in video games, where it's an Acceptable Break from Reality . For more information about defibrillators in Real Life , see the Useful Notes page . (That page is not meant to be a guide for how to revive someone in real life; if someone near you actually needs a defibrillator, call emergency services and/or find an AED and follow its instructions.) A Flatline Plotline often involves one of these used to temporarily "kill" and then revive a patient for whatever reason. Finally, as this trope can involve dying characters, When a defibrillator is used as a weapon instead of a healing tool, see Shock and Awe .

In Real Life , most marriages end in death, divorce, or rarely annulment. However, in this case supernatural forces are at play to ensure that the marriage is truly over. Common examples include this being performed via a Cosmic Retcon erasing the marriage altogether, or an otherworldly entity intervening to annul the marriage, thus signifying that the marriage is terminated in the eyes of cosmic forces. Or sometimes it's just something as simple as Laser-Guided Amnesia . This trope is especially common when the couple first wed through supernatural means, so it stands to reason that supernatural means would be required to sever their bond Compare Magical Abortion

Known as mahou shoujo</ ("magical girl") or just majokko</ ("witch-girl") in Japanese, Magical Girls are empowered by various means with fantastic powers that both assist and complicate their lives, but manage to persevere despite this. No matter how hard this may be for the Western world to believe , Magical Girls have high crossover popularity in different demographics with some minor but appropriate design modifications and make up a sizable portion of both Shōjo and bishoujo fandom. A Super-Trope to: Magical Girl Warriors arguably have the widest demographic appeal, and in the West are often synonymous with the idea of a Magical Girl.

It may come as a surprise to learn that the entire Magical Girl genre is descended , effectively, from the American live-action Magical

Girlfriend sitcom Bewitched </. While two series claim the role of "first magical girl anime"—Mitsuteru Yokoyama's Mahotsukai Sally</ (Sally the Witch </, 1966-1968) and Fujio Akatsuka's Himitsu no Akko-chan </ (broadcast 1969, but its manga predates Mahotsukai Sally</)—the creators of both credit Bewitched </ as a primary inspiration for their work. Yokoyama explicitly adapted its concept for a younger audience, while Akatsuka merely says he was "inspired" by it. Another important early Magical Girl show was Majokko Meg-chan </ in 1974. This was the first show to be marketed to boys as well as girls , and featured a number of developments—it was the first Magical Girl show to... have a Tomboyish heroine—all magical girls prior to this had been sweet feminine girls ; Originally, all Magical Girl shows were produced by Toei Animation , so "Magical Girl" wasn't so much a genre as a Series Franchise . This lasted until Ashi Production's Magical Princess Minky Momo </ hit the airwaves in 1982, followed by Studio Pierrot 's Magical Angel Creamy Mami </ in 1983 (the first Magic Idol Singer show). A one-shot OVA produced in 1987 featured a Bat Family Crossover between Studio Pierrot's four '80s Magical Girl shows (Magical Angel Creamy Mami </, Persia, the Magic Fairy </, Magical Star Magical Emi </, and Magical Idol Pastel Yumi </). This was the first instance of a magical girl team. The Magical Girl Warrior subgenre, despite being the most well-known style of Magical Girl show in the west, didn't hit until Sailor Moon </ in 1992 (unless you count Cutey Honey </, which wasn't aimed at girls but had a lot of influence on it, or Devil Hunter Yohko </, which wasn't aimed at girls either). This was essentially a combination of the earlier style shows with the Super Hero genre, particularly the Super Sentai formula. Sailor Moon </ was a huge hit, and, naturally, other shows were made in the same style . The wave of shows inspired by Sailor Moon </ eventually subsided, but new sub-genres spawned soon in its wake. As of present, most magical girl shows can be loosely organized into three broad categories. Neo-classical, codified by Cardcaptor Sakura </. Essentially, old school magical girl coming of age stories updated with the sensibilities of the modern age and the roles of girls and women in it. Mainly aimed towards young girls but often with a significant Peripheral Demographic of adult males. Contemporary examples include Ojamajo Doremi </, Shugo Chara! </ and the Pretty Cure </ franchise (though that also fits in the second set). Of course, there are other examples that feature similar themes but diverge even further from the old-style shows. Many fans felt that shows such as Magic Knight Rayearth </ were still Magical Girl shows, despite all the dissimilarities from the previous generation (others disagree, and feel that Rayearth</ is Shoujo RPG World Fantasy instead). IMPORTANT NOTE: A girl who can use magic is not</ necessarily a Magical Girl in the sense of the trope or genre. A Magical Girlfriend , for example, usually does not fit into the same structure that defines a Magical Girl series. For an index of magical girl works, see the Magical Girl Genre Index . A magical library is a mystical library that is explicitly magical or is infused with magic. These libraries tend to be small and hidden in a remote area. They usually contain dangerous and forbidden spells, arcane Spell Books and priceless Ancient Artifacts and MacGuffins . They also may have supernatural books

such as Tomes of Prophecy and Fate and Tome of Eldritch Lore . The libraries also might be home to monsters, creatures and Magic Librarians that are there to protect the library. The library might be quite old, and may even be as old as the universe itself Because these things are valuable - and it would be disastrous if these items were to fall into the wrong hands - these libraries are usually almost impossible to find without a special map, not to mention being well-guarded. The objects that allow the library's location to be found are sometimes scattered across the world. The heroes and villains alike might have to engage in a Gotta Catch Them All! plot in order to have access to the library's valuable information If the magical library is easily accessible for most people, it's usually part of a school. The protagonists may regularly visit the school library to find out how to solve a problem or gain information about the current plot. Characters that are a bit more rebellious might simply steal from the library instead, setting up the main conflict These type of libraries tend to appear mostly in fantasy , Urban Fantasy and works that have a Fantasy Kitchen Sink

A commercial is Magically Delicious when it tosses reality out the window The product was not created by a business that wants money. The rights to sell the product were not given to distributors who want money. It's definitely not in a store that requires money in exchange from you or your parents. The product was not the result of study groups or market analysis; chemical, nutritional, and physical testing; or construction No, the product is given to you by aliens, or talking animals that want you to eat them , or elves that live in trees, or it's the one MacGuffin needed to save the planet. It doesn't just taste " Crunchtastic "; it gives you superpowers. The insurance company is really a provider of a secret agent chick Of course it's a "lie"; it's fiction. But what this masks is that the commercial has successfully avoided any real-life details about the product. You cannot threaten a lawsuit with a straight face that Mountain Dew is lying when it says that it's "extreme." So you've been injured in some way, and you need immediate healing. Luckily, you have a friend with Healing Hands . He does what he does best, and nurses you back to perfect health in seconds. You look down to admire your friend's handiwork and think, "Wow! He's good! My bloodstains are gone, and the puncture mark in my leather jacket is gone too! How does he do it?" That's the question this trope raises

How do healers launder and repair your clothes, as well as heal your wounds, so quickly? This is commonly seen in fantasy and sci-fi works, and is seldom explained. When it is, it's usually Handwaved by the explanation that the healer is just that</ good. Sometimes Healing Hands don't even have to be involved; characters with a Healing Factor will often display this talent. When this happens in something drawn, like a Manga or Comic Strip for example, it is so the artist doesn't need to keep drawing the bloodstains and tears in clothing. To avert this, the artist would need to remember where each bloodstain and clothing tear was placed on said character, and then draw it in every subsequent frame involving that clothing. So, unless they are Lampshaded , examples from animation will not be added. Related to: Magic Pants , Beauty Is Never Tarnished . Justified on Bleach </ . A Soul Reaper's clothing is simply another manifestation of his spirit, like his body. When healed, the clothing heals as well.

In the comic book/computer program book Timelost</ , Jacque, a traveler from the future, wears clothing that automatically repairs itself no matter how damaged it gets.

from Thor </ , Selvig is wounded by a shard of glass, and then healed by Thor's "healing stone". The stone not only clears up the wound but patches Selvig's cardigan as well.

Justified on Charmed , </ since Leo 's powers can also "heal" broken objects. (Sometimes . When the writers remember .)

In most editions of Dungeons & Dragons </ this trope is Zig-Zagged both in the rules and at the DM's discretion. For the most part clothing damage is hand-waved, and magical items are stated to be capable of minor self-repair. Should a character be, say, caught in a fireball, however, a GM can roll a check on damage to items they are carrying as well. This includes such things as clothing, and severe damage to clothing is explicitly stated to require repairs separate from the wearer. In a further zag, however, most casters are able to learn simple and low-cost spells for repairing mundane items, making actively invoking the trope entirely possible for most healers.

A Magical Nanny is a woman who is hired to look after children , but ends up having a profound effect on the whole family. She may have genuine magical powers or she may just have a magical effect on the household. Even children who have scared off a number of previous nannies can be tamed by a Magical Nanny. Magical Nannies come in two flavors: A free spirited nanny will often be seen in households with strict parents, who are often cold and neglectful toward the children . She will encourage them to be themselves and talk about The Power of Love . Eventually this message will spread to the parents, drawing the family together. This type of Magical Nanny is often musically

Typically they will decide that their work here is done or they will stay and marry the head of the household. (Note that they never</ become the Wicked Stepmother .) One common stereotype attributed to Romani is their relationship to the supernatural, especially witchcraft and fortune-telling. This stereotype can be used to exoticize them as easily as it can be used to demonize them. It's usually attributed to women, but it's not unheard of in men This character often is a Hot Gypsy Woman if they're a Hot Witch , while fortune tellers are more likely to be mysterious old women May be a Discredited Trope , as it tends to stem from less-than-flattering ethnic stereotypes. In fantasy settings, magic and mythical creatures aren't supernatural, but a part of the world. It's normal to see wizards, the Anthropomorphic Personification of love, and even weirder fare sit down every third Tuesday for tea and biscuits (baked by tree elves , of course). Many things that are explained by physics in Real Life may even have completely different explanations in this world, such as The Grim Reaper going about ending lives (not necessarily killing, mind you) , that fires are actually small (or enormous) imp-like beings, or that there are Nature Spirits that guide nature Then there's settings that take it even further. In a world where there are Magical Underpinnings of Reality, everything</ that happens in the world is attributable to a magical force, worker, artifact, or another explanation. Gravity? There's a gigantic god who is holding the world like a bucket and spinning to create centrifugal force. The stars? They're cute little lightbulb girls that are suspended on a gigantic scaffold. The changing of the seasons? The Fair Folk go about telling the plants to grow, bloom, or sleep. The sun? It's a giant lamp fueled by the laughter of good children, which is gathered by angels, so be good or the sun won't shine! In short, most or even all the natural world works thanks to magical means. In a weird twist, they may even use industrial or scientific methods like worker shifts of gnomes who paint the leaves for fall , or machines that manufacture clouds. If this doesn't jive with science as we know it, there may be a Masquerade , or the magical aspect is only obvious in the Magic Land or Spirit World dimension parallel to the mundane world, but is no less important to the natural world. Some stories have the Magical Underpinnings of Reality act as Cosmic Keystones to the mundane world counterparts, so kidnapping the Maiden of Spring

effectively stops spring from happening in the mundane world as well. Essentially, everyone paints frost on the windows. In most mythologies, this is how things work by default. This is when a work has an intangible element that is obviously supposed to be magic, but is explicitly not called that. Maybe the word "magic" doesn't exist in their universe, maybe Agent Scully is using Insistent Terminology (as maybe their religion explicitly prohibits "magic") — yet whatever power they're using lets them levitate , throw fireballs and anything else that standard-issue Fantasy magic can do. This trope also applies to works where a practiced mystical art such as alchemy , tarot cards or ninjutsu has been broadened to the point where it functions as all-purpose magic In a Science Fiction setting, Magic from Technology and " psionics " are favorite stand-bys along with Minovsky Physics , possibly with a "quantum" or "nano" tacked on for good measure. In fantasy, it is a recurring feature that mages would summon a familiar , usually a demon or an owl. But wait! What if the being they entered a Magically Binding Contract with is a humanoid or of their same species and at least one party develops romantic interest in the other? Then, this is a Magic Contract Romance. In many cases, the contract between the contractor and his/her contractee would also grant greater spiritual bonds between them, often furthering their relations with one another—often romantic feelings. In many cases, weaker heroes would also enter into a contract with a stronger being for protection A common plot regarding this trope would usually involve the breaking down of the contract—forcing the couple apart—in order to test the strength of the pair's love A subtrope of Rescue

Romance and Magically Binding Contract , the contractor and the being they summoned would generally admire the qualities of one another as they travel through a journey between life and death, until gradually they fall in love. If the contracted being was originally disgusted by the weakness of his/her contractor, then the contractor would usually gain affection of his/her contractee through bravery, his/her inner kindness, or other inner qualities. This trope is common in both anime and manga. When this trope is present, expect a lot of action. Why in the world would one summon a guardian unless in grave danger? Many writers don't know (or deliberately ignore) that genes are only responsible for protein synthesis. This is when said writers give genes the ability to alter the very laws of physics (or other universal laws) - or at least the ability to do things that would be impossible for a human. In this case genes, instead of a component of cellular biology, might as well be magical talismans carried inside the body. LEGO Genetics is often involved as well. Extra fail points if the writer ignores the necessary secondary powers needed for the Functional Magic to actually be functional</, such as Photographic Memory for Voluntary Shapeshifting etc If the writer wants to firm up the science , they might say that the genes merely construct nanoscale Applied Phlebotinum in your cells which acts on " quantum forces not yet discovered " or some other Hand Wave , but it's still really Functional Magic given a pseudoscience gloss-over Some types of superpowers being caused by genetics are plausible. Super Strength could be from extra muscle mass or more efficient contractile cells (but you still won't be strong enough to bend girders bare-handed), low-level Super Speed would be a snap as natural human neural impulses and reaction time are notoriously sluggish (slower than sound, in fact) and could easily be sped up by increasing conductivity, claws could be some sort of bone growth or modified keratin, and there are animals that use electricity as a weapon, can stretch and distort their bodies , or have a Healing Factor or Super Senses . While you can't become an invisible man, chromatophores in the skin could give you super-camouflage. Etc Genetically-based Psychic Powers are automatically a subtrope of this, as are any Witch Species . Characters who are Randomly Gifted usually don't gain their powers from genetic sources, or in combination with other non-genetic factors A subtrope of Artistic License – Biology and Required Secondary Powers . See also Mutants , Superpowerful Genetics , Bio-Augmentation In Super Hero stories, usually considered an Acceptable Break from Reality due to Rule of Cool

In Child of the Storm father's side), share vast Psychic Powers - though Jean is significantly stronger than Harry. However, it's noted that while the Grey bloodline had a psychic or two every now and then, most of them were relatively weak, nothing compared to the latest generation. This is partly explained by the fact that they originally descended from a branch of the Clan Askani, which seemed to have lost

its psychic spark... until recently.

RWBY </: Faunus genetics are mentioned to be a pain for scientists to understand. Each Faunus has a single animal trait from a specific animal (such as cat ears or a monkey tail), but these traits seem random; one cat Faunus might have cat ears, while the other could have a cat's tail. If two Faunus of the same animal species have a child, the child will be the same species, but if two Faunus of different animal species have a child, the child will be a completely random species. If a human and a Faunus have a child it's even odds whether the child will be a Faunus of the same species as the parent or human. It's also mentioned it can sometimes take time for Faunus traits to manifest.

Among the many uses of headgear, hats can be enchanted with powers. Literal magic, or even just illusion. This is an index for magical hat tropes. This is a subtrope of Nice Hat .

Who better to solve an "impossible crime" than someone who does the impossible for a living ? The Magician Detective is a Stage Magician who uses his skills with illusion to solve crimes It is important to note that the Magician Detective does not have any actual supernatural powers and usually doesn't even believe in the supernatural. It is his disbelief that allows him to look at an "impossible crime" and realize that there must be a logical explanation and he possesses the skills to work out how it was done Not to be confused with the Occult Detective who has actual magical powers and deals with crimes that truly are supernatural. Although it's not impossible for them to overlap..

Fiction generally features two distinct types of magic users: Characters of the first kind stereotypically wear robes and pointy hats , have long white beards, and can perform impossible feats such as raising the dead , casting spells, and summoning fabulous creatures. We call these kinds of characters wizards</ or sorcerers</ (among other things), and they don't exist in Real Life at least, not anymore , or, that's what we think . Characters of the second kind wear capes and top hats, usually perform their acts before a wide audience, (or a children's birthday party) and can perform simpler tricks like pulling rabbits out of their hats . We call these kinds of characters stage magicians </, conjurers</ or illusionists</, and they do exist in Real Life . Their magic is not real; they use misdirection, special effects and optical illusions to create the impression of magic. As says, "'Real magic', in other words, refers to the magic that's not real, while the magic that is real, that can actually be done, is not real magic." Sometimes, in fiction, the lines between realism and fantasy blur, and magicians really can</ perform feats of magic that would normally belong strictly in the wizards' territory. There are no smoke and mirrors here; the magic is all real, but the audience may not realize this , and think that the magician is relying on the same old sleights-of-hand . There may be subtle differences — their magic may come from a different source , and/or the two groups may operate at different Power Levels (perhaps magicians can perform spells based on manipulating people's perception, whereas wizards can outright modify reality). If there is rivalry between the two factions, it falls under Unequal Rites . If a legitimate wizard really does use his magic for a magic show, then it's a Mundane Utility . If he uses it only</ for his show, then

it may be an example of Misapplied Phlebotinum . In other words, some Magicians Are Wizards. See also Magitek which in this case can be called " Engineers</ are wizards" because they make magical technology. If the wizard-magician hopes no one realizes that real wizards exist, his act is an example of Fiction as Cover-Up . When the Fourth Wall audience (you, the viewer or reader) isn't sure, it's a case of Maybe Magic, Maybe Mundane . The opposite of Fake Wizardry , where someone uses stage magic to pretend to have actual magic powers. Compare Our Mages Are Different for differentiating kinds of mages (especially the first kind mentioned above), Magical Clown , which involves clowns and jesters instead of stage magicians, and Circus of Magic , where an entire circus is magical. Contrast Magician Detective , where training in the art of deception have given magicians an ability to see the mundane solution when no-one else can. Subtrope of this is the Occult Detective . Contrast Impossibly Awesome Magic Trick , which is supposedly not true magic, yet is more spectacular than anything possible in real life.

Magick means, in fact, magic. "Magick" is an archaick spelling, dating back to Early Modern Ænglisc where it appeared in the worcks of poets such as Edmund Spenser. Aleister Crowley revived this spelling to add an air of archaism, distinguishing " actual magic " from stage shows . Wiccans and other Neo-Pagans, influenced by Crowley (to varying degrees), have picked up the Crowleyan spelling Others use newer idiosyncratick spellings like "magique" and "majik." For whatever reason, this casual approach to spelling seems to have taken off in the mass media, especially things trying to be edgy . The constant misspelling of "magic" has been known to drive Grammar Nazis up the wall, but it is reckommended you don't worry about it too much . In fiction however, Magick is used to differentiate it from other Fantasy genre magic. To simply put, while Fantasy magic has mana-fueled magic and wand waving, magick on the other hand is less flashy, spontaneous, and invisible. "Magic" is a word with a long history, and, like most older words, has been spelled all sorts of crazy ways at various times. That said, "magic" has been the official spelling ever since modern English was standardized. (Though that was more recent than you might expect : Samuel Johnson 's publication of A Dictionary of the English Language</ in 1755 is co-Trope Codifier for modern English spelling alongside Noah Webster's American Dictionary of the English Language</ , first edition 1828. Spelling in Early Modern English was... not actually standardised, really.) Note also that one specific spelling, "majic", has entirely different connotations: It's an abbreviation for Majestic 12, an alleged secret organization involved in hiding the existence of aliens . Magick Spelles may well include Ye Olde Butcherede Englishe , Xtreme Kool Letterz , Phantasy Spelling , and/or Canis Latinicus See also Post-Modern Magik . A title of one volume of DC Comics ' The Books of Magic </ was Books Of Magick: Life During Wartime</. Word of God has it that this spelling was used to make it clear the series was set in a separate continuity to the Books Of Magic</ , and not because the writer was a pretentious dumbass.

In Esther Friesner 's comic fantasy books Majyk By Accident </, Majyk

By Hook Or Crook </, and Majyk By Design </ , "Majyk" is The Force that makes "Magic" work.

Parodied in X-Play </ when Adam and Morgan go to New Mexico searching for the hole they buried the E.T. video game cartridges in, and meet Aleister Crowley. When asked if he knew any spells, he said he was "Founder of Modern Magic ". When asked why he added a K instead of replacing the C with one, he said that was an He could apparently do hat tricks, but he called them "hat moves</ ".

Red Hot Chili Peppers made an album called Blood Sugar Sex Magik </ .

A few years back Magic: The Gathering </ had an April Fools joke saying they'd been sued by the Orlando Magic and had to change their name to "Majique."

The Elder Scrolls </ uses the pseudo-Latin "magicka" to refer to Mana (the power you use to do magic); but magic itself is generally just called "magic."

Parodied in MS Paint Adventures </ with "Majyyk". The Dark Majyyks are most notable in Homestuck </, but the prisoner in Jailbreak </ also has Majyyks.

The Fake AP Stylebook</ has pointer for you:

Aleister Crowley called his teachings "magick" in order to distinguish his "real" magic from "cheap parlor tricks". (He also added the K for numerological reasons, with lots of predictably sexual symbolism: the letter can stand for kteis</ [κτείς</], ancient Greek for, among , "public hair", "penis", or</ "vagina" [ancient Greek was a confusing language]. Considering that Sex Magic was a significant part of his system of magick, the sexual symbolism is appropriate. Conveniently, it's also the eleventh letter of the alphabet and the number eleven is highly significant in his system of numerology.) He is in essence the originator of this trope, or at the very least, the popularizer of it.

Most mages are of the Squishy Wizard variety, able to work eldritch wonders but not take a punch . And most warriors are Magically Inept Fighters , able to deal and take devastating damage, but their range is limited to the length of their weapon and they'll have trouble with problems they can't bludgeon to death . But who said you can't have the best of both worlds? Whether they're wizards who picked up a melee weapon and some spiffy armor, or warriors who learned to cast a few spells, Magic Knights are every bit as deadly with both spell and sword For the purposes of game balance , the Magic Knight will either be weaker at sword and spell than a pure fighter or mage, generally slower , somehow otherwise limited to being defensive or offensive , or they'll be The Hero , who is expected to be the most powerful character anyway. Usually, the Magic Knights will specialize in a particular class of magic (attack or healing, for instance), effectively making them a hybrid of only two "classes", rather than being an out-and-out "Jack" of all </ trades. However, being a total Jack-of-All-Stats is also possible, depending on the game Another form of balance may be found in their spell loadout. Instead of the wide variety of spells a normal spellcaster can use, they tend to focus on Status

Buffs and direct attack spells. Other typical abilities for this class may include infusing their bodies or weapons with elemental powers . Doing the same with Standard Status Effects is not unknown either Older Than Print , as the Norse god Odin (who also made the Robe and Wizard Hat convention), was both a powerful wizard and an accomplished warrior The Paladin is a Magic Knight who's centered around Holy powers and fighting the forces of darkness . The Black Knight or Tin Tyrant may be one of these, usually with a focus of Necromancy and spells of darkness . Wizards that use their fists and feet instead of swords and shields go under Kung-Fu Wizard , Knights who use a bow instead of magic apply for Bow and Sword, in Accord , and those who favor firearms or a bow and arrow fall under Mage Marksman . Contrast Armor and Magic Don't Mix . A Magic Knight whose magic focuses on healing is a form of Combat Medic See also the Magical Girl Warrior sister trope/genre for magical girls (of which the Rayearth </ girls are a part, by the way) who use magic, sparkly weapons, frilly armor, and The Power of Friendship to kick evil's ass

Heroes who can change their size or shape generally don't have to worry about ruining their clothes in the process . They must have Magic Pants Simply put, Magic Pants are the "civilian" clothing the characters wear as they go about their daily business. They may lose them during the Transformation Sequence , but once the dirty work is done, they'll appear back in them often right where they were standing. This can even happen if the transformations are shown to explicitly destroy</ the clothing To be fair, it's not like a character suddenly conjuring up several hundred pounds of mass out of thin air is made any more</ unbelievable by their clothes being exempt Note that in many cases, even if the rest of his clothing is destroyed, the hero's pants will miraculously survive. You can thank the Moral Guardians for that. This is also conceptually related to Out-of-Clothes Experience : Your clothes technically aren't a part of "you", so in spirit-space you're naked. Monster Modesty (a monster walks around almost naked for little reason) is often used in conjunction with this trope Also note that Magic Pants are only for characters who seem to remain clothed even when it's inconsistent with what gives them their powers. Magical characters (who presumably can conjure up a fresh set), characters with super speed (Superman , The Flash) who have the demonstrated ability to get dressed faster than the human eye can see, or heroes whose clothing is what makes them super in the first place would actually be aversions of this trope For transformations which ruin clothing in such a way as to show a titillating swath of skin while still keeping the naughty bits covered, see Clothing Damage Compare: Impossibly Cool Clothes , Magic Skirt . Aversions and subversions should generally be listed under tropes like Shapeshifting Excludes Clothing , Technically Naked Shapeshifter , etc See also My Suit Is Also Super — for a transformation-powered hero, a popular kind of super-suit is one that can transform with them Not to be confused with Trouser Space and definitely not to be confused with Right Through His Pants

Phlebotinum thought by its creators to work on scientific principles , at least according to their Techno Babble . Actually, it's powered by some supernatural or magical ability of the creator and cannot be duplicated. Also, if the creator dies, it stops

working or malfunctions. Often, these gizmos can only be created by someone who possess The Spark of Genius Becoming an increasingly popular way to explain science-fiction style super-gizmos in Speculative Fiction settings. It's a good way to justify why Reed Richards Is Useless and there's No Plans, No Prototype, No Backup . These wondrous inventions cannot be mass-produced to improve mankind or make their creator a profit because they're not actual inventions so much as temporary manifestations of their subconscious superhuman abilities. Thus, application of them will usually boil down to either fighting crime or committing it. The setting maintains the status quo of the real-world's level of technology and the Gadgeteer Genius gets to keep all of their Phlebotinum to themselves and not risk becoming less unique because the Jones family can purchase his powers from Walmart A subtrope of Doing In the Scientist . Alchemy Is Magic may be considered a subtrope Related to Clap Your Hands If You Believe , Magitek and Placebotinum Effect . Related to and sometimes overlaps Magic Feather . The person who creates these devices possesses The Spark of Genius . Contrast with Clarke's Third Law , Magic from Technology and Doing In the Wizard

El Goonish Shive </: Tedd invented a Magitek glove to allow him to create magical watches that contain spells, making them basically small and compact Magic Wands . He is later informed that the glove is mostly ornamental—while the glove allows him to store data and create wands with more precision than would normally be possible, he's doing the vast majority of the heavy lifting himself, and the glove won't work for anyone else. He's very disappointed, since he was proud of his invention.

Magic is often seen as the realm of mysticism and a violation of scientific laws. Science is often seen as the realm of materialism and technology. These two realms are often viewed as unresolvable opposites; where magic holds sway, science must fail and where science holds sway, magic must fail. This trope builds on the potential factors that cause a divide between the "science" and "magic" in a work. However, please keep in mind the rules of Clarke's Third Law and the inverse law ; there isn't really a difference between the concepts, except for their presentation in the story. In many stories, modern technology (often called "science") is placed in opposition to the will of a person influencing the universe (often called "magic"). This divide can build into The Magic Versus Technology War , where both sides of the debate attempt to eliminate the other side. Stories which present the divide often use one or more reasons for the separation, summarized here: Compare the following tropes: Doing In the Wizard for when seemingly magical manifestations are explained as science. Doing In the Scientist for when scientific anomalies are later explained as magic. Maybe Magic, Maybe Mundane for when the phenomenon is inadequately explained either way and the characters just can't tell. Fantastic Science for when the scientist begins to make magic their field of study. Post-Modern Magik for when the magic takes cues from technology. Contrast Scientifically Understandable Sorcery where the magic and science use the same rules but different energy sources and methods, and Sufficiently Analyzed Magic where magic is treated as a science To see Magic A Versus Magic B, there's Unequal Rites . If you were looking for a trope where scientists and wizards actually get into a brawl, see The Magic Versus Technology War . Science Fantasy is a

genre for the heavy mixing of the two, which may or may not contain such a war. How Unscientific! is a violation of Genre Consistency that allows a work to temporarily operate as Science Fantasy . Contrast with Magitek , where both magic and science are used in combination.

Advanced, ubiquitous magic always seems to end up working just like technology. The car engine might be powered by a fire elemental, and the telephone may work through the principle of contagion , but this doesn't affect the man on the street. They just get in the car and drive away, or pick up the phone and talk — no special talent required, just as if the devices were technological. Magitek (or "magitech") often appears to combine magic with modern technology or at least something distinctively mechanical: traditional heat engine or an electrical generator powered by or powering a magic spell, or a giant mecha that can inexplicably shoot ice from an empty hand. Sufficiently Analyzed Magic frequently causes this, but isn't necessary, since a Black Box is almost as good if it's reliable and cheap enough. When Magitek is combined with gritty realism , we get Dungeon Punk , but magitek is also common in comedic fantasy. In some works, technology is based on sufficiently advanced magic, which is itself disguised sufficiently advanced technology. Fantastic Science leads to this because it treats magic as</ science; something to be studied and learned and experimented with. There is "technomancy", the school of magic that specializes in controlling or improving existing technology with magic. In these circumstances the machine would work without</ the magic, but magic improves it. That, or it possesses it... With all that said, a sci-fi setting with no supernatural/fantasy elements could readily substitute actual magic with alien phlebotinum in the equation. The Ur-Example is Robert A. Heinlein 's 1940 novella " Magic, Inc. ". It takes place in a (then) present-day in which, for example, your taxi is a flying carpet, but otherwise the same (cabbie, meter, and so on). The Trope Namer is Final Fantasy VI </, where the Gestahlian Empire had suits of Power Armor , dozens of Humongous Mecha , and fleets of flying Mini Mecha , armed with various lasers and missiles powered by the life essence of enslaved magical creatures. Courtesy of Ted Woolsey's translations , this fantastic science and the inventions using it became known under the blanket term "Magitek." Often involves the Science Wizard (not to be confused with the purely technical Techno Wizard). Magitek is one of the hallmarks of Science Fantasy works. May result from Sufficiently Analyzed Magic . Also, Utility Magic , which can sometimes manifest as this. Contrast with Clarke's Third Law , Magic from Technology , and Post-Modern Magik . See also Harmony Versus Discipline , Ritual Magic , and Alchemy Is Magic .

Gargoyles </

A common observation in fiction: Once you get a girlfriend, other girls just come naturally The lead male character may be nice, kind , and fairly attractive. He may adopt stray kittens, help old ladies across the street, do charity work in Third World countries. It doesn't matter, because he's never, ever</ going to be able to find a girlfriend....at least, not until a girl swoops down out of nowhere and attaches herself limpet-like to his arm Suddenly he has an embarrassment of riches. Girls who wouldn't even look at him before are now beating down his door. Old acquaintances he

can't even remember will appear and claim to have loved him for years. He can walk down the street and have new characters pop up claiming Love at First Sight This can also happen even when the girl is still only a Love Interest , which makes it even harder for the guy to brush away the other girls and convince her that she's his One True Love (which she is). It also makes it harder for him to brush off in general, but that's another story entirely As a part of the wish-fulfillment element that defines the Harem Anime genre, the Magnetic Girlfriend will not</ be jealous of the other girls that enter the equation. This is because she is either too naive to notice their affections, so nice that she would rather be their friend than their rival, or that she trusts her boyfriend to not cheat and so doesn't feel threatened by the extra girls. Oddly enough, her upbeat and kind personality is usually enough to win over their friendship, but the race for the guy is most definitely still on Note that if the Magnetic Girlfriend is somehow detached, her effect will often wear off. If the magnetic effect is unnecessary, the guy is a natural Chick Magnet Compare Operation: Jealousy where the same 'attraction of the unavailable' is at work Truth in Television . Sometimes, the experience of getting a girlfriend gives men newfound confidence that makes them more attractive to other women. Sometimes, the fact that a man isn't on the hunt anymore makes them more relaxed and natural and thus less awkward. Finally, the fact that he has a girlfriend signals to other women that there is something</ desirable about him, an effect which in Real Life is called "pre-selection" or "social proof." There's also a belief that after having sex, a man releases pheromones that make him more desirable (again going back to the "proven desirable" mentioned above.) This may or may not bode well for the relationship

Occasionally, you get a hero with such personal magnetism that he is capable of persuading others, usually the Badass Bystander , to join him in his quest . Of course, the new companion has no qualms about killing for, or even dying for, the hero, despite having known him only briefly and facing many people who want him dead. This is a staple of fiction that may well be Older Than They Think . Many epics and legends chronicle the process by which a hero gathers a band of motley friends and allies of dubious background but doubtless courage and nobility. Even if the hero has no special quality compared to his subordinates, this is often his implied "power", Heart . There's a few variants of this: Often at the center of a Character-Magnetic Team . Contrast with The Dulcinea Effect , which usually involves the hero falling victim to a similar phenomenon at the hands of a member of the opposite sex, and Hitchhiker Heroes . A female Magnetic Hero who leads male characters with The Dulcinea Effect may be a Jeanne d'Archétype . On a larger scale, the usual subject of A Protagonist Shall Lead Them . The resultant group generally turns out to be a Ragtag Bunch of Misfits . On a large enough scale, the hero will have created their own variation of The Cavalry or Big Damn Heroes . If it actually sticks around for a while, you may get True Companions or a Badass Crew . Contrast Socially Awkward Hero and Hero with Bad Publicity . Has nothing to do with a hero with Magnetism Manipulation , unless there's a Magnetic Hero with Magnetism Manipulation .

If a show is about characters who can see spirits or ghosts — and have no other superhuman ability — the show can stay interesting only if they come in contact with them about Once an

Episode . Now, one would think that, because usually even normal humans can sense these creatures a little (" Did anyone else get cold just now? ", if nothing else), they wouldn't be all that common, or someone would have seen through the Weirdness Censor by now ("Why is it always</ so cold?"). Yet somehow, unfailingly, there these spirits are, every single week This is where the trope comes into play. If you're able to see ghosts or spirits, they're attracted to you (no, not like that). They, of course, may just want someone who doesn't ignore them, but don't count on it. They may want you to become a Willing Channeler (or if you're uncooperative, a Meat Puppet) and, in more unfortunate forms of the condition, will want to eat you. Though there doesn't seem to be that much logic behind it, being able to see supernatural phenomena makes you a grand, shiny beacon for it to flock to you A very specific form of Weirdness Magnet . See also Supernaturally Delicious and Nutritious and Magic Is a Monster Magnet . Not to be confused with Electromagnetic Ghosts , which can involve magnetic media</

If there was ever a villain that deserved to be called "Magnificent", that character is</ the Magnificent Bastard. Capturing the audience with their charisma, incredible intellect, mastery of manipulation, and boldness of action, this character is a show-stealer, demanding your reverence at every turn. So what makes a character a Magnificent Bastard? Let's break it down: They are brilliant and utterly devious, a smooth operator. They are also savvy and do not fall for obvious traps; bringing them down is no easy feat. Compare Guile Hero , its Good Counterpart . Due to misuse, examples of this trope go through the before being added to works.

The serious work that you lavish all of your efforts on and have the highest expectations for will not</ receive nearly as much acclaim or success as the one you just toss out to pay the bills What happens when a writer or artist deliberately tries to create their Magnum Opus </? They slave over it for years, pouring 110% of their heart and soul and energy and sanity into it, and confidently expect it to be huge , monumental, Genre-Busting , and assure them eternal fame and honor... and what is the response? At best, "Meh, it's So Okay, It's Average ". At worst, "Wow, it's So Bad, It's Horrible " But what happens when the same artist just writes or creates something for fun or profit or out of contractual obligation with no big plans, hopes or expectations for its success? Heck, they know it's not that good but figure it will at least pay the bills this month. They're so busy working on that inevitably earth-shattering magnum opus</ , they don't even give this other silly little project much thought. Whoever commissioned it is sure to be disappointed, but it's no big deal; the public won't even notice its existence enough to laugh at its pointlessness anyway Cue Situational Irony ! That book, movie, or painting that the creator couldn't care less about becomes an instant sensation. They're hailed as a genius, worshipped for blessing the world with this wonderful new classic, immortalized in parodies and homages , and earn an eternal place in history for their brilliance and creativity. That masterpiece they had such high hopes for will quickly fade into obscurity, but they will be remembered and celebrated for this little hackwork forever There are multiple causes behind this. Creators have different expectations and standards they apply to themselves than the

audience and critics do; their definition of a Magnum Opus might simply be the one that was the most perfect, smoothest, with the fewest hassles that went into making it. Some of them tend to be The Perfectionist , and where audiences might forgive one or two mistakes or blemishes, the creator can't and will keep striving to achieve that ideal. Often, the author put so much pressure on themselves that it actually damaged the creative process , whereas giving their creativity free-rein produced better results despite them paying less attention. Also, works intended to deliver a deep, profound, important message have a tendency to come across as Anvilicious-esque , while works that are written without such concern end up focusing more on the story itself. This can also be related to One for the Money; One for the Art ; after succeeding with a crowd-pleasing work, a lot of creators get to work on their masterpiece , and said work may suffer from Protection from Editors due to a swollen ego or Development Hell due to the creator trying to get it just right Alternatively, writers are as human as the rest of us and, as individuals, can hold different opinions than their fanbase (or what they think is their fanbase); this includes both expectations of audience experience and perceived aesop importance/acceptance. And their tastes might evolve over time: their latest work is more likely to match what the creator currently prefers, as well as represent their accumulated experience throughout their career, but fans' tastes are much less likely to evolve in the same way as the creator, causing them to cry They Changed It, Now It Sucks! instead. In some cases, however, the author does indeed know better and over time the work of art they are proudest of might become Vindicated by History All of the above aside, this isn't necessarily as black and white as it sounds. As some of the examples below demonstrate, the opus can, in fact, have its own substantial fanbase and perfectly respectable sales and reviews...but it just ends up Overshadowed by Awesome compared to the other works. Some fans may even agree</ with the author and prefer the opus to the author's other creations When the effect is somewhat delayed, see Vindicated by History . For the inverse, see Old Shame Sub-Trope of Murphy's Law and the Centipede's Dilemma and Sister Trope to Creator Backlash (often a good source thereof, too). Breakout Character is sometimes related when a specific character rather than an entire work becomes far more popular than was ever planned. See also Creator's Favorite Episode , where that choice may potentially result in this Compare Self-Deprecation , Sweet and Sour Grapes , Springtime for Hitler , It Will Never Catch On , I Am Not Spock , Never Live It Down , and And You Thought It Would Fail . Some examples also drive on the Sunk Cost Fallacy as a creator can believe his best work is the work he spent the most time working on. May overlap with My Greatest Failure if the creator takes it hard. Also see Consolation Award for when the work that is</ considered the best by the public is not the most awarded. Can be the result of You Were Trying Too Hard . Compare Black Sheep Hit , where a work atypical of the creator's style attracts new fans... who often clash with the existing fan base. Often overlaps with One-Hit Wonder

The term magnum opus</ is Latin for "great work," and is usually used to refer to a work of particularly great ambition, scope, and scale and exceptional quality considered to be the creator's greatest and most renowned work. It is a pinnacle of creative achievement that every artist dreams of reaching and few ever do. Such a work often represents the culmination of years of painstaking work and

toil, and as such, its creation is rife with dramatic possibilities Characters striving to produce such perfection may fall victim to obsession and neglect their families, social lives, more-lucrative but less-satisfying careers, or even their very health and well-being in their quest. Once their opus is completed, the artist may fall victim to Magnum Opus Dissonance if the public doesn't give their work the accolades they feel it deserves. Even if the work itself is an unmitigated success, the artist may find it a Tough Act to Follow ; more than one has retired or changed careers after such a momentous undertaking, but finding a new purpose in life after dedicating oneself so fully to such a massive project can prove a challenge in and of itself. On the other hand, in many stories the successful completion of a magnum opus after many trials and tribulations is a Happy Ending . For examples of what creators believe to be their greatest work, see Creator's Favorite Episode . For the opposite, there's Creator Backlash . Due to misuse of this trope, examples are now restricted to In-Universe examples. </ In-Universe Examples Only :

Mainstream Obscurity is what happens to a famous successful work intended for a wide general audience, that succeeds so well and becomes so known, that paradoxically, despite its fame, it remains relatively unknown to the general public. Sure it lands on every critic's top 10 list, has a fantastic word of mouth on many amateur review sites, and is one of the most truly well-known works in media, and some part of the media (the Iconic Outfit , Iconic Item , Signature Scene) is known by Pop-Cultural Osmosis . Thing is, these elements become so overexposed that a lot of people might think</ they've seen it, or might even feel they don't have to see it , but individuals can't name things about it beyond these famous well-known aspects. A good example is a famous witticism that an intellectual is someone who can listen to Gioachino Rossini 's William Tell Overture</ without thinking of The Lone Ranger on account of the fact that the finale of Rossini's overture became a Standard Snippet used by the famous TV show, becoming associated with The Wild West despite the fact that it derives from an Italian opera about a Swiss rebel, which, being that it's an opera, has a smaller audience When the work has become so famous that "everybody else knows about it", yet no one has actually read or been exposed to that work, that work is wallowing in Mainstream Obscurity. People, groups, art movements, and entire genres can also be swallowed by Mainstream Obscurity. A "famous author" can be widely read, best-selling but largely unread, widely quote-mined, or just well known for "being an author". Iconic movie stars have their image reproduced in so many other places that it is easy to recognize their faces or get what part of them is being parodied and alluded to, without having to ever watch any of the movies they starred in. If a character portrayed by an actor (or that version of a character, if an adaptation) becomes more famous than their portrayer, the actor's name may be completely unknown to all except trivia buffs and paradoxically lead to extreme typecasting to the extent that an actor can't escape being pigeonholed, or rather mine it for the rest of their life . Likewise, people can be widely aware of an artistic movement or genre, but unable to describe what it was about For this trope to hold meaning, a few

conditions need to be met. It must</ be mainstream. Defining the mainstream is hard but a workable definition is that what is mainstream is the general knowledge and awareness in culture and society that people can have without having to go out of their way. A work for general audiences appeals to people who may not have, for instance, played other games, known or seen or heard of other works in said genre or other works in the said franchise, and likewise never have read a comic book, or listened to albums and artists of the given music genre. Likewise, one should not assume that a work is more famous than it actually is. Some works are likely not intended for mainstream appeal or mainstream audiences in the first place. For instance, works of philosophy, science, anthropology, and other social sciences, are not intended to be best-sellers, they are meant to be read and perused by peers and educated readers, and are likewise published in philosophical and scientific journals. Some scientists and philosophers owing to their great social and political influence end up becoming famous, their witticisms become proverbial in society by Memetic Mutation and so become a "known name" to people outside their field, but the fact is their works were never reasonably and realistically expected to be read unhindered by the non-specialist. So for instance, while Darwin is a famous scientist, and one cannot call him obscure simply because the majority of people who know his name haven't read his works. It would only be obscure if he is unknown among scientists and biologists, which obviously is not true Works from obscure fields or appealing to a rarefied demographic such as exploitation films, children's cartoons, Le Film Artistique are likewise not intended for mainstream appeal. The fact that some works become famous and known outside their intended audience is a case of coming Out of the Ghetto or having a Multiple Demographic Appeal rather than truly being obscure. Likewise, School Study Media features works and authors include bestselling authors from the 19th Century, and while many of them were once mainstream and obscure today, their appeal is strictly True Art Is Ancient The reverse of Fan Myopia . Often happens when a Cult Classic becomes so well known for being a cult classic (due to Popcultural Osmosis) that the cult classic becomes mainstream. They may have started as an Acclaimed Flop . This can, of course, lead to Adaptation Displacement and Beam Me Up, Scotty! . See also Praising Shows You Don't Watch , where people, well, do exactly that . One of the show's characters brags about his opulent lifestyle to a faraway friend, a relative or just someone he wants to impress. Impressed indeed, the other character wants to come over and see! The only problem was, the braggart was lying, and now, all of his friends must roleplay out the lies in a desperate attempt

not to reveal the truth Common in the Sitcom , and often happens as the result of a "Fawlty Towers" Plot or Snowball Lie . Other times, the person the character wants to impress starts it off by bragging about his</ life. In still others, the visitor reveals that he knew all along, and was playing along to deliver An Aesop Usually, one way or another, the lie collapses. Traditionally, the associate reveals that regardless of the lie, they are (for some truly different reason) far more impressed with the life the character actually leads May involve an Emergency Impersonation . Compare Celebrity Lie . Also see Mock Millionaire , Princess for a Day

Best Student Council </ had an episode with the same title as the trope name, wherein Cyndi Manabe has been writng letters to her mother, telling lies so that she won't be worried about Cyndi's welfare. This would be fine, except the lies are ridiculously extravagant The Bollywood film 'Munna Bhai M.B.B.S.' revolves around this plot. Munna Bai is a gangster lord with a heart of gold in Bombay. He has told his family however that he is a doctor, and has even created a fake hospital. But, his parents find out, and thus he decides to actually go to medical school. Various hijinks happen, and some serious, heartfelt touching moments as well. Surprisingly well done Memory, Sorrow and Thorn . John's Blood Knight tendencies, his persecution of the Sithi (whom he suspected of knowing the secret), and even his treatment of his sons (favoring the martial Elias against the introspective Josua), all derive from his attempts to maintain this lie throughout his life and result in the conflict against the Storm King being far worse than it could have been. It also sets up The Hero Simon's reveal as King Eahlstan's heir

The entire theme of Suits Ace Attorney steals from his company, gets fired, lies to her about being fired, and then resorts to grand and overdramatic theft just to keep her thinking she can go on shopping sprees. In What Birds Know </ , Elia's father left her mother long ago, and to deal with the shame, the latter turns to prostitution while keeping up the facade that he's simply working a long way away.

Two separate episodes of Spongebob Squarepants </ used this plot, both involving Squidward and his annoyingly successful high school acquaintance Squilliam. Oddly enough for Squidward, it was actually successful one of those times.

In webcomics and cartoons especially, characters in great pain will demonstrate this pain by making frequently deadpan statements , along the lines of "The truck lodged in my stomach is a bit uncomfortable" or some such Often justified by the character being resistant to pain in some way or a badass . In Real Life , a person might not notice an injury right away due to adrenaline, shock, or panic, all of which can eclipse pain. Often, major injuries damage nerves, so they may not feel any pain. This may be used to make a Mortal Wound Reveal all the more shocking Contrast with Minor Injury Overreaction , which is a direct inversion of this trope. Compare Only a Flesh Wound , Belated Injury Realization , I Can Still Fight! , Obviously Not Fine , and Dissonant Serenity

The rank of Major is one often overlooked in works of fiction. It is neither quite as cool as ' Colonel ', nor does it have the same ring as ' Captain ', nor does it have the same air of authority to it as ' General ', and so for the most part is an ignored rank. But occasionally a character comes along, who happens to hold that rank, and do so while being a major badass. This trope covers those people Major is the junior-most field officer there is. This means that, while a Major can be bossed around by higher-ranked officers, they also have the most room to grow. This makes them ideal protagonists. Among field officers, a Colonel Badass may be more of a leader and authority figure, but it's the Major who gets his hands dirty, shows what he's really made of, faces the music head on — and is affected by the consequences Therefore, while a certain amount of badass is almost expected from higher ranks (that's why they got promoted, after all), Majors will likely take levels as the plot moves along, and become leaders in their own right More likely than not they will be a Blue Blood though oft times they will be an Officer and a Gentleman If we're talking about naval officers, the equivalent in rank and awesomeness would be a Lieutenant Commander . For Authority Tropes in general, the next step down is arguably Dean Bitterman . The next step up is Commanding Coolness In various Japanese media involving pilots or an air wing, invariably the senior pilot will be a Major or a Lieutenant Commander; due to the IJN's heavy reliance on enlisted pilots, it was common for a carrier's air wing to be commanded by a Lieutenant Commander, as opposed to a full-bird Captain in the US Navy

Vatican City (sovereign city-state and tiny enclave within Rome , Italy ; treated as an independent state in international politics)

This is for when the benefit of what you do to someone isn't so much in and of itself as about the message it sends to others, about what could happen to them. As is implied from this, what happened needs to be known in order for it to work. While the most common "example" is death , more cunning punishment forces realize that this can backfire , and will go for the Humiliation Conga and/or Fate Worse than Death It is often associated with governments, especially the more tyrannical of them, but not exclusively; see also the deterrence argument for the use of this in the context of more democratic societies. Also, even forces outside the law, like terrorists, criminal syndicates , and Serial Killers , apply this as well. It's also very common with revolutionary forces ; with prisoners, stringing up or dumping their mutilated remains serves as a warning to soldiers of the current regime, while population centers that they suspect of being in league with the regime or even just not being supportive of them are likely to be brutalized as a "stand with us or else" message Often combined with You Have Failed Me , when an underling is punished brutally for failure "to encourage the others" Note that the "example" is usually more</ severe than the "normal" punishment, making this Disproportionate Retribution . See also Scare 'Em Straight , which is effectively the end goal of this trope

Some sort of competitive sport or game is used in lieu of warfare,

in order to settle disputes with less bloodshed. Most examples of this trope DO usually end up being Blood Sports - less bloodshed doesn't mean no</ bloodshed, after all. Note, however, that not all</ examples of this trope are Blood Sports, and not all Blood Sports exemplify this trope, so it is not simply a sub-trope. International examples usually overlap with International Showdown by Proxy Sometimes, the protagonist-slash-game-player is one of the people in the dispute, but far more often, the protagonist is merely a pawn, being forced to play games on someone else's behalf Compare Duels Decide Everything , where those involved can't even imagine</ a way of conflict resolution that doesn't involve the game. There's a person in the way. Maybe it's an Intrepid Reporter , or one of those Meddling Kids . It would be convenient if this inconvenient individual could be removed from the picture... permanently . But a murder rap would really make things even more inconvenient, especially if you're a Villain with Good Publicity who really cannot afford bad publicity. So your primary option as a Big Bad is to hire someone to take care of this little problem. But it can't look like murder, and it can't just be a mysterious death So what's the alternative? Make It Look Like an Accident . The villain or other inconvenienced party tells an assassin or other person that the inconvenient person has to die in a way that looks like an unfortunate happenstance, so suspicion will not fall on themselves or anyone else Note that the simple invocation</ of this trope is usually considered justification enough that the villains are playing by "real world rules", even if what they actually do can't be construed as being an accident by any stretch of the imagination This trope is probably thought of by many soon-to-be murderers, and so, a Truth in Television . Remember, just because it was ruled as an accident doesn't necessarily mean it truly was. Heh... heh... heh.. One reason a character may do this is to quickly gain their inheritance . In America (and many other countries), a person convicted of a crime is forbidden by law to keep any money they make as a result of the crime, so anyone killing for inheritance or a life insurance payout would probably try to make it seem like an accidental death Often used as a method of attempting to Murder the Hypotenuse , and as an excuse not to just shoot the bastard . If made to look like a death by animal attack, This Bear Was Framed . A more elaborate military murder, with the same intent, is the Uriah Gambit . Similar to the inverted form of Murder by Mistake , in which a murder is dressed up to look as if the killer got the wrong victim. When the villains want to make it look like someone else did the killing, it's a Frame-Up Super-Trope to Hunting "Accident" . Sister trope of Never Suicide , where the murder is made to look like a suicide. Overlaps with Unfriendly Fire , depending on how careful the killer was to get caught. Compare with The Coroner Doth Protest Too Much and Mistaken for Suicidal . Contrast with Suicide, Not Murder . When the killer actually did</ do it by accident, it's Accidental Murder

The power of sound. Able to shatter glass , crumble rocks, and knock down buildings. In the world of fiction, anyways. Characters who have super-powerful screams or other sound-based superpowers can usually do something like vocal mimicry, scream out sonic booms, and screech so loud it can paralyze people by making their eardrums bleed It's also interesting to note that in Real Life

, versions of this power would be Awesome, but Impractical , seeing as a sonic boom would practically level everything in a spherical radius from the hero (including themselves). Comes with an unusually high level of Required Secondary Powers (most importantly, super-resilient eardrums and respiratory tract), and often involves Acceptable Breaks from Reality — a visual that indicates the sound — to depict An occasional variation has entirely normal people able to use their voices as a weapon against a bad guy or monster who has loud noises as a Weaksauce Weakness . This is often used to subvert the helplessness and pathos often associated with the Screaming Woman Occasionally, characters with this power also have the Compelling Voice ability, if the character has sufficient fine control over it Glass-Shattering Sound is a sister trope for sounds that only shatter brittle materials. A non-weapon and adorable example would be Cute, but Cacophonic . Sometimes combined with Razor Wind . Can overlap with Breath Weapon . Compare Make Some Noise , Loud of War , Musical Assassin and the sonic variants of Brown Note . For a related but less lethal weapon trope, see Sonic Stunner . A standard teenage hang out where all sorts of canoodling takes place in cars . Usually features a father and/or police finding young people there to "break it up" and drag people back home. Depending on the broadness of the comedy (and the innocence — or lack thereof — of the setting), Don't Come A-Knockin' may be in play Often involves a tourist-trap-type scenic bluff, so as to overlook the city lights at night... as if you're looking at

What could be the worst way for a masculine guy to be humiliated? Giving him a feminine makeover of course! Because Most Writers Are Male having a male (typically masculine) character who has the belief that Pink Is for Sissies or Girls Have Cooties forcing them to dress up femininely is the most effective way to torment them. A common scenario of this is, if the guy happens to show up at an all-girls Slumber Party , the girls could capture him and give him one heck of a makeover, with the guy suffering of course (unless of course the guy secretly enjoys it) This can apply to tomboy girls (like the Unwillingly Girly Tomboy) as well but not as often as guys This can sometimes overlap with Dragged into Drag and Gravity Is a Harsh Seamstress but not always. Compare to Pet Dress-Up . Contrast with Real Men Wear Pink and In Touch with His Feminine Side

Sometimes, earlier plot elements must be quickly rushed aside in order to make room for newer ones, necessitating fast resolutions. What this usually entails is that the main thrust of the plot thus far must be resolved within a few scenes so we can hurry up and get to the new main event This trope can be frustrating if, until this resolution, the first plot had been portrayed as being a very difficult situation to deal with, only to be quickly solved now that the plot demands it. There are several ways around this — the main one is to turn the old problem into a sort of Worf Effect for the narrative as a whole. It establishes that, as bad as the old situation was, the new one is substantially worse, and requires our full attention without distractions. If the original part of the plot's conflict was largely diplomatic, for example, it's quite understandable that everyone is willing to put it aside to deal with the newer threat A relatively organic way of enacting a Halfway Plot Switch and averting an Aborted Arc . Compare Always a Bigger Fish , Rising Conflict and Wrap It Up Note that this trope, nearly by definition, involves spoilers since the new plot can only really show up in the middle of the story Happens in The Rise of Darth Vulcan </ with much of the pre-existing plot of MLP being derailed and pushed aside to focus on the arriving Villain Protagonist . This includes Lord Tirek, who is killed off in the span of a chapter without even meeting the heroes

A Forgotten Trope nowadays, but one that lasted for many centuries in western Europe: wearing any form of "paint" on your face is a sign of evil, particularly dishonesty, more to be expected of the Decadent Court or Vice City than any more wholesome place. Only an actress or some such disreputable woman would self-paint, which is why "painted woman" is not a compliment. The Femme Fatale and The Vamp obviously use make-up, as part of their stock in trade is unnaturally good looks. (The trope is rarer but stronger for men.) Historically, many forms of make-up have been hazardous — such as lead-based or arsenic-based ones — so a woman who used them might sacrifice her health or even life, not to mention her looks in the long term, for a brief attractive appearance. At the very least, this was a sign that she was vain and foolish . The trope faded out as make-up became acceptable, with points at which heavy make-up rather than make-up, in general, was the mark, and the degree of evil entailed varies widely. The transition towards non-toxic materials also helped in this. Fastidiously-applied makeup might indicate a character is rigorous and strict, usually a trait found on villains or Wicked Cultured ; a male character wearing makeup suggests a character who ignores normal gender roles, with a whole host of Sissy Villain and Otherworldly and Sexually Ambiguous readings that have stuck around even as attitudes towards gender have relaxed. When the trope appears nowadays, it's usually applied to garish</ makeup. From the very beginning, Punk Rock and Heavy Metal have demonstrated that a painted — and usually male — face is a sure sign that a character is mean or crazy, or at least sinister. May overlap with Beauty Equals Goodness and Evil Makes You Ugly : only evil people would need to paint since good ones are naturally beautiful. This often involved very heavy make-up in visual media, to make it clear that the character wears it, the alternatives being showing it being put on, having it run from tears or rain, or becoming lipstick kisses. Due to the strong historical and cultural associations of cosmetics with femininity, a man who wears obvious makeup in present-day society (outside of certain specific contexts, such as stage acting or the circus) will often be taken for a Crossdresser , or at least be considered effeminate. This trope is thus (predictably) a staple of the Creepy Crossdresser archetype. By contrast, it is inverted by the Drag Queen , who entertains by cleverly subverting gender norms, and shows crossdressing and makeup as positive and fun things. In real life, the trope is especially hard on Transgender people, who often need heavy makeup to be able to appear presentable as their preferred gender. Sister Trope to Sensible Heroes, Skimpy Villains , Femme Fatalons , Delinquent Hair , and Plastic Bitch ("plastic surgery is evil"). An influence on Uncanny Valley Makeup . See also Excessive Evil Eyeshadow , Beauty Is Bad . Monster Clown and Enemy Mime are extreme versions of this trope.

There are probably only so many things a story can examine about a romantic relationship. This is one of the big ones Will They or Won't They? has gone by They Do Now, something — infidelity, voting for the wrong political party, or even slurping soup </ in a really irritating way — has happened and one party has to decide if they can bear it for all time The cause of the breach is presented here as both serious and silly (Because, brother,

For this Sub-Trope of Elemental Powers , you attack with the stuff that makes up 60% of your body mass, covers 70% of the Earth's surface, and falls from the sky on a regular basis: . Just plain old reliable water. It may not scream " explosive devastation " like fire and lightning do, but you can't trump water's versatility and availability. Flood 'em, drown 'em, frost 'em, steam 'em, wash 'em, whatever. And no, we don't use that water to heal someone , that's for the White Mage . Use it to kill</ someone! (Although in many cases, water is used as a healing element.) Many philosophers, like Lao Tzu above, wax poetic far beyond Sesquipedalian Loquaciousness about how nothing in the world is weaker and more malleable than water, and yet water wears away the hard and strong. Water extinguishes fire, smothers air, and erodes earth. The mountain stands tall and proud, but the sea will eventually grind it to sand. Water always , always always wins. Combined with the other element , water has additional effects: fire can boil or steam, earth can create mudslides, and air can create mists, dew, or storms. A water controller's biggest weakness is that they usually must be in the vicinity of water to be effective . Not a problem in a modern city if they can affect underground plumbing, but if it's not raining and they're nowhere near a source of water, they might be screwed. It's very rarely addressed that they could just sap the water directly from a person's body , killing or weakening them instantly, but this could be an issue of dramatic license since that would result in some very short and uninteresting fight scenes. There are also beings like Marvel Comics ' Hydro-Man and Darkwing Duck or you can contaminate their bodies with a solidifying material, like cement or bake mix, to immobilize them. Water is also required for

Super Drowning Skills and Hazardous Water . In most cases, this power beats Playing with Fire . A Sub-Trope of sorts is An Ice Person ; both can be very dangerous indeed, if the two are combined . See Kill It with Water for cases where this is super effective; Soft Water may still be in effect — you just drown 'em. On the other hand, Heal It with Water is for cases when water is presented as a force of healing. Often, Water Is Blue . May also appear as part of Fire, Water, Wind . If you came here looking for Splash Damage tropes, you might want to go to Splash Damage Abuse , and to Shockwave Stomp for situations where the stomp isn't purely decorative . May overlap with Elemental Shapeshifter . In a Four-Temperament Ensemble , such a character is normally Phlegmatic (except in the case of a Power Stereotype Flip). When it overlaps with Four-Element Ensemble , the bearer is normally female .

If you want to pull out some kind of Doppelgänger in an episode of TV, the ideal way to achieve it would, of course, be to bring in a whole other actor who just happens to look exactly like the actor you're duplicating. Unfortunately, actors typically don't have identical twins hanging around But hey, sometimes they do! Twins have a certain advantage when it comes to getting in movies and TV. For one, child labor laws limit the amount of filming a kid can do in a single day. When you've used one kid to the daily quota, there's always the backup kid. This trope is practically the rule with babies since they obviously can't follow stage direction; one might be better at sitting still when they need him to, whereas the other might be a little better at interacting with others. Also, identical twins make excellent doubles, which works even if the twin isn't an actor Not to be confused with Backup Twin . Nor is the title referring to Twin Threesome Fantasy The opposite of Playing Their Own Twin

The Male Gaze is a form of Gaze that arouses from the assumption that the audience is mostly male, which in turn means female fanservice will appear in some form. The usual result of Male Gaze is the way a (usually male) director/cameraman's interest in women shapes his shots, leading to a focus on breasts, legs, buttocks, and other jiggly bits even when the film isn't necessarily supposed to be a feast for eyes of their admirers (though most of the time this can indeed be intentional). For example, a sex scene between a man and a woman may show more of her body than it does of his, or focus more on her reactions than his (see Right Through His Pants). Alternatively, it could appear in shows that aren't overtly sexual - for example, scenes of bikini-clad female characters talking that emphasize their bodies rather than showing just their heads. This trope can</ be used as a legitimate cinematic effect , especially when combined with Point of View . (At that point it may become Eating the Eye Candy , though not necessarily.) The term also applies in other media, such as video games and comic books. During the Dark Age , comic books were (and often still are) perfect examples of the male gaze, with scenes being framed to show off a female character's curves over everything else. Male Gaze does sometimes focus on male attributes,

focusing on big pumping biceps and perfect abs, but, crucially, in a way that is sexless and aspirational. The presumed male audience is intended to relate to the character being objectified in this way and wish they had that body themselves, rather than desire the character. The Distaff Counterpart of the Male Gaze is the Female Gaze - where the same rules as above apply except the focus is on more traditionally masculine qualities in a character. If the woman in question is aware of the Fourth Wall , she'll likely snap "Ahem, eyes are up here!" at the camera/artist/character. The concept was popularized in Laura Mulvey's 1973 essay . A group of people wearing masks is never a good sign. Maybe it's the anonymity, the obvious Uncanny Valley , or decades of horror movies ingraining a deep sense of distrust about someone wearing a mask outside of a Masquerade Ball (or even in one, if it's sufficiently creepy). It's because of this dehumanizing aspect that masks are often used by villains, their Gas Mask Mooks , and other Faceless Goons .

There are many kinds of Body Horror . Some are done from a Painful Transformation , Gorn , Orifice Invasion , Chest Burster , or something else terrible happening to a person's body This is when a person's body is mutilated due to deliberate intent Such a character has been subjected to body modification (tattooing, piercing, cutting, etc.) to a degree that goes beyond "fashionable" and straight into Squick . The kind of body modification that would make a person look like a monster, and their onlookers wince in imagined sympathy pain Why a character would be subjected to such extreme modifcation is varied. They might have been an innocent used as a Human Guinea Pig , in which case they might be The Grotesque . Unless the pain of their modifications is such that it drives them to lash out . Alternatively, it may be a sign that a character is Obviously Evil , especially if they did this willingly to themselves. Evil Is Visceral after all, and there is little more visceral than mortifying one's own flesh If a character has a few obvious piercings or tattoos, they are not part of this trope. This is only when those body modifications are taken to such a torturous extreme only a twisted mind would want to inflict or receive them See also Cybernetics Eat Your Soul

Being sick is no fun for anyone. There's the fever, the aches and pains, the need to sleep, the runny nose, and a plethora of other unpleasant symptoms to contend with For magical or powered characters in fiction, particularly in animation, the above can come along with a Malfunction Malady. Regular symptoms of the common cold or other condition may be compounded by Power Incontinence , or a form of it. Powered characters who come down sick may find their powers firing off uncontrollably with every

Naturally, Hilarity Ensues Worse yet, sometimes the effects are caused by something perfectly natural, like puberty or pregnancy If this wasn't all bad enough, there is almost never an easy cure. Usually the hapless victim of the malady wonking their powers has to wait it out, or their friends and teammates have to go on a Fetch Quest for some strange, arcane, rare, or mysterious item (perhaps a Flower from the Mountaintop) to get them over this disease and its dangerous side effects Use of this trope also tends to generate an Annoying Patient for any friend or family member nearby who isn't also sick or compromised by the sickness See also: Plot Allergy and Hiccup Hijinks

Usually occurring during the Christmas-themed episode, a male character gets a job at The Mall (or a department store in older works) as Santa Claus , either for a part-time job or as a last-minute substitute. Hilarity Ensues . We invariably see a series of kids on his lap doing things like questioning his authenticity as the "real" Santa Claus , attempting to pull off his beard, asking for extravagant or impossible gifts , or, in the most crass of Sit Coms , urinating on him out of fear (more refined sitcoms might have the kid simply cry out of fear). A common joke has the Mall Santa promising to deliver an outrageous gift come Christmas, much to the dismay of the kid's parents If the character playing the Mall Santa is a cynical Jaded Washout / Deadpan Snarker type, he may comment on the materialistic behavior of the kids or the commercialism of Christmas Added points if the Mall Santa is drunk The female equivalent is being stuck in a Sexy Santa Dress and/or hideous "helper elf" outfit In more outlandish shows with Speculative Fiction or Mundane Fantastic premises, the character may be the real deal after all , or maybe he could</ be the real deal but the jury is out Occasionally one encounters a Jewish</ mall Santa

The Mal Mariée (French for "badly married") is a young woman unhappily married to a much older man. Not just a year or two — there is a significant</ age difference. She is almost always innocent and beautiful, and was likely married against her will. He is probably ugly, probably cruel, and definitely obsessively jealous ; he often keeps her imprisoned (most iconically, in a tower) to avoid her interacting with other men This never works. The more he tries to keep her for his own, the less she wants to do with him — and sooner or later, some handsome young knight, poet, student, or fairy will find a way to romance her The older spouse is highly</ protective and tends to be aggressive towards any other character who even so much as hints at interest in their spouse. He is also often harsh and cruel towards his young wife because he constantly thinks she's cheating. If she's not cheating, she very often will eventually because he suspects her anyway and his jealousy is disgusting . Or he can be absolutely clueless. The story may end with the young wife outsmarting her husband and being happy with her lover, but it can also end in long suffering or tragedy Sub-Trope of Sympathetic Adulterer . Frequently this trope follows from an Arranged

Marriage or a Marriage of Convenience . Contrast Age-Gap Romance and May–December Romance , which is for couples with a major age difference who form a functional, loving relationship. See also Old Man Marrying a Child Very common in medieval literature, particularly in troubadour and trouvere poetry and the lais of Marie de France. A Forgotten Trope now, though it may get nods in stories with medieval or medieval-inspired settings. The trope is however subconsciously recognized by the audience who feel uncomfortable with predatory old men who romantically pursue and exploit very young women

Obligatory bit of 1950s Popular History . All the kids hang out here, play Pinball , and listen to the jukebox play Nothing but Hits . Carhops are optional. The Malt Shop may also be referred to as a diner, a soda fountain, a drug store or a café but the general look is always basically the same. In a Time Travel story ending up in The '50s , often the first place gone into after the "Mister Sandman" Sequence (as in Back to the Future </ , for example) There is</ some historical basis to these places; during most of the early- post-war era, from the mid-1940s to the 1950s, very few modern "chain" fast-food places were in business yet and the infrastructure to support them was still being built. As a result, there were a lot</ of privately-owned, short-order diner-style restaurants that served things like burgers and non-alcoholic malted beverages. Not all of them were hopping, hip places where the kids hung out, but pick a major suburb and you could probably find at least one. Many of the most successful ones would go on to become</ the major chains of The '70s and The '80s , driving their smaller competitors out of business The Greasy Spoon is the Malt Shop's less romanticized (but equally conventionalized) cousin. Watch out for the teenagers who are Sweetheart Sipping or the possible eruption of a Diner Brawl . In Australia and New Zealand , and in Great Britain in The '50s , these places were traditionally known as 'milk bars'

Like many other mammals depicted throughout history as predators, bears are actually passive animals, and won't attack humans unless provoked. Despite this, if you even think</ about getting between a mother bear and her cub she'll tear straight through you . Threaten her children , and you are in for a world of hurt. Righteous awesomeness will ensue, and the heroine reclaims her child with a tearful embrace Heaven help you if an Action Mom or even a Team Mom invokes this trope. If you think a normal Mama Bear is scary, hell hath no fury like a Motherly Scientist with access to One-Man Army levels of weaponry/technology/money/superpowers to protect her children. It can lead to a Did You Just Punch Out Cthulhu? moment Losing her child may cause a Start of Darkness into villainy or Anti-Hero -dom... anything if it will get her revenge , and not just on her own enemy but on anyone who would inflict this same pain on others. If the character is already a villain, expect it to overlap with Villainous Parental Instinct The Spear Counterpart is referred to as Papa Wolf rather than "Papa Bear". Disneyfication aside, male bears are notoriously poor parents in the animal kingdom (infanticide among bears is the main reason why mama bears are so protective in the first place), whereas male (and female) wolves will react to their offspring being threatened in a very similar manner to mother bears Sometimes overlaps with Apron Matron

and Pregnant Badass . It can be a cause of Let's Get Dangerous! , showing that the sweet and caring mother figure is dangerous. They may be a Knight Templar Parent . Provides a simultaneously simple and believable way to switch someone between dangerous and more "cute" modes without compromising the character as either. After all, if It's Personal then the claws come out If an older sibling is the one who takes up the role, s/he is a case of Big Brother Instinct / Big Sister Instinct . For a teacher who behaves like a Mama Bear if their students are threatened, see Badass Teacher . When it's the child</ who shows extreme feats of bravery or strength, and/or is very protective of their mother, it's Extremely Protective Child Related to Beware the Nice Ones and Berserk Button . See also the non-human counterpart, Monster Is a Mommy . Not to be confused with Bears Are Bad News (unless you're dealing with a literal</ Mama Bear). The Violently Protective Girlfriend is a much younger form of this trope that applies when the mate is in danger. Evil characters can use this too; after all, Even Evil Has Loved Ones . A particular Subtrope is the Badass and Child Duo which can take the form of a female badass protecting an orphaned, unrelated young child, though male badasses are also common. Also compare Cub Cues Protective Parent for examples from the animal kingdom Remember when adding examples that this is a female-only trope. The male equivalent is "Papa Wolves" so all Spear Counterparts should be placed there. When Mama Bear and Papa Wolf team up, it's a Battle Couple and all pairs should be placed there. Parents in Distress is the inversion, when Mama needs to be bailed out by the kids. If she has a Mama Bear of her own, it's a good idea to Never Mess with Granny Also, remember that this this trope is mama</ bear, so it is not about being protective of one's friends, unless of course it is something like an Intergenerational Friendship or Team Mom . In that case, it is okay. Otherwise, don't do it. Tropes about helping friends should go to A Friend in Need , The Power of Friendship etc This trope is Truth in Television , and universal

It's not unusual for fiction to depict the effects crime can have on the criminal's family. This trope is about when the criminal's family reacts with either disbelief, disavowal of responsibility or, if they're hedging their bets, both. When confronted with evidence of serious wrongdoing, they often go through predictable emotional processes , most prominently denial. Denial as a psychological phenomenon can manifest in many forms, and they may just have Failed a Spot Check on the criminal's behavior. When a family member or guardian is brought face-to-face with strong evidence that their child or more rarely other relative is a criminal, it will of course affect them in different ways. Some will sadly accept it and move on with their lives; some will be angry at their child but maintain ties. To fall under this trope, though, the family must either: React by denying any responsibility at all for the offending party. Whichever way it is expressed, this trope can sometimes be used to help show that it is not just the victims' lives and families that are disrupted by serious crime, to humanise a criminal character, or for laughs . Even if these reactions apply only temporarily, they count. People change, and few people in fiction or real life remain in denial their whole life. Contrast: The Family That Slays Together , where not only did the parents raise their kids to be criminals, but also treat crime as a family activity, and Don't Tell Mama , where the child tries to hide their criminal behavior from their parents. Compare Parental Obliviousness , where the parents never

realise their offspring is a criminal or otherwise unsavory — subconscious cases of Mama Didn't Raise No Criminal might be stopping them from seeing the truth in some cases. Also compare I Have No Son! , where family members deny even the physical fact of their blood relationship. See also Even Bad Men Love Their Mamas and Even Evil Can Be Loved .

Sometimes people just fail to develop into social or intellectual maturity. Maybe it's due to a very loving but confining mother or father , who don't suggest or won't let them to get a job and move out, enabling their laziness or dependence instead. Maybe they were never taught any responsibility growing up, and now that they're adults, it's too late and they're set in their ways. Maybe they're a Spoiled Brat who's learned to manipulate their parents into doing what they want, and the parents came to the conclusion that it's just easier to indulge them than to fight about it. Or maybe they just didn't want to leave the nest . Maybe they've been intentionally secluded from learning about the world. Or they grew up as a neglected orphan without a proper education or any guidance towards adult life. Maybe their parents simply failed to teach them how to do things like cook for themselves, keep their home clean, balance the checkbook, make and stick to a budget, do minor home repairs , or change a tire. Maybe they were literally</ Raised by Wolves . Maybe it's the result of brain damage, an intellectual disability or developmental disorder , or something sinister . Perhaps they just never had a life-changing moment involving a shotgun and a beloved pet . Maybe it's just a form of Mars-and-Venus Gender Contrast , or they live in a society with certain gender roles, where one sex is expected to be the responsible one , and the other is not expected to be (and is not always taught</ to be). Who can say? Although the causes might not be clear, the effects are. The Man-Child, a term invented by William Faulkner , is usually an adult who possesses a very childlike or (stereotypically) childish demeanor. He's emotionally both simple and fragile; he prefers (although does not always need</) to have a parent figure to look after him. He usually isn't very worldly and is typically pretty gullible . The Man-Child's interests are usually what most people consider to be immature or childish, sometimes even in comparison to actual children. The character is almost Always Male . This is (presumably) to contrast the differences between him and "normal men" with the normal responsibilities and wisdom of adulthood. The female version is usually split between The Ingenue , the Genki Girl , or other tropes which highlight an adult woman's child-like attributes rather than her grown-up persona. Manchild has many more negative connotations than The Ingenue ; the manchild's immaturity and lack of outward adult behavior is emphasized as being a bad thing versus being an emphasized good thing like The Ingenue 's purity and idealism. This is also because of the Double Standard most societies have, which exist for various reasons, where they expect more from men than they do from women . On the Brain Chain , the Man Child occupies a space between The Cloud Cuckoolander and The Ditz , but without necessarily becoming The Fool . He usually does not have The Fool 's luck , but he doesn't necessarily play the role of the Butt-Monkey either. Although the Man-Child is commonly portrayed as being mentally challenged, he does not necessarily have to be. In many cases, the character may be very intelligent, and even leave the idealism aside and be very shrewd in business or career,

but this only throws him deep in the Uncanny Valley when others find out his emotional immaturity . Alternatively, his childlike qualities/way of thinking, when intelligently applied, can be a basis</ for his success as a businessman, in which case he's also The Wonka . In comedic works , he usually plays the role of The Ditz . In dramatic works , he could be the Jerk with a Heart of Gold due to his simplicity or immaturity, or the sympathetic character we come to love. Sometimes the Man Child embarks on a late-in-the-day Coming-of-Age Story , which ushers him into true adulthood. Note that usually Sex as Rite-of-Passage works only some of the time. In many instances, a Man Child is not necessarily a virgin, but only sees sex as a tool of pleasure and does not recognize its emotional significance . If he ever gets married, it's likely that his wife will end up being a mother-figure not only to their children but to him as well, doing all the "emotional labor" needed to keep the household afloat while he just coasts along and drags her into all sorts of wacky hijinks. If he doesn't, there's a good chance that he's a Glorified Sperm Donor - he very likely knocked up an ex or casual sex partner, but plays no role in the child's life whatsoever, either because he can't or because he won't (quite often both). Some will agree that this is Truth in Television for certain people, as there do exist many immature adults out there who refuse to grow up. Sometimes it's just people who are capable of engaging in adult responsibilities but have childlike interests and personalities in their free time, other times it's adults who somehow have all the knowledge capable of living independently yet the emotional maturity of a spoiled child. The likeliest cause of the man-child is a sheltered upbringing or mental illness, particularly . One of the Kids is related, in where their childishness is caused by spending a lot of time around children. When events will force him to be independent, he will be Not Used to Freedom . Does not relate to Never Grew Up , because they physically did grow up - but never outgrew being attached to immature or childish things or behavior. Sister Trope (perhaps) to Adults Dressed as Children , although that trope is almost always played for laughs or borders on the grotesque . Compare Keet , One of the Kids , Kiddie Kid . For a villainous version, see Psychopathic Manchild . Compare Basement-Dweller . Not related to Manchild </, the British TV series, either. Compare and contrast The Three Faces of Adam . Contrast with Wise Beyond Their Years , where a child acts like an adult. Can overlap with Only One Finds It Fun for when the manchild is entertained by children's entertainment that fails to entertain the actual children.

A person is Brainwashed so that, on a certain trigger (either a situation, or else a phrase only someone in the know would ever say), they will go from their normal self to The Mole ; they will most often remember nothing afterward. Occasionally, they can be programmed to do even more serious crimes, such as attacking their teammates outright, but their true value lies in the fact that their cover is so deep that not even they themselves</ realise it If they or their teammates discover the truth, expect a lot of angst. Whether or not they are are able to break free of their programming (or at least, soon enough for it to matter) will vary from story to story In spy and technothriller fiction, such agents are an extreme form of what's commonly known as "sleeper agents", or just "sleepers" See also Brainwashed , Berserk Button , Morality Dial , Tomato in the Mirror , Conveniently Unverifiable Cover Story , Alternate Identity Amnesia , and Lotus-Eater Machine . Compare Memory Gambit , which is when you do this to yourself. May require

Deprogramming to cure and, if not cured sufficiently thoroughly, is one of the causes of Brainwash Residue In Troper Addition, this trope is Memory Gambit and Neuro-Vault meet Deep Cover Agent

A is one of the coolest plants out there: It's carnivorous!</ And it eats insects! Its leaves even resemble grotesque, tooth-lined mouths . How cool is that? Now let's enlarge the plant about 100 times , and give it a taste for people! Of course, there are differences. For one, Man-Eating Plants don't just wait motionlessly for someone to step into their leaf—they can move and actively chase their victims (thankfully, they usually can't uproot themselves from where they grow). They also tend to growl and roar . Somehow. Their leaves' resemblance to animal mouths also tends to get highly exaggerated — they might be dripping with saliva, be lined with actual</ razor-sharp teeth, or sport a tongue. Often, the plant's "mouth" is depicted as an elaborate, colorful bulb without any real parallels in real-life plant anatomy. In fact, while the real plant eats insects by trapping them within its leaves and digesting them, the Man-Eating Plant actually swallows its victims; its stalk seems to house an animal's full-scale digestive system. Besides the main set of jaws, their attacks may include typical traits of fictional plants: entangling with rapidly-growing vines, spewing damaging or debilitating substances or even spawning mini-copies of themselves that threaten to inflict a Death of a Thousand Cuts . Unless they are sufficiently vulnerable to normal attacks (although they typically take LOTS of ammo to kill this way), expect them to be fought by means used against plants in Real Life (or just take much more damage from them): cutting tools, weedcutters, pesticides, fire (or even napalm) or acid (they might instead attack with acid themselves). While doing this, a hero may be cracking snarky gardening-themed remarks. Other varieties of don't show up anywhere nearly as often. This is partially because they're not as well-known and don't sport that awesome carnivore-like appearance ; what's more, their trapping mechanisms tend to be more passive — making them little more than living flypaper or a Pit Trap , which doesn't make for an exciting monster. In Japanese Media , the giant flower sometimes gets depicted‎ as this, though in Real Life it's a non-insectivorous root parasite (which incidentally makes it more like an herbivorous</ plant than anything else). See also: Plant Aliens , Plant Mooks , Plant Person and When Trees Attack . Not to be confused with this Venus Flytrap or, err, THAT Venus Flytrap. (Though the latter is the reason for the Venus in Venus flytrap.) Also not to be confused with man eating a plant . A type of Fantastic Flora . Often overlaps with Botanical Abomination .

Most anime series are adapted from Japanese comic books called manga </. Manga artists have their own set of conventions that frequently make their way into the final animated series: The use of "screen tones" (prefabricated printed background patterns) as backgrounds behind one or two characters during important scenes, representing the characters' emotions rather than showing the surroundings behind the characters. This practice roughly equates to a closeup shot on TV or film with a shallow Depth of Field that throws away the actual background. Examples of this practice include: Conversely, introductory or concluding material, or particularly important emotional moments, are represented by an especially elaborate

rendering of the scene in greater-than-usual detail, sometimes as an Aspect Montage , sometimes as a single realistic or allegorical scene splashed across two facing pages. Pastel-Chalked Freeze Frame evokes this sort of "frozen moment" on screen. This is much more common in Shōjo </ than in other Anime Genres . For the index: Meanwhile, if the events being depicted are a flashback, the empty space between panels will often be colored black. In flashback heavy series, this is almost necessary to avoid entering Mind Screw territory. Manga artists include more on the page than just the actual action. Little explanatory notes to the reader are common, and show up especially in comedy series as on-screen footnotes. Likewise, there's no soundtrack to a manga book, so Written Sound Effects need to be included on the page... and find their way onto the screen in the same sorts of anime series. A fairly frequent problem, though, is that mangaka are used to drawing in black and white but may not have the same level of expertise to colour their drawings for e.g. covers .

Manga (kanji: 漫画; hiragana: まんが; katakana: マンガ). Japanese comic books and print cartoons. The chapters of a manga are usually first serialized in some weekly or monthly anthology magazine targeting a specific demographic, then collected in bound volumes known as tankōbon. Due to the expense of color printing, the vast majority of manga is drawn in black and white A high proportion of anime are adapted from these, so many of the Japanese Visual Arts Tropes got their start here. Sometimes, an existing anime series gets a manga adaptation; see Anime First for examples Officially manga should be read right to left , unless the manga was flipped during its English printing, which rarely happens these days, although there are exceptions. If reading flipped manga, that the effect is slightly different as speech bubbles may feel inappropriately placed, or the eye may not follow the action so effectively as each page is turned. The last page of manga books that are published in the US usually consist of instructions concerning the proper way to read manga books, though some publishers don’t include them any more Korean-made comic books (called " manhwa "), however, are generally read from left to right. Some manga scanlation sites have started showcasing a few manhwa, leading to some confusion in reading order when readers assume them to be Japanese manga. Chinese comic books are known as manhua ; more traditional ones are read from right-to-left like manga, while more modern ones are read from left-to-right; they also tend to be in color, like mainstream American comics It should be noted that the term is getting a broader meaning in certain countries than it once had. In France for instance some publishers make manga based on French comic books, which means that they reprint a comic book to be in black and white and to be read from right to left. The fact that it is actually hard to distinguish from real manga (even the bookfront is similar) and therefore selling about as well in native France will make it a popular practice for at least as long as manga itself keeps being popular there See also UsefulNotes/AnimeAndManga , Doujinshi (self-published manga), Manga Demographics (including Josei , Kodomomuke , Seinen , Shonen , and Shoujo), Manga Effects , Mangaka (manga authors), Manhwa (Korean), Manhua (Chinese), OEL Manga (English), and Web Comics (digital publishing)

Artists and/or writers who create manga , Japanese comic books.

There are several variant forms of Angst . There is Wangst , the angst of whiners. There is Angst? What Angst? , which is angst that is barely felt by heroes. Then there is Mangst, the angst of stoics A man who feels Mangst is the kind of guy who carries around a picture of the wife and child , both of whom were killed by the villain. Every once in a while he picks up that picture..... when no one is looking... and stares at it for a couple of hours. He never talks to other people about his private pain because several things keep him closed up about it. First, he's not the kind of guy to get all weepy (unless you count the occasional bout of Manly Tears). Second, he's not the kind of person who loads his problems on other people Mangst usually involves a man trying to fix his problem, right the wrong, prevent his tragedy from occurring to someone else , seek revenge , etc. If he's not doing any of those things, it's because something's holding him back. He may have an inner monologue, during which the source of his Mangst gets a regular mention. However, to mitigate potential Angst Dissonance , the character's monologue often is deceptively calm or metaphorical One of the things that turns basic Angst into Mangst is the source of the character's pain. When That One Case involved someone dying (especially if it was an innocent kid), the hero will most likely end up Mangsting . Having one's wife or girlfriend horribly killed is the most common cause of Mangst. Guilt over some past misdeed, or from failing to stop someone else's past misdeed, can also be a cause You don't see many women Mangsting , though it does happen, as many female mangsters are more likely to be Broken Birds who ultimately break down crying and need to be comforted before all is said and done. Although, with more modern depictions, women are just as likely as men to suffer horrible tragedies, yet have the fortitude (or unhealthy coping mechanisms) to bear their burdens in silence Compare Manly Tears , which a Mangster occasionally engages in, but only in private. Often accompanied by Past Experience Nightmares or Drowning My Sorrows . Very often the fuel which powers a Roaring Rampage of Revenge . Mangst is generally the cause of a Mook Horror Show . Often combined with Best Served Cold — though just as often it's combined with Best Served Steaming Hot With Lots Of Screaming Often derogatively referred to as "man pain" outside of this wiki, because many examples of Mangst, primarily those which use Stuffed in the Fridge as a motivation, veer into Angst Dissonance territory for female viewers Not to be understood as a Tropemanteau of " Manga and Angst "; the end result of that would be something like "Mangangst"

Manhua (Traditional: 漫畫 Simplified: 漫画; pinyin: mànhuà) is the general term for Chinese-language comics and print cartoons, and is applied both to works originally written in Chinese, and translated comics. The Chinese characters for manhua are identical to those used for Japanese manga and Korean manhwa . On the same note, the term for the creator of comics in Chinese is 漫画家/漫畫家 (màn huà jiā), its characters the same as the ones in Japanese mangaka (漫画家) and Korean manhwaga (만화가, hanja form 漫畵家) Manhua can be considered simultaneously the older and younger relative of manga. Manhua works were widely published and read in China from the 1920's, often with political or satirical content,

predating Japan's manga development in the post-WWII period. However, after WWII, China didn't get the same luck like Japan did - the Chinese Civil War placed creative development on hold for another few years, and creative oppression on both sides further strained production, long enough for manga to become a serious powerhouse on the international scene, though Hong Kong remained somewhat independent and developed on its own Even after things got better in the 80s, development was slow and manga influences were visible. Modern works have mainly been published in Hong Kong and Taiwan, though Mainland China also has a growing scene post-2000. Today, manhua can be found on sale anywhere with a large Chinese-speaking population Singapore also has Mandarin Chinese as one of its official languages, so some of its comic books can also be considered manhua The art style in manhua is generally more realistic than is typical of Japanese manga, and normally drawn in full color. The order Chinese manhua are read in depends on the situation: more traditional ones tend to be read from right to left, while more modern ones tend to be read from left to right See also Manga (Japanese), Manhwa (Korean), OEL Manga (English), and Webcomics (digital publishing). For the ease of categorizing, Chinese webcomics will also be listed on this page

Manhwa (Hangul: 만화) is the general Korean term for comics and print cartoons (common usage also includes animated cartoons). The Chinese characters for manhua (漫畫), which also make up the Korean word, are the same characters that make the Japanese word manga . </ Outside of Korea, the term usually refers specifically to South Korean comics Korean manhwa style is generally more realistic and less cartoon-like than manga. In manhwa, hair is more natural than the exaggerated spiky style of hair exhibited in many manga . Also, in contrast to the large-eyed non-ethnic characters in much manga, manhwa faces often show stronger evidence of an Asian ethnicity. Korean manhwa are also more creator-driven than Japanese manga, which are heavily shaped by editors . Thus manhwa has more of the creators' input and artistic vision. Manhwa are often created by a team of the writer and the artist, whereas manga are created by, or at least credited to, a single mangaka . Manhwa tend to focus more on plot whereas manga focus on characters Manhwa are read left to right like Western comics, as opposed to Japanese manga, which are read from right to left. Though Korea's manhwa industry is relatively young compared to other Asian comics, it has attracted increasing attention in recent years. While there are manga titles published in South Korea (mainly shounen titles), the reverse is very rare, but there are exceptions, such as Shin Angyo Onshi</

It should be noted that there are multiple systems for romanizing hangul (although South Korea has officially adopted), so the exact spelling of non-standard Korean words and names varies from translator to translator, particularly in scanlations. Therefore, Spell My Name with an "S" is quite common. There are now a number of publishers specializing in English translations of Korean comics, and by and large they are unafraid of calling them "manhwa." See also Hanguk Manhwa Aenimeisyeon , Korean Webtoons (digital publishing), Manga (Japanese), Manhua (Chinese), and OEL Manga (English).

Let's say you're a soulful, brooding male hero , living a

sheltered, emotionless existence. If only someone could come along and open your heart to the great, wondrous adventure of life.. Have no fear, the Manic Pixie Dream Girl</ is here to give new meaning to the male hero's life! She's stunningly attractive, energetic , high on life , full of wacky quirks and idiosyncrasies (generally including childlike playfulness), often with a touch of wild hair dye . She's inexplicably obsessed with our stuffed-shirt hero , on whom she will focus her kuh-razy</ antics until he learns to live freely and love madly The Manic Pixie Dream Girl may be featured as the Second Love , in order to break the character out of The Mourning After . If he's a cynic, her goal may be to convince him that Silly Rabbit, Cynicism Is for Losers! . Finally, she may be presented as a cheerful variety of Threshold Guardian , all the way from less uptight to psychopomps happily welcoming their clients into "another adventure" It's a long-standing trope (around since at least 1283), but the term was coined in 2007 by film critic Nathan Rabin , who found it grating , as he believed it to be the result of Wish Fulfillment from stir-crazy writers. He explicitly compared it to the Magical Negro , in that a Manic Pixie Dream Girl exists to help the protagonist achieve happiness without ever seeking any independent goals herself. disown the term , because instead of creating awareness of the "lack of independent goals in female characters", the concept was misunderstood as a condemnation of ALL quirky and fun female characters Despite all that (or because</ of all that), there are ways of utilizing this trope without falling into that pitfall . Given enough time, Character Development can add to their personality and interests and pull them away from the MPDG foundation. The story may even be told from their perspective , revealing that there is more to them than bringing adventure to brooding guys. A MPDG with independent story arc and depth of character can even be the true main character of a work, with her companion being a hapless Drag Along recruited to assist her</ goals- his world-expanding adventure is incidental to her need for someone to carry the cooking pots and backup hang glider Deconstructions of the idea may show that they resent being considered only useful for the benefit of the main character, idolized as something that they are not, or that once the main character reaches their "enlightened" stage, the MPDG moves on to the next person who needs their help. An alternative type of deconstruction is for a character introduced like this to turn out to be dangerously</ unstable, tipping over into Cute and Psycho , or (more realistically) a damaged and unhealthy individual whose childishness, naivete, and irresponsibility quickly either cause them to wear out their welcome, or suck the main character into a codependent mess that can only end badly A subtrope of Blithe Spirit , and related to Magical Girlfriend , Loony Friends Improve Your Personality , Uptight Loves Wild , and Damsel Errant . From the girl's perspective, this trope becomes Single Woman Seeks Good Man , though whether the hero qualifies</ varies Compare Cloudcuckoolander , Genki Girl , Perky Goth , Uptight Loves Wild , Savvy Guy, Energetic Girl , Pom-Pom Girl , and Quirky Ukulele for similar personality roles. May also overlap with Trickster Girlfriend if she enjoys playing tricks on the protagonist and deliberately misleading him just for the fun of it. Sometimes the Manic Pixie Dream Girl is a Hypercompetent Sidekick . Contrast Nerd Nanny and Yamato Nadeshiko for examples of calmer and more mature ladies. The Screwball Comedy is a genre driven entirely by this character type Although not quite Always Female , a "Manic Pixie Dream Guy" is a much rarer concept . "Manic Pixie Dream Guys",

where they exist, tend to either be young (e.g., a Kid Sidekick) or immature . If the latter, expect them to learn</ just as much from their cynical partner as they teach</ (the cynic learns to enjoy life more while the immature one learns responsibility)

Bikinis are usually shown on television as Fanservice when worn by women. However, men shown wearing them are likely to be done for Fan Disservice or Played for Laughs Very occasionally they will be shown as Wholesome Crossdresser - type characters However, this is also Truth in Television : fem/gender-nonconforming men, such as drag queens and crossdressers, do enjoy wearing feminine style bikinis in spite of arbitrary gender constructs. Also note that the word "bikini" can also refer to skimpy swimming shorts, which are technically unisex clothing - but men wearing briefs as a swimsuit generally looks more than a little odd to North American audiences. See Briefs Boasting for men who proudly wear legless briefs to show off their bodies

While The Chessmaster is the master manipulator of events, the Manipulative Bastard is the master manipulator of people, in essence, a character who manipulates others through their emotions, perspectives, psychologies and any other way they can get them dancing to their tune. This is the guy or gal who gets off on playing head/mind games — clever and dangerous and lacking comedic overtones (usu ally) . He or she always has a plan ready , but rather than do any work, the Manipulative Bastard prefers to play on other characters' emotions and mental states and then watch the victims destroy themselves as they waste their energy on fighting against fake dangers or their friends . In many cases the Manipulative Bastard personally is rarely emotional and seldom burdened by notions such as empathy, yet is all too willing to abuse it in others . The Bastard is unmoved by the pain of others , if not actively basking in it . Thus the frequent association of how someone who does manipulative bastardry too often can come across as a sociopath . After all, too many Pet the Dog moments may lead this character to become the mask and care about the people he or she previously saw as playthings. Like Chessmasters, Manipulative Bastards will have some larger scheme in mind but tend to lose sight of it more easily and simply enjoy the control they have over their peers. A highly-focused/ambitious Manipulative Bastard is scary indeed; not only achieving his or her goal, but then ensuring permanent supremacy by destroying the souls of everyone he or she used to get there. A hell of a lot of Heroic Willpower , and often Shooting the Dog is required to topple this character. While this character type seems inherently villainous, many of them are at least nominally on the heroes' side. A cunning branch of the Anti-Hero family sports this trope and many a pragmatic and/or Guile Hero uses many of the same tricks. Indeed, The Trickster may also overlap into Manipulative Bastard territory. The hero will probably survive a relationship with this character, but their trust in people will not . Manipulative Bastards often fall into the Karma Houdini trope — after all, they never "forced" anybody to do anything ... which leads the audience to scream, "Why do you keep falling for this?" at the other characters. Different methods of Manipulative Bastardry exists, depending on these characters' favorite tricks to manipulate people: Sometimes overlaps with Devil in Plain Sight , but is often the "grown up" version, where the "look cute" fallback has become

a fairly professional strategy. A Manipulative Bastard who mixes personal manipulation with more complicated schemes , more mind games , and sufficiently scary facial expressions — and does it all with style — can get promoted to Magnificent Bastard . Compare Clock King , who does the same thing with people's schedules instead of their emotions and/or minds. Manipulating people specifically to bring out their worst natures is the mark of The Corrupter . May engage in a Battle of Wits , if anyone can match the Manipulative Bastard. For the much more heroic equivalent, see Guile Hero . Not to be mistaken for a Troll , for whom their manipulations often don't have a purpose other than cruel amusement. See also Opportunistic Bastard . Almost always overlaps with The Social Expert , though not all examples of that trope are manipulative.

Crying is a very powerful expression of human emotion. But not all cultures and times understand the symbolism of crying in the same way. Particularly variable is the degree to which this symbolism has been gendered over the centuries. Boys don't cry . It doesn't matter the circumstances; shedding any tears is the ultimate no-no in terms of what you can and can't do as a man. But sometimes</... sometimes... sometimes there comes a time when a man's emotions deny any other form of expression, and they pour forth—prerequisite impassioned speech may or may not be present—by cascading down his cheeks. And crying does NOT make him any less badass in the eyes of the audience, but in fact may even reinforce this status . In other words, Manly Man-Tears Of Manliness. Common cases of this are: The common thread here is that Manly Tears are justified</ and dignified</. Crying for no (good) reason doesn't count, nor does crying out of frustration or over wounded pride. Pain is out too, for no matter how bone-shattering the beating or how excruciating the torture The Hero will never give their tormenter the satisfaction of MANPAIN TEARS this being where Berserker Tears come in handy, as per the "don't get scared, get angry" maxim . Crying in fear is also out, for the same reasons . On the "dignity" side, however justified they might be, Inelegant Blubbering generally doesn't qualify as Manly Tears because of their lesser/non-existent dignity- though depending on the situation and the person, the two can overlap on very</ rare occasions: There are some things which can move even the most stoic Badass to openly weep. This can also be a common audience response to particularly emotional moments in the more Hot-Blooded shows. In this case, it often overlaps with Tears of Joy . If the character is particularly sensitive and so is often moved deeply, see Tender Tears or Emotional Bruiser . Manly Tears may swiftly change into Berserker Tears if the one who caused the hero's suffering is here. Sometimes the tears may be Tears of Joy , and paired with the Fist Pump . Contemptible characters may attempt to characterize these tears as water works; the effect is to make them even more contemptible. The crying character may also apologize for them as a sign of weakness. Contrast Sand In My Eyes , where the man denies to the end that he is crying. See also Not So Stoic and Break the Badass . May be in the form of a Single Tear (which generally makes it even</ manlier) Since there is no separate trope covering works from cultures where crying is actively expected as a part of masculinity, or no big deal, examples of that are included here. But in such cultures the message of the symbolism is not "he's crying because it's so extreme that even a normally unemotional man would cry", but rather "he's crying because a display of authentic emotion is what is expected of a man in these circumstances". The phrase "manly tears" originates from Anime fandom. Fist of the North Star </ is the Trope Codifier , due

to how the hyper-masculine macho badass Kenshiro is not afraid of shedding tears. Tengen Toppa Gurren Lagann </ is arguably the Trope Namer , as it was the Gurren Lagann fanbase that coined the phrase "manly tears".

In some cases the flood wil be temporarily confined to a single room, despite the fact that the doors & floor of a regular house aren't built to be watertight. This is likely to result in Opening the Flood Gates when some poor sap tries to figure out what's going on The bathtub and sink versions of this trope are gradually becoming discredited : modern tubs and sinks now come with an overflow pipe built into them that connects to the drainpipe in order to prevent this sort of thing from happening. It isn't standard however, so for now it remains delightfully feasible

If a character has an Achilles' Heel — and especially if that character has a Weaksauce Weakness — inevitably an opponent comes along who is basically made of or otherwise works solely in the medium of Weaksauce. Examples abound, especially in DC Comics . This trope is essentially the ultra-specific, ultra-literalist version of Good Hurts Evil or No Man of Woman Born . Less commonly, a character with no existing vulnerability ends up against a character who introduces a unique weakness of theirs As these characters revolve around possessing an innate advantage over the hero, writers often have them fall victim to Crippling Overspecialization to avoid letting them dominate the story. If the power they rely on is an especially obscure weakness, they can often fall to humiliating defeats by opponents vastly beneath their primary target who don’t suffer the same handicap, or at least not as severely. Even worse for those confronted with their main target if they happen to acquire a Kryptonite-Proof Suit to deal with them on a more level playing field. This tends to lead to examples of this trope to become relatively minor villains and all but useless when away from their chosen prey. The few villains that are skilled, intelligent, and powerful enough to avoid this fate are usually regulated to the upper echelons of the Sorting Algorithm of Evil for the sake of story balance For obvious reasons, this is primarily a Comic Book Trope Closely related to Kryptonite Is Everywhere and Depleted Phlebotinum Shells . Counterpart to the Kung Fu-Proof Mook . Combine both to create a That One Boss or worse. Contrast This Looks Like a Job for Aquaman , which occurs when a situation is tailored to avoid</ a hero's Weaksauce Weakness and utilize their lame power of heart . If the hero manages to defeat this character anyway, it's a form of Scissors Cuts Rock and will often include a scene of Fight Off the Kryptonite . A subtrope of Meta Power

The human body is unexpectedly flammable , resulting in characters, particularly Spear Carriers , Red Shirts , Evil Minions , and Dragons being engulfed in flames and walking or running around the scene. Thus ensuring steady work (and a lot of money) for stuntmen. These days it's as likely to be used for comedy as to be used straight. Rarely will the character even attempt to "Stop, Drop and Roll", a safety technique often taught to kindergartners. The lit victim will always run around in a screaming panic, just causing the flames to get bigger. (This has some Truth in Television in that most amounts of fire don't kill quickly, and burning is one of the more painful ways to get hurt.) Not to be confused with the Denzel Washington film

Bob has made his wife Alice's life a living hell. He beats her , he closely monitors her movements and he effectively prevents her from living a normal life. As he's about to beat her for the three-hundredth time, Alice suddenly grabs the ashtray and strikes him across the head. Bob dies on the way to the hospital and Alice is arrested for his murder. There is no doubt that she's done it, but wouldn't anyone else do what she did if faced with what she's gone through? Alice's lawyers decide that Alice denies murder, but will claim manslaughter by provocation. The question is now, will the jury agree? "Manslaughter by provocation", in English law, requires actual provocation and must pass a test of whether a reasonable, sober, self-controlled person would do it. The other partial defenses are diminished responsibility and suicide pacts. In the US, it is one of the three partial defenses to murder (the others being diminished and unjustified use of force in what they thought was self-defense) In both cases, the crime becomes voluntary manslaughter rather than murder, which could still carry prison time, but it's far less than actual murder charges. It used to be the case that catching your spouse in the act of adultery was considered sufficient provocation for murder (though the ancient Celts had a time limit on that, you were expected to have cooled down three days after the adultery). Generally</ , most people nowadays agree that you're not allowed to kill someone for that. This can be Truth in Television , sadly enough .

Sometimes plans change before the game's release, leaving the manual as perfect documentation... of the game's beta version. The manual could have downright wrong</ stats, causing an uproar of confusion among the players. Maybe they forgot to remove that Dummied Out item or stage from the manual list, causing many an Urban Legend of Zelda as players try to track down the hidden secrets they suggest. Yet other times, it's just a crazy typo But whether the writer didn't research the game properly, or if the manual itself is just an incredibly Obvious Beta , it's hilarious to see just what made it through to print. This is an event where a network will run multiple episodes of the same show back-to-back for an extended period of time. It can also take the form of running all of the movies in a given franchise back-to-back Often done as a promotional event. A popular series will marathon all previous episodes prior to the start of the newest season. The release of a new film in a franchise will be preceded by a marathon showing of all previous films in that franchise. In addition to providing publicity, this gives the audience a chance to get up to speed with events in the show before they jump into the new season. Sometimes, it's also done with really, really popular shows to crank up the overall ratings Since the mid-2010s, this practice has become a lot</ more common as cable networks try to cater to the concept "binge viewing"; the idea of being able to have your own marathon using video-on-demand services such as Hulu and Netflix Sometimes overlaps with Adored by the Network . In Real Life , Western citizens of the twenty-first century predominantly Marry for Love . In fiction, that normally tiny proportion of other marriages is inflated because of the intense comedic, dramatic and tragic potential. That is, of course, in

Western nations: Arranged Marriage is still not unusual in many other countries; it can still be a form of marrying for convenience, though, typically when a person agrees to an arranged marriage in order to get the arrangers to stop pestering them once they've resigned themselves. In other cases, like in media where the featured arranged marriage is not opposed to, it is simply fulfilling a convention of that media and/or its country, and so will probably not be a Marriage Of Convenience. Historically, marrying for love did not become an option for the majority of people until about the 16th century. They married a good match for social standing and/or money . Additionally, if you wanted to keep the assets in the family, one may arrange a marriage of convenience with a distant-ish cousin . If you were not quite heterosexual, it really didn't matter because you would still pick out a suitable member of the opposite sex to marry. Nowadays, of course, incest is frowned upon and homophobia is becoming less common, so these good reasons for a purely convenient marriage shouldn't be so prevalent. But they are. Often, a marriage of convenience is a mutually beneficial agreement, with both parties profiting from the binding - it may even involve a contract - but not always. Sometimes, only one of the partners may be in it for something other than love. An expectation is that one or both of the people will fall in love with the other. It is also often a convention used to get two friends who are in love with each other to realise it. Then it may become a Perfectly Arranged Marriage . There are many reasons one may choose to Marry For Convenience, and any instance can be one or more of the following (and others): - differs from respect as it is typically someone upper class making a good match The (creators of the) work may show a marriage of convenience in order to fit in with the period of the story being told or for other reasons - commonly characterisation or as a critique of the society which has forced such a marriage to happen, or as a cheap way to get two characters together without any of that dating and love nonsense. Marriage. Marriage is what brings us together today . What happens when the newlyweds come home from the honeymoon and start living with each other. It's simultaneously a milestone, a building block for a family, a way to join two older families, a social institution, a public declaration and a very private affair. Many of these tropes are meant to play out over years; others are about the social clout that married status confers; others are about power and in/equality, such as who holds the purse strings.

When a character's devotion to their career is such that it begins to seriously affect their ability to hold any kind of relationship outside of it. Perhaps they're spending too many hours at the office and not enough with the wife and kids, perhaps they've scheduled a business meeting at the same time as little Sally's birthday party or Tommy's athletics day, or perhaps their work is leading them into some very dark or dangerous situations. Either way, their spouse or partner isn't very happy with them and is

quick to let them know it This trope is one of the key reasons why Everybody Is Single , why many characters find it difficult to make a relationship last longer than a week , and is one of the key causes of TV Divorce . As such, it's a major source of angst and relationship tension. This trope usually comes in one of two forms . In some cases, this concern is justified — the character genuinely is spending too much time at work and is neglecting their other relationships and commitments, and the complaining spouse is genuinely in the right to call them out on it. This is particularly the case if the character has a career that, whilst it may be important, is not going to result in any fatalities or the Collapse of Western Civilization if they take a break now and then. In these cases, the character might be neglecting their significant others and relationships out of a genuine desire to provide the best for their families, having completely missed the point that it'd probably be better for their families in the long run if they actually spend some time with them now and again. On the other hand, they might just be too obsessed with their career and the perks, privileges, and powers they have and have forgotten what's important in life. Or because they're simply a workaholic . If it's a happy story, then the character will gradually realize that they're focusing on the wrong things and resolve to make amends and spend more time with their loved ones. In a Downer Ending , the character will typically put in an insane amount of effort for a big promotion/raise/transfer/etc. at work, then actually get it, but lose everyone who was important to them in the process and quickly discover that whatever they wanted wasn't all it was cracked up to be demanding and their partner really does need to put in all that time at work in order to effectively do their job. This is Truth in Television , especially if the job is a profession that involves saving human lives, like a police officer, firefighter, paramedic, doctor, heart surgeon, and more, in which case people really do</ need to work long hours, be on call 24-7, and/or expose themselves to dangerous situations, and lives genuinely can</ be lost if they aren't attentive to their work to a high degree, even if this means they have to neglect their relationships or families. In these situations (whether the writer intended it or not), the complaining spouse may come across as selfish, whiny, and unfairly demanding, especially if it should have been obvious from the start of the relationship that their loved one's job was going to demand a large portion of their time A Truth in Television , as a common complaint these days is that the pursuit of success in climbing the career ladder is causing more people to work longer hours with less time to spend with their loved ones This is particularly common among military personnel, police detectives, secret agents, and doctors. Architects also seem prone to this trope (and usually fall into the first category) for some reason An interesting aspect whenever this is brought up in fiction is that nobody ever seems to direct the blame to the one thing largely responsible for this plight: mismanagement. If a character is spending too much time at their job, it usually means a misallocation of resources or manpower on a managerial level. Yet nobody ever approaches the supervisors and managers, even though they are the ones who might actually be able to do something for the character suffering from this See also Salaryman , The Masquerade Will Kill Your Dating Life , Workaholic , The Chains of Commanding , Career Versus Man , Family Versus Career , When You Coming Home, Dad? , and Eternal Employee . Not for money , power, political alliance , social standing, compatibility, looks , children ... but because they are attracted to the other person, feel a bond with them and want to be with them for as long as possible. Of course those things might end up being part of the package anyway Marry for Love comes in when a character in a work declares that they are not going to enter matrimony unless they have chosen and love the other person first. To them, there's no point in entering a lifelong relationship unless they can actually stand their spouse. This epiphany may occur when someone brings up the option of an Arranged Marriage , or simply the fact that the character in question is still single. They may or may not have already found their betrothed at this point in the story Usually associated with female characters , but rarely (if ever) with males This may result in a Runaway Fiancé when the character runs away to get out of marriage This is obviously Truth in Television with a lot of people, but it's Newer Than They Think Compare with the Rebellious Princess , an (almost) Always Female character who runs off with someone whom her parents have deemed unworthy. Also compare the Perfectly Arranged Marriage , where Marriage Before Romance occurs, similar to Rule-Abiding Rebel . And finally, compare Not with Them for the Money

In Love Triangles and more complicated situations , selecting just one suitor can prove to be a toughie. After all, the main character usually finds him/herself in this predicament because he/she likes all of the love interests to a degree and doesn't want to break anyone's heart or make anyone leave. Even if he/she likes only one in particular, there's little guarantee that the rest will be willing to accept their choice , especially in long-running harem series. This often happens when the love polygon devolves into True Companions and infatuations become close friendships instead So if First Girl Wins , Last Girl Wins , and/or Cleaning Up Romantic Loose Ends clearly aren't where the plot is going, there's another way to resolve the situation: Instead of choosing one Love Interest , the protagonist simply marries them all and they all live as one large family The happiness of those involved depends on where on the Sliding Scale of Idealism vs. Cynicism the series is; the only</ way (excluding large amounts of Shadow Clone abuse) this kind of ending will not end in a perpetual warzone of a Dysfunctional Family with an emotionally-dead Henpecked Husband (Tenchi Muyo! GXP </) or a bloodbath within the year (School Days </) is if the various spouses/partners in question are also close friends who love each other</ like siblings (or something else) May require Exotic Extended Marriage if the marriage is literal. In Real Life , such a thing is called polygamy. Which is illegal in most of the world See also One True Threesome and Polyamory . Contrast Dump Them All , where the main character chooses none of the Love Interests , and/or chooses someone outside the circle, and No Romantic Resolution where there is no conclusion between the love interest and the circle and they remain a (usually) Celibate Hero . Not to be confused with Marry the Mole . This is almost Always Male , due to longstanding Double Standards . However, there is nothing stopping the trope from being applied to a female lead in the right setting, and this has become more common over time

"Last night I dreamed that I was eating a giant marshmallow, and when

I woke up, my pillow was gone!" Simply put: a character is dreaming about doing something (such as eating a giant marshmallow) while in the waking world, they are doing that thing to some real object (or person!) at hand, such as their pillow, often ending with them waking up with a mouthful of feathers. This is a staple dream type found in comics and animation. Though eating is the most typical version of this, other activities can also be involved. The lower the dreamer's intelligence, the more likely this is to happen, and the less need for there to be an actual marshmallow in the dream. Big Eaters are, of course, prone to this trope as well. Always Played for Laughs , it exists solely due to Rule of Funny . It's likely Older than You Think . Not to be confused with Marshmallow Hell . Though now that it's been mentioned, it's only a matter of time before somebody figures out how to combine them Which has since happened in the anime version of Miss Kobayashi's Dragon Maid . Compare Crashing Dreams , Acting Out a Daydream , and Delicious Daydream .

One Head Taller , with a few inches on top (and quite a few more in front). Usually found in anime or manga: a usually short, usually male character becomes smooshed in the chest area of a taller female character. They get a cleavage cushion. A push-up pillow. A rack resting place. A maternal muffler , you get the picture... If she's Hot For Student , she may use this as an initial seduction tactic, but most of the time, the hugger is unaware of (or unable to see) the implications of the situation. This is often done for pure Fanservice value, but may also be used for comedy in one (or both) of two ways: Because of that last one, this is sometimes initiated from behind the victim instead, allowing both him to breathe and the audience to see his reaction better. While this trope is almost Always Female , there does exist a male variant where the Hunk draws someone into their pecs a tad too forcefully. The name comes from a scene in Negima! Magister Negi Magi </, where poor Negi nearly gets drowned when several girls do this to him at once while he was partly submerged. Poor, lucky bastard . On occasion, this can overlap I Have Boobs, You Must Obey! . See also Funbag Airbag and Thanks for the Mammary for accidental collisions of the type. Not to be confused with Marshmallow Dream . (However, it's only a matter of time before they're mixed into one trope .) Compare Cry into Chest and Cooldown Hug . Contrast Torpedo Tits , where the individual is deliberately attacking with breast-mounted weaponry.

One of the more common flavors of Planet Looters , in this case aliens are after one specific resource that Earth certainly has in abundance, water Realistically, invading Earth isn't a smart way to get water as there are a variety of other more easily accessible locations in space. All comets and a variety of asteroids, moons, and even large, interstellar clouds have water in great abundance and are much more accessible and easy to harvest than Earth, as well as lacking those pesky hairless apes. (For instance, Europa has a water ocean 60 miles deep</ .) Occasionally, this will be justified (or handwaved) through an explanation that Earth's water somehow has some quality that other sources lack Ironically , Mars itself has been discovered to have water in Real Life as of 2015 The Back Story of the anime Green Legend Ran </ is that giant wooden monoliths called "Holy Mothers" landed on Earth and drew all of Earth's natural resources into themselves - not just all the water but most of the breathable air.</ Travel between "Holy

Greens" is essentially space travel, with airtight ships and suits. As one would expect, those who control the Greens control the water, and thus the population

Lampshaded in Plan 7 of 9 from Outer Space </ (along with a number of other B-Movie explanations) as to the motives of the alien invaders In V (1983) </ the Visitors are after Earth's water, and the fact that humans are delicious too doesn't hurt. The Novelization has a justification ; in this Verse , the industrial effort of interstellar space development irreversibly destroys biospheres , and they have been unable to develop water purification technologies capable of efficiently supporting millions, let alone billions of people. Thus, the resulting empires are not only constantly fighting over whatever relatively pure</ water remains, but food</ as well; maybe they could harvest water from undefended comets(after filtering out twenty percent of their weight in ammonia Though in real life, ammonia is actually a very useful chemical, to the point that . If anything, the ammonia in comets should make them more), but a life-sustaining world which not only has over a quadrillion tons of fairly clean water but four and a half billion two-hundred-pound food animals too stupid to colonize space themselves? The planet looks like a buffet table guarded by illiterate street punks. And the Visitors have Slow Lasers ... which happen to be fusion powered and need heavy water as fuel

Played with in Ricardo Arjona 's song "Del Otro Lado del Sol" ("On the other side of the Sun"), which is the narration of an alien from a planet that has no water visiting Earth to see if it's viable to contact. He is from a race of Perfect Pacifist People , and is so horrified at how much Humans Are Bastards that he reasons going back to his planet to die of thirst is the better choice .

A Calvin and Hobbes </ strip parodies this with a poem Calvin wrote about a flying saucer stealing the Earth's water and air.

Downplayed in Half-Life 2 </. When close to some docks, if the player looks really close, they can notice that the dock isn't anywhere close</ to the shore, implying that there's less water in the ocean than before. Word of God also states that The Combine have placed a giant portal at the bottom of Earth's oceans, which is sending the water to other Combine-conquered worlds. However, the secondary purpose was terraforming.

Discussed in Grrl Power </ — , invading Earth and dealing with its nukes would be unnecessarily difficult compared to finding some anonymous undefended comets and mining those .

In an episode of Doctor Snuggles </ called "The Remarkable Fidgety River", a race of aliens are stealing cubes of water from the ocean and taking them to their home planet. It turns out to be subversion, however, as the aliens meant no harm — they thought the water was rubbish because it had so much garbage in it . When Snuggles explains that the plants and animals on Earth need the water, the aliens promptly agree to give it back) except</ for our home

Apparently, the hottest thing in the Multiverse, above even the

Cute Monster Girl and Green-Skinned Space Babe , is the Human Female. This is one of the reasons humans think Aliens Are Bastards Sooner or later, no matter what the species looks like, you'll find a sample of the male that prefers human girls. It can be an alien, a swamp monster, a robot, a Non-Human Sidekick , or even a giant gorilla . (Sometimes it Was Once a Man , which makes the attraction less implausible.) Note that this is usually played straight, while the inverse is almost always played for laughs. Also, the male non-human is far more likely to actually get the human girl Biologically, this is completely insane. Imagine a human in the real world falling in love with a squid Inklings don't count, as that's morally wrong for a different reason. and you'll see why. Of course, squids don't have that kind of complexity, which may be the difference here — you can't see past their looks to their "nice personality". But Most Writers Are Male . It's more plausible with Rubber-Forehead Aliens and other Humanoid Aliens , however, since they look enough like humans and vice versa for there to be an attraction. Regardless, this often results in Half-Human Hybrids . This, however, is equally biologically insane; you'd have a better chance getting knocked up by a tree</, since you and the tree are at least from the same planet</. Then again having Human Aliens and Rubber Forehead Aliens is just as big a case of Artistic License – Biology to begin with, so interbreeding with humans wouldn't be too big a leap from there Named after the infamous 1967 B-Movie . That this trope was popularized in 1950s and '60s monster movies is no coincidence. Considering the racial context of the time, this trope is a close cousin to the antiquated belief that Scary Black Men are always trying to steal white women . Which is itself a variation on the ancient tribal warfare trope of "They're invading, and they want our women/men !" While that version is a Discredited Trope , the more general "non-humanoid character attracted to a girl" is not Very rarely, the species either culturally values the idea of human slave concubines, or is so sterile or depopulated that this is the only means they have of avoiding extinction On the rare occasions that Venus Needs Men, the Venusians will almost always be sexy, scantily clad, and conforming to local norms of beauty . So a series doesn't quite manage to make the jump into other countries. It happens. Sometimes this work may cross over with another series, and characters from it may appear in something else, typically in a non-starring role. Official crossovers, extended company in-jokes, whatever, Product B has characters and whatnot from Product A... ...and then, for whatever reason, Product B manages to come out in a new market before</ Product A does. Meaning that the characters of Product A get their debut... in a product that isn't theirs at all. This causes people to assume that an Easter Egg character from Product B got their own spinoff in the form of Product A. That's how Marth debuted in Super Smash Bros. </ (in the West, anyway). A fairly peculiar subtrope of No Export for You that applies often to video games but can happen in any medium where a product is blocked or delayed at length from reaching other countries

and then gets referenced in another work. Distinct from Sequel First in that this often involves characters debuting in crossover works that are often nothing like</ their "core" franchises or are at best tangentially connected (the trope namer is a character from a Strategy RPG series, with Smash Bros.</ being a Platform Fighter series). This happens to Japanese products fairly often as companies, especially fan-oriented ones, like to have cameos and such as a nod to their fans . But at the same could present a Late-Arrival Spoiler for events that occurred in past products, note that the "source" products for the characters may eventually</ come out in other countries, but the fact remains that they debuted in other markets in other, often decidedly odd ways. It's also worth noting that if this happens multiple times to a single franchise, it can agitate the fans, who may begin to (understandably) wonder why Product A doesn't just come out in the first place instead of appearing minorly in Products B, C, D, and so on. Of course, if Product A comes out because</ of its appearances in Products B, C, etc..., that's one explanation right there. Mary Sue , and the plot bias indicative of it, is hardly limited to those of a female persuasion. For probably just as long (if not even longer) as there has been Mary Sue , so too has there been Marty Stu. All the same rules apply, but a couple variations do tend to show up, expressing different ideas of what constitutes male and female "perfection". Also referred to as "Gary Stu" or "Larry Stu" (for those who prefer rhyming to alliteration and whose dialect has the Mary-marry merger), "Mary Joe", or "Marty Sam". Marty Stu will be the personification of action, action, and more action. Or, if he is of an intellectual bent, he thinks his way through problems , inventing whole new branches of science and technology in the process, and in some cases, the character is often portrayed as the personification of both , completing missions as both the brains and the brawn, taking up the roles usually shared between the main character and a team or a partner. He's an unstoppable fighter, a rogue agent, a fearless freedom fighter, a master of disguise. But whether he is a Blood Knight or an Omnidisciplinary Scientist , Marty Stu will be devastatingly handsome (or if not, possessed of a strange, saturnine magnetism) and desired by all significant women, although as the works involved are usually aimed at a male audience, romance is not likely to be the main dish. He has usually been (and still mostly is) restricted to being a creature of action since men who do not take an active role in dramatic events are unmanly and, by definition, not perfect (Non-Action Guy tends to be looked upon with disdain). So Marty Stu, in contrast to Mary Sue who has recently been able to take more active roles , is almost never seen taking on his sister's old school Purity Sue role as a passive motivator of others through his purity, beauty, and helplessness, unless it's in addition to the action and intellectual roles they already have. However, as times have changed, Marty's had the occasional opportunity to show his softer side, and beautiful, passive male Possession Sue

examples are not uncommon in Slash fiction. For related tropes, see the Badass index. Marty Stus are often subject to a Double Standard where they tend to be noticed and hated to a much lesser degree than Mary Sues are. See also The Ace , which often uses this trope as a minor character for comic relief. Marty also generally doesn't have the sort of purity common in Mary (although it's not unheard of). Instead, he tends more towards the Darker and Edgier path, with a tragic and very personal backstory being the order of the day. Whereas Mary would use this to show that she's a brave survivor, Marty uses it for the sake of prolonged brooding . No doubt much of the recent popularity of this character trait owes credit to tragic superheroes and '90s Anti-Heroes like Batman </ and Wolverine </ (who often provide examples of Marty Stu themselves in the hands of certain writers), but there's no indication that it only started with those characters. Obviously, neither of these traits are exclusive to a Marty Stu, but since All Girls Want Bad Boys , increasing the badass potential of a character has the secondary effect of making him more attractive to women without having to sacrifice any capability. Sometimes this attitude goes just a little too far and creates Jerk Sue . Despite the huge overlap between Marty Stu and Mary Sue, there are a few character traits that are much, much more common in Marty than his sister (generally sexuality-related things). Here's the list of exclusive Marty Stu traits: Perma-Stubble . Nothing like the scratchy beginnings of a beard to emphasize that no, testosterone isn't in any sort of short supply for this rugged fellow. Yet despite this, actual beards are surprisingly rare.

Marty Stus can fit any Mary Sue Tropes , but some are more common with Marty Stus than Mary Sues and vice-versa. Some of the most common types of Marty Stus are:

Mary Sue is a derogatory term primarily used in Fan Fic circles to describe a particular type of character. This much everyone can agree on. What that character type is, exactly, differs wildly from circle to circle, and often from person to person . TV Tropes doesn't get to set what the term means; the best we can do is capture the way it is used. Since there's no consensus on a precise definition, the best way to describe the phenomenon is by example of the kind of character pretty much everyone could agree to be a Mary Sue. These traits usually reference the character's perceived importance in the story, their physical design and an irrelevantly over-skilled or over-idealized nature. The name "Mary Sue" comes from the 1974 Star Trek </ fanfic A Trekkie's Tale </. Originally written as a parody of the standard Self-Insert Fic of the time (as opposed to any particular traits), the name was quickly adopted by the Star Trek</ fanfiction community. Its original meaning mostly held that it was an Always Female Author Avatar , regardless of character role or perceived quality. Often, the characters would get in a relationship with either Kirk or Spock, turn out to have a familial bond with a crew member, be a Half-Human Hybrid masquerading as a human, and die in a graceful, beautiful way to reinforce that the character was Too Good for This Sinful Earth . (Or space , as the case may be.) Even back then, there wasn't a total consensus on what was or wasn't Mary Sue, since it's not always immediately obvious which character is an Author Avatar . As , suspiciously Mary Sue-like characters were noted in subscriber-submitted articles for 19th-century childrens' magazines, making this trope Older Than You Think . The prototypical Mary Sue is an original female character in a fanfic who obviously

serves as an idealized version of the author mainly for the purpose of Wish Fulfillment . She's exotically beautiful, often having an unusual hair or eye color, and has a similarly cool and exotic name . She's exceptionally talented in an implausibly wide variety of areas, and may possess skills that are rare or nonexistent in the canon setting. She also lacks any realistic, or at least story-relevant, character flaws — either that or her "flaws" are obviously meant to be endearing. She has an unusual and dramatic Back Story . The canon protagonists are all overwhelmed with admiration for her beauty, wit, courage and other virtues, and are quick to adopt her as one of their True Companions , even characters who are usually antisocial and untrusting; if any character doesn't</ love her, that character gets an extremely unsympathetic portrayal. She has some sort of especially close relationship to the author's favorite canon character — their love interest, illegitimate child, never-before-mentioned sister, etc. Other than that, the canon characters are quickly reduced to awestruck cheerleaders, watching from the sidelines as Mary Sue outstrips them in their areas of expertise and solves problems that have stymied them for the entire series. (See Common Mary Sue Traits for more detail on any of these cliches.) In other words, the term "Mary Sue" is generally slapped on a character who is important in the story, possesses unusual physical traits, and has an irrelevantly over-skilled or over-idealized nature. Over time, a male variant started to see use. Marty Stu (also known as Gary Stu, for those who prefer rhyme to alliteration) wasn't really that much different from Mary. Also an Author Avatar , it usually had implications of being a male crew member that tended to completely outshine established canon members in their roles and often become the best starship captain, ever. See The Ace . Since the female characters of Star Trek </ were all in secondary roles at best, the relationship angle was generally disregarded as being any sort of qualifier. Because of the not-entirely-unjustified perception that Most Fanfic Writers Are Girls , Marty Stu didn't really catch on for a long time. Originally, the term used to apply exclusively to fanfiction, but by the time of Star Trek: The Next Generation </, the term " Canon Sue " started seeing use, applying Author Avatar standards to canon works (most likely inspired by the backlash against Wesley Crusher; even Wil Wheaton has decried the character's obnoxiousness). It was around this time that the term started to lose a concrete meaning, since the label started getting applied even to characters who weren't</ explicit self-inserts (such as the title character of the episode "The Empath"), but just happened to use similar tropes. It was also (most likely) around this time that the term started to gain its pejorative tone. Finally, the advent of the Internet allowed the term to migrate out of the Star Trek </ community to most fandoms, losing pretty much any real meaning in the process. There are dozens upon dozens of essays that offer interpretations of what the term means, generally basing it off of some usages of it, but none of them are truly comprehensive or accepted. Using the term in most contexts isn't too far off from Flame Bait , generally provoking the defendant into rants. Much Internet Backdraft has resulted, especially if the term is applied to a canon character on a popular show. These last two paragraphs are why it's so hard to really nail down a definition of "Mary Sue": the term has started to be used in a much wider context, and to mean much wider things, than it once did, and there's no way to figure out which of those characteristics are necessary and sufficient to define</ a Mary Sue. Some of the controversies: Do Sues appear only in fanfic, or are Canon Sues allowed? See these articles for

takes on Mary Sue that focus on certain groupings of Common Mary Sue Traits : 30-Sue Pileup — We are Legion . </ See also Mary Sue Tropes . A couple of systems have popped up to classify Mary Sue characters, the most popular of which is a variation on the Characterization Tags system. For example, a Perky Goth sorceress that is also a dragon might be labeled as Goth!Sorceress!Dragon!Sue Alternatively, something might just be referred to as (insert biggest trait here)-Sue, but that doesn't allow for a whole lot of elements to be tacked on. There are also a couple of tests in the Internet to quickly determine if a character is overdosed with Common Mary Sue Traits (maybe with a couple pointers on underlying Sue structure); you can find most of them by searching for "mary sue litmus test". See Common Mary Sue Traits for the superficial tropes that get involved in a lot of Mary Sue fiction, but are not immediately evocative of it. Also see Marty Stu , which looks at both this and Common Mary Sue Traits from a male perspective. For a short explanation of non-fanfiction Mary Sue characters, see Canon Sue . See also Possession Sue (when an existing canon character is derailed towards this) and Copy Cat Sue (when a character is a blatant copy of a canon character). See Mary Sue Classic for the extremely common plot framework that the character often uses. Finally, for characters that often evoke this trope (but may not actually be proper entries within it), see Magical Girlfriend , Tsundere , Yamato Nadeshiko , A God Am I , and Original Character .

As mentioned above, there are many interpretations of what does or doesn't constitute a Mary Sue. In this sense, Mary Sue isn't so much a trope as it is a brand name, with the usage being determined by both writer and reader. It is not limited in usage, getting applied to all characters regardless of gender, role, or species. Sometimes, even whole groups, organizations, and even societies are labeled as being Mary Sue. This is a list of some of the interpretations. They are here to offer insight into why people might call a character a Mary Sue. Mary Sue as Protagonist You Don't Like People who accuse characters of being Mary Sues rarely admit that this is the definition they're using. The best way to tell is if their justifications for the character's Sue-hood are all based on shoehorning, Alternate Character Interpretation , misrepresenting the sources, and Accentuate the Negative . Describe any non-fanfic character as a Canon Sue , and you'll be lucky if no one accuses you of using this definition of the term. Essentially, this amounts to treating the symptoms rather than the disease. Averting this will only result in Anti-Sue . Mary Sue as Author Avatar

However, both this interpretation and a shift of society as a whole towards cynicism has led to many people trying to mask their otherwise idealized characters with either total non-flaws (e.g. being So Beautiful, It's A Curse and other Cursed With Awesome details), flaws by proxy (e.g. Dark and Troubled Past), or flaws that simply don't play any role in the plot at all (e.g. making a character an alcoholic, but never showing them as impeded by it). Often, this leads to a particular extreme where people start treating flaws themselves as Character Development and create a character that simply has no merits outside of being able to do the most basic biological functions (Anti-Su In practice, therefore, most characters fall somewhere on a continuum between constant failure and constant success, and it's up to each person to decide how often a character needs to fail to be realistic, how significant the failures need to be, e)

One advantage of this definition is that it can apply to canon characters , but it also explains why Mary Sues are especially annoying in fanfiction: if you're reading fanfic, it's probably because you're interested in the canon characters and want to hear about them — you didn't download the fic just so you could see the canon characters become props used to demonstrate the awesomeness of some OC in whom you have no stake whatever. It also helps account for the striking amount of overlap between Author Avatars and Mary Sues — many if not most people have a hard time truly accepting that they aren't the center of the universe. And, finally, it also explains why some characters who have no shortage of significant flaws are still often considered Mary Sues. After all, say what you will about the classic, idealized Mary Sue, but at least you can see why</ she makes such a strong impression on all the other characters. How much more annoying is it when the character doesn't have any obvious virtues, and yet the universe still</ seems to revolve around them?

This overlaps slightly with the center of attention reading above, as the entire world is redesigned for the benefit of a specific character. Very, very common in fanfiction that is written as an escape for the author rather than an appeal to a larger audience. In works with a shifting set of writers, this interpretation often gets used on characters that were introduced by a new writer that change the work in an undesirable way. This interpretation often gets used on characters that were always part of a particular work's dynamic simply because of the implausibility surrounding them. Again, this is subjective. See the Black Hole Sue page for an in-depth look at this interpretation. See Cousin Oliver , Creator's Pet . Mary Sue as Original Character Protagonist Mary Sue as a Sturgeon's Law Character It can be a shocking reminder that there is a lot more to a story or character than just good , bad and mediocre . As with all of the different qualifiers it only gets really bad when you combine all of them together. When they only have one or two they have a chance at redemption... or be the poster child for it.

Just as there have been many attempts to classify what Mary Sue means, a whole set of definitions to nullify the term have also come up. These are just as subjective as the above. Lampshade Hanging

More common in works revolving around warfare, a Mary Tzu is a character, usually a military commander, with unrealistic tactical abilities. They can pull a win out of any battle no matter how outnumbered, outgunned, or outmatched, can guess any enemy commander's plan no matter how convoluted or how little information they have to work from, and any plan they come up with will work perfectly, often employing Hollywood Tactics , resulting in total enemy defeat and another smashing success for General Tzu's track record. As per the standard Mary Sue traits, such a character is usually treated as a paragon and/or revered by the other characters. Sometimes they come complete with a Big Book of War , possibly self-written To be clear, this trope only deals with unrealistically</ good tacticians. Merely great</ commanders

wouldn't apply, as long as they're fallible, or if they're written well enough to make their victories seem plausible. If it looks like they play Gambit Roulette instead of more sound and realistic plans you've got a Mary Tzu. Another test you can do: Are the character's victories all perfect? Or do they suffer losses and pay prices? Even if there isn't a Gambit Roulette every other victory, having plans that are unrealistically successful, such as losing no</ troops who were sent in to distract heavy fire, that's also a Mary Tzu In some respects, one could argue that this is a case where "show, don't tell" does apply. If a character is simply described as an excellent commander, but the writer doesn't actually describe the tactics involved, it's a lot easier to accept, since the actual maneuvers can be left to Take Our Word for It Sometimes, this character will merely be a plot device, but other times it can be piled onto the Common Mary Sue Traits of your fourteen year old sparkly invincible teenage girl . Those are only worst case scenarios though, as most characters associated with this trope tend to be older men (which sometimes makes them popular despite being invincible) In Real Life, cases exist of brilliant strategists successfully predicting their opponent's plans, only to then dismiss their own prediction as depending on ascribing Mary Tzu-like powers to their enemy, as well as certain commanders having a Marty Tzu status in legend and image if not in actual performance Named for Sun Tzu , a Real Life (maybe) whose The Art of War </ is still used by many militaries around the world and is considered one of the greatest treatises on warfare ever written, as well as Mary Sue , the archetype of the unrealistically perfect protagonist Compare to The Chessmaster or The Strategist , which are for masterminds who push, but don't destroy, Willing Suspension of Disbelief . Also see Hollywood Tactics and Idiot Ball as (like all Mary Sue types), a Mary Tzu's main ability is to make everyone else incompetent so that they look good

If you were looking for our lovable mascot, please see Trope-tan . </ A character, animal or animate object (see Everything Talks) which theoretically represents all that is good and attractive about a product, and which may act as a spokesman for it. Sometimes it may be an anthropomorphized version of the product itself, or of some primary component in it. Mascots were almost mandatory in the early days of advertising on radio and television, but are far less common today, probably because of the growing sophistication (or cynicism if you prefer) of the audience coupled with the perception that they are, really, rather silly. Outside of advertising aimed at children and/or breakfast foods, a Mascot in a modern commercial is as likely to be a subversion as not. An exception would be Japan, where everything has a cute mascot nowadays. Punk bands aren't too far behind in the mascot department:

When it comes to gay couples in media, this is the most common set-up for them. Whichever gender they are, one is very feminine while the other is very masculine For gay male pairings, this means a Manly Gay or Straight Gay character and a Camp Gay or Macho Camp one. For lesbian pairings, a Butch Lesbian and a Lipstick Lesbian . This usually also shows itself in their character designs, with one being shorter and daintier (sometimes even twinky if male) than their One Head Taller , and often more muscular, lover This trope goes back to misconceptions that there must be a "man" and a "woman" in a same-sex relationship. It also invokes Opposites

Attract . Because this trope often based on these misconceptions, it's less common in works written by actual queer people. In real life, a Camp Gay man and a Manly Gay man are unlikely to be each other's type, and any exceptions would be noteworthy because</ they're exceptions. However, fiction only cares about averting this trope when it means pairing two Manly Gays or Lipstick Lesbians (especially for fanservice reasons regarding the latter). Two Butch Lesbians or Camp Gays in a relationship are all but unheard of where the media is concerned For more platonic versions see Tomboy and Girly Girl and Sensitive Guy and Manly Man . Also, see uke and seme for Japanese tropes heavily associated with this concept. See also Gay Guy Seeks Popular Jock , where the gay guy is generally less conventionally masculine than the popular athlete. Depending on what sort of story we're watching, there may be a wedding with a Gay Groom in a White Tux . See also Lover and Beloved , which focuses on age difference but usually has the older partner (the Lover) as being more masculine while the younger partner (the Beloved) is usually more feminine

The Useless Boyfriend trope can be the result of this, but not always. Most likely are Cultural Rebels . In lucha libre</, or Mexican Professional Wrestling , it is common for wrestlers to wear masks, The stock characterization for a luchador</ is a kindly Gentle Giant who loves kids . This is from the story of (Friar Storm), a Catholic priest who started wrestling to earn money for his orphanage. Villainous luchadores</ are pretty rare. Outside Mexico, though, where luchadores</ attract considerably less reverence, they're much more common - big burly dudes with concealed faces are scary, after all, and it's a good way to give your Malevolent Masked Man some exotic flair. This trope goes hand-in-hand with the Cool Mask trope.

Want to show off just how rich, elite, and extravagant your upper class is? Have them celebrate everything with a Masquerade Ball. With bizarre masks and elaborate Gorgeous Period Dress , everyone's identity is sufficiently obscured for any number of misunderstandings. Either Horror or Hilarity Ensues For really grand scale masquerades, the writers may include festivities where the entire city dresses up in grand costumes , a la Carnival/Mardi Gras. Which maximizes the chance for confusion and mingling with people one would normally never know. Hard to avoid in New Orleans

To wit: Mistaken identities, untraceable murderers, believing something is All Part of the Show , a normally-costumed character hiding in plain sight , (or mocked for their poor quality costume) and one of the attendees' masks being revealed to be their actual face </. A court is a... difficult place The refinery on top of the sheer trope goldmine that is the Masquerade Ball is the convention of using aliases to go with the masks. Historically, that can free participants to indulge in era-appropriate 'scandalous' behaviors — and also make a good opportunity for the uninvited to crash. Watch out for the mass robbery by the Phantom Thief and Classy Cat-Burglar , and hope there's a Golden Age Super Hero around somewhere. Charity Ball often combines with the theft, to give the thieves a good way to infiltrate A modern costume party has some of the potential for this, especially if there are disguises abounding. If Fanservice is desired, the modern costume party has a great advantage: Whereas the nineteenth century believed in modesty, the twenty-first century is a time in which you can expect plenty of Sexy Whatever Outfits Even those who vainly deny that Everyone Is Jesus in Purgatory may grudgingly admit the social metaphor inherent in the Masquerade Ball A Sub-Trope of Dances and Balls and a period-specific Sub Trope of Themed Party Has nothing to do with the Masquerade (and can actually mean a break from it, such as For Halloween, I Am Going as Myself)

A.k.a. The Unmasker Punisher Sometimes, magic only works when unobserved by muggles . The moment you try to show off to impress your muggle friends, the Masquerade Enforcer works to punish any Breach of the Masquerade , literally forcing</ the existence of a Masquerade, usually through two means: This is different from a Weirdness Censor , which stops normal people from seeing anything super via an illusion, BUT doesn't punish anyone from using their powers in front of people. By contrast, the Masquerade Enforcer actively punishes any super-person for getting their powers sensed by muggles. Often, it means getting Killed to Uphold the Masquerade . However, other fates including , or Also, this is far more than just an Anti-Magical Faction or a group of The Men in Black . The Masquerade Enforcer is much more like a force of nature, effectively an invulnerable, permanent feature of the setting, like a Lord British Postulate or an Invincible Villain . Any direct challenge will result in complete loss. Fear not! Just make sure that your super-powers don't look like super-powers. A fireball in public would backfire, but a gas main accidentally exploding is fine. In addition, the Masquerade Enforcer can be outwitted, its environmental effects can be evaded, and its agents can be overcome, via the masquerade . Masquerade Enforcers tend to fall into 2 types: Type 1: Villainous. Something wants to murder all super-people, and it's so powerful, it can easily do so. Here, human beings as they are serve as a domesticated animals, unwitting agents for their secret masters. As humanity spreads and increases in power, so do their secret masters Here, "magic" means "whatever threatens the power of the secret tyrants that rule over muggles". Scientifically speaking, this trope utilizes , specifically positive Punishment. Here, whenever a super-person uses their super-power in view of a normal person,

they receive a noxious or aversive stimuli, thus encouraging said super-person to keep their super-powers hidden. In an RPG with a Masquerade, it incentivizes players to respect the Masquerade. The Masquerade Enforcer would be a good way to resolve the Masquerade Paradox , however the author must still address why anyone bothers to use magic at all when it's so much safer not to. In some cases, the wizards don't</ bother, retreating to a Magical Land and leading to stories where The Magic Goes Away and the characters have to deal with it Roman mythology had its own episodes where the gods punished those who revealed their designs: Mythcreants has a couple of articles exploring the Masquerade, where the notion of a Masquerade Motivator is brought up:

The setting, the geography, etc. should somewhat resemble the viewer's. The newspapers will have the same headlines, the cities will look the same on the surface, etc. But... hidden below it all, what's really</ going on is far different. This trope is a tool of the writers to engage Willing Suspension of Disbelief and ensure Plausible Deniability . At its most basic definition, whatever supernatural or extraordinary groups in the series, often an Ancient Conspiracy (or at minimum Monsters Anonymous) of some sort, must hide their existence from consensus reality, and anything is permitted to maintain this: Laser-Guided Amnesia , Brainwashing for the Greater Good , even shaping the natural laws to make themselves Invisible to Normals . If a whole secondary society exists secretly adjacent to the mundane world, that's a Wainscot Society . The in-setting reason for this, when one is provided, is usually some version of " society in general would object to said group's very existence ", more or less plausible according to the writers' skill. The real-life reason is typically that the story is intended to be set in "our" world, and the streets of Anytown USA might seem a bit less familiar if they were filled with vampires and witches and the like who were making their presence obvious. The Masquerade makes it easier for the fans to imagine what it feels like to live as a "normal" person in the setting. Sometimes, especially in more cynical series, Bystander Syndrome or The World Is Not Ready are used to explain why the Masquerade persists, even if the heroes don't necessarily want</ it to continue. On the other end, maintaining the Masquerade usually requires morally gray or outright black choices , like discrediting or killing the Crazy Survivalist and Agent Mulder trying to expose it. Even if the character protecting the Masquerade doesn't turn evil doing it, he's likely to end up isolated. The tensions of their role usually engender a bad reputation and kill off their love life . People who discover the masquerade usually have five choices that present themselves to them. Join the secret world fully and, in effect, "go native". Real-life technology advanced from 2000-2010 or so to make Plausible Deniability much more difficult for modern authors than 20th century writers. Cell phones went from "punchline for comedians to mock rich bankers" to "item nearly everyone has, worldwide", and they have cameras. Rather than beg the local tabloid to publish a crazy story about how Billy was eaten by a werewolf, the witness to some masquerade breach can merely upload the cell phone video of Billy getting devoured to YouTube, with no potentially subverted intermediaries to convince. As a result, this trope has been increasingly ignored or subverted, although it is still a mainstay of the Urban Fantasy genre. One variant seen occasionally is wherein the public is deceived with * wrong conspiracies - everyone knows that some hidden group is secretly ruling the world, but the real conspiracy uses fake conspiracies to distract the public from the

scent. The Men in Black may even spread true rumors with the intent that a Crazy Survivalist will deny them. Without enough evidence to unravel the conflicting stories, the general public only gets a general idea that something is up, and might wrongly blame nonexistent vampires for things that the Illuminati did. Other times, it seems like the Masquerade is so paper thin that anyone with two brain cells to rub together should see through it, yet the world at large remains oblivious. If that happens you know you're dealing with an Extra-Strength Masquerade . If there is no reason for magical beings to maintain a Masquerade (whether they are so powerful that Muggles are no threat, or friendly enough that there is no need to hide), if in fact it would make more sense for magical folk not</ to have a Masquerade, then you have the Masquerade Paradox . Taken even further, if the Masquerade is broken in front of the general public with any regularity and yet the public never seems to acknowledge it, then there is likely a Weirdness Censor facilitating that it remain masked. In addition, some Masquerades have a Masquerade Enforcer , wherein reality itself, or some equally invincible force, punishes those that try to go public. Usually though there's Safety in Muggles , with warring factions inside the Masquerade refusing to go into war in the open. Covert warfare, though... If the Masquerade does manage to get blown wide open for everyone</, The Unmasqued World may result. If the masquerading beings aren't remotely human looking, they will have at least one means to pose as human . The word "Masquerade" appears with this meaning in the 1958 Robert A. Heinlein novel Methuselah's Children </, as the code-name which the extremely long-lived Howard Families apply to their efforts to conceal their longevity from ephemerals (the short-lived three-score-and-ten-years majority of the human race). A later example appears in the Tabletop RPG game Vampire: The Masquerade </, published by White Wolf Games since the early 1990s (and its short-lived TV series spinoff, 1996's Kindred: The Embraced </). "The Masquerade" referred to the necessity for vampires to hide their existence. A Sub-Trope of Living a Double Life . Not to be confused with Masquerade Ball , the short-lived (1983-84) television show </, the Webcomic Masquerade </, the Discworld novel Maskerade </, George Benson's song Masquerade</, Kit Williams' Masquerade </, the character from Bakugan </, or the film Masquerade (2012) </ .

The Masquerade is a common tool in Urban Fantasy stories — all powerful magical beings, heroes and villains alike, are living in their own Wainscot Society , hidden from the world at large. But this creates a bit of Fridge Logic : why is this necessary if the magic users are so much more powerful than everyone else? The author makes a fantasy world of incredibly powerful beings coexisting with Muggles , but simultaneously has them afraid</ of Muggles to the extent that they keep themselves hidden, as an explanation for why we never see them. For many audiences, it comes across as an Absurd Phobia . This is the Masquerade Paradox . It's a real problem for Urban Fantasy writers, who have come up with a number of different explanations. From a Doylist perspective, it's a Necessary Weasel if they want to make a world Like Reality, Unless Noted . But In-Universe , they've come up with a number of different possible explanations for why a Masquerade might be necessary, all of which have their own issues: As always, Tropes Are Tools , and any sufficiently skilled author can write around the Masquerade Paradox. The characters may question the Masquerade, or the magical rules of the setting are particularly conducive to it, or the story is just so entertaining that nobody stops to question it . We've even got our own advice on how to do it at Write a Believable Masquerade . The Masquerade Paradox is distinct

from the Extra-Strength Masquerade , where the Masquerade stays in place even when something happens that should have broken it . The Paradox describes the problem of why the Masquerade exists to begin with. As much as a hug and/or a kiss may be used to console a loved one, sometimes it's just not enough. What can be a nice alternate way to express that physical love without involving becoming intimate? A nice massage Whereas there are massages that are either seen as painful due to either malice or inexperience from the other party or that do lead to sex , this one lies in the middle of the road by being tender and showing affection without necessarily going any further. A crossover that involves characters from more than two works of fiction . More often than not, this is a mash up of series which do not have a strict sense of continuity or a clear Universe Bible . To lessen canon-faulting , especially with series that do have strict continuity, a new 'neutral' setting is made that offers equal footing for all the characters. Sometimes characters are anthropomorphise in various ways so that they can interact better. It also becomes more viable the farther you get from canon, such as one-time TV specials and especially video games. As Story Arcs have become more prevalent, this practice has somewhat lessened, with shifts to strict Verse building and explicit references. This rarely occurs in live action shows, unless a production company can be formed that holds copyrights to everything, or where Public Domain Characters are involved. Thus, this is much more common in animated works — although you can generally expect The BBC to pull one out of somewhere when Children in Need or Comic Relief rolls around This trope has become increasingly common in video games, especially those involving both licensed and original properties. These games, depending on how far or how deep they mine, can have interesting effects on the fiction chosen. Many long-gone and/or forgotten Humongous Mecha shows, for example, often get a new lease on life, or even a brand-new sequel or remake, after making an appearance or two in a Super Robot Wars </ game. Similarly, the Fire Emblem </ series was finally brought over to the US to great success after two of its characters made an appearance as unlockable fighters in Super Smash Bros. Melee </. Crossing over with Real Life , Racing Games with licensed vehicles (such as Forza </, Gran Turismo </, Need for Speed </) are always this trope, due to the fact multiples of vehicles are licensed from wildly different manufacturers for use in-game. And it should be clear that this trope is trivially easy to pull off in Fan Fic , since fan-fiction is almost always unlicensed and unofficial, meaning the creators are free to put whatever characters they want, from as many (often wildly) different universes as they want, and however they want into their stories without worrying about those pesky trademarks and character licensing issues getting

in the way. That said, it's much rarer to pull off this trope well </ in fan-fiction. The name is a pun on the video game genre of " massive(ly) multiplayer online game ". This trope is Older Than Feudalism . The Argonautica</ by Apollonius Rhodius (3rd century BCE) features nearly every ancient Greek mythical hero all going on a quest to find the Golden Fleece. A character who can be anybody during the course of the story. Giving a character this power and concealing its use from the audience for a "reveal" is very hard to pull off They may rely on extensive training and a vast collection of wigs, clothing, and stage makeup to pull off the fakery. Or, their powers could be Phlebotinum -driven, in that they have the physical ability to alter their very shape and size to perfectly match that of the person they are duplicating. In animation, this is often done by having said master of disguise go into a tornado-like spin to don or doff the disguise Expect them to be compared to chameleons (even if real chameleons can't hide themselves) and to be crucial to an Impossible Mission Their allegiances can go either way. Sometimes they're villains, sometimes they're heroes (though not usually Big Bad or The Hero themselves), and very often they're just Wild Cards See also Convenient Color Change ; Latex Perfection ; Master of Illusion ; Shapeshifting ; Wig, Dress, Accent ; We Will Not Use Stage Makeup In The Future ; The Power of Acting ; Animal Disguise . Most villains (and the occasional hero, but this is largely a villain power), if given the chance, will employ magic or mechanisms to confuse his or her enemies and render them vulnerable, but a Master of Illusion will go beyond merely using such trickery as a tool. Instead, he or she will hone it into a fine art form; milking it for as much trickery, espionage, and/or personal pleasure as they can derive from it. Such powers are usually psychic in origin, although they can also be technological as well, creating Holograms which can be especially dangerous when they can make them solid (holograms also carry the bonus of being able to fool electronic surveillance). Despite lacking obvious means of attack like with Pyrokinesis and Telekinesis , they can use a Faux Flame to burn, though resolute heroes may resist , or making a gaping hole seem like an even floor . A common variant is for the Master of Illusion to trap the hero in a virtual reality simulation over which the villain has complete control. Of course, death or injury in the simulation will usually mean death or injury in real life , so any hero thus ensnared will have to be careful. Most Masters of Illusion aren't content to just let their VR deathtrap program

play out by itself - what would be the fun in that</ after all? So they'll frequently appear in the simulation, usually as a cackling, monstrous tormentor who plays cat and mouse games with the hero and who mocks their every step. If the Master of Illusion traps a hero in a Lotus-Eater Machine ,—or in a simulation of their ordinary, everyday life—they'll frequently appear as an ally of the hero , using this form to distract the hero from discovering their true whereabouts, or as part of a ruse to trick the hero into revealing some important confidential information. In more insidious cases, the Master of Illusion will appear to the hero as a romantic interest , either one the hero knows, or one that's been created whole cloth out of the hero's own memories and desires. This gives the Master of Illusion the chance to screw with the hero's mind (and body, depending on how far the writers let things go.) Masters of Illusion really needn't bother with such elaborate setups. It would be easy enough, after all, to trick an enemy into killing himself : use some variant of the " This Is Not a Floor " trick; destroy a spaceship by having its crewmembers press the wrong buttons and steer it into the nearest star; kill the heroes by having them confuse each other for enemies and fatally attack each other.. But again, what would be the fun in doing something as simple as that? Masters of Illusion, having Trickster personalities by the very nature of their powers, will usually not be able to resist playing with their prey. Of course, this could—and usually does</ - give the heroes the time and/or chance to think up a way to counter the Master of Illusion's powers, or leave clues that they are in an illusion in the first place, such as a Blank Book . Once the villain is destroyed, the world they create usually dissolves into nothingness - provided the defeat or death of the Master of Illusion wasn't part of the illusion itself...</ And really, as a hero... how would you know?</ Could you ever really be sure that you defeated the Master of Illusion and escaped? Why is Schrödinger's Butterfly flapping nearby? (Cue an echoing " Mwahahahahaha. ") Interestingly, the Master of Illusion will very rarely turn out to be the Big Bad - this is because they're far less interested in ruling people than they are in just screwing with them. For some reason, the Big Bad who employs a Master of Illusion never worries that he himself</ might be enthralled or under their control. (Although if he were, would the Master of Illusion allow him to experience any doubts?) Also, while the Master of Illusion is usually</ villainous, heroic examples are hardly unknown. If the Master of Illusion is the Big Bad , their power over illusions may become borderline Reality Warping . Indeed, it might actually be their goal to "upgrade" from faking control of reality to actual control. On that note, sometimes even a "mundane" Master of Illusion will be able to make their projections "solid" or "real" in some sense, which as noted effectively makes them the budget version of the Reality Warper . These abilities will usually come with limitations however, most often No Ontological Inertia for the created constructs, a greater fragility than the constructs realistically would have (to physical force or especially disbelief), and/or some limits on what can be made real (Belief might make a sword wound or a Faux Flame Fireball as deadly as they seem, but unless you're in a cartoon world , forget about an illusory bridge fooling gravity or a tunnel overcoming the) Note: This trope doesn't apply to villains who occasionally employ illusory tricks to ensnare enemies. The Master of Illusion is a specialist in generating manipulative hallucinations, and will usually possess no other powers apart from that. (Although when you have the ability to trick the Mighty Glacier into thinking that his 6-foot long claymore is a

flyswatter and that a poisonous mosquito has just landed on the back of his buddy's neck, who needs</ other powers?) Fire and explosives don't mix. Even the smallest flame can cause a room full of bombs to detonate in a matter of seconds. As such, when a character uses a flame in one of these rooms, expect that room to be blown to bits ... with them in it. Sometimes, they may do it without realizing where they are. Upon lighting a flame, expect them to realize how much trouble they are in . However, there are also plenty of moments where a character will light a flame knowing exactly</ where they are, either to deal with something else that is also inside or Explosive Stupidity . A trope commonly found in animation; two or more characters, usually hiding from something, have found themselves in an entirely pitch-black environment. One of them remarks on or complains about how dark it is. The other strikes a match — maybe even their last match — but the sudden burst of light reveals that the characters are, in fact, standing in the middle of an amazingly dangerous environment, be it a room filled with monsters (who have, up until this point, been remarkably quiet) or — to give the danger an added boost of irony — a room packed with an unimaginably large store of explosives (especially if the "match" turns out to be a Dynamite Candle). Guess what happens next? Bonus points if the revealed monsters (or even the match-holder himself) blow out the match, implying that someone's going to be in a lot of pain while conveniently preventing the viewer from actually seeing it . Subtrope of Lightswitch Surprise , which covers any surprising sight when a light is turned on. A likely to happen when lighting a Match in a Bomb Shack . In Real Life , this is why matches and lighters are strongly advised against as immediate emergency lighting, especially after a disaster such as an earthquake or tornado where there could be burst gas lines (which won't even give you the warning of a labeled dynamite box before they explode and incinerate anything in range), scattered flammable chemicals such as gasoline and paint thinner giving off explosive fumes, or low-hanging easily combustible materials.

A character starts out</ trying to help one character hook up with another , but ends up falling in love with the person they were helping (or worse, the person they're trying to help them get</), seriously undermining their own efforts Why? Perhaps they felt unworthy and just wanted their beloved to be happy but in the end, just can't resist their own feelings. Or maybe their intentions were pure at the beginning, but the excessive attempts to help their target caused feelings to bloom Alternatively/Additionally, the hopeless and lovestruck individual employs the help of the matchmaker to help him/her hook up with the object of their (sometimes superficial) affections...only to later on find themselves falling deeply and genuinely in love with the matchmaker themselves. This usually occurs if the matchmaker and the suitor spend a lot of time together, perhaps practicing how to do the approach or even getting to know their matchmaker a lot better. If this happens, the suitor often reveals later on that his/her feelings have shifted to the matchmaker in question Sometimes overlaps with Wife Husbandry when an older man tries heroically to pair a younger woman off with men her own age, only to fall for her himself. This trope may result in Matchmaker Failure Love Triangle -arity ensues. See also Playing Cyrano , another intermediary type who generally isn't in love with the target

The Matchmaker lives to get people together. They'd love nothing more than two watch a couple they've set up walk off into the sunset. However, things don't always work out how they've planned. Maybe they've misjudged the couple. Maybe the two had an Incompatible Orientation . Maybe the two have so much in common that they'd rather be with someone else . Whatever the case, The Matchmaker has failed to bring them together. Reactions to this failure may vary. The matchmaker might just shrug it off or getting very angry, depending on their investment in the relationship.

That's not even getting into how the couple themselves react to this meddling Matchmaker Crush could be a reason why the couple doesn't work out. Thinks Like a Romance Novel could be another cause of this, as relationship aren't always this straightforward. Things get hairy when Harper and Charlie discover that Charlie's boss, Rick, is cheating on Harper's boss, Kirsten, with his ex. Eventually, Charlie personally sabotages Rick and Kirsten's relationship when he realizes that by allowing their relationship to continue, he is compromising his own ethics.

Emma </ : Emma loves matchmaking, spending a good deal of the novel trying to set up the people around her with each other. Yet, the only time she's successful is when she sets up Miss Taylor and Mr. Weston. Every other one is a failure.

Blackish </: In one episode, Junior asks his sister Zoe if she can help set him up with a girl he likes. Zoe scoffs at this, finding the girl too nerdy , and tries setting him up with a more attractive girl. It looks like she's successful at first, as Junior lands a date with this girl. Then he reveals the only reason the girl went out with him was so he would edit a video for her. Zoe is actually more upset about this than Junior, because she took pride in her matchmaking skills.

However, they have no clue what people actually like</ in each other, so those pairings are usually unfulfilling, and many go insane or kill their partners to escape their alleged " One True Love ".

Questionable Content </: Claire tricks her brother Clinton into visiting his crush Emily at her workplace so he has no choice but to ask her out. She turns him down. Outside, he for manipulating and publicly embarrassing them both.

The Gravity Falls </ episode "The Love God" has Mabel try to cure Robbie of his depression by stealing a Love Potion from a visiting

Love God to set him up with Tambry. This backfires horribly, as it causes Wendy's group of friends to break up: Wendy hates Tambry for dating her ex-boyfriend, while it turns out Nate had a crush on Tambry that he told Robbie about, and had promised he wouldn't try dating her until Nate asked her out first. Mabel desperately tries to fix it using an anti-love potion, but winds up making things worse and invokes Love God's wrath. In the end, it's Thompson who manages to convince the group to stay together by deliberately humiliating himself in public , while Robbie and Tambry stay together as a couple.

Sometimes, when a woman dies in childbirth , the child is seen as the mother's last gift to her surviving family . But then there are these</ cases, in which the child is blamed for the mother's death Typically, this involves being hated or otherwise ill-treated by their father , their (maybe) Resentful Guardian . Other relatives are free to join in, though. Who's actually to blame for the death is completely irrelevant — there are too many historical cases of Death by Childbirth caused by doctor screw-ups (and Streptococcus pneumoniae</), but if this trope is in play the kid's still getting full blame. Likewise, don't expect anyone to point out that the father is much more blameworthy for the mother's death than the child, as he's the one who impregnated her in the first place. Also, keep in mind that this trope also applies when only the child blames themselves for "killing" their mother Needless to say, this child will commonly grow up to be The Unfavorite . Some societies are thought to exist as matriarchies, where women hold power and rule over society, both in modern day and historically. However, in fiction, the first known fictional matriarchies to be described in any detail were called "gynæcocracy", and was hypothesized by Aristotle and Plutarch , but Amazons go back even further, to Homer . They usually vary widely from supposed real-life matriarchies, and can be considered separate. The treatment of matriarchies varies from author to author and by time period, but they tend to follow a few major patterns. Identical to patriarchy, but with the genders flipped . Men are treated as lower class citizens, often used for free labor and subjected to Arranged Marriages . Commonly used to illuminate human patriarchies and make a point about gender inequality by asking, "what if it were the other way around?" Note that if the society is ruled by a queen, the succession of the crown has to be either solely or at least preferentially down the female line — otherwise it's just Heir Club for Men or (in the case of equal primogeniture) an aversion thereof. Also note that a society may be matrilineal (descent is traced through the female line), matrilocal (husbands join/reside with their wives families), or matrifocal (where fathers have little or no role in family life and child rearing) while still being

a patriarchy. Matriarchy is solely about women having power in government and society. A Lady Land will generally fall under either the Patriarchy Flip or the Straw Matriarchy type. Many instances of Bee People are matriarchies, due to the social structure of real life bee colonies.

Fallout: Equestria </: As in canon , Equestria was ruled by two goddesses and most of the ponies in charge were mares. During the war, this only increased; while many companies led by stallions rose to power, ultimately the ones on top were the six Mares of the Ministries, appointed by Princess Luna to win the war however possible. Because of this, every Stable was ruled by an Overmare, the sole exception being Stable 24, which had an Overstallion. Since the Stables were social experiments to try to figure out where Equestria went wrong, it only made sense to see if stallions could do better. They didn't In Out-of-Placers </, the Yinglet species is a fairly complex example for biological reasons. Females are both rare and less afflicted by the species-wide Attention Deficit... Ooh, Shiny! problem that keeps most male Yinglets from ever rising above the roles of spear-fodder and/or general scavenger. They also have a lot of control over their own reproductive processes: As they mate with multiple males, they can select specific traits from each partner that they want to reinforce and attempt to breed them into the next generation of eggs. The Matriarch of an enclave is in charge of selecting which males get to mate with which female as well as the primary keeper of knowledge, giving her a huge amount of power over the council of Patriarchs (the males with the most skill and experience in their specific fields) who oversee the day-to-day operations of the enclave as well as the overall direction of Yinglet society. Interestingly, this system was set up by a male</ Yinglet, a legendary hero figure who designed enclave society to minimize unrest (before the enclave system, male yinglets spent a lot of their time fighting each other over the few available females) and maximize the efficiency of their directed breeding ability

That trippy raining code in The Matrix </ that is constantly changing has pretty much become synonymous with high tech computing, VR environments, AIs, and Robots. Originally, it represented the ever changing nature of the Matrix and the overwhelmingly complex incalculability of it all. So when Neo starts seeing things in Matrix-Text-O-Vision, it represents him seeing and being able to manipulate the underpinnings of reality. Nowadays, it's mostly used to convey "Look, high-tech computer with arcane, indecipherably alien power and mentality !" or as a Stock Parody for The Matrix</ . "Traditionally", the Raining Code will be green, flow from top to bottom, consist of normal letters and numbers with what looks like Japanese kana or other strange runes, and change text mid-fall. Newer adaptations will likely use a different color, direction for it to scroll, and text palette. Note that the original Matrix</ version used katakana characters and arabic numerals, mirror-flipped to obscure their shapes. These tags seen on mattresses and pillows are the subject of numerous gags. Most commonly they involve a goody two-shoes character who accidentally or intentionally removes one, and then assumes they're in danger of going to jail and ends up on the run. Note that in modern times, that part "except by the consumer" means that it doesn't even apply to those who are so worried about it. Even if it did, it wouldn't be nearly so much of a crime as people say it is. (Even if the authorities didn't have bigger things on their plate, like Arson, Murder, and Jaywalking , how would they know?) However, in the past, this phrasing wasn't there, making the worries slightly more legitimate The reason there is such a warning tag is that the tag lists such information as the materials used in making the mattress and the country of origin. Especially, that they are "new material only" — because of historical problems of furniture being stuffed with disease-ridden rags. Nowadays, it's a question of whether or not the mattress contains any allergens. Thus, it is illegal for the seller</ of the mattress to remove the tag, in order to protect the consumer. The words "...except by the consumer"</ have been there since at least the 60s, making this a Discredited , Dead Horse Trope Can overlap with Poke the Poodle , Felony Misdemeanor , Serious Business , and Jaywalking Will Ruin Your Life There is, however, one actual downside to tearing off the mattress tag: doing so voids the warranty

This is a trope that doesn't appear much in fiction, being pretty much exclusive to Fandom . The basic idea is that the more seriously a character acts, or the more seriously a story takes itself, the more mature it is For example, if a Plucky Comic Relief character has a Let's Get Dangerous! moment and spends a good portion of an episode, film, or book being deadly serious, odds are someone will hail this as the character "finally maturing." And when Plucky Comic Relief guy inevitably goes back</ to making lots of jokes, someone will complain that the writers are regressing the character. While rarely said outright, the implied idea behind this is that having a sense of humor is a sign of immaturity, and that a mature character will act with grim seriousness at all times. " This Is Reality " will often be invoked This same attitude can apply to stories as a whole, with comedies frequently seen as being less mature works than their dramatic counterparts, even if the comedy also</ has some dramatic moments Related to True Art Is Angsty and Comedy Ghetto . A leading cause of Darker and Edgier . Fans of this mindset generally want their show to be on the 'Serious' side of the Sliding Scale of Silliness vs. Seriousness all the time, regardless of whether or not it's appropriate, and are often found saying " Silly Rabbit, Idealism Is for Kids! " On the other hand, overplaying this may lead to denunciation as being a Wangst or in worst case scenario, causing complete apathy A common subversion of the trope is to play it so straight that the characters come off as Comically Serious ; the inappropriate or incongruous seriousness becomes laughable in its own right

Normally, it's easy to recognize when a romance arc ends with a Relationship Upgrade or an outright Happily Ever After . The tale may end with True Love's Kiss , romantic Holding Hands , an embrace, a mutual Love Confession or proposal, or even a wedding. Babies Ever After may ensue, particularly in the credits. What about those romance plots that end on an ambiguous note? What if both parties seem interested, and there's no definitive "no," but there's no kiss, no embrace, and no wedding? This can occur when a story ends with the tentative start of a new relationship, rather than with the culmination of the relationship. In some cases, separated characters are reunited, or a quarrel between two romantically interested characters is resolved, but it isn't entirely certain where the relationship is going to go. Instead of a "yes" or "no" answer to Will They or Won't They? we get "probably" or "kinda sorta maybe." Unlike some other forms of No Romantic Resolution , a Maybe Ever After ending hints at or implies a successful conclusion to a romance arc. However, the degree of resolution can vary widely. At one extreme, a Maybe Ever After ending can strongly imply that the characters in question are entering into a long-term relationship, coming just short of explicitly indicating that. At the opposite extreme, there may be just a hint of something romantic developing between the characters. When adding examples, don't forget that there must be a reasonable</ likelihood that the characters in question would end up together. Wishful thinking doesn't count: if you can't point to specific evidence of a potential romantic relationship, leave it out. Likewise, there must be at least some degree of ambiguity about the status of the relationship: if the ending leaves absolutely no doubt about the fact that the two characters are a long-term item now, the example belongs in Relationship Upgrade , Last-Minute Hookup , Happily Ever After , or They Do rather than this trope. This is a common ending trope in anime adaptations of manga, where it may manifest as an alternative to a Gecko Ending . In Western literature, it may function as part of a Sequel Hook . Maybe Ever After is the subtrope of No Romantic Resolution , which may offer less resolution or may otherwise lack

the hint-of-a-positive-ending that characterizes Maybe Ever After. This might also be the conclusion of an storyline involving an Implied Love Interest . If your example involves secondary characters whose relationship involves little or no romance arc to speak of, it might be a case of Hooked Up Afterwards . See also Belated Happy Ending , where a sequel clears up the ambiguity of a Maybe Ever After, as well as Downtime Downgrade , where the resolution is unraveled in between the first work and the sequel. Contrast with Did Not Get the Girl , which may lead to a Bittersweet Ending . .

Sometimes you track down the monster and pull the rubber mask off to reveal the janitor . Sometimes you try that, and the monster gobbles you up . And sometimes you don't get either way. You are left with nothing except the tracks, the sightings, and hypotheses. Two characters can argue for the alternative explanations, supernatural or naturalistic, without either one of them carrying the Idiot Ball . How this is done affects any reaction to it. Sometimes it invokes The Chris Carter Effect or Kudzu Plot . Sometimes it is an eminently satisfactory way to create an open ending (generally when the question has not been the focus of the plot). A common effect is to offer a mundane explanation of how something could</ have happened, but not in fact establish that is how it did</ happen. (Such as never trying to eliminate the purported cause and establish that the effect does end.) The verifiable presence of magic in the world does not preclude this trope; in Fantasy works, this may come into play for divine intervention, or rare forms of magic (vs ordinary forms as well as mundane). Or some magical things may be clearly magical, and others more ambiguous. Conversely, the presence of high technology or other non</ -magical special powers extends the possibilities of this trope by allowing a greater range of "mundane" phenomena. It can also effectively come into play when characters ponder whether an effect was natural or extremely high tech. Usually the author won't confirm or deny a solution. If they do, see Doing In the Wizard (or Scientist), Jossed , Magic A Is Magic A , all of which tend to exclude this trope. Often comes into play with Angel Unaware , and does when characters say Because Destiny Says So about situations that could be interpreted as Contrived Coincidence . Any apparent Dead Person Conversation (particularly if Talking in Your Dreams) may fall under this, if the conversation contains nothing that the character could not have known. Prophecies Are Always Right does not preclude their looking like dumb luck. Sub-Trope of Riddle for the Ages . Super-Trope of Santa Ambiguity . Or Was It a Dream? is related, but isn't a subtrope, since not every Or Was it a Dream? scenario involves magical things happening within the "dream". Compare Ambiguous Ending ; and (from The Other Wiki), a genre of fiction typified by supernatural phenomena that is not explained to the reader or the main characters, hinting at a magical occurrence. Also compare Through the Eyes of Madness , where the audience sees evidence in favor of the weird explanation, but remains unsure of whether it's real or not because of the possible unreliability of the narrator . Contrast Real After All , which often involves a mix of mundane and magical explanations, but usually makes it clear at the end which incidents were which (at least to the audience, Gave Up Too Soon is common for the characters). This may also happen in adaptations. The original character may have a certain ability to do a supernatural thing, but the adaptation never openly states that he has such a power. And yet, at some point something happens, that

may suggest it, but with no clear explanation. Those familiar with the source work may be free to consider it a Mythology Gag to the original work, and others may suspect a mundane explanation for it. See also Domino Revelation , In Mysterious Ways , and Magic Realism . If it's subverted by revealing that some dangerous magic was actually mundane, see Shock-and-Switch Ending .

A well known corporation has just come out with an amazing brand-name product. They've spammed it over every media channel, and everyone is using it because of its "health benefits" Obviously the world is coming to an end, if consumerism has gotten to that point. It can't get any worse than this, right? Wrong! For whatever reason, the product in question May Contain Evil, and that "may" is silent So now people are mutating into evil monsters and are on the loose, the rest are being mind controlled and dying left and right, and the product is insanely addictive. Remember, ALWAYS read the small print , particularly the ingredients list This plot often occurs in Wake Up, Go to School, Save the World -type shows, as it easily connects a mundane plot (Drinking/peer pressure/vanity ...) with an adventure plot (aliens/zombies/mind control...) The effect is often connected to the product to suggest a message that is then turned up to eleven , such as a card game that makes people so enthused they forget to eat, or a rock band's music literally turning people into murderers. Whether this message remains reasonable outside of context, or even applies at all , varies Depending on how scary the evil is, and how familiar the product is to the kids in the audience, this can easily become Paranoia Fuel . Or, more often, Narm Compare No Product Safety Standards , Sigil Spam , Paranormal Mundane Item and Evil Tastes Good

It refers to a romantic relationship where there is a drastic</ difference in age between the two participants. These seem to be less common in modern media, perhaps because some now perceive them to be Squicky . However, they still crop up from time to time; they're very common in soaps in particular. The ways in which these relationships can occur in media can vary: Teachers and students . (The teacher must be significantly older than the student.) Generally, the man is the "December" (elder) and the woman is the "May" (younger), though it can happen the other way around. This can sometimes be a Double Standard in Hollywood, as while older actors get paired up with younger actresses, . May lead to cases of Ugly Guy, Hot Wife if the years haven't been kind to him. This is the version of the Intergenerational Friendship . It is the Real Life , mundane version of the Mayfly–December Romance and the Sub-Trope and extreme version of Age-Gap Romance . Due to continued confusion over the applicability of this trope, here are the criteria that need to be satisfied to qualify for inclusion here: , because the younger one is in the spring of their life. a place to put any relationship which feels Squicky due to age differences. 30-year-olds dating 13-year-olds are not this trope. This is Truth in Television , of course, but wasn't nearly as common in the past as some would have us think. Most couples in pre-modern days couldn't afford to marry until both the man and the woman had saved up enough to set up a household, and that could take years; it's therefore perhaps not surprising that the average ages at marriage for both men and women in Elizabethan England are identical to those in 21st century America where most of all married couples are within two to three years of each other. (It was even worse in medieval times when daughters

would have to work for years to save up the customary fee owed their father's lord upon their marriage.) Most May-December marriages in pre-19th century times were among the aristocracy, whose prominence in the history books is balanced by their small numbers (fewer than 0.5% of the population of Tudor England). Victorian-era historians, however, twisted the narrative, going as far as to destroy and deface records, to justify child marriage. At best their scholarship was unconsciously biased by their desire to justify their own cultural norms; at worst they deliberately lied. See also Christmas Cake , Likes Older Men , and Likes Older Women . Wife Husbandry is when someone intentionally</ raises a younger person to be their spouse. When the December is a woman, she may be Mrs. Robinson . Compare December–December Romance for romantic pairings between older characters and Merlin and Nimue for non-romantic partnerships with a large age gap and a gender difference. Often the result of an Unequal Pairing . Compare Age-Gap Algebra when a mathematical formula is proposed for determining when a romance is this (and for which the criteria listed above are one example).

Large disparities in lifespans between characters can be problematic, especially if their relationship goes into the romantic field. This plays on the very mundane fact a character will probably be long dead before another is, and the emotional issues it raises. How much this is alluded to is usually related to how concise the story which addresses it is. The most obvious way to address the issue is to even out the age-bracket on either end. In older fiction, characters may be granted immortality, but recently the reverse, making the immortal mortal, is more common. For the Half-Human Hybrid progeny of these pairings, it's even harder to find a compatible mate lifespan-wise, because generally their lifespan is some sort of average of their parents'. They'll live longer than the mayfly, and shorter than the immortal. Such individuals tend to be rare, so there's no option with "just the right amount of lifespan." If the immortal is a vampire, they have an obvious way around this, but this has a tendency to piss off the would-be mortal or turn them evil, as opposed to the Friendly Neighborhood Vampire the original was. Can raise Fridge Logic issues in an Anyone Can Die franchise with a high body count, given how few characters in such series even get the chance to live out a full lifespan. Anime is known for its treatment of the subject due to the Japanese concept of mono no aware</ ; roughly, the beauty of transient things. Subtrope of Age-Gap Romance . May–December Romance is the more mundane version without the mayflies . Compare Reincarnation Romance . Contrast Eternal Love , where both partners are immortal or at least long-lived. See Mayfly–December Friendship for the platonic equivalent. May be a reason for Who Wants to Live Forever? .

One of Clive Barker 's Abarat </ books has an unusual twist on this idea: on the island of Nonce, where the heat and storms cause the rainforest there to grow and decay incredibly quickly, a man has fallen in love with a plant.</ Plant-woman. However, her life is very brief compared to his (a few hours, at most, with the island's weather), but she also always produces a seed that is a fresh new version of herself. So he spends his whole life clambering over the island all day, looking for her newest sprouting, even though she won't remember him, so that for however brief, they can be together.

TV Industry jargon: When an actor leaves a show, and the character they play is then Killed Off for Real , they've been McLeaned. As for why a TV show might do this rather than simply putting the character on a bus , there are generally two reasons: : The odds of the actor returning to the show are next to nothing, and killing them off gives the writers a chance to inject the series with some drama. : Relations between the actor and the show people are somewhat contentious , often as a direct result of the actor leaving, and the writers kill the character off either as an act of "revenge" more final than being Put on a Bus to Hell , or as a way of preventing the actor from ever being able to return to the role (though it could still fail to do so if the situation changes, due to the First Law of Resurrection). The trope is named for McLean Stevenson , and the death of his character Colonel Henry Blake after he left M * A * S * H </. This event was not primarily about retaliation, although the production staff was annoyed by Stevenson's leaving even while co-star Wayne Rogers was wriggling out of his own contract. Ironically, Rogers' character, "Trapper" John McIntyre, was merely Put on a Bus , being sent home between seasons, despite Rogers leaving on worse terms with more animosity between him and the production staff. Apparently, Rogers held out his final decision up until the series entered its hiatus between seasons, which is what spared his character from suffering a similar fate to Col. Blake. The main reason was to bring home the idea that war can take anyone at any time and to evoke a strong and unrehearsed response from the cast , most of whom would first hear of the character's fate minutes before the scene was being shot. This isn't to say that the exact manner</ of Blake's death wasn't just a bit vindictive. If the death is particularly awkward, anticlimactic or mean-spirited, it's a case of Dropped a Bridge on Him . When it happens off-screen (especially after the character was already written out in a non-deadly manner), it's a Bus Crash . If the actor specifically requested to be killed off rather than written out in some less permanent way, it's Killed by Request . If the actor has not simply left the show, but life altogether, then this becomes The Character Died with Him and the way the character is written out is generally very respectful . The opposite of Character Outlives Actor . As with all Death Tropes , beware of unmarked spoilers.

Ninjas are cool . It's a simple, straightforward fact that, unless you are a pirate , seems to be universally recognized. They're also very, very Japanese. However, just as McDonald's came out of the United States and conquered the world, so the ninja have set up local branches all over the globe The takes advantage of the comedy potential inherent in the non-Japanese ninja. Imposing the "ninja" template on a different culture can result in anything from ninja-waiters to ninja-doctors ... especially if you invoke a national stereotype or two It's also a convenient visible shorthand. Ninjas have a reputation for being killing machines with nearly supernatural stealth. Showing someone like this conveys the idea without the need to explain it. Plus, people tend to think a ninja suit quite suited to sneaking about, unless you stand in plain sight . In real life... not so much. The traditional black suit of ninjas is actually horribly conspicuous, even at night. You want mottled grays for night stealth, solid black just silhouettes you. The "traditional" ninja outfit isn't even the traditional garb of actual ninjas, who would actually have worn the everyday clothing of some low ranking nobody who had business being where they needed to go. It's the traditional garb of Japanese stage hands</ and signalled to theatre audiences that they were

supposed to ignore them. In some plays, one of the "stage hands" would suddenly jump out and shank someone — thus revealing themselves to be an actual ninja actually there to shank someone Sometimes it's implied or stated outright that ninja started</ in Japan, but have since secretly branched out; after all, what do a group based around infiltration and stealth care about national borders? This can be justified , however, if the ninja in said media have moved to another country and then passed ninjitsu on to the locals. Something similar has happened before in real life: Japanese Judo was brought to Brazil in 1914, and developed into the style of Brazilian Jiu-Jitsu . Can also be justified if the McNinja in said media learned ninjitsu from actual ninja manuals which they have (somehow) obtained Characters who are non-Japanese but explicitly were trained in ninjitsu by real Japanese ninja usually</ don't count as McNinja Fantasy worlds that have McNinjas might also be a case of Culture Chop Suey . The practice of medicine has long been one of the highest-status professions around; what, after all, could be more admirable than healing the sick? In comedies, the high status attached to physicians is always shown to loom large over those who come close to, but do not quite attain, the sacred mantle... such as other health professionals, doctors in non-medical fields, and sometimes even medical doctors whose specialty is perceived as less challenging or useful than others. Similarly, a nurse has a different set of skills than a doctor and they don't like to be confused for one. Of course in some Real Life cultures like Judaism (at least in America), a doctor is often considered to be a preferred profession by the family , so this has some basis in reality. See also Not That Kind of Doctor . Compare Hard on Soft Science .

Two lovers run toward each other in slow motion across a meadow filled with flowers and butterflies, arms spread, totally suffused in the joy of their reunion, and occasionally spinning around like a roundabout , as or Pachelbel's Canon in D (or some other piece deemed romantic) plays on the soundtrack This trope hasn't yet passed into Dead Horse Trope territory (creators can still play it straight to great effect), but even those who love it usually can't resist poking a little fun at how corny it is. Sometimes subverted by interrupting one of the lovers in mid-stride (fell, distracted by bees, picked off by sniper fire), making one lover violently allergic to all the pretty flowers, having the lover run right past his beloved because he wants whatever is behind her, etc. There are other variants that only one of them is running or that they continue running together hand in hand and skipping cheerfully on the meadow Can be part of Falling-in-Love Montage

It's quite a popular device in fiction to reuse lines of dialogue. The Ironic Echo is a common trope built around this—when a prominent line of dialogue is repeated later, but with a flipped or surprising new meaning A Meaningful Echo is similar to an Ironic Echo, but without the irony. It occurs when characters, in their usual way, say things to one another. Normally, these things aren't all that notable or special—they're part of normal dialogue. However, later on in the story, one of these "ordinary" lines is repeated. But unlike the original line, it isn't in a normal, throwaway context. It's at a moment of emotional height, when the viewer or reader is deep into the work, making a callback to an earlier scene. Suddenly, the line isn't simple or meaningless anymore. It's heartwarming, tear-jerking, or awesome. If it had meaning before—however minor—it's now been expanded to a much greater context. It's gone from being something ordinary to something extraordinary Note that sometimes either of the people (the one saying it, or the one hearing it) may be completely unaware of its meaning, or even that it is an echo. Other times it is linked to Something Only They Would Say , when this results in The Reveal Compare Ironic Echo , Gag Echo , Flashback to Catchphrase , Dialogue Reversal , Strange Minds Think Alike , Alternate Catchphrase Inflection , and Arc Words

So a well-liked character died and we don't feel like laughing . We need to find a way to cope with the loss Much like in real life, the cast assembles to bid farewell. Even cynical shows, and so much more the idealistic ones, make the characters emphasize their feeling of community. We get to see all the reactions, from crying over composure to quiet shock. We get to see the stylish cast in subdued clothes. We get to see a scenery shot from further away to show the mood - and who's still alive. The soundtrack gets quite creative and the weather will be fitting for the mood: Rainy and cloudy . Or there can be snow A speech, a song or a poem might be performed by one of the cast. It will praise the deceased, recall memories of him or her, emphasize the ideals they lived by and express the cast's (and with them the public's and maybe even writer's) sorrow. The scene ends on a very moving note that can be anything between hopeful, heartbroken and tragic-comic A well-made funeral scene can virtually sum up what the show is all about A funeral being Due to the Dead , arranging a Meaningful Funeral or attending with proper respect may be used to characterize good characters, and denying one or behaving disrespectfully at one likewise for evil characters A Reality Subtext can make the Meaningful Funeral even more meaningful (i.e., The Character Died with Him) A less formal but similar situation is To Absent Friends . A name that has a direct, barely-hidden meaning to it. The first, second/third/middle/nth, last, or full name says something primal about the character. Often has multiple layers. To hide the meaning a bit, use an alternate spelling or foreign equivalent. Instead of writers having to make up random words or think of real names, they can use mythological names or old words. As an example, it is common to use for heroic characters names associated with hunting. So, apart from Hunter, which is a valid first and last name in English, you can use a translation to another language (Jäger, or the phonetic Yeager), the name of a predatory animal (Wolf, Hawk), a translation of the latter (Wolfe, Lupin, Lupis, Wulf) or Orion, the constellation of The Hunter. Which is kinda cool, which is why this can double up with Awesome McCoolname . Often, the characters in-universe are completely unaware that a name has any meaning, and act as if the name was just like any other. If this is the case, the name is a sort of Unusually Uninteresting Sight . This can be Played for Laughs when the characters are Comically Missing the Point , or alternatively, can become a Chekhov's Gun if the name turned out to be an important plot device. Sometimes used more subtly; the Meaningful Name only becomes obvious in hindsight, but when the clincher is revealed it's a moment of "Now how did I miss that?" Self-chosen names can manifest this naturally, but may make the character look arrogant if the symbolism is too blatant. This can be a problem with bestowed names as well; although the character didn't create it, if he accepts</ it without much objection , the effect is similar. Very common in cartoons , where the meaning is most times not hidden at all, except that the target audience may not have the vocabulary to get the joke. Also common in Anime , since Japanese names have a lot of obvious literal meaning to start with . See notes at Theme Naming . Real Life examples of this are often referred to as " ". The magazine New Scientist</ refers to it as "nominative determinism" in a tongue-in-cheek manner, and encouraged people to send examples in. (Until they utterly swamped by examples and had to repeatedly beg for readers to stop.) The proper name for this trope is "charactonym". This goes back to the Bible and probably turns up in the books of other religions, due to the way that names in many different cultures had significance beyond the merely cosmetic. An unusual form of Meanwhile, Back at the… . The story cuts between two different time periods, just as in Meanwhile, Back at the… , but here the plotlines are separated in time as well as space; one of them is chronologically in advance of the other. The narrator treats the two different plot threads in different times as if they were happening simultaneously, despite the fact that, chronologically, the plot thread in the past is going to be resolved long before the thread in the future starts This can be used as a way to maintain suspense about past events, using out-of-order storytelling to keep the audience in the dark about crucial details While Time Travel is not a necessary element, this trope most often appears in Time Travel stories, and in these scenarios it can also reflect the ability of past, present, and future to interact with one another. Examples with Time Travel sometimes turn out to be San Dimas Time instead The actual phrase "Meanwhile, in the Future..." is usually used tongue-in-cheek, but there are examples of legitimate comic books using it with a straight face Related to Time-Travel Tense Trouble . Surgeries are dangerous and delicate things. There's a reason why " brain surgeon " is a byword for "genius" - they have to spend hours carefully maneuvering minute instruments and a millimeter's error can kill their patient or worse Naturally, expect this aspect of medicine to be thrown away in the name of comedy : the nurse will give the surgeon a hammer and he'll immediately proceed to whack away violently, then an axe and proceed to hack away, then a drill , then a chainsaw , then an eggbeater , then.. Usually occurring in sci-fi works, Meat Moss is when an inorganic, usually mechanical, structure is overgrown with a thick fleshy

biomass. The origin of this tissue can be the bodies of victims altered by The Virus or a particularly aggressive form of Alien Kudzu , or it could even be the "natural" state of a Living Ship . The end result is always, however, the disturbing architectural counterpart to the Cyborg An excellent way of saying "This is The Virus 's territory" or "The heroes are on a techno-organic spaceship", though it does raise questions as to how this biomass is sustaining itself, as well as its purpose other than as set decor. This, in turn, however, makes it also an excellent way to demonstrate that you're in an Eldritch Location or some other place where the usual rules of reality don't apply . The Rule of Scary and the Rule of Cool go a long way toward maintaining the suspension of disbelief This tends to overlap with Wetware CPU , particularly in the case of the Living Ship variant, in this case the tissue itself being the wetware in question. Everyone knows that a Cyborg is a living being with technological components of one sort or another grafted onto his/her body. Though sometimes in fiction, it is done in the opposite direction in which a AI controlled machine is grafted with biological tissue (either by another individual or of its own volition). How such a robotic entity is created can be for one of or a combination of a variety of reasons: Regardless of the reasons that a robot has

been given biological tissues, it in this regard also has some of the drawbacks in that it will have to gain certain nutrition (and probably a mechanism for waste disposal) to ensure that its biological components remain healthy, though to what extent this shows up in a work and is addressed in it will vary. A defining trait of this type of robotic entity is that the thoroughly machine AI governing an entity that is partly biological. As a result of such a reversal of an artificially created intelligence directly controlling tissues that were taken from naturally evolved beings (or possibly synthetically created living tissue in some cases), it is a creation that displays machinely unnatural tendencies despite being composed of biological tissue and thus likely to invoke Uncanny Valley from some of the audience. The other wiki has an article on such a hypothetical machine called . See also Organic Technology . Overlaps with certain variants of Artificial Human . In many American cartoon series, the extraordinary violence is blunted by having the nameless bad guys (or Mooks) be, in fact, robots. This allows the protagonists to dismember, mutilate, and otherwise mess-up armies of faceless goons , in a manner unacceptable if said bad guys were squishy and red on the inside . In many of these shows, a common sequence has the heroes fighting the humanoid-looking mooks as normal , until one of them hits one a little too</ hard, revealing it to be a robot. At which point, things start to get really , really </ messy , as the heroes decide they don't have to hold back anymore . Mecha-Mooks are surprisingly fragile . In extreme cases the heroes will demolish them with their fists. Mecha-Mooks go to the Imperial Stormtrooper Marksmanship Academy , since it would be awkward if the heroes had their brainstems targeted perfectly by Mooks running a predictive kinetic model much faster than real time . Expect them to be programmed to march in eerie unison using Marionette Motion (and in a pinch provide back-up for dance numbers). Two governing rules of Mecha-Mooks seem to be: 1) Upon being defeated, they will explode . Usually into a fireball, leaving nothing behind but a few patches of burning earth. This will usually happen no matter how they were defeated, even if it was something like turning off their power source. 2) Said explosions never produce shrapnel. A hero can be five feet from a Mecha Mook, blow him up, and somehow not be cut to pieces by the flying shards of metal. Samurai Jack </ is particularly guilty of this, with mooks constantly exploding in Jack's face. This often is a form of Pragmatic Adaptation when the series is based on an earlier source which was more realistically violent, but showing that would invoke the ire of Media Watchdogs . When you've got an action-based children's show where Nobody Can Die , expect Mecha-Mooks to pick up the slack. After all, they're Just Machines . Should they not</ explode, then at the least you will see Eye Lights Out . On a related note, if they should be hacked or reprogrammed their Glowing Eyes of Doom will have a Convenient Color Change . Additionally, it can be cheaper to stage than using human extras . Anime , has a second, more literal type: Real Robot series will usually have at least one class of mecha that basically acts as the "Grunt" unit for the bad guy's army. This mech is usually

simply constructed, probably with a basic ranged weapon (machinegun or Energy Weapon or two, a close-combat weapon, and may have the option of carrying a bigger gun , depending on how much tougher the hero's armor is.) These will act just like regular Mooks or</ Mecha-Mooks, depending on how much the writers want you to empathize with the enemy. There's usually a very good chance that the Hero's Rival will at least start out by riding in an Ace Custom version of this mecha. Tanks usually serve a similar role on the heroes' side, and said grunt will often be the only thing they can reasonably threaten. For obvious reasons, Mecha-Mooks are usually very far down the Sliding Scale of Robot Intelligence . If they do show signs of self-awareness, destroying them becomes much more ethically problematic. If one wants something a bit more up the ladder in terms of "kill-tasticness" and " non-suckitude ", look at Mechanical Monster . If you want the guy building</ the mooks, that's the Robot Master . Contrast with Plant Mooks , the vegetative alternative. A subtrope of Robot Soldier and, obviously, Mooks .

Mechanical Evolution is the tendency in speculative fiction to apply the idea of biological evolution to mechanical devices, wherein later versions of the devices become progressively more suited to their niche (or more likely just progressively better at everything). This is frequently used to explain the presence of Mechanical Lifeforms or Ridiculously Human Robots It is seldom shown as the equivalent of the biological process; rather, the mechanical species will be shown to actively design their own successors, or even "evolve" within their current generation through self-modification . This is similar to real-life design, which is in a sense an evolutionary process; success is defined by market factors, testing and other pressures; successive designs build on those before them and attempt to improve or refine them to better fit the given application. With mechanical creatures the "market" becomes society; a common result is a rigid caste system where various machines are built to specialise in particular applications . The most important caste is likely to also be the most humanoid , or be a Master Computer This trope often appears in A.I. Is a Crapshoot and/or Robot War story arcs, as a justification for why</ the machines want to Kill All Humans . More serious authors will try to justify the Mechanical Evolution with Applied Phlebotinum like Nanomachines or self-learning algorithms; less</ serious authors will simply toss out the words "Mechanical Evolution" and leave it at that If the setting also features a Robot Religion (especially of a Thank the Maker variety), expect jokes about them not believing in Mechanical Evolution (or perhaps the other way around) No one ever seems to compare the advancement of machines to the theory of Lamarckian evolution , which says that traits acquired by an organism over its life will be passed on to the child. Though wrong when talking about organic evolution , this makes perfect sense for mechanical evolution. If an upgrade to an existing model of robot is developed it can be incorporated as standard into future robots of that model when they are created. The Lamarck comparison is probably taken out because the writers assume the viewers don't know who Lamarck is A subtrope of Hollywood Evolution . A Horse of a Different Color indeed — and an entirely different

nature. Combining the coolness of a horse with the tireless reliability of a machine, the Mechanical Horse is, at its most basic level, a motorbike with legs. (If it doesn't</ have legs, see My Horse Is a Motorbike .) The Mechanical Horse will usually be a robot , but some Steampunk universes feature clockwork</ horses. The idea is not quite as ludicrous as it sounds. Biological horses can walk on vastly more kinds of terrain than a wheeled vehicle (not to mention they are perfectly amphibious), and it would be quite useful if there were a machine that could do the same thing. But engineers find it very challenging to overcome all of the problems with moving around on legs, on any uneven surface, without falling down. As an odd example, the US military once funded experimentation into a "walking truck", a horse-like machine designed as an all-terrain mount and transport. </ Not to be confused with horses treated like machines , the identically-named or a type of kiddie ride . A really big mechanical horse with some of the animal traits taken away and some weapons added is basically a Spider Tank .

Sometimes in fiction there's an overlap of bugs and machines being mixed into one new type of being: Robo-Bugs. These robo-bugs have what you call the best of both worlds: multiple limbs and visors/eyes, sometimes they have wings and other body parts that only bugs have. These critters usually will appear being employed as Mecha Mooks by the villains or have antagonistic roles, though that does not mean that necessarily all examples will be evil-aligned or antagonistic Generally speaking, the main reason for the trope's usage might be rooted in that both bugs and robots are both usually seen as uncanny by many people and that the bugs' different anatomy to vertebrates might make them look off compared to all other living beings. Sometimes an inversion might be found with bugs which have robot-like characteristics or become cyborgs, though these tend to overlap with other tropes Further, arthropods' exoskeletons and segmented limbs and bodies translate better to a robotic design than vertebrates' flexible skin and smoother outlines tend to. Even a robot that is not explicitly designed to resemble an arthropod can still bring one to mind through its plated outer armor, many-jointed limbs, and featureless eyes. At the very least, it's going to resemble some kind of insect more than it's likely to resemble a lizard, bird or mammal Another reason for this trope's usage is that one of the main issues with building robots is stability: two-legged robots tend to tip over very easily, and while wheels and tracks are more stable they also don't do too well on uneven terrain. Multiple legs solve both issues at once, and most real-life robots tend to have four or six walking limbs Can be considered a subtrope of Starfish Robots and Mechanical Lifeform . Super-trope to Literal Surveillance Bug , which specifically covers ones employed for espionage. Also compare to Insectoid Aliens , Mechanical Horse , Mechanical Monster and Robot Dog . Larger specimens may overlap with Spider Tank

Mechanical Lifeforms are a race of robots or robot-like creatures that are also considered a honest-to-goodness species of living things. They're just like your everyday living organisms, except they happen to have metal for skin, wires for nerves, and so on. They're often silicon-based as well These may be robotic animals, plants, micro-organisms, or sapient creatures. If they are sapient, they would never wish to Become a Real Boy because, as far as they can see, they are as real as that boy . May also form a Robot

Republic , and have a Robot Religion where they worship the Deus Est Machina . Expect them to be Metal Munchers The origin of such creatures is traditionally left unexplained — they were never built by another race (that anyone knows of), and if they were, it would be treated as a very</ shocking revelation, as audience previously accepted their mechanical nature as-is. Also, should any creators arrive to cart them back, expect them to react just the same as humans would (i.e. much anger, denial, violence, and maybe a speech or two about free will). However, with the growing popularity of Science Fiction concepts like Brain Uploading and The Singularity , there has been a trend of portraying mechanical lifeforms as formerly organic races that roboticized themselves either as the next Evolutionary Level or simply to survive some world-ending catastrophy that affected them in the past Contrast Organic Technology , which are machines that happen to be organic in nature. So your Mecha-Mooks aren't cutting it? What's the next logical step up from taking the already impressive stamina, loyalty, and destructive power of a mechanical henchman? Simply, you go absolutely off the wall with them. Where the mecha-mook will be a dime a thousand, you'll see only a few, or only one, Mechanical Monster. This may be due to limited resources or simply because everyone involved in making it is no longer amongst the living . They are always improbably hard to stop , incredibly persistent , never needs to recharge and always, always</ terrifying to look at. Very likely to be the big bad's Dragon , and often times much tougher to kill. It should also be noted, that while the mecha-mooks often are fragile, incompetent, and generally gentle at their jobs, expect the Mechanical Monster to be a far less kind to its prey. Slashing, stabbing, soul stealing to fuel their infernal engines, and loud noises are all par for the course. Mechanical Abomination is when it goes to Eldritch Abomination levels. We already know that androids, robots, cyborgs, and other mechanical beings are stronger than organics. This is when they're constructed with the Heroic Build to prove it While more realistically utilitarian real-world robots often make do with a skeletal framework, real-life creators and in-universe roboticists often feel that such pragmatic designs don't do the sheer might of their robot creation justice. In such cases, the designer (which is sometimes the machine itself) goes to some effort to give themselves the outward appearance of a muscular human, often whether or not their "muscles" actually move or function as such. And while this might seem Awesome, but Impractical at first glance, one shouldn't discount the intimidation factor, as the mechanoid in question can be not only jacked, but also many times the size of any ordinary human Part of the growing popularity of this trope in live action comes with the increasing sophistication of CG allowing for more moving parts to be detailed and animated. It's much easier to show all those tiny components, rather than using a blocky outward appearance as a kind of SFX shorthand for "robot" Compare Sculpted Physique . Contrast SkeleBot 9000 . See also Humongous Mecha , although the style for the latter is often to render the character as if they're wearing a suit of armor, the better to emphasize their mechanical qualities. Note that while this can

cover characters with Artificial Limbs , the key element is machine components</ built to look suitably macho. Robots and androids with artificially grown organic tissue like Blade Runner </ replicants or the T-800 don't qualify; see Ambiguous Robots and Meat-Sack Robot instead

The Zeerusty cultural counterpart to the Retro Rocket , the Flying Saucer , and the Tin-Can Robot ; usually seen in older media and Retraux works. This probably comes from a classic way of distinguishing aliens from humans in older science fiction: give the aliens machine-like characteristics and values, and suddenly what would otherwise be just a Human Alien , a Rubber Forehead Alien , or some guy in a rubber suit seems much more exotic when compared to regular old humans Aliens like this may have some kind of Hive Mind , have a Hive Caste System , or be controlled by an Artificial Intelligence (these frequently overlap). However they are just as often portrayed as individuals, though perhaps unimaginative ones. They will often use mechanical sounding terms, combined with typical Spock Speak or Robo Speak and Sesquipedalian Loquaciousness to describe biological characteristics and processes ("energy extraction" or similar for eating; "waste extraction" for urination/defecation, "databanks" for memory, etc...), or their equivalents. Very often they will speak in a Creepy Monotone . Sometimes the reason that such a culture exists is because the entire species experienced a civilization-wide case of Cybernetics Eat Your Soul , often as a response to some kind of large scale catastrophe. In the case of organics though, they will skip the cybernetic stage and adopt a mechanistic society in response to catastrophe, with similar consequences as Cybernetics Eat Your Soul In the twentieth century, it was probably also a commentary on both fascism and communism as systems that placed little to no value on the individual, and which seemed likely to dominate the world at the time. Yet even back in the 19th century, Jules Verne portrayed such a future in a very negative light in Paris in the Twentieth Century </ as a response to the dehumanizing aspects of the Industrial Revolution In-universe, the aliens might either think of themselves as</ living machines, place a high cultural value on the characteristics of machines that are not reflected by organic beings (efficiency, organization, emotionlessness, etc...), or maybe held in bondage by a machine like a supercomputer

Oh no, a Kaiju is attacking the city! Bullets are useless, tanks just get stomped, an air strike would cause too much collateral damage... Guess it's time to bring out the Humongous Mecha to punch it in the face The idea that it might produce less collateral damage tends to be belied by the buildings smashed by both combatants in their battles. An event that usually takes place at the Dénouement of a story. Our heroes are rewarded by some authority figure (the King

is a favorite); the rewards may include medals, titles, clothes , the Princess' hand in marriage and half the kingdom , etc. Expect all the main characters to be lined up to receive their praise one after another Often, the characters receive the very thing (or a representation thereof) they've been trying to acquire throughout the story. Alternatively, it's just a scene that lets us see the heroes receiving just adulation from the people they've spent no small effort saving. In extreme cases, praise may give way to outright genuflection by the assembled masses Expect some awkwardness in the pinning of actual medals, especially if one receiver is highly unusual (particularly a non-human) or the giver is impaired in some way (blind, decrepit, etc.). Another common element is for the award-giver to be opposed to the heroes, such as an Obstructive Bureaucrat , and must now show them honour in public as part of a Humiliation Conga . They may try to sabotage the proceedings in secret May also involve an Awesome Moment of Crowning , on the part of either the giver or receivers or at least be the result of Expose the Villain, Get His Job . From Rugby, a knot of reporters and camera men gathered around someone, usually a politician, each trying to shove forward to ask their questions and catch the answers to the others' questions. Also known as a "gangbang". Often the questions are things that the interviewee has not or does not want to address in a press release or conference. The reporters can and will chase the politician to their car or office, only being diverted by the appearance of someone even more newsworthy. Note, the scrum is the activity described, not the group of reporters themselves. More common in the Commonwealth than elsewhere but ubiquitous in Canadian politics, where the scrum is considered one of the central facets of parliamentary democracy and a cornerstone of freedom of the press. Although certain individuals might choose not to participate (and might be judged accordingly), any government (federal or provincial) that tried to dispose of the scrum in toto</ might find itself out of a job. Scrums are taken that</ seriously, by everyone. On the other hand, the scrum is almost unknown at the highest levels of American politics. The President especially would never be mobbed like this;

that's what press conferences are for (in 2012, a reporter for an online publication attempted to scrum President Obama during an answer and found himself out of the White House Press Corps). The difference is likely to be related to the fact that the US President is both the head of state and the head of government, whereas the Prime Minister of Canada is merely the head of government, and heads of state are always considered of higher rank than heads of government. Protocol-wise the Prime Minister doesn't even come second in line after the actual Head of State, the Queen - he's Lesser politicians and non-politicians can expect them in the US, often from "less legitimate" news agencies. Anyone running</ for office—including the presidency—can expect to get scrummed (unless, of course, they're already President). Lower offices with smaller constituencies are more likely to have this happen; presidential candidates are more likely to get scrummed during the early primaries (where "retail politics" predominate). Whether this implies a greater respect for the subject's privacy or a lack of journalistic independence is a matter of some debate. Because of the scrum's central role in Canadian politics, you'll see these featured in all kinds of shows. Comedians have even participated in scrums</; Mary Walsh of This Hour Has 22 Minutes </ once showed up to a scrum on Parliament Hill dressed as Xena and calling herself "Marg, Princess Warrior" - to the apparent amazement and delight of then-Prime Minister Paul Martin. Media scrums are often fictionalized in Korean Series , often to the point of knocking down the person they want to interview. Compare Paparazzi .

something we accept as part of our Willing Suspension of Disbelief . It's also a wonderful thing to play with, and that is what Medium Awareness does; the characters acknowledge and interact with elements and conventions of the medium that shouldn't technically "exist" in-universe. Suddenly the characters can hear the ominous background music or the disembodied narration, they can read the subtitles at the bottom of your screen, and they can tell when it's almost time for a commercial break. Generally, this awareness is brief; it's used for a joke or two and then never mentioned again. Used this way, it's Lampshade Hanging as applied to Paratext . May involve Breaking the Fourth Wall . Compare with other metafictional devices , particularly Painting the Medium , which uses Paratext and artifacts to tell the story, and Reading Ahead in the Script which is exactly what it sounds like. Left the Background Music On is a specific inversion. Fourth-Wall Observer is what happens when a particular character has this on full-time and the rest do not. Similar to Art Shift and Art-Style Clash , but instead of styles blending it's the blending of animation/filming techniques used to tell a story This can come in a lot of flavors like live-action in cartoons, animated segment, or animation warping Live-action in cartoons is pretty straightforward: it just means there's a filmed part in a cartoon with live actors. An animated segment is the exact opposite, where a live-action show or movie gets a part that's given some traditional 2D, 3D, or stop-motion part. Animation warping technically keeps an animated show animated, but with a different style than the norm, like traditional 2D animation into 3D. It's probably easier to just list them all as Medium Blending for the moment, as some examples can get tricky with multiple different varieties This is the exact opposite of how traditional special effects are used. Instead of supplementing a medium with material of a different source that is meant to blend in, this is meant to stand out. Proper examples of Medium Blending make it blatantly obvious it is different, and it sticks out on purpose This can happen with a dose of Medium Awareness sometimes, as well. Meet Cute is a way to quickly introduce two characters and set up their burgeoning relationship. A meet-cute is almost always rife with awkwardness, embarrassment, and sometimes outright hostility . It's often used in films, particularly the Romantic Comedy , due to time constraints; while on television a relationship can develop more naturally over many episodes, a movie has to get their couple set up right away to fit within 2 hours This meeting can happen by way of any of an innumerable array of circumstances, so long as there's something cutesy about it. Possibly they have an instant dislike for one another. Maybe they crash into each other in a hallway and papers fly about. Maybe one of them has been shopping for ISO-Standard Urban Groceries and trips over the other walking down the street. Perhaps mistaken identity or other wacky misunderstanding is involved. Sometimes someone is naked or in an otherwise embarrassing situation This is a subtrope of Boy Meets Girl and sister trope to Chic And Awe . Science Fiction , of the Dystopian and Cyberpunk sorts, especially, loves its massive corporations. These corporations are umbrella corporations, controlling dozens of smaller companies that manufacture everything from clothing to military hardware. They can be the police . Perhaps there is one company that is a Privately Owned Society in its own right. This goes beyond the definition of "monopoly." Traditionally, it was rare for Mega Corporations to be portrayed other than negatively. Rather than being a simple business making things that people want to buy, they are the villains of the setting, depicted as exploitative, oppressive and screwing the rules with their money while maintaining a Peace & Love, Incorporated façade. However, in Post Cyber Punk stories, some Mega Corps can aspire to be Big Good , providing the hero with amazing equipment , or are owned by and support a Rich Idiot With No Day Job . There do exist some benevolent portrayals of a Mega Corp; in which they are a large business which employs a lot of people and isn't shown practicing in unethical trade practices. These benevolent portrayals have become increasingly common in 21st Century media. The nastier version are home to the Corrupt Corporate Executive , Mean Boss , Pointy-Haired Boss , and Obstructive Bureaucrat , and have Amoral Attorneys on the payroll. In line with their corporate ambition, Mega Corps invest an ungodly amount of money in security, employing not only large contingents of Private Military Contractors as

staff and guards, reaching military levels in numbers and hardware , but also Hired Guns in order to take out the competition. As a sign of their omnipresence, they will Sigil Spam all over the place and bombastically announce the company's name, which will be almost always a single word followed by "Corporation", "Industries" or "Enterprises". Japanese Mega Corps might prefer "Group" or "Zaibatsu". the latter of which is actually an Anachronism Stew from Imperial Japan Mega Corporations are shown to be private institutions that don't have to play by the rules, because "nobody is forcing you to work for them or buy from them or use their institutions or buy their products." Dark versions will show these guys buying off and eliminating their competitors, brainwashing the masses, and coming up with Evil Plans to ensure they have a monopoly. Their employees are portrayed as oppressed, paid pitifully low wages, if paid at all, who are expendable. The Mega Corp may control the government by either having employees in important positions or by all-powerful lobbyists. Taken to its extreme, it may have One Nation Under Copyright , an entire country or world at their disposal, becoming superpowers in their own right. Corporate Warfare may result if financial means are not enough to accomplish the company's goals. In shows seeking a Green Aesop a Mega Corp could also be Toxic, Inc. . Real Life : Monopolies, monopsonies (only one buyer</ of goods in the market), duopolies (only two sellers in the market), and oligopolies (only a small handful of Mega Corp entities that are selling in the market) do</ exist in real life, and indeed, very large multinational corporations do exist. And yes, some</ of these corporations do engage in unethical practices or political influence, and there are</ historical examples of Mega Corps acting either as a state within state or as an semi-independent political entity, such as the Hanseatic League. However, it is still an exaggeration to claim that all</ corporations act in this way and those that do become too powerful usually get stopped by anti-trust laws which may even result in them being broken up like Standard Oil. The term megacorp comes from the works of Alfred Eichner (an economist), who defined a megacorp as a large, corporate enterprise that places survival and growth as key objectives — using its impressive resources to protect itself and its interests, but to also constantly look for avenues of expansion. He argued that such large corporate entities operated using different rules and could be expected to act in different ways from smaller corporations. With the removal of morality as a limiter for corporate actions in the 1980s Wall Street culture, the megacorp became more dominant than even Eichner predicted. And much of modern fear of corporations comes from predictions of what lines they might cross to meet their need for expansion.

In a nutshell, this is when a hostile force attacks a target by using a much larger vehicle with a large door to chase down and then "swallow" the target vehicle. The attackers have just performed the Mega Maw Maneuver. The reasons for using this tactic are usually as a form of piracy. Once inside the large vehicle, the target is at the mercy of its captors, and can be easily boarded, plundered, or seized without risking damage in a firefight While certainly an interesting maneuver, it does pose several problems in Real Life . For one, its success hinges upon the maw ship being much larger and much faster than its victims. For another, the very real possibility of the target performing some desperate evasive action trying to get away would pose considerable danger. Sometimes Tractor Beams are used to speed up the chase and/or

explain away why the target isn't performing any evasive actions. And finally, if it happening in space, the bigger ship is a subject of the Kzinti Lesson , if the smaller ship will turn their engines on while inside of the maw In other words, if there was any real potential to this tactic, it probably would have been tried by now Not to be confused with maneuvering with Mega Maw Compare: Swallowed Whole , which is this trope but with monsters, and Driving into a Truck

Literally, "glasses girl"—one of the classic "sweet girl" stereotypes in anime When seen through the lens of how attractive others find her, she is cute without going overboard and seems more approachable than a more conventionally beautiful girl. is usually pleasant and clever, and something about the fact that she needs glasses seems to imply an endearing vulnerability that makes her far more accessible to the average guy. After the Yamato Nadeshiko , she is presented as the second-best girl that a boy can bring home to meet his parents and probably the more realistic of the two. Naturally, as with any stereotype, the meganekko can be inverted or subverted, but the vast majority in anime are sweet, smart and relatively independent. Occasionally she is an unpopular character within the story, but not with the fans The glasses are the important part, though. Whether she's Blind Without 'Em or not, they are presented as key to her appeal. This is one girl who does not need a " Beautiful All Along " transformation; in fact, taking her glasses away is an almost surefire way to reduce</ her attractiveness ! Keep in mind that not all Meganekko/Megane's are always nerds or geeks of some sort Sometimes the presence or absence of glasses shows a change in personality, while other times they are a way to give a character a more realistic costume prop In Western countries this type of character is rarely popular; when she appears, she is often commanded that The Glasses Gotta Go !, although the Shrinking Violet or cute nerd sometimes invoke this trope Glasses on a Hot Librarian or Sexy Secretary are a completely different thing. A punch so strong it doesn't just send its target across the room ; it sends them across town, or to another state, or even another country. Sometimes reaching Low Earth Orbit and vanishing as A Twinkle in the Sky , or in extreme cases, right into the Sun This is usually an adaptation of a one-panel gag the animators end up having fun with, although the usual treatment is to make it so over the top that it's not mistaken for real violence. On the other hand, it may be played straight if the attacker is just that strong When it's Pervert Revenge Mode , compare Armor-Piercing Slap , which this trope is often combined with, or Hyperspace Mallet for

This is any fight where there are at least</ three sides involved (i.e. against each other), with no prearranged alliances We can be talking individuals or armies, although the version with the individuals is usually more fun since the army one often degenerates fast into a free for all. Often noted by directors and fight coordinators as being very difficult to set up or film properly, although often worth it for the aforementioned fun if they manage to pull it off right Almost always begins as a Mexican Standoff as the various sides try to figure out who to shoot or stab or fireball first. Things get particularly fun if you have several guys with a gun in each hand , each trying to keep aim on the other two targets simultaneously. Expect a lot of sweating, twitching, and flicking eyes until the inevitable happens This trope calls for no prearranged alliances, because then it's not really three-sided — unless there are so many sides involved that even taking prearranged alliances into account, there are still at least three sides! However, it is fairly common that after a short amount of fighting, two of the sides will accidentally or on purpose end up ganging up on the third, often with an unspoken agreement to finish dealing with each other once the third side is out of the way. As a general rule, at the very least two of the sides will have to be in an Evil vs. Evil scenario and at the very most everyone</ involved Often enough, this alliance will be helped along when the third side assumes that all its foes are on the same side Alternatively, if neither side can win the battle on their own, the outcome depends entirely on whom the weakest of the three will ally themselves with, resulting in the Kingmaker Scenario As another alternative , a particularly devious side may manipulate the others into Let's You and Him Fight , then go after whoever is left In a video game, especially a First-Person Shooter , 99% of the time the three sides will consist of the player and any allies vs. enemy soldiers vs. some sort of mutants/aliens/zombies The trope name comes from the French phrase "Ménage à trois", which basically means a threesome. Who knows if that's connected to what this trope means No real relation to Super Smash Bros. A type of theater, film, and television that focuses on heightening the emotions of the audience. The word "melodrama" derives from "melody [in] drama" (like opera); melodrama at its finest aspires to have the tone and the repetitive, building emotion of an opera or a symphony It's usually associated with everyone acting like a Large Ham , but it's actually about specific emphasis on any dramatic situation. This is done by amping up the perceived scale

and emotional response on everything. Basically, every little hurdle becomes a mountain, every setback a tragedy of Greek proportions, and the official couple will be Star-Crossed Lovers over the tiniest things, usually thanks to outside interference and Poor Communication Kills Note that this isn't the same as stage actors speaking loudly and making broad movements . That's just a necessity of stage acting. This is when the actors portray the characters (or the characters are written as) being akin to teenagers with a very small, Soap Opera scale world. Every success, kiss, and snub will carry the sting of a legendary story. Essentially, what to us would be a pinprick gains the pathos of a rending wound Also note that this can be done right . Melodrama can quite easily hook viewers into becoming emotionally invested in the characters, something every story needs to survive. It helps if the stories are the type that can produce large emotions — and if the characters are depicted with proper motivations. Only occasionally does it fall into the Anvilicious Narm-fests we associate with them. Memes happen. Whether it's a Catchphrase that catches on , an intentionally or unintentionally funny moment, or an unfortunate coincidence, these things spread throughout the Internet like a virus. Sometimes crew members catch on and reference them It can be anything—a line at a convention, a YouTube video, even a piece of supplementary material. To qualify for this trope, it just has to be outside the show Often, this takes the form of a "lesser" worker (as in, not the creator or showrunner himself) referencing it, as trying to get it put into the script could potentially cause an uproar. Also, a lot of memes are OOC , risqué , or just plain random , which wouldn't fit at all in canon . The Expanded Universe gets more leeway in this department A Sister Trope to Ascended Meme , which is when the show itself references the meme

Sociology notwithstanding, on The Internet , a (rhymes with "cream") is usually described as a catchy derivative of some aspect of pop culture parodied and repeated over and over, essentially being a cross between a catchphrase and an inside joke. If not used carefully</, it can get to the point that its origins and original meaning become muddled and completely mutilated beyond any point of recognition or humor . Which means we don't want them in TV Tropes articles. Because we are not interested in being muddled, dated, and beyond humor. Fandom being what it is, this also applies to characters. Fandoms are liable to spread a "meme" version of a character which is totally (oftentimes deliberately) at odds with the original depiction, such as a cheerful version of a dark or scary character, a sexy version of a character featured in a Jekyll & Hyde episode, or an unlucky-yet-annoyingly-optimistic version of a normally depressed, tragic character . Another quirk of memes depends on where they're initially propagated. Memes often spread regardless of content, taste or sensibilities, while the original source may be the only ones who know enough about the source material to use it

ironically. Furthermore, some memes reference something common, but become catchy enough to be associated with only a single new thing Depending on how strongly the production company is tied with fandom , sometimes a meme can escape the space it originally spread in and get referenced in the medium it parodied through Bonus Material or Popularity Power . When this is the case you get an Ascended Meme . Some forgotten or Discredited Memes are even resurrected thanks to the Popularity Polynomial . A specific form of Memetic Mutation when the fandom of a series exaggerates a character that is simply badass, or sometimes not all that impressive, to preposterously epic god-like levels. All shows need to have extras. Whether they're the Faceless Masses or a Cast of Snowflakes , everything needs to have some way to show the main characters are not the only people existing in the world (unless, of course, that's the point). But every now and then, someone will stand out... and all of a sudden they become incredibly popular for whatever reason. They may be endowed with a Fan Nickname , and a whole Backstory and personality may be extrapolated... from just one character, with few or no lines and highly limited appearances The fandom may latch onto these characters because they are either a Recurring Extra or a One-Scene Wonder . If the creators of the work get wind of this phenomenon, the character may become an Ascended Extra . Compare the Ensemble Dark Horse , who is a popular minor character instead of a background character. Can overlap with Memetic Badass , but not all the time. See also O.C. Almost anything</ can become a meme, whether it be an outfit, a badass, or a picture of an animal doing something funny. Hairstyles are by no means immune to memification . Hair is a device creators often use to convey information about a character to the audience. For example, a girl with pigtails and a girl with a Mohawk are likely to be very different. In non-visual mediums, largely due to The Law of Conservation of Detail , it's seldom an arbitrary choice on the author's part to describe hair at all Sometimes somebody's hair is so stylish or unique that it becomes associated with that person or character. In fiction, weird hair can become so recognizable that to change it would be like losing part of his or her personality. In Real Life , a celebrity's trademark hair could even become a trend, even if was around long before they made it popular See Hair Tropes . Note that Anime Hair is especially likely to be subjected to this. Einstein Hair is a subtrope

Sometimes a character is shown to be competent, maybe even heroic and badass. But that's not what they're remembered most for. Instead, they become remembered for their supposed "lameness". The fandom flanderizes that one time the character made a stupid mistake or got defeated in a shameful way, to the point that as far as the fandom is concerned they're a complete weakling who cannot defeat an insect Maybe a parody version of the character is more well-known than the character themselves to begin with. Maybe the character is weak or unskilled at the beginning of a series, but gains more skills and goes through Character Development later after the character's initial portrayal had already burned its way into most peoples' minds. However it happened the character's "lameness" undergoes Memetic Mutation and they reach Butt-Monkey status within Fanon . Expect no one to care because it's funny In video games, particularly games with fan-tiered characters , this can happen to characters that are perceived as low-tier characters. Going into a multiplayer game with one of these can easily lead to mockery or even getting booted just for picking a character seen as weak, even if you're skilled enough to make excellent use of the character's abilities. Maybe the character is Difficult, but Awesome , but people only focus on the "Difficult" elements because the majority of people who use that character don't quite get a good grip on their potential. Or maybe the character is</ good and doesn't need hundreds of hours to be good at, but people still think the character is garbage for whatever reason Occasionally, the character may also be depicted as The Woobie because people also feel sorry for the character, and may end up as the Fan of Underdog . Sometimes a character is interpreted in different ways by the fandom . Maybe they're treated as more badass than they really are , or wimpier , or they're treated as a sex offender . But then other times the fandom creates an interpretation that's so</ far out, so completely different, that they seem to be an entirely different person. Reasons for this vary, but it's usually an exaggeration of

This can also cover Fanon examples of Character Exaggeration , if they're widespread enough. Memetics is a fairly new field of science, sufficiently so that it is not even taught yet in most colleges. However, it has gained some traction in the Speculative Fiction arena so many sci-fi writers will reference the field in their works And of course, while the codified</ concept of memetics is new, like many other "new" broad tropes (like Moe), ur-examples can crop up quite a lot earlier than one might expect at first glance

Quite often, the character isn't really a troll, but gets this reputation due to something he did or said in-story for no apparent other reason than screwing with others (such as neglecting a major detail about something in a situation where it would have been crucial) that cannot be attributed to his stupidity. It's also possible for the character to actually be</ a troll in the original support, but get this reputation exaggerated for laughs by the fandom . In any case, the character has a reputation of being a Troll that has become a Memetic Mutation Obviously an example of Memetic Mutation . Compare Never Live It Down . The Gadfly is susceptible to this kind of depiction, especially by those who don't know the difference between that and a Troll . Characters with god-like powers or spectacular scheming skills also have a particularly strong tendency to be subject to this trope, the former because this provides a good explanation why they don't use

all their power to end the story quickly , and the latter because it is hilarious to imagine them manipulating entire groups of people just to pull pranks

If there's something we know about real life it is that people die, and sometimes these people happen to be related in some way to a creator or a work. It's not uncommon to see works being dedicated to a dead person in the form of an In Memoriam , but sometimes creators might go an extra mile A Memorial Character has the purpose of honoring a dead person, be they someone close to the creator or just a simple fan, by immortalizing them in the work. In its most basic form, this is done by giving an already existing character the name of the person they are honoring (or at least part of it), making these characters a subtle way to commemorate them Other times, a whole new character might be created in their honor. Also sharing their name, these are usually minor characters that show up at some point in the story, acting as another part of the world without any particularly obvious hint to the true meaning behind their presence to those viewers not in the know Particularly strong cases might have a whole new important character being created in the person's memory, or a whole new work being made with them as the centerpiece, but these are obviously restricted to the creator's family or the closest of friends Related to In Memoriam , Tuckerization , Write Who You Know and Reality Subtext . This trope is when an object becomes imbued with the memories of a character, allowing others to gain these memories in a Pensieve Flashback or Exposition Beam . The "Jar" may be single use or

reusable, and while it is often made intentionally either as an awesome form of journaling or diary keeping, it's entirely possible for it to be made unintentionally. In those cases, it's probably a psychic or wizard using a form of touch based Psychometry to find out the history of an item In some cases, the memory jar can potentially be a complete record of a character's memories, becoming both a biography and potentially a "restore point" if their memories are damaged or a clone has to imprinted Compare Transferable Memory and Neuro-Vault

Memory and amnesia in TV, movies, and video games works a bit differently than in Real Life ... Why? Because memory often makes for an interesting storyline involving one or more characters, and can be used to make a powerful argument on questions such as identity, destiny, betrayal and love. Assuming they aren't boring or just plain weird , museums in fiction can be worrying places, regardless of whether they're natural history museums, technological showcases, art galleries, or even tourist-trap exhibitions Sometimes, this is a case of the venue being merely creepy, exhibiting incredibly morbid subject matter and featuring curators that might be a little too engaged in the material to be considered sane. In other cases, circumstances beyond the control of the staff have made the museum dangerous, perhaps because some villainous character or faction has decided to spend some time there. And sometimes, the museum and its contents are the danger to the patrons, to the point that the building itself might be some kind of malevolent construct In any case, the smartest thing to do would be to leave as quickly as possible without stopping for the gift shop - but chances are that you can't escape, especially in the more dangerous instances of this trope May feature a Living Museum Exhibit or two. In media, male characters are defined more by their actions than their personalities or appearances. Female characters, on the other hand, are defined by their personalities and appearances but not their actions. This trope is rooted in the female/male = passive/active dichotomy. Essentially, it's the idea men are

expected to be out doing things, but women are expected to just sit there looking pretty , emotionally reacting to events, and avoid action . Like most gender-based Double Standards , this is unfair and restrictive to both genders, male and female. Part of this trope refers to how characters function to advance the plot. While male characters will be directly involved in the action, or manipulating the action behind the scenes in a comprehensive way , female characters, when they do take action, often take it in the form of inspiring, motivating or nagging a male character to do something. See Lady Macbeth , Henpecked Husband . And, yes, it also applies to that</ meaning of "action" as well. In the past, and indeed today, many traditions considered women good if they didn't have sex (got no 'action') , and/or considered them to be superior to women who did(unless it was strictly This trope is a possible consequence of Men Are Generic, Women Are Special . Since men are generic, any individual male character has to do something special to stand out. But because women are special, a female character just has to be, well, female. Contrast Action Girl , Damsel out of Distress , Feminist Fantasy , Non-Action Guy , Politically Active Princess , and Silk Hiding Steel . River Tam from Firefly </ is the prime example of a Living Macguffin , while her older, slightly less genius brother is charged with protecting , care taking , and enduring most of Mal's flack . River is said to be a super genius with infinite potential, but because of some rather unsavory experiments performed against her will , she's more sought after as a weapon than an outlaw.

In media, male is the default, "normal" form of humanity, while female is a special subcategory reserved just for women. This meta-trope is Older Than Feudalism and is found not only in fiction, but is ingrained into many human societies and cultures . The technical term for this is Take the English language, for example. The terms "Man" and "Mankind" are often used to represent humanity in general, whereas "Woman" and "Womankind" only ever refer to humans of the female gender. Many job titles, such as fireman and mailman, assume maleness, even though there are female firefighters and mail carriers. People often specify that someone is a "female doctor" or "female author", but generally don't say "male doctor" because that is already assumed. If the gender of a person is unknown, it is sometimes argued that the traditional proper pronoun to use is "he" (e.g. "Everyone comes to a point in his life...") – though "singular they" goes back to Geoffrey Chaucer but remains controversial even today, reflecting this trope. Certain languages like French and Spanish take this concept even further, having two words for "They"; a masculine and feminine form, but if there is a mixed group of men and women the masculine is the default. In fact, this is correct even for a group of any</ number of women, and one single man. Grammatically speaking, in languages featuring gender, masculinity generally prevails and is the default. Adjectives and past participles, as well as nouns for humans, are overwhelmingly masculine by default; feminine equivalents are always derivative, with specific suffixes. For example, in French, a female hunter is "chasseuresse" or "chasseuse", with the feminine suffixes "-esse" and "-euse" attached to the masculine form "chasseur"; in German, you add "-in", so a (male) chancellor is "Kanzler" and a female one is "Kanzlerin"; in Italian, Spanish, Portuguese, you swap "-o" for "-a", or stick "-a" to the masculine forms. The use of feminine words is pretty much always exclusive, in that a person or group of people have to be known explicitly as all-female only for the

words to be usable; if there is even a hint of ambiguity, like say a theoretical group of "1000 women and 1 man", languages will default to masculine words, be it pronouns or nouns. Feminine-by-default nouns are generally reserved for higher, more abstract concepts such as "humanity", "manliness", "affliction", etc. rather than anything to do with concrete biological sex. The only notable exceptions are animals: many words for animals are feminine by default, and they refer to a species as a whole (which results in expressions such as the grammatically feminine French phrase "une girafe mâle" ("a male giraffe")), and to a lesser extent, specifically the female animals of that species (e.g. French "une chèvre" ("a (female) goat"); still, masculine derivatives are extremely rare (e.g. French "un girafeau" ("a baby giraffe")), and the males tend to have their own words instead (e.g. French "un bouc" ("a male goat"). The trope can be observed in many different elements of society and culture. "Unisex" fashion tends to be built around men's fashion; jeans and shirts are worn by both sexes, but dresses and skirts are exclusive to women in most of the Western world (with the famous exception of the kilt). T-shirts are typically sold in two cuts, women's and mens, but men's T-shirts are sometimes sold as "unisex tees." Many health clubs have women's gyms, but never men's gyms, since men are considered the default group and just use the main gym. Most androgynous names (like Jordan or Taylor) started out as men's names. The restroom sign for a man is a featureless stick figure, but the sign for a woman is a stick figure in a dress . (One could imagine an alternate universe where women are represented as a featureless stick figure, and men are represented with a cowboy hat.) In the eyes of society, male is default, and women are basically men plus or minus something else. This phenomenon carries Unfortunate Implications for both male and female characters when used in fiction. The main problem for male characters is that maleness is not special in the way femaleness is, and is often undervalued to the point of being disposable ; men's actions are less likely to be judged based on their gender, which gives them more freedom to act, but the consequences for their actions are likely to be magnified. The implication for female characters is that femaleness is special in a way that maleness isn't or, to put it more bluntly, being male is "normal", while being female is "abnormal", which can either mean superior to men or inferior . This leads to The Smurfette Principle , in which a character's femaleness is the most important and interesting thing about her, often to exclusion of all else. It also tends to result in works failing The Bechdel Test , because if there's a potential character who doesn't have to be any particular gender, the role will probably be filled by a male character by default. It may or may not be the result of Gender Rarity Value . Likely exacerbated by the fact that Most Writers Are Male . Probably the parent to Men Act, Women Are and Men Are Strong, Women Are Pretty . See High-Heel–Face Turn for when being a woman becomes a Chekhov's Gun for a Heel–Face Turn . Compare Men Are the Expendable Gender .

Primarily in Sit Coms : Men absolutely loathe opera, classical music, visual arts, and books . But they LOOOOOVE sports. If they don't act in this manner, there's either something wrong with them or they're Camp Gay . Never mind that for a long time virtually all opera and classical music — and most literary books — were written by men specifically as manly diversions, those things aren't manly! There are also strong class undertones to this trope - being cultured is seen as a middle/upper-class trait, and there is a trend in media

for the working classes to be depicted as more masculine (including the women, for that matter). Indeed, this trope is often used in depictions where being cultured is an implied class shorthand for the rich. Also, you'll notice that the women making them go are either completely oblivious to the fact, or don't care, that their companion is not having a good time. This is one of the many ways that the Grande Dame will make life an utter Damnation de Faust</ for her Henpecked Husband . Compare Men Don't Cry , Women Are Wiser ; Buffoonish Tomcat is a related trope for cat examples. When the man is a slob , this trope is almost always included also, but the opposite isn't always true. Surprisingly, despite the fact that The Lad-ette can be basically summarized as "a man's attitudes/behaviors in a woman's body", you very rarely see ladettes who have the same aversion to "culture". Contrast Real Men Wear Pink for manly men unafraid to show their softer side, and Cultured Badass for manly men who find your lack of appreciation for opera grounds for a No-Holds-Barred Beatdown . It's also the reason why most of the adults who have to write The Dreaded Thank You Letter are men.

Much like Clarke's Law for Girls' Toys presumes that girls are more interested in the fantasy and magic aspect of their toys (instead of the technological aspect) than boys, this trope places similar assumptions on the preferences of adult males and females and markets them accordingly As usual, in the world of advertising, there's usually at least some</ degree of Truth in Television

Be chauvinistic or utterly clueless about anything pertaining to women.

Be oversensitive and emotional, sometimes to the point of being needy Oh, and let's not forget that all commercials with this trope assume that their characters and anyone else watching are all heterosexual, so don't expect any lesbian or gay stereotypes here , beyond the occasional Pet Homosexual in the women's ads Also, anything that is supposed to be marketed to both genders equally will be advertised by men if the people in the ad are supposed to be characters we relate to, and by women if we're just supposed to be looking. In short, unisex products are advertised as if to heterosexual men . One reason for this is that men (and above all young adult men 18-25) are more likely to be influenced by advertising than women of any age, whose brand preferences are more likely to be fixed. Also, according to market research done by Angus Reid, young men are more swayed by emotional appeals in advertising than are older people or women, who tend to be more practical Naturally, this leads to many commercials setting up very implausible scenarios to emphasize the stereotype they're appealing to. Sometimes, if more than one gender is present in the commercial, they'll compare and contrast stereotypes, playing off the woman's sensitivity with the man's machismo. Hilarity Ensues Compare Sex for Product , which is typically men being told that using a product will get them more sex

Regardless of how many hits they take, they can go head-to-head with the enemy without being wiped out in seconds, and often without losing any men at all The key difference between these guys and a Badass Army is that they are not</ technically an army. Usually they'll be a relatively small and elite fighting force, and they're more likely to answer to a single individual or be devoted to a specific cause. Contrast with Badass Crew , which will also encompass a small team, but is made up of distinct characters and more likely to be the focus of any given story Named for Robin Hood 's army of outlaws in the classic film The Adventures of Robin Hood </ (known as the "Merry Men" in folklore). In most fiction, periods are rarely mentioned . Speculative Fiction normally does likewise, but on the rare occasions that it does mention menstruation, the characters should tremble. Menstruation in SF holds great sway over supernatural powers SF periods serve as the trigger for every supernatural menace you can think of. Gruesome Body Horror is the favorite, but a period can also serve as a source of great power (and great insanity), a magnet for The Fair Folk , a gateway to a hell dimension, or even a semi-sentient Reality Warper . Periods also cause all sorts of supernatural powers, from Puberty Superpower , to attunement to magic . You're gonna need more than chocolate to sort this one out The Menstrual Menace is particularly popular as a Monster of the Aesop . Any monster evolving out of a girl's period will serve as an object lesson of how to deal with the pain of puberty. If the moral is that Growing Up Sucks , the whole cast will be dead or insane by the end. At the more idealistic end of the Sliding Scale of Idealism vs. Cynicism , defeating the Menstrual Menace will be an Anvilicious moral about the importance of abandoning childish things Menstruation in Speculative Fiction also causes mundane misery and angst, which tend to lead to stupid mistakes that create all of the previous supernatural problems The belief systems of some cultures have often incorporated a strong positive or negative supernatural significance to the phenomenon of menstruation This trope is for supernatural periods only; for trouble caused by mundane periods, see All Periods Are PMS . Compare Women's Mysteries . See also Hysterical Woman and All Women Are Lustful , two beliefs brought on by this very trope

Space travel is expensive. So expensive, that some people wonder if it might be worthwhile to just send a cloning vat and upload the brains of the potential colonists from Earth to the destination planet Depending on the technology available, the travelers might have clones of their original bodies on the other end, or they may have to "borrow" someone else's May be a form of Twin Maker . Mental Time Travel . Compare Sleeper Starship

A form of Time Travel where you don't physically go back in time. Instead, your body goes back to where it was in the state that it was, but you keep your memories from the future. The advantage is that, if done correctly, it neatly sidesteps many of the logical conundrums and paradoxes associated with time travel. The disadvantage is that your range of times to travel to is limited to the time your body can function for these purposes, a few decades at most A common variation is that the time traveler isn't going back to their own body, but to someone else's, maybe sharing their consciousness and having mental conversations or maybe a full Grand Theft Me . This gets around the disadvantage of the destination being with a few decades of the starting point, while still avoiding some of the logical problems with paradox Depending on what point the writer is trying to make, it sometimes turns out that you can't actually change anything in the past , and are forced to live through all your mistakes again "Groundhog Day" Loop stories often (but not always) use this mechanism. Also see Peggy Sue fanfic. Unstuck in Time is usually a version of this More effective with a Ripple Effect-Proof Memory . Contrast with Intangible Time Travel

A Mental World is any world that exists inside a person's mind (or heart, soul, whatever, but not their physical body). Similar to Dream Land and Cyberspace , a Mental World does not follow the regular laws of physics , and may ignore or respond badly to characters trying to use logic or force. This world is usually entered by some type of telepathy , either magical or technological; if the character whose mind contains the Mental World is sleeping or unconscious, then their individual dreamworld may be physically attached to a larger Dream Land or collective unconscious, which makes it enterable by other dreaming or meditating people. Symbolism is king here, sympathetic magic may be in operation, and puns, metaphors, and metamorphoses may be common. Because this world is based on an individual's (possibly incorrect) beliefs, it may contain multiple Evil Twin versions of both the owner's personality and that of anyone else (s)he knows, especially the people exploring the world. Sometimes this works in the other direction, and changes made inside the Mental World may change the beliefs of the individual who is the source of the world in question. In other cases, this Mental World is more like a magical pocket dimension where the controlling mage can wage battles, imprison others, hide themselves from enemies, or even take a friend for a vacation. In this case the world does not necessarily exist strictly inside the character's mind, but still behaves as if it does because it is woven out of that person's magic and actively connected to that person's mind (and still generally representative of their "self"). Oftentimes the world is surreal and barren and may be a space-like void with stars, multiple suns, and small chunks of floating rock or debris that may be used to get about, like stair-steps. Their role is to introduce a new skill or sharpen the current skills of their student, often hoping to pass the torch because they know their career is coming to an end. This character may die , so that their student can learn to stand on their own two feet . Expect them to have the same elderly, but powerful look associated with the Grandpa God . Compare Big Good where they tend to keep a distance on the hero's quest and run things from the throne. The Merchandise-Driven show, otherwise known as the "half-hour toy commercial", is not merely a television show (or other work) with a line of toys licensed on the side, but a television show created from</ a line of toys. The program exists largely to sell these products to the audience. Although merchandise-driven cartoons and anime are usually targeted at younger viewers, examples aimed at the older demographic do exist, though they're fairly rare. Note that there are very few instances of the Merchandise Driven cartoons of today that predate . The FCC classified 1969's Hot Wheels</ cartoon as "a thirty-minute toy commercial", which pretty well killed the show (along with reruns of </, a show starring the cartoon Mascots of the Post Cereal line). (Conversely, it was rare that a popular show would spawn action figures and toys when it was actually on the air in the US. Throughout The '60s and The '70s , the only reliable source for the various Cool Cars and Cool Ships from various science fiction and superhero shows were the Corgi line, imported from the UK. Mego's Star Trek: The Original Series </ figures didn't appear until well after the show was in reruns.) Today, there is a full symbiotic relationship between the show's production and the toy company (or other manufacturer licensed, show-themed products), which is usually the primary (or even only) sponsor of the show. But the key difference between this and normal licensed merchandising is that here, it is the toy manufacturer who dictates the show's canon . They may be able to demand addition or removal of characters from the series based on the actual toys in their production line , or that new characters must be something that they can design a toy version for on demand (military or paramilitary-themed shows and Humongous Mecha anime are particularly prone to this). Another sign of a toy manufacturer exerting influence is the blatant structuring of episode plots solely around the newest merchandisable toy accessories</, often where the characters Gotta Catch 'Em All or be declared a failure as a human being</ ... yeah, something like that . Meanwhile, in Tokusatsu works, it has become common for the production staff to use weapons and Transformation Trinkets from the show's toyline in the actual show itself . Merchandise Driven shows are not limited to a young audience either. Many works are adapted from manga, video games, toys, etc. only if there's an existing lucrative market, and older fans are often targeted for their potential loyalty and deeper wallets. That so many comic books and late-night anime can maintain a decent budget is due to this small but vocal group of fans. Can be halfheartedly avoided with the use of a Segregated Commercial . Still, this sometimes produces a Franchise Zombie . However, Tropes Are Not Bad — some fandoms like the merchandise more so than the show itself. Many musicals ensured that potential hit tunes were reprised a few times. This was as much for the sake of the song

publishers as for dramatic opportunities like the Dark Reprise . The revues, which were formed around Sketch Comedy and had little to no plot, could get quite shameless: some of them explicitly introduced song reprises as a ploy to sell sheet music. , and once the requirements are met the writers are basically given free rein to script what they want. See The Merch for that. Peanuts </ creator Charles Schulz was famously quoted as saying there is nothing wrong with using characters in marketing, so long as the quality of one's work stays refined. That said, Bill Watterson has, equally famously, taken no chances and limited Calvin and Hobbes </ to the print medium to prevent any decay in quality. (Unfortunately, this caused people to just make offensive unauthorized merchandise...) Also note while advertising can often be the main reason for a show's existence, it is the only reason, that's what actual commercials are for. Shows of this nature always do their best to tell a story and to keep the viewers hooked with said story. Keep that in mind whenever viewing a show that falls under this trope. It's also notable that, when the series is particularly well-done, it may outlive the product that inspired it. This seems to be particularly true of comic books, such as ROM: Space Knight </ and Micronauts . </ It's also common for merchandise driven shows to develop a cult following that long outlasts the original merchandise; such a fanbase may result in its eventually being Un-Canceled (usually with accompanying new</ merchandise), as the current incarnations of Transformers , </ G.I. Joe , </ and others can attest. Compare Misaimed Marketing , where this sort of thinking is applied where it shouldn't be. See also Defictionalization , where the licensed merchandise is also merchandise inside</ the show; and Breakaway Advertisement . In some instances, this can also be intertwined with Off-the-Shelf FX . Contrast with The Merch , where the merchandise sales came after</ the work, in order to support it. See also Product-Promotion Parade , a common occurrence in Merchandise Driven works, and Cash Cow Franchise , and Toyline-Exclusive Character , where the merchandise includes characters that don't actually appear in the work made to promote the merchandise. See the Analysis page for a list of tropes enforced in these works as ways to sell more merchandise.

More plausible versions (relatively speaking — this isn't a particularly plausible idea) often put the Mercurial Base on train tracks , and use the thermal expansion and contraction of the tracks to move the base; this only works at sunrise or sunset, which can result in added drama. Less plausible versions might move it in just about any way the author thinks is cool, and are probably more likely to try to stay near midnight, or just after sunset, to give themselves a larger safety margin. Because of the Rule of Drama , a Mercurial Base inevitably comes along with one of two events. Either: At least as applied to Mercury itself, the Mercurial Base is of necessity a relatively new idea. Astronomers used to think Mercury was to the sun, with the day side constantly searing hot and the night side constantly near absolute zero. But in 1965 it was discovered that the planet is only sort-of "locked," in a 3:2 orbital resonance that gives it three days every two years. Thus came the idea that a base would have to move, slowly, in order to stay out of the sun. This is a subtrope of Mobile City . May (of course) be a feature of an Industrialized Mercury .

Something horrible has happened or is happening to Alice. Her pain is unbearable. Even her loved ones look away and cover their ears, trying to block out the sights and sounds of her agony. There is nothing they can do to ease her pain or save her. But they can offer one last mercy to their friend: they can end it all for her now, before it gets any worse Whatever is afflicting Alice is usually in the category of a Fate Worse than Death (thus making the death a kindness). There may be a Body Horror that nobody can figure out how to destroy. Or Cold-Blooded Torture has left her horribly maimed and screaming incoherently. Maybe she's being Eaten Alive . Or perhaps she's about to succumb to The Virus or The Corruption , and she wants to Die As Herself . It may be that she could survive, but they have no access to medical care; or that Alice, if she lived, would be reduced to a shell of her former self. Whatever the reason, this trope implies that death is the merciful option, even if Alice is begging for her life (or is so overcome that she cannot speak at all) Instant Death Bullet is likely, and justified in this situation: the killer has no difficulty getting to a position and attacking in a manner that would cause quick death. There is usually a moment when a glimmer of self-awareness allows Alice to show her gratitude through a tearful smile or the like. This is usually easier when the shooter is Cradling Their Kill When several people could do it, it is likely that her closest friend will insist on being the one to give the fatal blow; compare Dying Alone The Medic , even if holding to Thou Shalt Not Kill , may make an exception for these Note that in Real Life , is extremely</ controversial. Primarily in comedy: With groups that are based on the Boy Scouts and what have you , you can name virtually anything, and odds are, there'll be a merit badge for it. Hopping On One Foot While Singing Led Zeppelin Tunes And Drinking Chocolate Milk Badge? Yep. Bruce Campbell Lookalike Badge? Check. Catching Arrows Blindfolded Badge?

You know it! And many, many more. Sometimes this concept is used as a throw away line to explain some (suddenly essential) esoteric knowledge held by one of the heroes (particularly if they have not been set up as having those skills as part of their character): Might even be an Aesop of some kind about how Boy Scouts might be geeky or nerdy, but they do have some skills that come in handy at times, and maybe they are masculine after all. Probably inspired by the Real Life Merit badges of: Those six merit badges were the favorites of Boy Scouts at Scout Camp who needed an extra merit badge but didn't want to work too hard. Then there were also the weird ones like Masonry which involved building your very own outdoors fireplace/brick barbecue. Sadly most of the really odd ball ones were eliminated in the 90's (rabbit breeding, anyone?). It's worth noting that many sources use "getting a merit badge" like winning an award, when the actual process involves meeting with an approved merit badge counselor, showing achievement of a specific set of criteria, and producing a formal writeup of the process for approval by said counselor and the relevant troop leaders — it's more like a short hands-on class (occasionally with homework) than it is a trophy. While the word "messiah" has different meanings in different cultures and there have been according to Wikipedia , for most Western intents and purposes, the term has been Hijacked by Jesus , with Jesus becoming the Trope Maker . In media, the Messianic Archetype is a character whose role in the story (but not necessarily personality) echoes that of Christ. They are portrayed as a savior, whether the thing they are saving is a person, a lot of people or the whole of humanity. They endure a sizable sacrifice as the means of bringing that salvation about for others, a fate they do not deserve up to and including death or a Fate Worse than Death . Other elements may be mixed and matched as required but the Messianic Archetype will include one or more of the following: Some takes on what makes a Messianic Archetype include All-Loving Hero , the Dark Messiah (the extreme Anti-Hero version), The Antichrist , the False Prophet (the lying scammer version), and the Anti-Antichrist . However, keep in mind that All-Loving Hero and the Messianic Archetype are not synonymous</. All-Loving Hero is about a character type with certain personality traits. The Messianic Archetype is about the role the character has in the events of the plot and can have any personality traits, even overtly villainous ones. Even spawns of The Devil themselves can be Messianic Archetypes (such as the more messianic versions of the Anti-Antichrist). It's also not necessary for the archetypal character to be even remotely Christian. The Ur Examples include Osiris (Egyptian) and Inanna (ancient Mesopotamia and the actual city of Ur) making this trope Older Than They Think . This trope is the good counterpart to the The Antichrist , which are characters inspired by the being of the same name as portrayed in the Book of Revelation though the book itself only refers to him as "The Beast" . Those who fall into this archetype are often Allegorical Characters . See Away in a Manger for Nativity parallels at an earlier point on the life timeline. Compare Madonna Archetype

Actors are prone to having their own personality... surprise! They may be gifted in being able to portray someone else, but often that baggage of their own distinct personality can cross over into the minds of the general public. There are also past roles that they will be eternally known for. The use of Meta Casting is taking an actor and crafting a role that utilizes their known history to create a resonance between the performance and the audience that makes the whole thing far more dynamic than it could have been in any other way. As an example, take an actor who is famous for having altercations with obnoxious tabloid reporters. Take that same actor and cast them in a role of a famous businessman who kills a reporter for harassing him constantly. In some cases the actual role is almost an expy of themselves, as in they're playing an actor</ with a suspiciously similar history. This can come in multiple ways: In many cases this can be And the Fandom Rejoiced ; the fans latch on to that resonance and appreciate it. Taking a step back and looking at how we look at things.</

Metafiction is crazy, man! We had to do what it said! </

The game outside the game, the metagame is a concept that exists for all competitive games and can't be easily defined in one sentence. Put simply, the metagame is the question of how everyone else is playing. If you know the answer, you can then tailor your own play to take advantage of their weakpoints For example, you've been watching your buddy play Street Fighter II </ in the arcade. You notice he uses the same moves and Combos over and over. Therefore, when you later decide to play against him yourself, you use a character and moves that you know can beat him. Instead of going in blind, your foreknowledge of his favorite strategies gives you an advantage Knowing the metagame is vital for gamers who are much into Tournament Play . Many a tournament has been won by a player who cannily predicted which way the pendulum would swing, and many, many players have scrubbed out as a result of a miscalculation of the metagame A common Metagame term is the Mirror Match , where you play against someone using the same thing as you are; the same video game character, or card deck, or whatever. A Mirror Match often requires special strategies, metagaming the metagame

It should probably be noted that the term "metagame" is also used pejoratively when it comes to Tabletop Games and other roleplaying games that expect players not to jump In and Out of Character . Here, using The metagame is often considered somewhat akin to cheating, since it's information that the player's character couldn't possibly

know (since the character shouldn't know that he's in a game), and shouldn't be making use of. The Stop Having Fun Guy attempts to enforce his own metagame on the other players. Naturally, this can cause problems for new players, even going so far as to become a Guide Dang It! . In some cases, the metagame can further confuse new players, particularly for adaptations: what should</ be good, based on the source material, isn't</ in the game itself. (We have a trope for this, CCG Importance Dissonance , but it doesn't just happen in card games.) A.I. Breaker is a subtrope. Compare with Meta Plot . Contrast with Achievements in Ignorance . Also known as headbanger, thrasher, or hesher, the metalhead is a typically male character that started showing up in movies and television shows in the 1980s as Heavy Metal became popular. As the title implies, he is a very passionate fan of hard rock and heavy metal music and is not shy about expressing it. Unfortunately, some express their opinions too much to the point of coming off as an elitist Jerkass (and No True Scotsman is by no means uncommon) The metalhead can usually be identified by any combination of the following: long hair, tattoos, piercings, badass beard or mustache , a black t-shirt bearing the logo of his favorite band (occasionally a hoodie as well), a black leather motorcycle jacket, tattered denim jeans, camo pants, high-tops, skate shoes (almost always Vans Old Skools), Converse (typically All Stars), combat boots, or a denim vest adorned with pins and patches. They are also known for using the "heavy metal horns" hand gesture as a way of showing their approval for something. Most metalhead characters are male, though female examples exist. Metalhead characters usually live in a Poster-Gallery Bedroom with walls covered in heavy metal band posters (and sometimes they still live in Mom's Basement). Female metalheads will generally be presented as either The Lad-ette or as Gloomy Goths , and are liable to be either incredibly beautiful and ultra-sexualised (the male metalhead's assumed ideal) or comedy fat girls He usually has a menial job and dreams of one day being in a successful band. He likes to say "dude" and "awesome" a lot. Although he doesn't have a lot of book smarts, his knowledge of heavy metal is staggering and he can debate for hours what bands should and should not be considered "metal." Other stereotypical things that the metalhead loves are muscle cars , motorcycles , beer, Horror Films , violent Video Games , and (depending on the portrayal) marijuana or violent anime. S/he may also be portrayed as a Hollywood Satanist for good measure

Tropes about various metals and alloys Not to be confused with tropes about Heavy Metal (although the genre was simply named after a certain type of metallic elements), or the metallic named Superhero Comic Ages

One of the easiest ways to portray an organism as different from other living creatures is to give it radically different dietary needs. And one of the easiest ways to do that is to have the organism consume metal. Now, while in real life humans and other carbon-based organisms need to consume trace amounts of metals to stay healthy (for example, the iron found in green vegetables is necessary for the production of metalloproteins like hemoglobin), this trope is about creatures that consume pure, refined metal for food. So a person eating the aforementioned green vegetables would not be an example, but a monster eating a steel sword would be Such metal-eating creatures often present a unique threat to many of the constituent parts of human civilization compared to other entities with strange diets. After all, automobiles, I-beams, electrical wires, and computers all need metal to manufacture, so a monster that devours such objects can throw people's lives into disarray even if the people themselves are unharmed. Heroes can also find it difficult to fight monsters that can eat their weapons and armor . At other times, however, metal-eating organisms can be beneficial to humans, such as by recycling or refining the metals through digesting and expelling them in a way that can be gathered. There's also an occasional overlap with Nuclear Nasty ; radioactive elements such as uranium and plutonium are metals, and irradiated monsters are likely to seek out such substances for a meal. Hard science fiction likes to make these creatures Extremophile Lifeforms , though more fantastical works tend to just depict creatures that resemble those in real life aside from the metal eating It is common for the metal eaters to be creatures predominantly made of metal themselves, usually Chrome Champions with some kind of Sculpted Physique . It is also a common trait among robots, in lieu of them needing just electricity and factory-made replacement parts like in real life. A meal for these characters may consist of Palette-Swapped Alien Food with a metallic color and texture, oftentimes with visible seams and rivets to emphasize that it is made from metal. And sometimes, the eater is actually a human or humanlike character who chows down on metal in order to be more "macho" Subtrope to Bizarre Taste in Food . Sometimes an example of Extreme Omnivore , unless the character only </ eats metal. Extreme Omni Goats are very frequently shown eating metal; tin cans, in particular, are a staple item in their diets. Metal is also a common food for Grey Goo . Compare with Eat Dirt, Cheap , which also deals with characters eating a substance that comes from the ground, and Eating Machine , where metallic robots eat the same food as organic humans. Not to be confused with Tasty Gold or Ate the Spoon , unless the characters really do</ eat the gold/spoon outright

Metals, especially iron and copper, are a critical part of a typical human civilization. A common setting in science fiction and fantasy is a world that is lacking in these materials. This lack can be used to drive the plot, or simply to provide an unusual background for the story This can be a reason for a Medieval Stasis or the driving force behind the development of Magitek or Organic Technology . Bamboo Technology is a possible (but uncommon) outcome. A dangerous Metal Muncher might be banished to such a planet where it can do no harm There is an element of Zeerust to this trope, as real world advances in materials science is increasingly demonstrating the ways in which elements like carbon

and silicon can be used to produce both structural materials and electronic components with little or no iron, copper or other traditionally used metals. In particular, many works in the science fiction genre start with the assumption that virtually all future technology would be based on metals like iron, and that the lack of it would result in a technological collapse since nobody could conceive of using anything else. That said, so far as we can tell, developing the technologies needed to refine carbon and silicon into substitutes for metal would require metalworking to be developed first. A neolithic or medieval society on a planet with little or no metal would not realistically be able to advance to a modern level of technology, and as such would not be able to develop the ability to manufacture non-metallic technologies

In most cases, you can expect the child form of a creature and the adult form of a creature to be rather similar. Kittens look like cats, puppies look like dogs, etc. This isn't always the case, though, such as in certain insects that go through metamorphosis. The most obvious example is caterpillars becoming butterflies, but there are even weirder examples Naturally, fiction has played with the concept. It's not an uncommon occurrence for parasitic grubs to become giant lizards, or fuzzy rabbitlike creatures to grow up to become bearlike behemoths. If you weren't told they were the same creature, you never would believe it Naturally, the most extreme cases present a problem for artists. How do you go about creating the intermediate stage between an insect and a dragon? In many cases, they don't bother. The transitional stages are either never shown onscreen, or the creature will use a form of cocooning that prevents the audience from seeing its metamorphosis If the adult form is significantly stronger, this can act as a species-wide Magikarp Power , but sometimes the different forms are dangerous in different ways. While this is often used for a species-wide One-Winged Angel or to introduce more powerful forms of old enemies, occasionally it's just for weirdness' sake See also Metamorphosis . Closely related to Pupating Peril Gosamyr, a friend of the New Mutants </, was a member of an alien race whose members undergo through this. At first, they're cute, delicate, winged creatures (although with the annoying ability to empathically - and involuntarily - cause conflicts among male humans), but then they enter the cocoon phase (which lasts centuries) which would turn them into their adult form: gargantuan abominations

The Xenomorphs from Alien </ also have a peculiar lifecycle: It could be described as , with the "gametophyte" being a creature that could be described as a mismatch of hands/legs, tail and genitalia that lives just to seek a host to impregnate, and the "sporophyte" developing in the body cavity of the host, emerging violently as a snake-like creature, and quickly growing up into a large, 4-limbed biomechanoid creature with some traits reminiscent of the host species, but taller and slimmer. If it grows into a fertile queen, it also changes its limb structure, grows an additional pair of arms, increases in size, and loses the host-like characters.

Inheritance Cycle </ has a humanoid species named Ra'zac. They ride big winged creatures, which are the next step in their life cycle (and their parents).

In Sluggy Freelance </ Aylee has gone through this over a dozen times, eventually turning into a fifty foot tall dragon and finally

into the most dangerous creature of all ... a woman! </ A Space Ghost </ episode had Jan and Jayce adopt a cute l'il creature called a star fly, unaware that it was the larval form of a giant glowing Kaiju called a star beast. It grows up fast and seems threatening, but in the end, it remembers Jan and Jayce and refuses to hurt them.

There are tons of critters with weird life cycles. Insects, for example, lay eggs that hatch into worm-like larvae, who gorge themselves until they can spin a cocoon around themselves. That itself hatches into a mature adult. There may also be sub-stages of larval development, called instars</ .

Sometimes, a metaphor is a train, taking you from concept A to concept B, maybe at high speed, maybe derailing , and definitely serving overpriced sandwiches There's nothing wrong with using a metaphor to explain the situation, but make sure it doesn't derail on you later. Trying to hold to an established metaphor while including added information that doesn't fit it at all... well, that's sillier than wearing a trash can on your head while artistically comparing two unlike concepts In other words, a good comedy trope The trope generally follows one of two paths. The metaphor begins with a solid concept but quickly degenerates into a repetition of the actual situation only projected onto the metaphorical concepts. " You Can't Make an Omelette... without [something much more unpleasant than breaking a few eggs]" seems to be particularly popular, perhaps because it lends itself well to Black Comedy . It is also possible for the metaphorical concept to distract the speaker so that the metaphor is forgotten Sometimes the character will realise they've spoilt the metaphor and admit they've lost their train of thought, or perhaps they'll try to reconnect the mess they've made back to the original metaphor, which just prolongs the joke further Handily Truth in Television . This trope occurs when a statement is clearly false — at least according to the most obvious meaning of the words — but from a certain point of view it could be considered true. " From a Certain Point of View " was the original Trope name. The justification for calling it 'true' generally hinges on a shaky technicality which most people would not consider valid (e.g. the statement "Japan conquered the world" is clearly false in any literal sense, but Japanese culture is very popular worldwide, which you could say is a form of conquering). One way to make this trope work is to play with the Exact Words , but particularly bad cases may require a Personal Dictionary or outright Insane Troll Logic This is most commonly used by oracles who are trying to create a Prophecy Twist but haven't sufficiently mastered the art of double meanings. Instead of taking advantage of a non-obvious but genuine ambiguity of phrasing , or relying on elaborate symbolism , the oracle takes an unambiguous statement and tries to pretend that there was another valid meaning. It is

also what separates a Literal Genie from a Jackass Genie , as the latter stretches the interpretation of the wish beyond the bounds of credibility just to screw the wisher over. Also often used by The Fair Folk and others who Cannot Tell a Lie . It can be a (questionable) way to Take a Third Option when faced with To Be Lawful or Good in the form of whether to tell the truth if it causes harm Less commonly, it is used in the wake of a Retcon , in an effort to smooth over the inconsistencies introduced by said retcon. A particularly infamous example occurs in the Star Wars </ movies, where, "Darth Vader betrayed and murdered your father" was pronounced true "from a certain point of view" in the third film , even though in the first film the line clearly indicated that they were two different men. Nevertheless, George L insists that the metaphorically-true meaning was always what he intended Compare Distinction Without a Difference , Double Speak , False Reassurance , Loophole Abuse , Keeping Secrets Sucks , Both Sides Have a Point (or contrasting, depending on the circumstances), Stealth Pun , Visual Pun , Pragmatic Villainy , Blue-and-Orange Morality , Ignorance Is Bliss Contrast Prophecy Twist , in which the alternative interpretation is not anticipated by the characters (and hopefully the audience), but makes sense when revealed. Say you're into a particular author who likes giving each of their stories a special kind of Twist Ending . They like using it so much it's practically a signature element for their works. For some, it's predictable and groanworthy , while others might like it. Either way, it's always going to be there. Right? Imagine the surprise when, after finishing with the story, the twist isn't there . Much like an Empty Room Psych , the author willingly removes that twist from their latest work to throw avid fans who expected it for a loop. Maybe they realized that using the trope was becoming predictable or worse, a crutch, and ditched it. Or perhaps they plotted the surprise from the start from before even starting their first work just to give fans a huge surprise. And of course, maybe they just wanted (horror of horrors) to surprise the audience in order to entertain them. It doesn't matter which it is, the net effect is the same: the plot twist for that story becomes the absence of an established twist. So,

a Meta Twist. For a moment, the experienced have become just as easy to surprise as the newbie. In fact, a newbie into the works/genre will be pleasantly surprised regardless. The avid fan will get the added bonus of not knowing what happens next</ . This can be a good way to keep the audience interested in their future stories. Compare with The Un-Twist . Not His Sled is a Sub-Trope where the Meta Twist occurs in an Adaptation or a Reboot as opposed to a sequel or an otherwise unrelated franchise by the same creator. For the latter, beware of potential examples that are Older Than They Think : earlier works lacking expected twists are the Author establishing a style instead of subverting it. </ This is a Spoilered Rotten trope, that means that on this list is a spoiler by default and most of them will be unmarked. This is your last warning , only proceed if you really believe you can handle this list. In fact, these spoilers are even more dangerous than the usual variety, since it's impossible to not spoil the twist ending usually utilized from the moment the name of the work or creator is stated.

Method Acting is a controversial practice in the field of performance. The core gist of it is this: an actor tries to replicate the life circumstances, mannerisms and emotional feelings of the character he portrays, so as to give realism, legitimacy and dramatic strength to his performance. An actor playing a character from history might research the character, look for media featuring him, and try to live in the same conditions that that character lived, provided that doing so would not be detrimental to his mental or physical health. A character in a deep depression might make him reflect on his own moments of sadness and bring those feelings forth. He might gain or lose weight to fit a character who is morphologically different from him, but this is generally frowned upon (despite what Robert De Niro would have you believe) Though Method Acting has produced powerful and affecting performances, it is increasingly finding itself coming under fire for its inherent limitations. Method actors are pretty notorious as being hard to work with because of their involvement with their roles. When all's said and done, method acting is a search for perfection in performance, so method actors sometimes have confrontations with cast and crew over the direction his character takes. Also, well, it's hard to give directions to an actor when he's in-character even off-camera (note that not all Method Actors do this, although they do have a reputation for it). Nonetheless, many of the greatest performances in movie history have resulted from an actor who completely immersed himself in the role. Method acting is, above all, not easy. It takes its toll on the actors, both physically and emotionally, and as mentioned earlier, can result in friction between the actor and the rest of the production staff. But when a performance was well method acted, it shows For the involuntary version of this, see Enforced Method Acting . For when a writer/director casts an actor for his natural fit into a role (natural method acting, if you may), see Write Who You Know . If the character falls too deep into their role, they may become Lost in Character Technically speaking, Method Acting refers to an outgrowth of Konstantin Stanislavski's technique as developed and popularized by Lee Strasberg. Stanislavski's own method, further developed after Strasberg's contact with the Russian's theories, is known as the System. In fact, in acting circles, there are several schools of the Method. Strasberg's version is the best known, with the being the most revered training ground. But there are also the

theories of Stella Adler (who counted both Marlon Brando and Robert De Niro among her students), who was the only one to apprentice under Stanislavski himself. She felt Strasberg's focus on personal identification with the character got Stanislavski all wrong, and that the performer should be using his or her imagination to develop their performance. Sanford Meisner, who knew both Strasberg and Adler personally, developed his own spin on Method ideas, centered on the belief that performers should learn to act based on instinct (Meisner's long list of protégés include Gregory Peck , Steve McQueen , Grace Kelly , and Jeff Goldblum) There is, needless to say, much debate between followers as to which is the "true" Method, with the likes of Elia Kazan believing it to be a highly personal, subjective actor-to-actor thing rather than a dogma. It should be noted that while for Stanislavski it was important that every actor (for example, even those playing 'Guard #3') research heavily and work just as hard as the actors playing the lead characters, Method Acting in modern cinema is usually only practised by the leading actors for main characters. In addition, one of the most well-known aspects, emotional/affective memory, is a cornerstone in the more modern development of the Method, whereas Stanislavski later noted its limitations in eliciting performance after one protégé had a mental breakdown A disclaimer is probably needed for anyone looking to try method acting: the process is controversial for a reason. Not only is it physically and emotionally exhausting, but it can also cause lasting psychological harm to an actor. This is because acting can alter the activity of a person's brain to fit the character they're portraying; staying in one role for too long will cause that character to gradually override the actor's state of mind, and suddenly dropping the character after a performance is complete can really throw the actor for a loop. In many cases, method acting gone wrong can result in the actor facing severe mental health issues and a lack of personal identity, hence the aforementioned case of Stanislavski's student breaking down. Actors who specialize in method acting often have to take long breaks between roles in order to recover from the immense psychological strain they cause, and some, like Daniel Day-Lewis , retire much earlier than non-method actors partly because of the dangers posed by the craft Shia LaBeouf actually took acid for his role in The Necessary Death of Charlie Countryman.</ Not off-screen just so he'd know what it felt like, but while he actually was shooting the film. For Fury (2014) </ he cut his face, pulled a tooth, and stopped bathing, which got him kicked out of the cast accommodations. He has compared this to Sean Penn being strapped to a real electric chair for Dead Man Walking </

The tendency for ancient and fantasy settings to show humans having very long lifespans despite the lack of any established medical science. People will routinely live to a century or better while remaining lucid and active. Might or might not be explained as Wizards Live Longer , Our Humans Are Different or simply A Wizard Did It in the case of magical characters, or Enlightenment Superpowers for spiritual ones. Because in fiction age automatically equals wisdom rather than, say, the gradual death of brain cells, this character is frequently is an Old Master or a mentor . A stalemate in which everyone must</ lose This is typically dramatized as a situation where everyone is standing out in the open and has a weapon pointed at someone else. All the threats are equally balanced to ensure a Mutual Disadvantage ; no one is walking away from this standoff with what they came for. That being said, there is also no possibility of withdrawal; everyone is stranded in the situation, and Failure Is the Only Option , either because you attack (and die) or attempt to retreat (and die). Typically, such situations are only resolved by some form of Plot Twist or Deus ex Machina This trope can be constructed in a number of geometries: one against one, three or more to a side, free-for-all , or army against army. Frequently ends in a Blast Out when someone gets twitchy, figures the odds differently than everyone else and decides they have an advantage, or is just crazy enough to not care if they die too When this kind of standoff happens in Heroic Bloodshed movies, it usually takes the form of two characters with their guns in each other's faces at point blank range . Another version of the Mexican Standoff has three or more

participants with guns leveled in ring-around-the-rosy fashion, so the person you've got covered is not the one covering you. Blades could be substituted for guns, meaning the person you've got covered just might survive long enough to retaliate Sometimes the situation is resolved in a civilized fashion with all involved parties realizing the suicidal position they are in and agreeing to put down their weapons, usually on a count of three to make sure no one ambushes the other. Occasionally, a downplayed Friend or Foe situation results in a brief version of this It's Older Than Radio and has been around long enough to be parodied</ in the play "The Critic", first staged in 1779. The term itself, however, originated in the 19th century - possibly in Australia, of all places - regarding perceived political indecision in Mexico Unsurprisingly, Mexicans don't refer to this as a Mexican standoff. In fact, no quippy Spanish equivalent seems to exist at all When entire nations do this, it's upscaled to Mutually Assured Destruction . Also a case of the famous " Prisoner's Dilemma ": If everyone puts the gun down, everyone lives. If everyone shoots, everyone will die. But nobody wants to be the first to put the gun down and become vulnerable. Compare the Showdown at High Noon from Westerns which sometimes take the form of this trope. It's also closely related to the Game of Chicken , where nobody wants to be the first to back down, but if nobody backs down, well.. Expect Extreme Close-Ups Not to be confused with Mexican rugby fly-halves. That is a stand-off that happens to be Mexican

Some Mexicans came to America, and for some, America came to them. In 1836 the Republic of Texas separated from its previous Mexican rule. After spending the better part of their one sovereign decade attempting to join the United States, Texas was annexed by the USA in 1845. The United States offered Texas security, stable rule, and economic survivability, as many had families in the United States and feared that Mexico had plans to strike once more at Texas, hence this trope. The United States also would protect the settlers' right to own slaves — these settlers, first invited to Texas by the Mexican government after agreeing to follow Mexican law, balked at Mexico's ban on slavery in 1829, which these slave-owning settlers very much disagreed with. The new Texas immigrants from the United States became known as Texicans while the original Hispanic locals were called Tejanos. Texas (or Tejas as it was called at the time) was originally granted a one-year exemption from the 1829 ban, but Mexican president Anastasio Bustamante ordered that all slaves be freed in the law of April 6th, 1830 which also prevented further emigration to Texas from the United States and increased import taxes. This law didn't stop further immigration as Americans continued to settle Texas illegally. To circumvent the law, many Anglo colonists converted their slaves into indentured servants for life. The slavery aspect is something Texans unsurprisingly tend to gloss over when discussing their state's history. After Santa Anna overthrew president Anastasio Bustamante in 1832 the Mexican government started giving concessions to Texas that included a repeal on the emigration ban, more representation to Texas, and the right to trial by jury. However, Santa Anna had other plans as he overturned the 1824 constitution in 1835 and ordered all state legislatures and militias to be disbanded. The Tejano governor of Texas refused and when Mexican authorities attempted to seize a cannon used for defense against Comanche raiders it led to the Battle of Gonzales which

sparked the Texas Revolution. In 1846, the United States Congress declared war on Mexico following a border skirmish between a Mexican cavalry detachment and a U.S. patrol. Long story short, the US army fought all the way to Mexico City, Mexico lost the fight, and the Mexican government signed the Guadalupe-Hidalgo treaty, in which Mexico transferred to the USA the territories that are nowadays covered by California, Nevada, Utah, Arizona, New Mexico, Texas, and parts of Colorado, Kansas, Wyoming, and Oklahoma — that is, around 60% of its territory (though only a very small part of its population or gross national income) — in exchange for the sum of 15 million dollars (accounting for inflation, that's about $390 million in 2012). This was later followed by the sale of La Mesilla / purchase of Gadsden for the purpose of building a transcontinental railroad. Needless to say, the thought of being formerly such a huge country that lost so much land supposedly means that many Mexicans have at some point dreamed of getting back the "Lost Territories". However, given that America spends about 100 times as much as Mexico on its military, this dream will likely go unrealized for quite some time. There is a Truth in Television aspect here, as activist groups like La Raza and MEChA have stated in their charters the goal of bringing back to Mexico much of its former land, but what if, in fiction, the USA were weakened enough (or Mexico made powerful enough) to make this dream come true? Thus, whenever in speculative fiction you see the United States somehow greatly weakened , or in the past before the USA became a superpower, you can pretty much be assured the back story will involve Mexico invading and conquering at least Texas and California. This is particularly ironic, because Mexico's economy right now is smaller than both Texas and California. ; in fact should Mexico hypothetically succeed this very moment in recovering just these two states, the Mexican economy would practically quadruple</ its size, but then again, it IS Texas . For the same reason, in the event of the United States breaking apart it's probably more plausible for California and/or Texas to take over Mexico than for the reverse to happen. See also Divided States of America . Sister trope of Russia Called; They Want Alaska Back . May happen as a result of opportunism during a Second American Civil War . Eurabia , the idea of Europe being taken over by Muslim immigrants, is the loose European version of this trope. See also and which were actual, primarily European, examples of this phenomena.

A character having just delivered an awesome speech or performance will emphasize just how awesome it was by purposefully toppling a microphone stand or dropping the microphone from shoulder level height just before leaving the stage. Since this is a showy, arrogant gesture, comedy is frequently wrought by having self-effacing or rule-conscious characters do it. Expect a wide range of audience reaction, from Show Stopper rapturous applause to Chirping Crickets silence. This action is often, but not always, accompanied by the stock phrase, "<Name> out" or "Peace out". Can also be parodied by NOT cutting out the sound while doing this, creating horrible sounding noise. This is also why people hold the mic up high before dropping it - it's a cue for the sound tech to cut power to it. The term mic drop has also been adopted to refer to a definitive statement for which there is no valid comeback or debate. ("He delivered the mic drop on the argument.") The mic drop also has connotations of an unspoken challenge, daring anyone who thinks they can do better to pick up the mic . If someone does</ rise to the challenge and picks up the mic, the mic dropper can be seen as a

showboater who didn't quit gracefully while he was ahead , especially if the challenger subsequently outclasses him . On the other hand, if the challenger fails</ to meet the challenge, he'll probably be seen as a fool who can't recognize he's in way over his head. Related to less-boastful use of this in stand-up comedy, the term is also used as Self-Deprecation akin to the Rimshot . (This is usually accompanied by “Thank you, ladies and gentlemen, I’ll be here all week.”)

A character is in possession of an incredible machine or device the size of a bean, which while small or seemingly inconsequential by its lonesome can do incredible things when working together with a large swarm of others like itself. In an action-oriented story they will be used as a swarm to attack someone or demolish structures, but in a more mundane situation they can be used to move objects or even a person, assemble objects or perform a myriad other tasks One of the greatest advantages of such as swarm is its versatility — by changing its shape and configuration, assembling and dissembling itself and shifting its attention to a single viewpoint or many to suit the needs of the moment, it can perform a much greater variety of different and specialized tasks than a single larger machine would be able to Related to Synchronization , Synchronized Swarming and Heart Is an Awesome Power . Performing on stage, be it as a musician, a comedian or a host of a program, can be pretty fun, and in this moment of fun, the performer may taken it upon themselves to swing around the microphone either in front of them or over their heads. Do it right, it can be pretty cool. Do it wrong, you just look awkward or foolish by potentially damaging an expensive piece of technology. For added humor, someone could swing the mic and it accidentally hits someone else. This has been seen in individuals who do to show that they are cocky, fancy or just dramatic. Plenty of times, you'll see a flamboyant or otherwise spirited character engage in this behavior and it's additionally seen as a sign of being comfortable with their performance and/or the audience. Keep in mind that while swinging a microphone is usually done with the cord and is the most popular example of this trope, other variations can be done. This includes swinging the microphone by the handle instead (example being in a golf club swing action) or even playing with the microphone stand while the mic in still in it, be it just swaying along or even dancing with it. Closely related to Mic Drop . Unfortunately, this is falling out of practice (but isn't completely gone) due to liability-related issues and just being seen as an odd antic or quirk of yesteryear, although if someone has a signature of doing this, like Roger Daltrey, then it's to be expected. Additionally, it's increasingly common for artists to use cordless microphones to allow more dynamic performances without risking getting the cords tangled. Played for Laughs in Top Secret! </ during Nick Rivers' performance. While singing "How Silly Can You Get?", he sings with the microphone still in the stand and stretches towards the end of the stage as the stand magically stretches with him. Gets horrifyingly parodied in Carrie </ when Carrie opens the sprinkler system on the prom goers. Josie from the band is holding onto the microphone when this happens and so he's electrocuted while

holding onto the mic and swings around holding it. Plants vs. Zombies 2: It's About Time </ : The MC Zom-B enemy can swing his microphone in a 3×3 range when he is near a plant, dealing very high damage. In an episode of Doug </, Doug has a fantasy where he is a member of his favorite band, The Beets, and he's joyfully swinging around the mic by its cord over his head (while wearing a blue punk rock wig) and screaming "Killer Tofu!" As stated above, this is a signature move with some musicians, such as Freddie Mercury , who often danced with his microphone stand and Steven Tyler , who not only dances it his mic stand and swings it around, but also puts brightly colored scarves on it, too.

Post-Release Content, or content that is created after a game has been released, is additional purchasable content that comes in two distinct flavors: DLC, or big updates to a game, synonymous with expansion packs; and Microtransactions. Microtransactions, also called Micropayments or MTX, are small transactions found in online games and services where a user pays a one-time fee for access to a piece of exclusive content (Virtual Goods). This could be pretty much anything—a cute new hat for your Virtual Paper Doll , a cool new piece of armor, a temporary power-up, whatever. It could even just be a shortcut to content you could access for free — for example, you might pay real-world money for a cache of the in-game currency. The Virtual Goods can be bought directly, but it's also common for your real-world money to buy some amount of special in-game currency to spend in a special shop. Fictional universes call for fictional measurements of time. After all, why would an alien culture use the same words for time as an Earth-based culture? Strangely, 'alien' time units correlate pretty well with Earth time units in the majority of cases. 'Cycle' is the most common of these, usually referring to a year (though sometimes a day). This can be justified easily enough; aliens probably live on a planet that orbits a star and has a day-night cycle, so they might well have natural units of time corresponding to "day" and "year," though probably not exactly the same length (unless, of course, the planet in question is almost identical to Earth and the star it circles is the same as the Sun, in which case it may be the same distance away and would therefore have about the same length for a year. No accounting for days, though.) If an alien character doesn't use their own measurements, but instead uses Earth measurements in a jarring manner, they're talking in terms of Two of Your Earth Minutes . If these units are used across multiple worlds or civilizations, they are Standard Time Units . See also Fantastic Measurement System for other fictional units.

Historically, attempts to replace seven-day weeks with something else have failed. This has been attributed to, of all things, bearded men preferring to trim their facial hair on the same day each week: wait longer than seven days and it grows enough to get tangled; don't wait as long, and they're grooming themselves before there's much need to do so.

Someone (usually the Gadgeteer Genius or Mad Scientist of the cast) will get everything back into working order . In mid-air. Before hitting the ground. This can be as simple as flipping some switches (Anakin pulled this one off with his podracer) or climbing out and cranking the engine until it restarts. Of course, there's also the option of Depending on how fast you're falling when you finally pull out of the dive, you might be acting under the assumption that it's Not the Fall That Kills You… . Strangely, this can be Truth in Television - the pilots and crew of early cargo planes learned that certain maintenance operations could be conducted without landing if you had Suicidal Overconfidence in your grip and no fear of heights. Long-distance bombers in WWII damaged during bombing runs also had a choice between attempting this trope, or one of two other options.

Two adversaries are locked in brutal combat, and the tension is thick enough to cut with a knife. Naturally, the writers grab a knife and cut it In the midst of combat, the fighting will suddenly stop. All parties involved will turn around, take a few deep breaths, then turn around again and simultaneously resume fighting. Occasionally, the fighters will resort to something more nonsensical during the break, such as fixing their hair or yelling at a friend/sibling/teammate. A common cause is when a character crosses a joke version of This Is Unforgivable! - usually through burning a hole in the opponent's favorite jacket , a chopping off a chunk of hair , or, well... In those cases, the tea break takes the form of a "Dude, why did you do that?" (or, in the protagonist's case, " What the Hell, Hero? An author, developer, or a group of them start with a basic idea, and from there start building a new work intended to be released

to the public, but sometimes these author(s) may see that their creation isn't working like they intended to, it's missing a little something</ in it. Maybe the creators are not very talented in the genre or media they used to start their work, maybe those just don't, or flat out can't, show the work the way they intended to, or maybe it's just for a meddling executive getting involved. Whatever the reason, they see that the bases they have chosen for their work just aren't working the way they want to, so it's time to change one or more of these bases before they release anything. This can come in two flavors: The work keeps its grounds on the same media, but changes its style to other of the many genres inside that media, like from Comedy to Drama in Theater , or a Platformer to Action Adventure in Video Games . A frequent occurrence in 20 Minutes into the Future settings, especially those with some version of The War on Terror . A strange coalition that seems to consist of most Islamic and/or Arab nations or just of numerous terrorist organizations (often themselves funded by a Western Ancient Conspiracy of some sort) excluding Pakistan, Turkey and Iran. Sometimes, writers who don't know better have Shi‘a Persian Iran uniting with Sunni Arab states like Saudi Arabia.) This seems to often be used as a strange version of an Anonymous Ringer for nations like Iran, Saudi Arabia, Libya and other Southwest Asian or Middle Eastern states. Prior to the 1980s, these tended to be secular military dictatorships or socialist/nationalist regimes (like the real-life abortive attempt to set up a United Arab Republic combining Egypt, Syria and Iraq, as well as Libya's attempt). Since the rise in fundamentalism, the Iranian Revolution, and especially 9/11, a more popular idea is to combine it into one huge poorly defined "Inevitable Caliphate" theocracy . This is al-Qaida's and ISIL's primary war aim, but it is probably not in the stars — at least not if Iran and Turkey have anything to say about it. Beyond that, al-Qaida and ISIL are, at the end of the day, lunatic fringes; most other Muslims are non-violent nationalists who probably have a worse view of Osama bin Laden than most Westerners (" You're making us ALL look evil! " is what they usually say), and al-Qaida itself – according to the CIA, MI6, French Intelligence, Russian Intelligence, and pretty much everyone else – is down to about 300 guys on the run in the mountains of Pakistan and Yemen. Israel's state with this power around is rarely mentioned. If Persians and Arabs are being conflated, there's often no mention of what the Kurds or Turks think of all this, and the Arab Christian population is… er, wait, there are Arab Christians ? Often portrayed as a sort of Spiritual Successor to Red Scare , for fairly obvious reasons on the writers' part . May or may not be a Qurac . Compare United Europe and Expanded States of America . A unified Middle East has happened many times throughout history: Subversion: The Ten Rings organization in the Marvel Cinematic Universe version of Iron Man </ appears to be this (despite speaking languages such as Urdu and Romanian), but the novelization refers to the head of the organization, Mandarin, who is Mongolian .

The Global Liberation Army from Command & Conquer: Generals </ is supposedly a terrorist organization, but in reality it goes far beyond that, with armored divisions, entire armies of soldiers, a (small) airforce, chemical and biological weaponry, weapons factories, and most of the Middle East and Central Asia under their control. They're so powerful that they conquer the Middle East and launch a full invasion of Europe! In an episode of The Simpsons </, Homer is concerned about Bart's new Jordanian friend, simply because the boy is Muslim. Homer has a dream where "their kind" takes over the world, and turns Springfield into a Qurac ...and wakes up screaming. Eventually, (emphasis on "eventually") he learns that Bart's friend and the parents of Bart's friend are just regular people, not terrorists bent on world domination .

A Sister Trope to Western , African and Far East Asian Terrorists , Middle Eastern Terrorists are terrorists who are based in the

Middle East to carry out guerrilla and terrorist attacks against domestic/foreign governments and interests alike. They can be based in other places, but the majority of the manpower is made up of nationals who are from the Middle East. They can be used as mooks , usually working alongside other types of terrorists and criminals, as long as they share the same objectives and interests. In fiction, they mostly operate under Terrorists Without a Cause , La Résistance , Knight Templars , or are placed under Your Terrorists Are Our Freedom Fighters . In other instances, they can operate as a lone wolf-type terrorist without being tied to any known terrorist group, something a bit like a Middle-Eastern version of the Right-Wing Militia Fanatic . Due to the recent string of attacks attributed to Middle East-based terrorist groups from the 1990s (including the 9/11 attacks and the attacks attributed to ISIS or their allies in parts of Europe, North America, Asia and Africa), it can come under Unfortunate Implications if handled clumsily. Some stereotypes associated include the use of shemaghs or black balaclavas, communist-made weapons/gear and verses from the Koran to justify their actions, most prominently including the phrase Allahu Akbar Creators can draw inspiration from Real Life sources and cases where terrorism has occurred in the Middle East, the vast majority of them falling under Islamist groups, making The Fundamentalist a common character among their ranks regardless of their exact "flavour". , the majority of terrorist deaths worldwide were caused by five specific groups: the Islamic State, the Taliban, Al-Shabaab, Boko Haram, and al-Qaeda. All five of these groups are Sunni fundamentalist, and with the exception of the Taliban (Deobandi), all belong to the movement. Sometimes, fictional depictions can also include ultranationalist/Communist (or an odd mixture of both as some nationalist and pan Arab factions were Soviet aligned), Christian fundamentalist groups, Jewish fundamentalist (especially if the story is set in Israel) or some obscure cult . Compare Western Terrorists , which consists of terrorists who are born/raised in Western countries from the Americas to Europe, including Australia and New Zealand, African Terrorists , which consists of terrorists who are born/raised in the African continent, South Asian Terrorists , which consists of terrorists who are born/raised in the region of South Asia, and Far East Asian Terrorists , which consists of terrorists who are born/raised in the Far East region of the Asian continent. Compare and contrast with Arab Oil Sheikh , which is a possible source of how Middle East-based terrorists get help in terms of funding.

Also known as the Midnight Fridge Raid—which may induce Fridge Logic , Fridge Brilliance , or Fridge Horror A common occurrence in American sitcoms and other comedy shows is to have some character get up in the middle of the night in order to have a snack. This may be due to the character being a Big Eater , or being on a diet and attempting to cheat on it without anyone noticing Sometimes two or more people will have the same idea and bump into each other. May either be a plot point or a Running Gag

In a series dealing with mecha (or Cool Ship / Cool Car), typically anime, it's common for the important machines to be upgraded with a Mecha Expansion Pack with a Meaningful Rename or replaced with a brand new version about halfway through the storyline. The original is either damaged, destroyed, served as the base skeleton of the new model or retired entirely because of the escalating technology of the conflict In many such cases, the series starts

with the protagonist mecha so powerful that no enemy unit can stop them, then to get some balance the enemy catches on eventually and creates weapons powerful enough that defeating them gets virtually impossible. Finally, the heroes get their upgrades to devastate their enemies and restores their superiority The name comes from Fan Speak in the Gundam franchise, as it is especially common for a new Gundam to be introduced as So Last Season comes into effect. In cases where the original mech survives or is later retrieved, it often becomes a hand-me-down given to one of the other members of the cast but is no longer the Bigger Stick it once was. Note that the opening sequence of the show will probably change to show the upgrade, and in some cases reveals the meaning behind the title Don't be surprised if it happens in time for new toys to get out for Christmas shopping season Despite the name this does not exclusively come "mid season," but may be introduced in the beginning of the second season, at the beginning of the second movie, or after a Hard-Work Montage the new toy is ready for a movies climactic battle Compare to the Mecha Expansion Pack , which may just be adding a Jet Pack to the existing machine. May overlap with Super Mode or Time to Unlock More True Potential , but those can just be linear performance improvements, although developing new superpowers or adding new features to old abilities may count. See also Next Tier Power-Up Do not confuse or other types of upgrades like Art Evolution or Significant Wardrobe Shift In Gundam </ fanspeak it happens in almost every series except for the original (which only had a passive modification for the first mobile suit, not a replacement)

Transformers </: The Unicron Trilogy was built on this trope In the Dragon Magazine series "Voyage of the Princess Ark</", the titular flying ship is accidentally upgraded when it gets possessed by a powerful, sphinx-like extraplanar entity. Not only does the Princess Ark</ become sentient in the process, but it rebuilds itself into the shape of a gigantic sphinx, with sails mounted laterally for wings and a separated bridge/head that floats above its shoulders, turning side to side to 'look' at things or deliver a lightning-blast roar

Sometimes the Big Bad is such a Manipulative Bastard that throwing them into prison isn't much of a hindrance to them. It's not necessarily that they're in a Cardboard Prison from which they can get out at any time , or that they're in a Luxury Prison Suite and thus might not even notice their circumstances. Rather, it's that while they're in prison, they are still capable of leading their organization and moving their schemes against the good guys forward Prison is just a change of location for them, and won't slow down their evil plot to Take Over the World for one nanosecond. Even better, the villain is now in a secure location protected by high walls and armed men, and surrounded by fellow criminals who are easily manipulated thanks to their own lack of opportunities. It's like a made-to-order Supervillain Lair provided by the taxpayer! In fact, the greatest of chessmasters actually plan for their eventual imprisonment and make getting caught a part of their overall Evil Plan from the beginning. This way they benefit regardless of their plan's success or failure. Often combines with a Luxury Prison Suite in the worst cases. Compare Leaking Can of Evil for similar effects with supernatural evils.

A common character build in Competitive Balance which emphasizes raw power at the cost of speed and evasion. Strong but slow. As the name implies, the Mighty Glacier is one of the strongest people in the world . A single hit from a Mighty Glacier is about ten hits from anyone else. Mighty Glaciers also tend to carry weapons that would break anyone else's arms just to pick up, and can hold open doors that would break a lesser person's fingers off when they slammed shut. The catch is this: they're slow. Reeeeeeaaaaalllly slow. They would need rocket skates to be described as "inching along". Some games mitigate the Mighty Glacier 's slowness by providing support units which can carry it around more quickly than it can move on its own. They tend to be uncommon as main characters in Platform Games , due to agility being a pivotal element of that genre. A greater muscle mass (to a point) theoretically provides speed but the Mighty Glacier tends to use the heaviest equipment possible, sacrificing any speed for the pure crushing power that only he can achieve. Too much muscle can hinder speed and endurance to a degree, as some deconstructions of Mighty Glacier characters show. In Real Life , people with loads of muscle can still be fast and have endurance to a point but they most likely will not have the same as those with relatively less muscle mass, and lots of muscle can hinder agility and flexibility to a degree as well... but of course, some people work hard enough to be capable of doing it all Lightning Bruiser types They tend to play as Difficult, but Awesome in video games, requiring intimate knowledge of their move-set in order to consistently land powerful blows. However, some games punish this build when landing more hits than the enemy over time is easier and just as effective as strong individual hits. Racing games tend to have a variant where the heavier vehicles have slow acceleration and turning, but once they get moving their powerful engines allow them to go really</ fast. They also tend to be able to knock lighter vehicles around. In fighting games, they are typically grapplers or defensive power hitters, though some Stone Walls may cross into this if they have non-situational offensive options, and bulky zoners who hit much harder and are more durable than traditional zoners at the cost of speed and versatility are also common. In MOBAs, the few who aren't tanks or supports are typically either bulky mages with melee autoattacks, or melee casters who rely on skills rather than autoattacks. Compare Glass Cannon , which sacrifices toughness (as opposed to speed) for the ability to deal massive damage. Contrast the Lightning Bruiser , who is strong, and</ fast. Also contrast the Stone Wall , who sacrifices offensive strength for superior defensive ability. See Glacier Waif for when a Mighty Glacier is of average or below-average size, and Anchored Attack Stance for when a character becomes a Mighty Glacier to use certain attacks. See also: Necessary Drawback , PVP Balanced , and Character Roster Global Warming , which they are frequent victims of because it appears to be harder to be "creative" with strong-and-slow characters. Should not be confused with the pro wrestler Glacier , who, despite his name, is not this trope. by the Resistance for due to its highly-durable armor and deadly twin-arm cannons that can easily turn a human being into meaty chunks.

The stereotypical relationship of a white male with a disadvantaged, or submissive, Asian woman Interracial relationships, in general, are still a touchy subject . There still

exists the notion that the women of a social category somehow "belong" to the men of that category and vice-versa . Those who stray are often considered some kind of traitor to "their people" . Asiatic-European pairings are also plagued by the shadow of , and a long history of stories about "pink men rescuing brown women from evil brown men". Though Orientalism was originally defined by European attitudes to the Middle East, European eyes went on to view the Far East through the same paradigm. In any case, the modern stereotype of an Asian woman is that she's a charmingly exotic, uber-domestic, unquestioningly-subservient nymphomaniac ... or, at the other extreme, an uneducated, ditzy moron . Thus, her white lover will arrive and be somehow "better" than her Asian peers, often to the point of her complete devotion Sometimes, this trope is a simple Race Fetish , but at other times, expect one or both partners to be something of a Flat Character . The Asian woman may exhibit Asian Speekee Engrish , may be a sex worker , may be an immigrant struggling to fit in, or otherwise show some sort of social disadvantage. The white male, however, will either be a a wealthy, successful, exotic and handsome hunk-angel who will win the hearts of frustrated Asian women or an Everyman that audiences can identify with. The former is popular in Glurgey Asian romance novels and is a direct counterpart to the eponymous Greek/Spanish millionaires of trashy romance novel fame In Real Life , it should be noted that . Back in The Golden Age of Hollywood , Chinese-American star Anna May Wong was treated this way in the press for dating white men - as she found that Asian men looked down on her for being an actress. But we won't get into the psychology or implications of real people here See also Asian Babymama , where this type of relationship doesn't end well Compare Where da White Women At? , which is about African-male-European-female pairings, and contrast Black Gal on White Guy Drama , for the African-female-European-male pairing Contrast Like Goes with Like , where an Asian courts another Asian (though predominantly as it occurs in European media)

Plotting to destroy the planet is a good source of conflict for your standard Evil Overlord , but, when it comes right down to it, destroying the world isn't really a very effective Evil Plan — especially if it's the world the Evil Overlord is living on: it's where he keeps his stuff . Basically, plotting to destroy the planet is a good way to demonstrate that you're evil, but there are hardly any situations in which this sort of destruction is going to have any sort of value for the villain. Once this is understood, you find yourself in the curious situation where the sort of fellow who goes around destroying worlds isn't actively evil</ . More often, he's more a sort of buffoon. A guy who just doesn't have the sense of responsibility or the ability to wrap his mind around the consequences of his actions to realize that blowing up a planet is a particularly bad idea. Or, just as likely, does it purely by accident</ . He may not even realize his actions could possibly have such ramifications. Even worse, he could delegate the issue to someone with the means to Kill 'Em All , who doesn't have the scruples to not Compare with the Omnicidal Maniac , the "serious" version of this trope who can</ wrap his head around the concept and wants to do it anyway. If this goes to the next step and the destruction is only really caused by the character's indirect actions, then the character is a Doom Magnet (though the normal version of this also applies as well). Compare From Nobody to Nightmare , when an average person wreaks havoc on purpose after

a Start of Darkness . Compare also with Unwitting Instigator of Doom , when someone unintentionally plays a small and/or unlikely but crucial role in some horrible development (usually this action serves as the catalyst). These two tropes also frequently overlap if the destroyer-of-worlds in question is able to comprehend what his actions have caused, but had no intention of doing</ so; this is equally-likely to be Played for Drama or Laughs . Not to be confused with Woobie, Destroyer of Worlds , who wants to destroy everything because of past mistreatment. Can be considered a subtrope of Nice Job Breaking It, Hero!

A lot of the time, military forces in the media don't really seem all that military. The characters get to wear neat uniforms and live in a Cool Ship or base, but don't have to deal with the strict hierarchy, discipline and training that exists in the Real Life military. A Military Maverick who disobeys orders is likely to receive no harsher punishment than getting assigned to Peeling Potatoes , a stint in the brig, or at worst being " disciplined " (i.e. Punched Across the Room) by a superior officer. It seems like the only thing keeping them together is The Code Sometimes, this is justified by having the organization in question not be a real military, or a combined military/civilian organization, or some kind of special operations group whose members usually operate independent of the regular chain of command (and possibly of each other). Sometimes, the work is set in a time or place where military organizations were just not that disciplined (e.g. The Dung Ages). Most of the time, it appears to be the result of lack of experience on the part of the writers on how the military actually operates And sometimes, the apparent lack of discipline is the whole point : some military organizations in fiction land are not disciplined because they do not need</ discipline to begin with. Either the members are competent or simply badass enough so that "normal" discipline is not necessary any more, or the common cause they are fighting for and/or the charisma of their leader is enough to ensure their efficiency when it is time to get serious; in such cases, the Mildly Military organization is actually a group of True Companions with the size and the firepower of a standing army. If well written, it can impress the audience by letting the apparently laid back characters show just how frightfully competent they really are and even make a valid point. Done poorly, it can quickly fall into the realm of Fridge Logic Contrast Army of Thieves and Whores , where the army in question truly is</ an undisciplined rabble

Your starship is big, very big. Now how do you get this across to people? By stating how big it is in miles or kilometers . It may be a Starship Luxurious or so packed full of people or machinery that the interior resembles that of a submarine. These ships are generally too massive to land, so they're built in space and stay there; in case they do see the interior of a planet's atmosphere, it's usually because something's gone horribly wrong — usually emphasized by the very agitated crew bracing for impact Often, mile-long starships are considered to be "harder" than small ones, partially because a slower-than-light ship would need to be huge to carry all the fuel and supplies needed for a decades-long voyage The most realistic designs—the ones that are very clear how lethal most high-powered spaceship engines are—tend to be very long</, specifically, in order to maximize distance

between the habitat section and the engine. In order to minimize mass (since mass is proportional to volume and one dimension is already determined), long ships will often be very thin No one knows how big ships will be when/if humankind takes to the stars, but it is worth noting that big spaceships do make sense if you are dealing with Generation Ships — the occupants will want and need space to run around. And because space is so vast it is even called "space," the only limits to single spaceship size would be structural strength and propulsion capacity Has nothing to do with long-distant fanmade romances. He's a soldier; he's a real man ! Just listen to all his exploits and how the very gods are afraid of him ! Admire his pristine uniform and shiny medals that prove his valour ! Behold the physique that has been honed over years of adventure and peril ! He loves danger ! He will seek out any peril to test himself against ! Just don't put him near an actual fight . The Miles Gloriosus (pronounced "ME-lace glor-ee-OH-sys") claims to be some sort of mighty warrior or doer of the impossible. A soldier, Great White Hunter , Gentleman Adventurer , Hunter of Monsters , Superhero or other dangerous occupations are all possible. He is full of boasts about his many adventures, making himself out to be the ultimate badass. But when real danger rears its ugly head, Miles reveals what's Beneath the Mask and proves to be a Dirty Coward , anything but</ what his stories make him out to be, leaving whoever was foolish enough to be taken in by them to fend for themselves. Miles is Always Male , as women aren't usually expected to distinguish themselves in danger. This doesn't mean they wouldn't boast on how they brave through such quests, however. The Foil of The So-Called Coward or the Cowardly Lion . Since he is invariably all talk, falling for his stories is a mark of the Naïve Newcomer Those who are not taken in may, in peace and quiet, find him more or less amusing, which depends on his skill on storytelling, but when trouble arises, he is always The Load . May be No Hero to His Valet , Type 1 only. Often considering himself God's personal gift to women, he is frequently part of a Love Triangle , his stories making him triumphant , until danger reveals to the heroine which man really is admirable . May be a Small Name, Big Ego , but may also be running a con and may be proud of himself for reasons other than his boasted prowess. It can be hard to tell because one of his chief traits is his utter shamelessness. No matter how clearly he was reduced to quivering terror by the merest hint of danger, as soon as the danger ends he will snap back to the boasting mode, making it hard to tell whether Believing Their Own Lies is in effect. He is incapable of realizing that people might think better of him if he says Think Nothing of It . Sympathetic examples may suffer from an Inferiority Superiority Complex , and hiding their own insecurities under a braggart façade. Any annoying braggart may be taken for the Miles Gloriosus, which is why subverting this, having them turn out to be brave and good at fighting — or even just competent — is a surprise . (See Boisterous Bruiser for the character most likely to subvert it.) Such surprises often fall under Glory Seeker ; he may also go for glory at the expense of others: Glory Hound . Similar in ego to The Fighting Narcissist , but the latter generally has the fighting ability to back it up. Named for a stock character in ancient Roman theater: the term translates to "boasting soldier." Particularly annoying subtrope of Fake Ultimate Hero and particularly egotistical subtrope of The Münchausen (the latter of whom can

actually back it up). Inverse of the Cowardly Lion . Similar to Lord Error-Prone . If the plot ever forces him to stand and actually act like the badass he claims to be, then it's Becoming the Boast . Villainous versions may overlap with Heroism Addict . May be inclined to say Nobody Calls Me "Chicken"! ... right before saying Screw This, I'm Outta Here! Compare Smug Super , Nominal Hero , and Phony Veteran . Contrast Shrouded in Myth , Armchair Military , Badass on Paper and Let's Get Dangerous! . Subtrope of Paper Tiger .

Show pilots are a very tricky process. They are made, and even if they get a chance on the air, the vast majority of them fail within a few weeks. With other shows, they will sometimes build up a dedicated audience that will fail to keep the show alive long enough. Most of the time . Most full television seasons are between 20 and 26 episodes long. There are various exceptions; shows can run from 13 episodes to well over 40 episodes. With such a vicious market, the ability to reach the 100</ episode mark is a rare and coveted thing. So when a show does achieve that milestone, they plan something big to not only draw ratings, but to break out into the three-digit episodes . Part of the celebration is that pure money is offered with syndication rights, which a general rule of thumb is to have 100 episodes to air in certain time slots like Nick at Nite</ does. Because the show was already financed and produced, this will bring in the nostalgic viewers without much effort. This is not inherently just for television series, but any property that has had a consistent run will either celebrate the installment count or in the form of "10 Year Anniversary." This will often coincide with the Very Special Episode , but it could also be Tonight, Someone Dies or a Continuity Cavalcade with Internal Homage , especially when elements (or even the entire plot) of the series' first installment is directly recreated. It may avoid all of that and the installment is just given an additional polishing to make it one of the best episodes of the series. But no matter what, remaining in the public view for years is an impressive event in any</ form of media. Compare Meaningful Release Date . Remember, Examples Are Not Recent . </

In some shows, when a country is attacked by some enemy (alien, monster , evil overlord), their armed forces, which are probably made specifically to defend said country, show themselves rather bad at defending it: they use Hollywood Tactics instead of more efficient and logical ones, with a particular reliance on the Five Rounds Rapid , do evil stuff that just undermine their side for no reason, and refuse to cooperate with The Hero The aim is to make the Hero the only one who can defeat the villains: how can you save your world when it can defend itself with no problem thanks to its competent military? This is a staple of Superhero settings, and is quite frequent in stories about an Alien Invasion , a Kaiju attack, or a Zombie Apocalypse , because a war consisting of large open Curb Stomp Battles is a quicker way to show how the enemy won than the long and complex battles that would have occurred had the military been competent Well, a competent military would have won</, as noted above, but then how could the protagonists be protagonists ? Some genres are more prone to this trope than others, of course. A kickass war epic summer action film can have a thoroughly awesome army with the hero a part of it. A zombie film, almost by definition, has to begin with authority's complete failure to contain the situation. Can't have an After the End story

without, you know, the end Note that this trope isn't about lots of soldiers dying: that's the Red Shirt Army . A military can achieve great victories by swarming the enemy with disposable soldiers , or lose everything while keeping a low casualty record. This trope comes when the military as an institution is of no use. Either the writer doesn't have them appear, or the situation is always such that the army in question isn't allowed to handle it so that the hero(es) can save the day Often overlaps with Artistic License – Military . Compare Armed Farces , which is mainly military humor about bumbling incompetent military personnel, though tends to lack them failing at some specific objective. First cause of an Easily Conquered World , though some countries in Fiction Land can have the worst possible army without being conquered. Can include Police Are Useless and No FEMA Response , where they don't even try to help. Don't expect anything from them when Adults Are Useless , since (most) armies are made of adults. Often overlaps with Conservation of Ninjutsu , The Worf Effect and Tanks for Nothing . Sister trope of Armies Are Evil

Essentially, the school where a military officer learns his or her trade, that of leading enlisted servicemembers into combat. In fiction, these academies are popular for their ability to combine various School Tropes with Military and Warfare Tropes and allow for use of the various plots and characters that come with both settings. A military academy comes in several forms: Often within a military service, there is some tension and/or friendly rivalry between graduates of each type. Traditional academy alumni might be elitist "Ring Knockers" who look down on "13-Week Wonder" Officer Candidate School graduates, whereas those OCS grads who were formerly enlisted servicemembers might disdain all those who became officers "the easy way" without getting experience serving in the ranks first. This should not be confused with Basic Training or Boot Camp, which is a crash course for turning civilians into enlisted soldiers. Basic Training is aimed at the lowest common denominator and is intended to teach the most basic military skills; typically they take a few months to complete at most, whereas a military academy typically takes several months or years to create a new officer. (Not that it always helps them succeed right away!) Compare with Military School , which is a military institutional environment for junior high and high school students that typically does not graduate its students directly into the military. Also compare Space Cadet Academy , which is a Military Academy IN SPACE! .

Also called a spelling alphabet or a phonetic alphabet, (not to be confused with the entirely different) this is a system of assigning to each letter of the alphabet a word that begins with that letter. This way, if something has to be spelled over a radio, telephone, etc. there is much less chance of the wrong information being transmitted. The military, police departments and radio operators all make frequent use of this. Phone-based customer service and technical support also use it, but with more informal construction (any word will do), for the same reasons. (The formal ones specifically pick words themselves which all sound distinct from all the others with poor sound quality.) The most common alphabets are shown below, from A to Z. The NATO version is near universal in the modern age, because it is also used for civil aviation throughout the whole world (for which English is the only official language). In addition, if

the NATO system is being used, expect the digit 3 to be pronounced "tree"; 4 to be pronounced "fo-wer" to distinguish from "for", 5 to be pronounced "fife" so it won't be confused with "fire"; and 9 to be pronounced "niner", to keep it distinct from "nein", German for "no" (as well as from "five," as the two are indistinguishable otherwise over a distorted signal). This is used almost exclusively in modern military shows. Non-military shows which use it will usually stick to A-E, since they are more recognizable. Exclusively military shows tend to use more of the letters. Military units will sometimes use one of the letters as their designation (for example, 'Bravo Company'). Individual personnel may refer to themselves or others in the military alphabet over radios; "Echo-6-Charlie" would be someone whose pay-grade is E-6, with a last name beginning with the letter C. (Alternately, the number is code for a position withing the unit. 6 usually is the commander.) Other languages may have their own similar alphabet systems. Flight of the Intruder </ uses this for a bit of a Genius Bonus : A character uses "Alfa Mike Foxtrot calling in an airstrike on himself because the North Vietnamese were using him as bait for rescue choppers. Biggles </ uses the now less well known World War I era British alphabet. One of the few uses that survived is "Ack-Ack" for AA (anti-air) fire.

One of The Bloodhound Gang 's many Intercourse with You songs is named "Foxtrot Uniform Charlie Kilo".

Williams Electronics ' F-14 Tomcat </ identifies the enemy fighters with the NATO alphabet — Alfa, Bravo, Charlie, Delta, Echo, Fox, and Golf. The last opponent is the Big Bad , General Yagov .

The entrance theme of WWE stable The Shield starts off with radio chatter spelling out "Shield" with the NATO military alphabet (Sierra - Hotel - India - Echo - Lima - Delta), which is fitting, considering their paramilitary-esque gimmick.

Cabin Pressure </ has a scene in which Arthur is trying to learn the NATO alphabet (as used in real-life civil aviation) with predictable consequences.

Archer </ 's inability to use this creates a funny moment in "Skytanic". Seriously, Mancy</ ? Rising Storm 2: Vietnam </ uses the NATO Phonetic Alphabet to label each capture point on a map, starting from Alpha all the way up to Oscar on some of the largest maps. Schlock Mercenary </: Various examples, but in one comic, after getting some unexpected heavy fire support from an off-screen character, Tagon angrily informs him that it is rude to "fire into someone else's Charlie Foxtrot without asking permission first". Charlie Foxtrot being 20th century American military slang for "Cluster Fuck" (and, evidently, 30th century mercenary slang for the same concept). There are lots of variations on this term, up to one

The NATO alphabet (Alpha Bravo code) was originally designed so that every code word is pronounced in each NATO language in the similar way, so there would be no linguistic misunderstandings. There are some discrepancies, however; "Juliet" is usually "Giulietta" in Italian, and easily mistaken for G. Inversely, Quebec is pronounced in the French manner (Kay-bek) which might confuse some English speakers (Kway-bek).

A Military Brat is exactly what the name implies : someone who grew up with at least one parent in the military . Sometimes both parents. Tends to crop up a lot in American series and works of fiction, particularly in times of Real Life conflicts when it can potentially make for a Reality Subtext , dealing with issues than many military brats might be experiencing in Real Life when their parents deploy. In fiction, if a character has this as a backstory, you can expect at least one of the following to have affected him or her in some way: While there is definitely a Truth in Television aspect to this trope, it's important to note that: The US military contains several million people at any given time. Used often in war movies to explain why a character enlisted ; the most common sub-explanation of this is that he wants to make his mother/father proud . A Military Brat may have a child who is, himself a Military Brat. Despite the name , "brat" is mostly a neutral or even affectionate term, and characters with this background can be all over the place personality-wise. See also Circus Brat , which is sort of the opposite. Is never</ a Spoiled Brat , and usually dislikes parents who raise children such. Preacher's Kid often share features with this trope, as do missionary kids. A related but markedly less badass version of this (which rarely appears in fiction) are the Foreign Service brats, whose childhoods were generally twisted by hopping around the world behind their parents. The same holds true for children of spies (said children, however, usually think that the parent is actually in the Foreign Service, some other government department, or occasionally some international corporation). The British word for this is diplobrat</ . Military brats, foreign service brats, and missionary kids (though not preacher's kids) all fall within a larger category known as "third culture kids" (TCKs), usually defined as children who, for whatever reason, spend a significant part of their childhood outside their passport country. TCKs can also include children of executives of international businesses or NGOs, as well as children of expatriate professional athletes. A notable example of the latter is Kobe Bryant, who spent a significant part of his childhood in Italy while his father was playing basketball in that country. Naturally comes equipped with Dad the Veteran , even if it was Mom. In many countries this trope interleaves heavily with Blue Blood . Armed forces are the traditional career choice of aristocracy, and even today the children of old families of nobility are grossly over-represented in European and Asian forces. This trope is also Older Than They Think . The Other Wiki calls American Military Brats a "200 year old subculture". As mentioned, this changed throughout history, but most troops have historically had "Camp Followers" which were made up of the wives and children of the fighting forces, often serving in important behind the lines rolls such as cooks, nurses, and errand runners. The most famous were probably those families that followed their husbands in Valley Forge , which would make Military Brats in the United States an older culture than the country proper.

Want to know how unpopular a leader of a country is? Usually, it goes no further than if even the leader's own military forces can't stand him and proceed to attempt to overthrow the ruler. At worst, expect the country to become a military junta (a state run by the military) afterwards, which is when the military plans to take over the existing government, ushering in a new empire under martial law Often, this is led by a power hungry General Ripper who believes the current administration is soft, and that their nation should eliminate all their enemies and suppress dissent with an iron fist. Expect the general's dream to be a new government based on "efficiency," where citizens are conscripted into manual labor to build for the new expansionist government, with any protesters being shot on sight or at least jailed Cue a threat that's got numbers, technology, and high power weaponry - these can range from just the leader and a few groups of soldiers covertly trying to take over to the entire armed force of the country going on full-scale attack On the flipside, this can occur due to genuine concern for the well-being of the empire, especially if their commander-in-chief and the nation's leader also turns out to be The Caligula . Given what Real Life leaders of military coups mostly end up doing, this isn't usually the case in Real Life Note that a military official beating a politician out of office by political means like the ballot box, even if said box was stuffed , does not qualify as a military coup. A military coup requires that the military force a change in who wields what power by militaristic or otherwise explicitly extralegal means, such as assassinations or fighting directly against them — modern constitutions do not legally sanction the Klingon Promotion . Military coups committed by the recognized leader already</ in power are also possible, provided the military is used by said leader for a power grab he shouldn't legally have; such "auto-coups" or "self-coups" might involve, say, a head of state unilaterally dissolving a legislative assembly that was meant to serve as a check on his power This can be Truth in Television . Most coup attempts in Real Life are either led by a military officer or someone with their backing—in unstable countries the military is often the only entity that has the organization, discipline, speed, and access to arms necessary to pull off a coup. All this is needed for a coup to work, as the more time that is needed to secure strategic points the more time a coup's opponents have to organize a response Subtrope of The Coup , which is the trope you want if it's not the military leading the charge. If this takes place in your country, it's Day of the Jackboot RWBY </ : With Penny loose with the Winter Maiden's powers, the Relic of Knowledge in Salem's hands, and his few loyal forces weakened, Ironwood declares martial law across Atlas. When the remaining councilmen come to him to protest, he shoots Sleet in cold blood to remove him as an obstacle

Although they often hold themselves apart from Muggles , the fantastical powers wielded by Wizards and Witches logically make them much sought-after by those in need of great power; and who is more concerned with developing and wielding great power than the military? In settings with little or no Fantastic Racism against magic-users, organized militaries may do just that, systematically seeking to recruit the mage down the street— or better yet, the entire Wizarding School across town— to help them fight their battles, often giving them formalized ranks and roles not unlike any other soldier. Just what those roles are can vary, mixing and matching from a number of varieties: Support : Support mages tend to stay out of

the fighting proper. Instead, they make the Muggle soldiers around them better</. White Mages may act as medics to get the wounded back in fighting shape more quickly than conventional medicine could, often back on the field before the battle has even ended. They may cast Status Buffs or beneficial auras that make their allies faster, stronger, and more resilient. Magical artificers may keep an entire army supplied with enchanted arms and armor. Other mages work strictly in logistics , magically facilitating easy communication between units through Telepathy , obviating the need for supply lines by teleporting in food and supplies, or even transporting whole armies where they need to be . Compare Super Soldier , which is someone specifically augmented by the military to make them a better soldier, Church Militant , which may employ these if Religion Is Magic . Compare Magic Knight and Mage Marksman , which involve magic-users also adept with conventional weaponry but who may or may not be a formal part of an organized military.

In the military, innovation has driven military conquest as someone found new ways to do something that was better than what came before. However, in Speculative Fiction , it seems that a lot of people have decided combining previous concepts into one über-machine is easier than coming up with something original . Enter the Military Mashup Machine. In reality, some of these would be far more expensive than practical , with other existing military technologies being much easier to get the same results from, but if it looks cool , why not present it as worthwhile? Its also worth noting that numerous militaries since the dawn of man have attempted to build them for the same reason . Most such projects meet their end on the drawing board thanks to the intervention of saner minds, but the occasional lovechild of General Ripper and The Engineer somehow manages to sneak into production. Usually these result in machines with predictably lackluster performance, but a handful have proven surprisingly effective. While generally members of Speculative Fiction or Science Fiction , these can also show up in Steampunk as well. See Airborne Aircraft Carrier , The Battlestar , and Mobile Factory for specific Sub Tropes . See More Dakka for a similar philosophy applied to ranged weaponry. Compare Mix-and-Match Weapon , similar principle applied to hand-held weapons.

Real Life

A Military Maverick is one of those service members who often breaks the rules , and regularly annoys superiors: but he/she generally prevails in the end, just because they broke the rules in the

first place. Breaking the rules in this context doesn’t have to be an outright violation, but could also include imaginative interpretations of the rules , serving as the justification of such actions. Consider them the armed forces counterpart to the Cowboy Cop . The popularity of this trope is largely because of the Rule of Cool . For in real life, any military needs people they can be certain will stop</ fighting when ordered, just as much as they need people who will start</ fighting when ordered. The primary purpose of order and discipline in the military, apart from doing what you're told, is to learn self-restraint, after all. Still, most instances of this would have far more consequences in Real Life than in fiction (and so does everything). Note that the higher up you are in the chain of command, the more likely you are to get away with stuff . There are no recruits and privates who can get away with acting like a Military Maverick in fiction does. Or at least, if there are right now, give it a few days. You might get away with disobeying orders and regulations on rare occasions or under unusual circumstances, but doing so to the point of recklessness is a good way to end a military career with a plain and simple dismissal at best or capital punishment at worst. So it goes without saying... That being said, this trope is</ Truth in Television to some extent. Some officers in regular militaries really do rise to the top without ever picking up the "regular" part. However, these folks are much more common and tolerated in non-professional insurgent armies, guerrillas, and during civil wars , where the entire society goes bananas. If they're still competent military professionals, despite regarding following orders and regulations as optional, they might also be a Colonel Badass , a Sergeant Rock , and sometimes even a Four-Star Badass . If they can get away with just about anything, they have Ultimate Job Security . It's possible they might also be The Neidermeyer , a Colonel Kilgore , a General Ripper , or sometimes all three. Often, they're a Glory Seeker . Sometimes they're a Bunny-Ears Lawyer in uniform. Star Wars Legends </

A military company has one member — usually low-ranking — who secretly distills liquor Well, more or less secretly, depending on how strict regulations are. Usually winked at all around. Especially by those who drink it. Though officers sometimes have an interesting time getting connections to it The moonshiner is often quite skilled at it; the Hillbilly Moonshiner is often his backstory. And the hooch itself, though frequently of fire-breathing potency , is at least drinkable without danger. Although the drinkers may curse it and describe it negatively, it generally doesn't blind or kill them, presumably because (from the characters' POV) if it were truly dangerous it wouldn't get the necessary nod-and-a-wink from higher up, and (from the writer's POV) they don't want to take out characters that way Often produces it for a toast To Absent Friends Because it requires the use of a still, appearances in cultures prior to the High Middle Ages are anachronistic — and even in the High Middle Ages stills were rarities, mostly used for medicinal purposes. This character has been known to appear earlier, making fermented brews rather than distilled liquor If he's not The Scrounger , he gets his parts from him See also: Camp Cook , Hillbilly Moonshiner

The Military Salute is a long-standing tradition of military forces around the world, and it is obviously the most visible and known

gesture of military protocol to the average civilian. There is an urban myth that it evolved out of a custom in which mediaeval knights opened their visors with their weapon-hand to be recognised and to show that they were not armed; in fact it evolved from the former custom of men removing their hats as a sign of respect. This is the reason that in some military outfits (such as the US Marine Corps and Navy) it is incorrect to salute when you are not wearing a "cover". (In other outfits customs are different, and salutes are given when bare-headed; meanwhile, in many armies, including the Russian one, it is expressly forbidden to salute without a hat on) The salute evolved because of the introduction of headwear that could no longer be taken off easily with just one hand, especially bearskin caps and mitre-shaped grenadier caps. In the 18th century, when the military salute was first introduced, there were situation when it was still possible to give it with the left hand, e. g. on parade when the saluting officer was holding a spontoon in his right hand. Different armies in the world have different small details that distinguish their salutes (as can be seen in the picture above), but most of them still follow a certain pattern: the arm is lifted up perpendicular to the side of the body and bent at the elbow, forming an angle around 30 degrees, the hand is open straight with fingers joined, and the fingers touch the temple (or the lip of the visor when with headgear). The salute is dropped by lowering the hand back to the side of the body. In the English speaking world, which here means the US and the commonwealth there are two types of salutes. The first, with palm facing outwards, is the "British military salute." This is used by the armies and air forces of most Commonwealth countries. Its origins are with the British Army. The other which is palm downwards, originating with the Royal Navy, is the British "Naval" salute (this was originally introduced because sailors' and officers' hands were often stained with tar through life aboard ship, and showing a dirty palm was considered to reduce the dignity of the gesture). This is used by the Naval forces of the Commonwealth and the US Armed Forces. This is often in popular parlance seen as an American salute, even in the commonwealth. There has been examples of nitpickers and scolds attacking works (or real life) where British or Australians are depicted as saluting palm downwards as an example of Eagleland Osmosis . Additionally, there are several oddball types of salutes that are given in various situations, mainly where there is something impractical about rendering a normal salute with your hand. These include: Salutes are usually rendered by an officer (of equal or lesser rank than the salutee) or enlisted soldier to an officer of equal or higher rank. The officer, while not necessarily obligated to return the salute, almost universally does. Not returning the salute is a serious show of disrespect and condescension, which reflects poorly on the salutee. This also has another interesting effect: initiating a salute towards an officer of lesser rank or an enlisted soldier, while not considered insulting (generally), is considered weird and out of place. In the United States armed forces and the armed forces of those countries which award the Victoria Cross, there is one exception to this rule: if you are a recipient of the Medal Of Honor or the Victoria Cross, you WILL be saluted by any member of the armed forces, regardless of rank . So yes, this means that badassery is worthy of saluting. Saluting is Serious Business for any member of the armed forces, and its misuse or improper execution are considered a serious faux pas</ at best and a serious insult</ at worst. If you're a soldier and you render an improper salute, expect a small lecture on proper execution and a SEVERE butt-chewing if you're lucky</ . Worst-case scenario, you can even be taken for disciplinary

action and get hit where it really hurts: your paycheck. As mentioned above, the salute is a sign of respect, so any kind of corruption, change or mockery in the salute reflects very poorly on the saluter Also, a very important characteristic of the salute is that it is a privilege</, not a right. While civilians may salute as a sign of respect for a soldier, this is more about soldiers gracefully accepting gratitude than the civilian actually being acknowledged in fellowship. In fact, military prisoners convicted of a crime must not</ salute: since the salute, as mentioned above, is an expression of fellowship, saluting someone while being imprisoned is akin to saying the salutee is as much of a criminal as the saluter, which can end in a WORLD of shit for the saluter. However, enemy prisoners of war CAN be saluted according to their rank, and it is seen as a sign of respect and fairness for a soldier of the imprisoning army to salute the imprisoned officer. There are also situations in which saluting is NOT recommended. When in the field or in a forward operation base, soldiers are instructed not to salute, since it identifies the officer/VIP, which can provide a sniper with an easy target. Most forces allow people operating vehicles to refrain from doing so if it would be unsafe to take their hand off the controls. Many forces find it inappropriate to salute when not in uniform; for example, in the US Navy if you are out of uniform you simply stand at attention instead of saluting in situations that normally call for it. The hand salute is also used in various situations and towards people of importance to the military. These include: There is also a difference between a standard or "administrative" salute used day-to-day, and a "funeral salute" used only at funerals . A regular salute is a quick motion: the saluting hand snaps up, holds until the salute is returned, then snaps back down. In a funeral salute, the saluting hand comes up in a slow, deliberate (three-second) motion, and comes down the same way. The funeral salute is used only</ when specifically saluting the dead man being buried . An officer attending the funeral will still receive a standard salute. Occasionally you will see slow salutes during a flag-passing ceremony as part of a retirement to indicate respect for the flag and the person who is retiring. Suffice it to say, using a slow salute for any other purpose is downright offensive. Interesting dynamics can happen in fiction with the salute, including: While in real life organizations other than the armed forces have salutes, in fiction it is almost exclusively associated with the armed forces. Examples of the salute happening in fiction would probably feature pretty much every series on the entire site, so please limit examples to when the salute is a dramatically powerful or distinctive moment.

A school where not only do you learn mathematics, but how to shoot a rifle Military schools are institutions which aim to instill military-style discipline in students. Often the explicit goal of such schools is to prepare students for military careers. The military school is intended for minors, as opposed to the Military Academy which trains at the undergraduate university level The idea of the military school is rapidly becoming a Dead Horse Trope . Military schools were more common in ages where service was a family tradition, especially among aristocrats, and large standing armies sought new manpower all the time. They were (and are) also very common in dictatorships where the school seeks to instill loyalty to the regime (such as the Hitler Youth or the Young Baath Party). In modern America, this had once varied; in the 1990's and the late 1980's, it was considered justified for "problem" kids and

delinquents whose parents were oft too busy to handle raising them in a nuclear family structure with a 9 to 5 job, sending youths to military camps is viewed as borderline child abuse and most such institutions have closed In fiction, a rebellious teen may be threatened with one, or be sent to one if they've been Expelled from Every Other School , making it a variation on the Boarding School of Horrors theme. It is also a common basis for a Boot Camp Episode or Off to Boarding School . Compare Military Academy , which is for older students who tend to take it more seriously Sometimes includes an element of Ho Yay or Homoerotic Subtext , due to the fact that military schools in fiction and reality tend to either be all-male or mostly male Absurdly Powerful Student Council exists here in the form of a command staff

Military Science Fiction is a subgenre of both Science Fiction and Military Fiction , commonly sliding into the Space Opera territory. At its most basic, Military Science Fiction is Science Fiction that focuses on the military , but the genre has more specific nuances than that The Protagonist in this genre is normally part of the chain of command (or becomes part of it in progress), while an ensemble cast is The Squad . The story is usually set against the backdrop of a large-scale (space) war but war is optional. The Science Fiction part mostly manifests in futuristic weaponry and vehicles (first of all, Cool Starships), while the organization structure is mostly based upon contemporary US or Commonwealth military . It should come as no surprise that a high percentage of MSF writers are military veterans Often, the writers would cheat a little by having a Mildly Military organization instead of realistic military for the sake of good story. One particular subgenre of MSF in Video Games is A Space Marine Is You . Another that's especially particular (but by no means exclusive) to anime is the Real Robot Genre

For many, being a superhero is something they fell into by accident For others, it's a calling. But for these</ guys, it's just a day job. A Military Superhero is a character who is or was a member of the armed services, and his experience as a soldier has colored his attitude towards the cause for the greater good. The discipline and training of the armed forces lends itself well to producing a pretty badass individual, and their codes of ethics and duty compliment the higher calling of heroism in such a way that they will, undoubtedly, stand out amongst their peers as someone who is reliable and sincerely committed to the cause. This doesn't mean the hero is perfect by any means: military heroes tend to be pretty old-fashioned and stubborn in their beliefs, and also have a tendency to shun heroes who take authority lightly. They also often harbor disdain for authority themselves when serving under what they think is a weak leader, leading them to either try to take charge or just do things on their own. However, they are also the definition of esprit-de-corps</ within their organization's ranks, and will be the first to volunteer for any mission if it means keeping their teammates away from harm, as well as be the one guy you can always</ count on to never leave a man behind. Very often, the character's background can actually come back to bite him. Their military superiors might come to them with a mission that goes against their current ideals as a hero. Perhaps a teammate does something that goes against the ethics he learned in the military.

The bottom line is that this character can face many moral quandaries revolving around the conflict between his military background and his current status as a hero, which will always be played for drama as a way to deepen the story or make it more interesting. Military heroes often exhibit stereotypes of the branch of service they serve/served with: an Air Force hero can be expected to be an Ace Pilot and love to fly, a Marine hero will be tough and have a little bit of the Blood Knight in him (or, sometimes, even a Knight Templar), an Army hero will be very patriotic, etc. It's pretty much expected of a military hero to also be a Captain Patriotic , but this is not always the case. If they have a rank as part of their name, they will</ possess that rank. There are a few specific characteristics a hero must meet to qualify for this trope: See also Military Rank Names , when a character who may or may not have served incorporates the rank into their alias.

Among drama students, "Milking the Giant Cow" is a term that refers to the practice of holding your hands skyward (or merely gesticulating wildly) to show emotion. May be accompanied by a Skyward Scream If they fall to their knees while doing so, they are contractually obligated to raise their hands to the heavens, grasp the invisible teats tightly, and pull down a few times, as if milking an oversized bovine This also occurs when a character just can't sit still. A character may pump his hands up and down theatrically while speaking... "for emphasis". If played for laughs, he will be holding a beverage (or some sort of blunt object) — which will, of course, go flying everywhere If it is done in order to Chew the Scenery , it may be necessary to Milk The Cow. Not to be confused with Ham and Cheese . Unless the actor chooses to milk while</ ordering Ham and Cheese to chew. Or other dairy products A critical part of being a Large Ham . See also Big "NO!" , Angry Fist-Shake , Futile Hand Reach , Gloved Fist of Doom , Got the Whole World in My Hand , and Skyward Scream , as well as particularly over-the-top cases of Italians Talk with Hands . If one tries to dial back on this, they might go Finger-Tenting instead Not related to milking a franchise or the trope about actually milking cows

You've got a massive army at your disposal, but people need to see its size, not only to show off your power, but to hurt morale of anyone who stands against you. So you have them march, either in a straight line that takes all day, or massive formations that cover even the largest fields. Of course, The Empire can be expected to show this off Of course it's important that they actually fight well , and many Evil Overlords heed that advice, while the logistics of providing food and toilet facilities for such a huge army are usually ignored or Hand Waved . Also, doesn't work if the heroes are using a bottleneck, like a narrow bridge. Or, god forbid, a thin path between the mountain and the sea... In fact it's surprising how often this trope goes south Truth in Television , going back to most ancient armies. If an Evil Overlord isn't careful, they become Cannon Fodder . Compare Flaunting Your Fleets . Contrast Suspiciously Small Army

In layman's terms: if there's a million to one chance against something of vital importance happening,

then it's that one time rather than the other nine-hundred-and-ninety-nine-thousand-nine-hundred-and-ninety-nine times</. This is Truth in Television in a sense, that if an extremely improbable event occurs to someone, chances are that it's his story that's told . What the trope hinges on is the reality that each audience member is an individual, and, thus, their own "number one": undeniably, each audience member is one in an increasing number from six billion, so, that single chance offers each of them the avenue to imbue it with themselves — "you are the single chance"; if the chance is missed, it can break catharsis for the viewer, as they may feel, in a sense, that they are being left behind This comes up most frequently when characters say Never Tell Me the Odds! , and occasionally when someone makes a few calculations . A good approximation of these odds is the chance of flipping a coin twenty times and getting heads every time It is still played straight, but it is also widely parodied Incidentally, in statistics, odds are defined as a ratio of the probability of an event happening to the probability of it not happening. Saying that the odds of something happening are "a million to one" is actually equivalent to saying that it's a million times more likely to happen than not. The correct expression for something extremely improbable would be a million to one odds against</ . Many examples omit that bit, but given the nature of this trope, they may not be entirely wrong A corollary of the Theory of Narrative Causality . May involve Finagle's Law , or a Coincidental Broadcast Not to be confused with One to Million to One , or the web game One Chance </ As a narrative trope, no real life examples

A lot of animated short films, especially in the classic theatrical shorts era , were made devoid of dialogue. In these cartoons, only music and basic sound effects are used along with the action on screen to convey the concepts and feelings of the show. Sometimes, when more complex things have</ to be conveyed, it is done via Talking with Signs . The reason for this is that lip sync is tedious, and the jokes used were often adapted from old musical comedy sketches in vaudeville This trope is also used in media. Whenever a TV character is watching a cartoon, chances are they'll be watching one of these. Often we never even see</ the cartoon, just the glow-illumined face of the viewer, and sometimes the side and back of the TV set. If we do get to see the cartoon, it invariably appears to have no plot beyond various characters running back and forth assaulting each other For the gaming spins on this, see Pac Man Fever and Ultra Super Death Gore Fest Chainsawer 3000 . Sometimes, a person gets caught in a situation where he or she wants to say something to someone else, but doesn't want to be the one to say it, mainly because they're too embarrassed to show themselves or only one of their friends can speak for them. So, they perform a game of Charades behind another person's back to tell their friend what to say to that person. This is obviously so they don't attract the attention of the person or people the friend is trying to speak to. Hilarity often ensues as the friend sometimes misinterprets the gestures that his pal is signaling towards him This is a sibling trope to Earpiece Conversation . Can

lead to Nonverbal Miscommunication . Compare Hand Signals

In Lilo & Stitch </ , Nani coaches Lilo via hand signals through a talk with social worker Cobra Bubbles about how Nani is doing as her guardian. It goes well at first, but then Nani makes the mistake of raising a fist in triumph and Lilo interprets it as "getting disciplined." Things swiftly go downhill from there.

A variation of this trope shows up in the Mr. Bogus </ episode " Class Clown Bogus ".

As a Hive Mind is one mind, many bodies, a Mind Hive is many minds, one body The minds/consciousnesses/ souls /whatnot of different people are housed within one body, most likely through magical or technological means. The minds can communicate with each other, and normally actions are through consensus Distinct from Split Personality because even if what's housed inside is totally separate entities that got merged, they still retain their individuality. Sometimes may speak in I Am Legion pattern. Compare Many Spirits Inside of One . Contrast Merger of Souls . See also Animal Eye Spies

This is a romantic trope where lovers share not just their lives and beds, but actually their consciousness . Most often they're from an already telepathic race, but this telepathy goes even further; maybe they're always aware of the other, not just when communicating but always</; or they understand each other better

than anyone else; or they actually feel exactly like the other, or something like that. Sometimes successful reproduction is tied to it. Sometimes the sanity of one , usually the male, or both partners depends on the mindlink. Often the link is not unsoliticious. It goes both ways, so if something bad happens to one of them.. It's doubtful whether real humans could take this for a half an hour, but anyway, it's often presented as superior to a normal relationship, more fulfilling or close or "true". It can also be taken as a "metaphor" This is a subtrope of Fantastic Romance . Also see: Mental Affair

Telekinesis/Psychokinesis: the ability to move stuff and/or people just by thinking. Although it fundamentally only requires a thought to work, hand gestures can also help, especially if they make the user look focused . How does the glass lift up but not everything else nearby? Because the glass is what the hero wanted</ to lift up As superpowers go, it's one of the most useful and straightforward, and in its more refined form, it allows the user to manipulate any object in a wide number of ways, not only the more intuitive lifting and moving around. Nevertheless, it is very rarely used up to its full potential , as almost every fight would become trivial if it ended with a telekinetic Neck Snap . This is usually justified by stating or implying the user is not dexterous and/or precise enough to give his foe anything more than a good rough push or pull, although sheer psychic strength is</ often enough to crush or squash an enemy in a less subtle way Being a Psychic Power , we don't have to worry so much about violating the laws of physics. That said, its major limitation seems to be precisely its scalability: it is almost always harder to lift a heavy object than a light one, and a person with this superpower will often be seen to be visibly straining to accomplish it, as if their telekinesis took the form of a long but entirely physical "invisible arm" with all the normal physical limitations that normally implies. Pushing this ability past its limit often leads to a Psychic Nosebleed or even passing out, and it is even possible to die due to the effort This power is the most recognizable form of Psychic Powers , only matched by Telepathy in popular consciousness. As such, they are often more associated with each other than the rest of skills on the list: many telekinetic characters are also telepaths and vice versa, and even whenever they are not, odds are that any strictly telepathic but sufficiently spirited mental duel will have visible, physical effects on the users' surroundings or bodies. Sometimes Flight will be added to the mix as well, as theoretically nothing impedes a telekinesis user from lifting their own body For whatever reason, telekinesis seems to be more common for characters outside the usual superhero tradition, as classic The Cape -style superheroes rarely have this as a power. One possible explanation is that if the character is already</ a Flying Brick , giving them telekinetic powers can run the risk of turning them into an Invincible Hero by giving them too many advantages. In a superhero series featuring an ensemble cast, telekinesis is usually reserved for characters who specialize in it or who are weak in the physical field. Some non-corporeal characters, such as ghosts, can interact with normal matter only</ via telekinesis. Creatures without fingered hands, or without limbs at all, often will have such powers, allowing them to comfortably interact with the world It's also very light in terms of Special Effects demand (no need for expensive fire effects or CG energy projectiles, just use some

strings or an air-cannon to blast stuff around), making it popular with Live Action shows. It's also very simple to pull off in 3D animation. See Coconut Superpowers Single Substance Manipulation is a Sub-Trope for when this can only be done for one type of object, with magnetic fields and glass being sub-sub-tropes If the character has a native set of powers that's not Telekinesis that can be used to move an object such as enclosing it in a forcefield and moving the forcefield, that would be a case of Swiss-Army Superpower Note that the term "mind over matter" originally had nothing</ to do with telekinesis, it was coined in reference to what Tropers would call Heroic Willpower (or maybe Charles Atlas Superpower); the mind forcing the body beyond its normal limits

A character is attacked by a villain in the most painful non-physical way possible: Their mind and soul are assaulted with painful, horrifying visions, sensations, and/or memories, and their will and sanity broken until afterward they're powerless, hopeless and numb , but not dead , although they may wish they were. Minimal to no sexual contact actually occurs, but as the name indicates, everything else is there to resemble a rape — the ultimate violation of privacy and consent, extreme humiliation that annihilates all sense of self-esteem, near-absolute helplessness even against your very own mind and body, and the corrupt perversion of what could otherwise be a source of identity and joy The physical attacks are just icing on the cake; most of the focus of the agony is inflicted mentally and emotionally, and it's chilling to see a villain be that cruel. The traumatized victim suffers all of the side-effects afterward almost immediately (such as Despair Event Horizon and Rape Leads to Insanity). May include further sexual symbolism for good measure, such as severe and unfunny Clothing Damage and sinister Double Entendres Comes in two variations: one is a completely "mundane" but no less horrifying brand of torture that nonetheless breaks a character's mind . The other is the above done via Mind Probe , Psychic Powers , Brown Note , illusions, your worst nightmares , or something Man Was Not Meant to Know that will cause permanent damage to your sanity . Of course, Mind Rape can also involve forced exposure to Mind Screws Just as Rape Is a Special Kind of Evil , a character indulging in the Mind Rape of another character primarily for their own pleasure or enjoyment is a good sign they have crossed the Moral Event Horizon . Doubly so if the sexual symbolism is present. A Well-Intentioned Extremist , Anti-Villain , or even the heroes may resort to Mind Rape if circumstances force them to (and will probably regret it with all grief for the rest of their existence), but only the most disgusting lowest of the low shall take a sick enjoyment out of it The less said of the things that are created when this trope meets Rule 34 , the better Can be a possible cause of I'm Having Soul Pains , and can function as a Stupidity-Inducing Attack . Heroes will try to protect themselves from these by entering Heroic Safe Mode or trying out some Brain Bleach See also Room 101 , 2 + Torture = 5 , Fate Worse than Death , Gaslighting and Psychological Torment Zone . Contrast with the Care-Bear Stare , which assaults the target with happy thoughts, like rainbows and stuff Not to Be Confused with More Than Mind Control (though Mind Rape can</ have some elements of this). Also not to be confused with Mind Screw , although sometimes a Mind Screw might leave the audience feeling this way. And for a literal rape by mind, see Fantastic Arousal

Minds are hard to define. Some say it's inseparable of one's existence, others say its a soul; an entity within a flesh-and-blood container, or in the case of a robot, a bunch of ones and zeroes within a metal one. But in any case, sci-fi media likes to treat it as if it's something that can be taken from one place to another, and affected by external stimuli, with a lot (and we a lot) of implications about how it works and its nature in each instance. However, some say Cybernetics Eat Your Soul if you try to upgrade your flesh-and-blood body into a robot, or if you upload your consciousness into a computer, you may not be able to get yourself out, or call for help . Then again, you, or at least what is your mind and very essence of being, may like it in there. You may appreciate being immortal, powerful, and free of pain and misery as humans know it. You may even be forced to if you need to save yourself or your mind. But now there's a catch... if there's an accident in the transfer (if you're human, upgrading yourself), your memory storage is faulty, or someone finds a way to access your memory circuits... How about having your mind regressed to a simpler form so that at best, you lose all previous personality and experiences, and at worst, it loses the human/organic/artificial-consciousness element, or even much worse, being scrambled into millions and billions of randomized bits or erased to all zeroes, so that </ trace of your essence is left? If you're a robot, your former body is now just an empty shell of metal, plastic, ceramic, glass, and silicon with electricity flowing through it. If you're a human, you might as well be brain-dead. Although this trope is oriented to characters who are robotic and/or artificially intelligent, it can also happen even if the character is fully flesh and blood, and with or without electronic enhancements, if their mind is majorly and adversely affected in any way while connected by wetware direct mixing of electronics and flesh (for example, a plug in the back of your head, or a VR system somehow connected directly to your brain.) Techno Babble . The technical term for this trope is "ego death". Subtrope of Death of Personality . Because this is a Death Trope , </

The Mind Screw is something that relies so heavily on symbolism or surrealism/absurdism , or failed so extremely in an attempt at regular old coherency, that the immediate response afterwards is "What the heck was that</ ?!?!" These works beg</ for fans to invent their own improbable theories about Epileptic Trees and such. There are several criteria for a Mind Screw, and a Mind Screw will usually fit a few of them: The work looks weird due to symbolism or just general surrealism. While some fans can make arguments over what the symbolism means, and what everything represents, many mind screws will pad themselves with meaningless sequences to make the audience work even harder. Arguments over which sequences are significant are common. Don't expect the writer to be very helpful. And if the show has supplemental materials , don't expect them to be much help either. (If, by some miracle, they are</ helpful, you've got yourself a Mind Screwdriver .) The more decipherable symbolism tends to focus on the perceptions people have of one another and puberty and sex. Japanese and South Korean often produce this sort of thing and particularly in the horror and psychological drama genres because Asian audiences thrive on this type of oblique, enigmatic ambiguity David Lynch is hugely popular in Japan for this reason . Note that

the screwing is not the kind that involves romantic candlelight, long walks on the beach and the throes of passion. Unless you're into that. Not to be confused with Mind Rape , no matter how the audience feels, nor with the Mind Game Ship , nor Mental Affair , which is a literal</ mind screw, nor with the literal screws in the mind of Frankenstein's monster . Distinct from an In-Joke , which is designed to make sense to a portion of the audience. There is a set of stairs that has one step that has something wrong with it. Perhaps it's broken, perhaps it squeaks. For whatever reason, the characters have reason to avoid it. And, most of the time, they do. Until that one time when they are in a tearing hurry and they forget all about it. Their foot comes down on the defective step and Hilarity Ensues May lead to Death by Falling Over , both in serious and funny contexts, and also in real life . This trope is one reason for a Staircase Tumble , but not the only one

In the Tintin </ album Tintin: The Castafiore Emerald </ , a broken stair in Marlinspike Hall puts Captain Haddock in a wheelchair after he forgets about it, while the repairman keeps procrastinating. At the end of the story, when he is out of the wheelchair and the stair is freshly repaired, he forgets about it again, steps on the still setting marble, and sends himself flying, undoing the repair in the process.

In Muppet Treasure Island </ , Benjamina (Ms. Piggy) ruins her huge entrance by tumbling down the stairs. She blames her pet anteater.

Harry Potter </ : Peter Pan Goes Wrong </ : When Trevor (as Peter Pan) steps on to the table, he steps on a loose plank which flips up and hits him the face, knocking him out.

Homestuck </ plays a variation: Tavros is repeatedly warned about stairs , specifically that his new robot legs are not fit for traversing them as of yet. He's got too much self-confidence to heed the warnings, though, and chooses to try going up and down the things to test them out. Much as you'd expect , his legs fail to handle them properly and he trips down them. Repeatedly.

What's a fun, friendly way to introduce a little competition into a series without having to commit to a multi-episode format like a Tournament Arc ? A Mini-Golf Episode! A few rounds at a petite

putting green could bring out the competitive side of the characters, or give them an opportunity to meet a villain on more friendly terms . Crafty characters might even build their own mini-golf course out of whatever materials are on hand if they can't get to a real mini-golf green. The courses themselves are likely to feature obstacles in the form of windmills, pirate ships, chomping monster mouths, and miniaturized versions of world-famous monuments - which opens the floodgates for some humorous Monumental Damage if the mini-golf round goes off the rails. Mini-golf rounds can (and often do) devolve into a Bizarre and Improbable Golf Game . This trope is most commonly found in western media (due to the fact that mini-golf's popularity and cultural relevance has by and large been limited to the United States and Europe). Related Tropes include Baseball Episode , The Boxing Episode , and Paintball Episode .

Many works of fiction try to be as epic as possible. A new work will try to top the ones that came before it , and the sequels try to top their predecessors Minimalism goes for the exact opposite Minimalism is when a piece of fiction lowers the scale of the events depicted within it, not simply due to time and budget restraints , but rather for creative reasons The reasons for a minimalistic approach to a work can vary greatly. For example, the author of the work may be trying to do a "back to basics" approach to a sequel, as the previous entry in the franchise had gotten too "over the top". Perhaps if the movie spends less time on grand action scenes involving hundreds of extras, the film can spend more time with dialogue, improving character development. Perhaps if the TV show only has one villain instead of many , more time can be spent developing that character in order to make him seem more intimidating. Maybe if the book only uses short, non-descriptive sentences instead of paragraphs of exposition , the book will read at a more dramatic pace. It's possible that if the film has one Special Effects scene instead of a hundred, more time and money will go into that one scene, improving the quality of the effect. Perhaps a horror movie believes that if they hide the monster off screen instead of showing it in its full glory, it will leave the details of the creature to the audience's imagination, making it scarier . There is no real singular reason as to why, it's just a creative choice Minimalism is essentially the exact opposite of the Bigger Is Better trope. Like any good sci-fi concept, mecha come in all shapes and sizes. Most audiences hear the word and immediately think of Humongous Mecha popularized by Japanese media; on the other end of the scale, is the human-sized Powered Armor , more commonly seen in Western works. But what about the middle ground? Mini-Mecha are machines too big or complex to be considered Powered Armor but not quite humongous</ enough to fit in the other category. A telltale sign you have a Mini-Mecha instead of Powered Armor is the presence of a physical cockpit, typically small and exposed. Powered Armor is "worn", meaning that all or most limbs of it cover and move with the wearer's limbs. If the user has to use commands or controls to control the limbs or movement, they can be described as a "pilot" or "driver", and then you have a Mini-Mecha on your hands. As the above comparison may suggest, these are about evenly distributed between Japanese and Western works, though becoming more popular in mainstream sci-fi. Compare and contrast Mobile-Suit Human , where the mecha is relatively small simply due to having a really small pilot</ . For the low low price of this is now Truth in Television .

Mining seems to be a bit romanticized in fiction, from the idea of being able to strike it rich with one lucky stroke, to the horror of thinking that you might have to stay the rest of your life inside a mine working for an evil overlord. Since mining seems to be so interesting, any resource the characters need will be mined from the ground. Falling between the Neck Lift and Metronomic Man Mashing in terms of forcefulness (and physical improbability), the Minion Maracas occurs when a villain lifts one or more minions of theirs and shakes them in mid-air, whether for emphasis or from an excess of emotion. The sound of a cowbell is optional If the shaking has the pragmatic reason of letting loose something hidden in the subject's clothes, that's Shake Someone, Objects Fall

A miniseries (also frequently referred to as a limited series) is a multi-part drama that airs a pre-determined number of episodes on television. It differs from a traditional television show by the fact that it tells a self-contained story, with no intention of stretching out the concept over multiple seasons. For this reason, production values are frequently more lavish than for a regular series, and the cast usually includes big-name non-TV stars In the past, miniseries were often "event television" and aired on multiple nights in the same week, sometimes even on consecutive nights. Many miniseries are adaptations of large books, and as such differ from other shows in that they place a high value identifying the author, to the point that the author's name is frequently embedded in the program's title. Miniseries in this vein were often epic melodramas, and consequently the concept

of a "miniseries" gained something of a stigma. By the 1990s, however, thanks to a glut of bad mini-series produced largely as a method for the networks to juice their ratings during " Sweeps " weeks, and with the networks tightening budgets and therefore decreasing the length of mini-series, they gradually fell out of favor In more recent times, miniseries episodes often air at the same weekly time slot or all at once on a streaming service. This, combined with television's trend toward serialization, has blurred the lines between a miniseries and a normal television show. Some television series even originate as a miniseries that got expanded into multiple seasons The concept of a miniseries varies outside of the United States. British series often air only short , heavily serialized seasons, so the entire run of a British show might be akin to an American miniseries and be aired on American television as such. In Asian countries, the concept of TV seasons is much weaker, and miniseries tend to be the de facto</ style of TV programming for dramas, with anything from 10 to 100 episodes per series

Someone investigates a minor crime, or possibly something as major as murder, but finds something much bigger going on behind it. The first crime might be part of a Revealing Cover-Up , or it might be just a Red Herring ; it can also be both the cause and effect of Crime After Crime . This is extremely common in crime fighting action films where the plot is more about building up a lead in from normal life and confronting the big secret; in other fiction there might be all manner of twists, turns and dead ends before it all links up. This is a staple of the detective variety of Film Noir Some of the more complex Evil Plans may stretch from the most trifling crimes to the mind-bogglingly evil in a mind-bogglingly complex manner Sometimes the Anti-Villain is revealed to be quite heinous; in other cases the Anti-Villain teams up with the Heroes to fight the Big Bad Works in which several different crimes are committed (e.g. a Police Procedural TV series) sometimes follow the pattern that every</ Minor Crime reveals a Major Plot — the main characters can't investigate any crime, big or small, without stumbling upon an Evil Plan involving several different people and six- or seven-digit sums of money. This is largely an Acceptable Break From Reality : of course, in Real Life , thousands of crimes are committed each day without any sort of plan or conspiracy behind them — burglars sneak into homes to steal some small cash, people are killed when petty arguments get out of hand, dastardly villains cross streets in illegal ways to get to the other side faster — but it makes for a more interesting story to have your master detectives slowly uncover the villainous plot of a Diabolical Mastermind than to have them book random mugger after random mugger Contrast Infraction Distraction , where a minor crime is committed to conceal a greater one. Also contrast Not the First Victim , which refers to the tendency of killers in fiction to be Serial Killers , but their stories usually begin with a major crime revealing a series of other</ major crimes Truth in Television . Similar to the Girl-Show Ghetto , but with racial minorities instead of females. This is the idea that fiction centered on a racial minority cannot entertain or otherwise appeal to people outside of that race. Marketers might fear that a work starring a racial minority will be focused on issues of race and culture, driving away audiences who are not interested in such movies. They might also fear that white audiences won't be able to relate to a minority in the lead, or worse, find the movies preachy and/or guilt-inducing simply because of who is in them. The result of this belief is that works starring people of a racial minority in the work's place of origin are rare compared to works starring a member of a racial majority. If a Western work of fiction wishes to have a diverse cast or deal with issues of race, it will likely star a white person with minorities as supporting actors. See Mighty Whitey , White Man's Burden , White Male Lead , Token White , and Pop-Culture Isolation . Adaptions and anything Based on a True Story fearing this might go for a race lift to get around it, making any minorities in the original work white instead. Alternatively, they might find a white person who had a minor role in the original story and focus on them . It is not uncommon for works featuring non-white leads to become popular when advertising hides or downplays the presence of non-white characters This is especially true in written works, where advertising does not require visual representations of the characters. Sometimes these works see no drop in popularity when the lead is shown to be a person of color, suggesting that readers will enjoy a good story once they get over their initial reluctance from seeing a person of color on the cover, or that the reluctance doesn't exist in the first place. Note that this trope is often a Self-Fulfilling Prophecy . Marketeers are afraid that majority people might not be interested in a minority-centric work since it might deal with hard-to-relate themes. This can cause filmmakers to make their movies about those themes since they may be relatable to only minorities to begin with and thus implement themes they feel are important, causing many such movies to in fact feature such themes, thus usually keeping majority

people away... and so on. So please be discerning when adding or editing examples. See also Watched It for the Representation , where people turn out to see a work because</ it has minorities. Anime And Manga Comic Books Film Literature Live-Action TV Music

However, anyone remotely familiar with either engineering or military tactics will tell you that such devices are almost impossible to use effectively; a bipedal platform is needlessly complicated, hard to properly armor, and the easiest thing to shoot at on a battlefield. Enter the Minovsky Particle: an EMP-like, sensor-jamming, delicate-electronics wrecking Plot Device that not only renders all ranged targeting and guided missiles useless, but requires Helium-3 to produce. Consequently, humans had to go to space to get Helium-3, fight old-school, close-combat battles using systems capable of tricky microgravity maneuvering, and eventually standardize the technology to simplify maintenance. The result? A world full of Humongous Mecha — which, far from being contrived, seems like a natural evolution of military technology in light of</ the Minovsky Particle. Both the Marvel and DC Comic universes have plenty of examples. From Marvel: Unexpected as this trope may be in a Michael Bay film, Transformers: Age of Extinction </ goes in this direction with Transformium , providing an explanation of how transforming robots, which seem to have traits of both machines and biological entities, can exist. The short of it is that Transformers are built out of "living metal" protoform forged by alien creators out of organic

matter, whose "genome" was in turn was cracked, reprogrammed, manufactured, and trademarked by a corrupt human corporation as Transformium, allowing them to create stuff that transforms into whatever they program. Note that it exists in limited supply (if it can't be created outright, it must be harvested from other robots), and the fact it requires organic planetary matter to exist provides brings implications of Hostile Terraforming that form up part of the movie's conflict. "Inertron" and "Ultron" in Philip Francis Nowlan's 1928 novellas Armageddon 2419 A.D.</ and The Airlords of Han</, which became the basis for the 1929 comic strip Buck Rogers in the 25th Century</. Both ultron and inertron are synthetic elements made of "ultronic vibrations" (which are akin to quarks in that Nowlan posits them to be to atoms what atoms are to molecules), which are "isolated from the ether and through slow processes built up into subelectronic, electronic and atomic forms" into miraclous substances with diametrically opposed physical properties. Ultron is "a solid of great molecular density and moderate elasticity, which has the property of being 100% conductive to those pulsations known as light, electricity and heat" and thus an invisible and nonreflective superconductor. Inertron is "completely inert to both electric and magnetic forces … has no molecular vibration whatever … reflects 100% of the heat and light impinging on it" and is thus not only a perfect shield against the Han Airlords' feared disintegrator ray but also an antigravity device, although that latter property involves a bit of handwaving in that it's never explained how inertron goes from simply having no weight to somehow having a negative</ weight, such that a sufficient amounts of it will either counterbalance a given weight, effectively making it weightless, or overbalance it to imparting buoyance. Left to itself, inertron "falls up</ " into outer space, presumably forever. Ultron would not only allow one to build the functional equivalent of Wonder Woman's invisible plane but, being superconductive, one should beware lightning and heat rays as well as disintegrators. conversion reactors and conversion drives (which generate power and propel spaceships, respectively).

Energon is a borderline case; while it was given many more powers than it used to have when it was made the focus of Transformers Energon </, it shares certain properties that remain constant. It is an energy source for the Transformers that come in both solid and liquid forms, has Power Glows , and goes kaboom quite nicely when manhandled. In its natural state, though, it is unstable and gives off radiation that's hurtful to Transformers in large concentrations (though confusingly organic material is generally immune to it).

Many myths and folk tales describe a food that is created by gods , magic , or science to feed people in a time of need. It goes by many names: manna, ambrosia Not to be confused with the marshmallow and fruit dessert from the American South . , nectar, etc., but it is usually portrayed as a gift. A pre-requisite of sporting flicks, where the competitor or team (usually the underdog, see David Versus Goliath) seems to be on the way down, until a pivotal moment happens (often a case of Put Me In, Coach!), after which the team stages, yes, a miraculous comeback ending in victory. Of course, this is a case of Truth in Television - several teams and individuals in the history of organized sports have, in fact, accomplished nearly impossible comebacks to win games no one thought they could possibly win anymore. The National Hockey League, for example, has seen at least five teams turn 5–0 scores against them into 6–5 victories - the Los Angeles Kings in 1982 against the Edmonton Oilers (the so-called "Miracle on Manchester"), the Colorado Avalanche against the Florida Panthers in 1999 , the St. Louis Blues against the Toronto Maple Leafs in 2000, the Montreal Canadiens in 2008 against the New York Rangers, and the Chicago Blackhawks in 2009 against the Calgary Flames. In mad science , "malfunction" does not mean fried circuits and broken equipment (sometimes) but often it turns out that a malfunction has created something wondrous. Usually there is no explanation to how a "malfunction" can make modifications that seem intelligent, and no mention to where it gets the parts for a technology that is entirely different from the intended. For example a toaster can easily become a time machine through Miraculous Malfunction. This can be used as an Achievement In Ignorance for the Bungling Inventor (most of whose works are created in this manner). It can also serve as an alternative explanation to why there are No Plans, No Prototype, No Backup : it's not that the technology was lost but rather, the individual sample was a result of a one-time event that cannot be recreated. Particularly good researchers might then learn to reverse</ engineer this piece to create more, but usually they will be just as dumbfounded about how it works as everyone else even if they themselves have created it. Surpringly such technology will usually be surprisingly stable and not at all prone to Phlebotinum Breakdown , unless the plot suddenly calls for it. Note, that because of the poorly understood nature of such technology it can</ unexpectedly become dangerous. (While there are real-world examples of inventors accidentally stumbling upon new things while researching something else, the fictional inventor will never need to bother with follow-up research: they will get the new tech from it ready-made.) In the United States, the Fifth and Sixth Amendments to the Constitution provide valuable rights to those arrested or accused of a crime, be you innocent or guilty... provided you remember they exist. Not easy when your hands are in cuffs and your face is being smashed against the trunk of a police cruiser. Until the 1966 Supreme Court decision in </, from which the term Miranda Rights got their name, the police were very</ unlikely to remind you of those rights. Although the exact wording varies from state to state, it goes something like this: In some states the following is added: In fiction, the Miranda Rights are frequent victims of Hollywood Law . Some common deviations from reality: In some movies or series, the rights are an inevitable part of every climax. In others, perps never</ seem to get their Miranda</ rights read to them when they are arrested. The latter case is actually more realistic : police will only read the Miranda Rights to anyone they want to interrogate, and they'll usually do so just prior to interrogation, rather than as their suspect is being arrested. When we see someone Mirandized , fictional officers almost always recite the text from memory, as if they've said the words for years by heart. In reality, while officers certainly do memorize the words over time, they are still required to read the rights from a card,</ to avoid mistakes that could get the case thrown out. This is because any</ deviation from the actual rights as printed means the suspect was not properly read their rights. In addition, suspects are required to sign the card, as evidence in case they later deny having been read their rights. In fiction, the officer might be tempted to interrupt the reading of rights to suggest an obnoxious suspect really should</ take advantage of their right to remain silent, or to modify the "if you cannot afford an attorney" with sarcastic references to a wealthy suspect's obvious ability to afford one. In reality, as mentioned above, any</ deviation from the words written on the card could be used by a defense attorney to claim that their client was not properly read their rights. In fiction, sometimes suspects get Off on a Technicality because the arresting officer forgot to read their Miranda Rights . Setting aside how unlikely this would be, this tends to be incorrectly treated as automatically resulting in dismissing the case. It is rarely brought up that this only affects any statements the suspect made under arrest. Any evidence the police had uncovered by unrelated means would still be valid. In addition, the law presumes that a person's rights were</ read to them unless clear evidence to the contrary (usually in the form of a statement from a reliable eyewitness) is presented in writing prior to the trial. The only time in which Miranda</ can be waived is in cases where "public safety" is under immediate threat and the officer does not have the time or wherewithal to lecture the perp

for 30 seconds. The usual example is the hypothetical case where an officer catches a Mad Bomber in a mall and demands to know where the bomber stashed the Time Bomb , but exceptions must be approved on an individual basis. And even if the suspect is not Mirandized prior to interrogation, the evidence gained can still be used by police to justify further action. While they may not be allowed to bring up the interrogation in court, they can</ bring up the fact they found a bomb and the bomber's fingerprints were all over it. Even in cases where an illegal</ interrogation results in a confession or other evidence discovered as a direct result being ruled inadmissible (the so called "fruit of the poisonous tree" doctrine) there are rare occasions where the police can make the "inevitable discovery" claim, essentially stating that they would have discovered the evidence even without the interrogation ("We would have found evidence of the bomb anyway, since it would have blown up, and an explosion in a mall would certainly have been investigated.") People aren't always Mirandized upon arrest either; sometimes, the police will arrest a suspect, get him or her into an interrogation room and on camera, and then</ read his or her rights, to ensure that the suspect's response (usually waiving the rights) is recorded. It used to be accepted procedure in some police departments to interrogate people until they were convinced to confess, and then</ Mirandize them and have them repeat what they'd said "for the official record;" this is now considered to be coercion (meaning said statements could not be used against people in court). And obviously, undercover officers do not need to read rights (the police only need to read them to people they're interrogating who have been arrested</ ; if the police are asking questions but the person is free to leave, they do not have to be read their rights). Incidentally, if you are ever Mirandized, even if you are convinced you've done nothing wrong (in fact, especially</ if you are convinced you've done nothing wrong), the only</ words out of your mouth should be "I want a lawyer and will not consider answering questions until I have one." Many of the molecules required for life have the property known as or "handedness". That is, they are not the same as their mirror image, like a left shoe which will not fit properly on your right foot no matter how you rotate it. That wouldn't have been that much of a problem, if not for the one insignificant fact that a lot of the stuff our bodies are made of, mainly the amino acids, which are the building blocks for the proteins we consist of, are chiral. And all Dextro-amino acids (except cysteine) are exceedingly rare in Earth organisms and are used only by some bacteria and in a few very specialized cases by larger creatures. Science-fiction writers have commonly Shown Their Work by referencing this fact. It generally comes up in one of two situations: In either case, this usually manifests itself as an inability to eat the same food in the same way. Either food tastes different depending on your handedness, or wrong-handed food has no nutritional value or is actively dangerous

There may be some mention of the fact that ethanol is a biologically interesting molecule that doesn't have this property — so, regardless of chirality, everyone can always get drunk together, and you can make moonshine from organic stuff that's otherwise useless for you because it's of the wrong chirality (assuming you have the right, or rather the left, handedness of microbes). This is often a form of Artistic License – Chemistry , especially when authors try to extrapolate to what happens with molecules that are too complex to be synthesized chemically. Contrast No Biochemical Barriers .

A common comedy trope, especially in western animation, a character's ugliness is frequently conveyed by his (or her) smiling into a mirror, and the mirror cracks as a result. A type of Informed Flaw sometimes, specially when it's featured in a visual medium Compare Rage Against the Reflection and Glass-Shattering Sound

Mirrors are inherently creepy objects. If you're looking in a mirror, there's also someone looking at you. A movement in a mirror can make you jump. It's no surprise that they're associated with badness. But what if there were something more than just one's own reflection in the mirror? What if the mirror showed something else looking back at you? This is the Mirror Monster! Though a mirror is really just a pane of glass and silver, in fiction it can become a gateway — something terrible could come out... or something terrible could try and suck you in. A Mirror Monster could be an image only visible in a mirror. It could be a ghost fettered to the world of the living by a mirror. It could be something which comes out of a mirror or communicates via mirror. The key thing about this trope is the horror is directly connected to the mirror itself. Sometimes mirror monsters can be defeated by smashing the glass. Unfortunately, sometimes smashing the glass can free the mirror monster and allow it free rein (or make even more of them). Compare with Mirror Scare , Mirror Routine .

Sometimes this is to hide the fact that they</ have broken the mirror, and they don't want the other character to find out In cartoons, this is usually played for laughs with two characters that look nothing alike, with the mark trying to catch the "mirror image" out and the foil managing to pull off a perfectly synchronised act. If the act is convincing enough to work , expect the mark to attribute glaring differences to simple illness, drinking, or staying up too late. It can also be used very effectively to hide from a pursuer, especially if you happen to be an Evil Twin Another variant is when two Identical Strangers meet each other for the first time. This is also sometimes done when someone is flawlessly disguised as the person he is impersonating or vice-versa , or even if the impersonator is only wearing a convincing rubber mask but leaving the rest of the body exposed A similar setup is used when the character seen by the audience isn't the character seen by the other characters (e.g., a "Freaky Friday" Flip situation, or a person using a glamour to hide his true form). If Bob is hiding in Alice's body, sometimes the show will continue

to show us Bob, but have everyone react like they've seen Alice, and the Mirror Routine is a decent way to clarify what's going on Unfortunately, since mirrors have traditionally been a way to see through a glamour (e.g., how Dracula doesn't reflect), there are two variants here, one the inverse of the other: Either Bob is the true person (or at least the soul) and Alice-in-the-Mirror is what others see, or Bob is what others see and Alice-in-the-Mirror is his true form. Whichever you use, establish it well In Real Life , this is almost impossible to do convincingly. If you've ever done basic drama in school then you've probably done this exercise and know just how hard it is to synchronise your actions with those of another actor, even with proper forward planning See also Stand-In Portrait and Wallpaper Camouflage . Compare with The Mirror Shows Your True Self . Not to be confused with Mirror Match

A scene where a reflection is used to suddenly reveal a villain or monster, usually, when the angle of the mirror is adjusted by the victim/protagonist. The most common form of mirror scare is the use of a bathroom mirror on a medicine cabinet. As a character goes to get something from the cabinet: we see the character's reflection in front of the mirror, then opening the cabinet, then as they close the mirror again, Bam : they're right behind you! The exact shot usually holds the camera in place, with our only view of the scene being what is shown in the mirror itself. Variants can use other reflective surfaces, but are usually done in a "safe" environment. TV screens can be used, with the revelation appearing when the screen goes off. (This may well be symbolic of something.) Either way, the character will somehow not have heard their enemy sneak up. Often, the villain isn't there when the victim looks again or looks behind: it's just them going slowly crazy . Sometimes, it turns out they are there after all . See a video of these examples . Sometimes, the powerful need to be told uncomfortable or unpleasant things. Unfortunately, there's always the possibility that they might not take it seriously or might not want to listen. At best, they may ignore it; at worst... well, sometimes the Bearer of Bad News lands themselves in some very hot water Thankfully, there's a powerful tool that can be used to make the point hit home for these authority figures: humor. Whether by sugarcoating something unpleasant to make it more palatable or making it more biting to impress the gravity of the matter, comedy can be an excellent means of persuasion. As the saying goes: "many a true word is spoken in jest" This is a specialty of the Court Jester . From a meta standpoint, this is a major driving force behind satire , which often uses comedy to criticize the powerful. Compare Bad News in a Good Way and Honest Advisor

Let's cut to the chase: Fans are an odd group of people. There are

writers with a vision who have created a character who represents everything they loathe, and have placed him in a setting that satirizes everything they hate about modern society . Bring on the Moral Guardians and Media Watchdogs ; they're prepared for controversy! Only... it doesn't quite work like that . Instead of seeing a loathsome, hateful figure, the audience sees a Woobie who only is the way he is because of his daddy issues , and feel sorry for him instead of hating him... or even find him cute . They take the author's painstaking satire at face value . The Crapsack World the writer has created is somewhere they think is pretty awesome. They have, in the writer's view, missed the point: ignoring the subtext that the writer had thought was obvious in favor of the text</ — and they really like the text. The majority of time the readers realize what the writer intended, but simply disagree. After all, just because the writer loathes certain traits doesn't mean the reader will do so. The work and its creator have acquired a Misaimed Fandom . It's around this point that the writer learns exactly how different he is from his fans... and, often, actively begins to hate them . There are many paths leading to a Misaimed Fandom, but many of them originate from the ' Death of the Author ' theory; the idea that the audience can interpret a work however they like, regardless of what the author says. No matter how many times Word of God states their case, there's always going to be a large portion of the readers who will have their own very different perspective. And they're always going to be able to find something in the text to help their case , whether the author intended it to be there or not. Of course, while fans are entitled to their own interpretation, that does not mean they are always right. The writer's original intention might not be the only valid interpretation, but it probably shouldn't be dismissed out of hand, either; they're the ones actually putting their thoughts down and getting them published, after all. But this doesn't mean that fans have to worship at the writer's feet. Works have to stand by themselves, and there is a limit to what authorial intent can change. Ultimately: when words and images clearly depict A, no Word of God can make it B. On the same note, though, and most importantly, if words and images clearly depict A and Word of God confirms A, the fans who swear up and down it was B make up the misaimed Fan Dumb . Sometimes Misaimed Fandom is a matter of Values Dissonance or Culture Clash : where a writer doesn't recognise (or actively disagrees with) social changes, they may perceive Misaimed Fandom about their work as villains and heroes switch places in the popular mind, or the failure to recognize that people of different cultures, political points of view, or backgrounds will see the story and characters in a different way than the writer intended. In some cases, the reader may genuinely be seeing something that isn't there, or might not be looking hard enough; if the text isn't read correctly, then the interpretation that follows is naturally going to be flawed. The reader might miss some of the more subtle meanings or interpretations. Alternatively, they might read the text too closely, and find symbolism and meaning that the author never intended — especially if the symbolism in question is something quite obscure, that the author may not necessarily be aware of. And, of course, they may just be missing the point. Often, however, the fans know full well that their interpretation of the text isn't that of the author, and may acknowledge what the author was trying to do, but choose their own interpretation anyway . They may be aware that the author is satirizing them and their views, but they're good sports and can appreciate a well-done jab in the ribs, especially if it's not without affection or they think it's Actually Pretty Funny .

Thus, an unlikely fandom is not necessarily Misaimed. And sometimes the Misaimed Fandom simply comes from the fact that the author's not that good a writer. If a message is poorly communicated to begin with, then of course there will be problems when interpreting it. Some authors go for subtlety when they really should have been a bit more obvious, or try to set up a Strawman Political only to make the strawman's arguments more logical and valid than their hero's . In these cases, the fandom is misaimed because the author's botched the sights on the rifle. This is especially common in parody, where an author may simply not be literate enough in the culture or media they're mocking and just produce a mediocre example of what they're trying to parody when they think they're exaggerating it to the point of ridiculousness. Other times, the Misaimed Fandom starts out as the target audience, but becomes misaimed when the creators decide to take a series in a different direction. The original fandom often doesn't like this one bit . And oh yeah, the inverse happens too. Sometimes people dislike something for playing clichés and tropes straight, when it's actually parodying</ or deconstructing</ them. See Stealth Parody . Do not confuse this with an Alternative Character Interpretation . A Misaimed Fandom fails to understand the author's intention for a character, no matter how Anvilicious it may have been; an Alternative Character Interpretation understands the intended or default interpretation, but deliberately subverts it. Another related trope is Rooting for the Empire , when you root for the villain without misinterpreting them as a intended good guy . This trope comes in many forms, which are listed below (and it's a long</ list), as well as tropes that can be compared, connected and contrasted to:

Executives are a superstitious, cowardly lot . They're always worrying about their "next big thing" gaining lots and lots of fans And so when it comes to marketing and tie-in merchandise, they'll try to cast as wide a net as possible to attract a wide variety of people. This often results in Misaimed Marketing. It's when a work of fiction is promoted in a way that seems... odd to people who are already familiar with it. This most often takes the form of extremely deceptive advertising or bizarre tie-in products. Toys based on R-rated films are common; such action figures are sometimes aimed at least partially at adults, but are also often found sold in mainstream toy stores . Some companies go even further, creating products directed at</ kids for those same movies. It's a tad creepy when either toys or Saturday Morning Cartoons of movies that have graphic sexual and/or violent content are sold to kids. (Why, yes, your kids would a Starship Troopers </ action figure...). It may also be because executives know that a Periphery Demographic exists among kids who watch shows meant for older audiences. Fortunately, retailers are starting to get wise to this and such items are often found only in specialty stores now. And keep in mind, just about every apparently misaimed retailer action will end up being justified if it makes money </ . There are no exceptions to this. The thing about stereotypes is that they reduce the amount of thinking and effort required. You can get an (admittedly sketchy) overview of an entire culture by absorbing a few ideas rather than doing an in-depth study. However, this sometimes encourages so little thinking that people can't even be bothered getting the stereotype right This isn't about the fact that stereotypes are often wrong because they over-simplify things . This is about times when someone makes a comment referring to a character's stereotype, when in fact the stereotype doesn't apply to that character at all For example, saying "Hey, kilt-boy!" to a Scotsman at least makes sense. It's probably inaccurate since most Scotsmen don't wear kilts most of the time, but at least the person has correctly identified the Scotsman's nationality and referenced a piece of clothing originating from that nation. However, it would be misaimed if they said it to an Englishman, or had said "Hey, baguette-boy!" to the Scotsman Compare Mistaken Nationality and Interchangeable Asian Cultures . See also Insult Backfire , which usually follows instances of this trope This trope can happen when Cultural Blending (e.g. Spexico , Scot Ireland , Mayin Catec , Ancient Grome) happens in a character's head rather than the creator's

So you've heard this song repeatedly, and you're utterly certain it's from Group A. You look all over Group A's discography trying to find it, but simply can't. And with good reason: the song was actually performed by someone else Often shows up due to mis-tagged files on file-sharing services, a small-scale research mistake blossomed into widespread misinformation. Also, after some artists gain a measure of mainstream success in a niche genre or Signature Style , all songs done In the Style of... that apparent artist or genre are often misattributed to them. Or it might just be an honest mistake, where the two lead singers sound like each other. Another common version of this trope is the case of songs being credited to a band which are actually solo or side-project recordings by one or more of the band's members (although the band at large might incorporate such songs into their concert performances if the solo artist is still with them), or where a member works with another band. Still, it guarantees an uphill battle against Fan Dumb for both bands It's not surprising that most victims of this incident are one-hit wonders or artists with a song that doesn't sound like most or all of their early or later work See also Refrain from Assuming and Covered Up . All Animation Is Disney for a similar trope in a different medium (and both are subtropes of Small Reference Pools)

Fans sometimes blame the wrong people, and thus misblame somebody. Comes in multiple varieties:

There are actual weaknesses in the original work, which were faithfully translated in an adaptation. For example, you see an anime or manga with great action sequences and an interesting premise, punctuated by bizarre changes by the translators that cheapen said premise, provide a jarring tone, or even make the plot nonsense.

You assume it's fallen victim to a serious</ Macekre . So you import the DVD, maybe get a region 2 player if you live outside the region, and put it in... Surprise! It's not a Macekre after all; what you thought was caused by overzealous translators was just a weakness in the original work. And yet, the fans have misblamed the translators, and they're not going to stop any time soon. It's less common for audiences nowadays who have access to the original material beforehand. Animation Lead Time Works take time to create, with professional works often taking years and having hard deadlines to complete by. Thus there's many times the blame is for things implemented before what's being accused of, the unforeseeable events that caused it to become controversial, or they'd realized audience backlash. By the time they realizes or are in a position to address the issues, so much of the work is set in stone that they couldn't feasibly fix it even if they wanted to. Writers and those working the grindmill of day-to-day creative production are just trying to do their best making a good show/movie/comic book. Unfortunately, the demands of the executives to try and make it more popular become a kink in the creative flow. For example, a new story arc emerges that turns the characters inside out, and the fans respond with bile and hatred . Upon exiting said story arc, everything returns to the status quo. Odds are, such major changes are demanded as a method to shake up the series and blindsides you because it was shoehorned into a narrative the writers already had planned out. Similarly, often the actors will take heat for being "terrible actors" and "ruining the performance" when the real problem lies in the script they were handed and the director telling them what to do. An actor can only do so much with what they're given , and their choices are often limited to going wild with it or trying their damnedest to give a good performance , neither option is particularly likely to work barring luck or an extremely</ charismatic actor, as it's not like an actor can just up and say "this is bad, I'm going to change it!"

Blaming Executive Meddling when the author did it on purpose, without any executive mandate, perhaps with good cause , perhaps with poor cause. The mere existence of meddling executives often gives the impression that they are tyrants, slave driving the humble writer. But even the glorified writers are prone to mistakes and their own issues, which is chronicled with Author Tract , Author Appeal , Creator Breakdown and other tropes. For example, your favorite character is subject to Flanderization and you assume that the executives demanded the supposedly "flatter" personality. But the writer's blog reveals that the change was made because it made writing for the character easier and allowed for more story possibilities. Fan Dumb Poisoning Its Own Well The ultimate difficulties of the Fan Dumb , laying down false information and establishing opinion as fact. The information is then spread across the Internet and only information from the source can correct it. This is an example of when the fan dumb just doesn't fact check. They blame someone who worked on it for an error when they actually didn't even do that much behind it. A very common form of this is when people blame a company that worked on something that was subject to Hype Backlash , when in reality, the blamed company was merely a financial backer or they didn't have any</ involvement whatsoever and merely published it. This is often the underlying cause behind all the other types and we here at TV Tropes are not immune to it either. Another small set of cases that might be related are mistranslations. Some fans might accidentally translate something the wrong way and accept it as fact. This may also be the result of rumors.

They believe somehow one</ individual is responsible for the totality of a problem or mistake that cripples a production. Or the entire production as a whole. A common name for this particular fallacy variant is the "Quarterback Syndrome", so called due to the tendency to blame the quarterback for bad plays in a game of American football. Take any given movie or television series. There happens to be an episode or scene that is just bad. The costuming is ridiculous , the acting is stiff, the dialogue is clichéd, the direction is uninspired and even the lighting looks bad. Yet why is the director/showrunner blamed for it all? Well, each of those things listed are handled by a whole individual team who specialize in that field. The director has a lot of control, but if one of those elements goes sour it isn't just the director/showrunner's fault, and sometimes the director/showrunner is unable to do anything about it due to executive meddling, time/budget constraints, or some other impairment. A similar fallacy that applies to Video Games is the "There are no Developers, only Publishers" Fallacy. Despite all the company logos that show when people load up a game, they only seem to see the one of the big company and tend to assume it was all their doing. Even when their input is limited to monetary support and maybe localization. To further confound this, sometimes the #1 targets for this fallacy (Nintendo , Square Enix , Electronic Arts , Ubisoft , Activision) are companies that actually do</ develop and</ publish games. There are some rumors that Japanese developers are actually glad in knowing they'll receive no credit for their work, because they'll also</ receive none of the criticism. This is often a result of a phenomenon called "Credits Negligence". Admit it. You yourself don't watch most credits in movies, shows, games, etc. Unless, that is, they do stuff like add in animation sequences, bloopers, small epilogues, or there's something else at the end. And even then, it's not likely you paid attention to them. Sometimes, they even scroll too fast for you to read them exactly (this happens on Television shows a lot, because they have to fit it all within a timeslot, so many times they only show the major credits and omit a lot). But nevertheless, you sometimes would actually be quite</ surprised at what one person's role really was</ in the work if you took the time to read the credits. Most haters typically won't do this, especially for games (this leads to why the "Single Person" Fallacy is often accepted as "fact" and "creditable"). All of that said, many would say that blaming the director for an artistic demerit in a film is completely justified. After all, the director's job is overseeing all artistic decisions, so if he or she lets another person's mistake slip by unchecked, there is some culpability. Hence the popular industry ideology, "When you're the director, everything</ is your fault" (this is pretty much the same phenomenon wherein the director is also credited</ for every good thing as well). The problem in these cases is when people fail to acknowledge that the director isn't the only one to blame. Even we</ are susceptible to this. Both in this page and other pages on the wiki, you will see us blame a " mysterious executive " for all of a show's problems. The Black Cauldron , in reality, most of the cuts were just timing issues. While he did do a infamous twelve minute cut, most of it was restored after Eisner talked to him. Most of the film blame can go towards Executive Meddling . The film was already overbudget and had been in production since 1973 when the rights to the book were obtained. The film had missed its release date a number of times, but issues with adaption, in fighting between Walt's old animators and the newer animators caused a lot of people to drop out of the film. Katzenberg wasn't hired by Disney until 1984, only a few months before the original release date. The storyboards of the movie and the book tie in show the missing and reworked scenes.

This is often a result of a phenomenon called "Credits Negligence". Admit it. You yourself don't watch most credits in movies, shows, games, etc. Unless, that is, they do stuff like add in animation sequences, bloopers, small epilogues, or there's something else at the end. And even then, it's not likely you paid attention to them. Sometimes, they even scroll too fast for you to read them exactly (this happens on Television shows a lot, because they have to fit it all within a timeslot, so many times they only show the major credits and omit a lot). But

nevertheless, you sometimes would actually be quite</ surprised at what one person's role really was</ in the work if you took the time to read the credits. Most haters typically won't do this, especially for games (this leads to why the "Single Person" Fallacy is often accepted as "fact" and "creditable"). All of that said, many would say that blaming the director for an artistic demerit in a film is completely justified. After all, the director's job is overseeing all artistic decisions, so if he or she lets another person's mistake slip by unchecked, there is some culpability. Hence the popular industry ideology, "When you're the director, everything</ is your fault" (this is pretty much the same phenomenon wherein the director is also credited</ for every good thing as well). The problem in these cases is when people fail to acknowledge that the director isn't the only one to blame. Even we</ are susceptible to this. Both in this page and other pages on the wiki, you will see us blame a " mysterious executive " for all of a show's problems. Misblame can be exacerbated when someone willingly takes blame for something not their fault. Among professionals, this can happen for lots of reasons: Compare Beam Me Up, Scotty! for misquotes. The Black Cauldron , in reality, most of the cuts were just timing issues. While he did do a infamous twelve minute cut, most of it was restored after Eisner talked to him. Most of the film blame can go towards Executive Meddling . The film was already overbudget and had been in production since 1973 when the rights to the book were obtained. The film had missed its release date a number of times, but issues with adaption, in fighting between Walt's old animators and the newer animators caused a lot of people to drop out of the film. Katzenberg wasn't hired by Disney until 1984, only a few months before the original release date. The storyboards of the movie and the book tie in show the missing and reworked scenes.

This trope covers when an innocent person goes through the justice system, but for whatever reason is found guilty. The reasons can often include corruption in the system, a Frame-Up , or misleading circumstantial evidence. In Real Life , it can include bad eyewitness evidence; in fiction, it's more likely to be a false witness or a lying eyewitness. In both, it is not uncommon to see overzealous prosecutors who may focus more on their record of getting successful convictions than guilt or innocence This can be the premise of a story, leading into Great Escape , Boxed Crook , Clear My Name , and many other plots, or it can be a Downer Ending if it overlaps with Acquitted Too Late . At the most extreme, it can explode into a Rage Against the Legal System The inverse—an Obviously Evil and guilty person going free—isn't this trope, but a Karma Houdini situation that falls under one of a number of tropes depending on how they escaped justice; Off on a Technicality is the most common, but sometimes it can be a result of Diplomatic Impunity , Screw the Rules, I Have Money! , Screw the Rules, I Have Connections! , an Insanity Defense , Not Proven , and so on. Getting a massage is supposed to be a positive experience. It can relieve stress, relax your muscles, and even fix chronic pain. However, there's a tendency in fiction for massages to be anything but</ relaxing; they're agonizing experiences, as the character on the table just gets beaten, pounded, and generally abused while they can do nothing but groan and take it Their massage therapist will often be a Battleaxe Nurse or Brawn Hilda , but this sort of massage can come just as easily from not-as-strong amateurs. In fact, sometimes it's a character's friend</ genuinely trying to give them a good experience- the hilarity in this case comes partially from the fact that a character is inadvertently causing their friends pain without realizing it. Another common scenario is for two characters to get a massage, with the duo's Butt-Monkey winding up in this situation to contrast the luckier character's relaxing time This can be Truth in Television , as certain types of massages can</ be painful; however, in fiction, the agony is exaggerated, and the benefit minimized, all for comedic effect Compare Harmful Healing and If It Tastes Bad, It Must Be Good for You . In almost any movie or novel with a Ragtag Bunch of Misfits or an Odd Couple , there will come a time (usually during the Darkest Hour) when they transform from a dysfunctional group of losers into a well-oiled machine. Perhaps The Hero or The Leader makes a Rousing Speech that rallies the troops, or the Big Bad has sufficiently scared everyone to stop bickering and finally come together . Despite their past differences and overall ineptitude, when the Misfit Mobilization Moment is reached, the members will immediately become an unstoppable Badass Crew Will often lead to a Big Damn Heroes moment. If done properly, this will go down in fandom history as a Crowning Moment of Awesome Visual works will usually pair this with a Theme Music Power-Up or crowd-pleasing Fanfare , along with an A-Team Montage or similar Harbinger of Asskicking For identification purposes, the Misfit Mobilization Moment is the point when the protagonists stop hindering each other and begin working as a cohesive unit The effectiveness of the MMM in combat may stem from Refuge in Audacity or a large-scale version of Confusion Fu due to being a group of various atypical individuals. A guided missile has been launched at an orphanage or one of the protagonists' planes, usually once it's been damaged and left limping along with no anti-missile defenses. Those onboard can't escape and get a nice, long look at their oncoming doom as they say their prayers... till the Ace Pilot flies his plane in front of the missile, making it switch targets and leading it away. The Ace Pilot

either has the skills to blow it up or a plan (well, more like on the spot improvising) to destroy or escape from the missile. Usually by deftly dodging and making it hit a cliff or asteroid , just plain letting it hit his plane but using an Ejection Seat beforehand, or best of all, leading it back to the launcher! If he's being chased by the Macross Missile Massacre , then expect his new target to go " Oh, Crap! " Needless to say, the missile will not</ have any Friend Or Foe recognition software to tell it to either dodge the ally plane or not explode. Some retaliation exceeds what's being retaliated to in its severity . But some retaliation isn't even along the same line; it's directed at those who can't reasonably be blamed for what you're retaliating for, except according to exceedingly shaky justifications, or even no real justification at all (or the culprit stole the victim's identity). Whether it is worse than what is retaliated to or milder, the point remains that it is still indefensibly directed at the wrong targets Closely related to Mis-blamed . A Sister Trope to Disproportionate Retribution and Revenge by Proxy (and so more often than not Moral Event Horizon -worthy). Similar to Guilt by Association Gag and Karmic Misfire . I Will Punish Your Friend for Your Failure is when one uses this trope as a threat. It's one of the many ways in which a Cycle of Revenge can get ugly. Avenging the Villain is also related, since The Hero (or whoever killed the villain) is usually either blameless or justified . Yet another related trope is Bewildering Punishment , which is what this trope probably feels like from the victim's POV. The Chain of Harm can result if the victim goes on to inflict this on somebody else. The Butt-Monkey or Cosmic Plaything is often on the receiving end of this when it's Played for Laughs . For cases where someone deliberately ensures this happens, see Frame-Up and The Scapegoat . A form of Black Comedy where a character misses another character for shallow, selfish reasons, such as money. Let's say Alice has died. Or, she has gone away for a long time , perhaps never to return ; point is, you're never going to see her again. This trope is when another character, say Bob, expresses sadness over Alice's

passing...but not because Bob actually misses</ Alice. Rather, he's sad that Alice will never be able to pay back the $5 she owes him Doesn't necessarily have to be about owing a debt. This would be any example where someone misses a dead character for unconventional and/or inappropriate reasons. A common variant is Alice's family members bawling their hearts out, eliciting sympathy from a passerby... only to be informed that they didn't get anything in the will Compare If You Die, I Call Your Stuff . Two characters are wandering around a busy and/or crowded location such as a large business office, and they continuously and unintentionally just manage to keep missing seeing each other, turning corners, ducking down into cubicles to peer at intriguing computer screens, and so forth. Variables: Usually played for laughs, but can be used in an attempt to build suspense. Also used to execute and maintain a Not-So-Imaginary Friend . In any event, as some of the examples below will indicate, it is a schtick that is very very</ easy for a plot-creator to painfully over-do. For works with contemporary, real-world settings, this trope may soon fall victim to the prevalence of cell phones and wind up discredited. Scooby-Dooby Doors is an overtly comedic and frantic version. Behind the Black is when only one of the two are within frame at any time (presumably Rule of Perception is in effect). For the time-travel variant, see Never the Selves Shall Meet . See also Failed a Spot Check , Hidden in Plain Sight , Gave Up Too Soon . See Close-Call Haircut for the attack version. The trope's name is a riff on one of Maxwell Smart's many catch phrases, but he never actually engaged in it himself.

An episode of a regular series which, for some reason, is not included when the series is shown in syndication (or is sometimes pulled when the series is first run and then</ shown in syndication or is never shown in syndication at all — and, in some cases, not included when the show is put on home video, DVD or online streaming websites). A missing episode is (almost always) an episode that plans to air, but something later comes up to prevent it. The circumstances are usually one, all, or any of the following: if the event precedes the fiction's publishing, it's Distanced from Current Events . If the fiction's "ruined" in retrospect by later events, it's a "Funny Aneurysm" Moment or Harsher in Hindsight , and, therefore is considered a Banned Episode This overlaps with Banned Episode , though the difference between a Missing Episode and a Banned Episode is that a banned episode is often an episode that used to have no censorial problems until complaints from Moral Guardians or a tragic real-world event drives it to being shelved. The terms "Missing Episode" and "Lost Episode" are not</ synonymous, but which term refers to which phenomenon varies. It can also be an abused term, such as the case of Entertainment Tonight </ finding "lost footage" for their shows which is already properly catalogued and digitized , but uses the "lost" term instead of "old footage" as the latter doesn't work to pull in viewers. Often overlaps with Keep Circulating the Tapes , which is when a work cannot obtained easily and/or legally (and that's if</ it can be obtained at all). Can overlap with Denial of Digital Distribution if specific episodes are missing from the digital release. For an episode that never actually existed in the first place, see UnInstallment . Perhaps she died. Perhaps she left and there's bitterness involved. Perhaps she's a Damsel in Distress . Regardless of what happened—and regardless of whether or not the viewers find out what happened — Dad seems to have raised his children on his own Missing Moms are considered more unusual than missing fathers, and they are more likely to have their absence explicitly explained (usually with death). This might be because a man can technically leave his baby-mama at any time after knocking her up (or she can leave him), but a woman carrying a child to term, giving birth, and then abandoning them, is rarer. As a result of this, Missing Moms are more likely to be remembered positively than Disappeared Dads (although see First Father Wins): the father will wax poetic about her character and the times they shared, Happier Home Movies will be found throughout the house, and those that knew her will affectionately tell the female (or sometimes male) protagonist "You look so much like your mother." This beatification also paves the way for a Wicked Stepmother if the father remarries — where the new, cruel 'mother' is contrasted with the saintly dead one Death by Childbirth is very often the cause of a Missing Mom, as not only does it get the mother out of the way whilst keeping her sympathetic but it adds an extra touch of tragedy to the protagonist's life. By contrast, if the Missing Mom is alive and willingly</ abandoned her child, she will probably be portrayed as worse than an absentee dad However, the flip-side is that if both parents are absent, the character is far</ more likely to be obsessed with his or her lost father. Characters who have lost both parents often do not mention the lost mother at all. Missing Moms in general are likely to get a mention as to what happened to them, but are far less likely to turn up again in the story and/or be a driving force behind a hero's adventures Unbelievably</ prevalent in pre 1970s American television, where it was frowned upon to talk about divorce. Most plots to stick to a two-at-a-time one-off character scheme where writers would find it hard to write for both parents and usually limit themselves to the one who is relevant. Such plots generally involve a less-than-ideal parent and a troubled child and the one parent who could solve the conflict is dead or absent, with the mom or dad being the toss-up depending on the gender of the child. Sometimes subverted if the one-off characters actually return and the absent parent does</ get a chance to drop in, or the Parent with New Paramour trope is invoked to fill the missing piece Combine with Disappeared Dad , and you get Parental Abandonment . For the inverse, see Missing Child . If the mother's absence is never explained or even acknowledged, you've got the Ambiguously Absent Parent

A popular conception about vampires is that they cast no reflection

in a mirror and often have an intense aversion to them. Genre Savvy characters may become aware of places that lack mirrors or contain several broken ones foreshadowing this trope The reason for the mirror-phobia has to do with the idea that mirrors reflect souls and because vampires don't have souls , they don't have reflections, unless the mirror has a backing that's not silver . There is also the old argument that blood suckers exist in two worlds, in the living and in the dead. But since it isn't fully in either one it will not be seen in a mirror. Mirrors force vampires to confront their nature of existence as an undead, which is why many vampires do not like mirrors Depending on the setting , a Missing Reflection may take the form of not appearing on film and/or digital cameras, or being inaudible on telephone or recording Note that traditional vampire folklore doesn't necessarily include the lore about vampires and mirrors. A hilariously ill-conceived scheme that lacks the " scheme ", or at least a well-thought-out one. Often, it's not even clear how The Plan is supposed to work — but the planner thinks it's such a good idea , it has</ to work somehow</ The goal can be anything, such as "financial profit," "get the girl," "world domination," and "win." The point is that the plan contains a specific first step and a final step that benefits the planner, but misses a way to connect the two ends The implementation of the scheme is sometimes, but not always, ridiculously more expensive than any money they could hope to make on the off-chance the scheme is successful. Sometimes, it just flat out does not make sense — but due to the Unspoken Plan Guarantee , if anyone points this out it will of course succeed without a hitch See also Cut Lex Luthor a Check for when the intellect and hard work used to advance the plan would be far more profitable to the character if he just did an honest day's work, rather than work on his Evil Plan . Never Trust a Trailer taken to the logical extreme: trailers that are so</ untrustworthy they include scenes that have been cut from the film itself. Or even worse, filmed just for the trailer. This happens more often than not: almost every movie with a sufficient amount of promotional material will feature at least some shots not in the final movie. Sometimes they end up released later as the Deleted Scene on the Home Release or included as part of a Recut for the Limited Special Collector's Ultimate Edition The reasons for this vary. Usually the trailers are released while the film itself is still being edited, so the Trailer footage may end becoming a Deleted Scene or replaced by an alternate take in the final cut. Also, most trailers are put together by third-party companies that often have no idea what is or is not going to end up in the film, working only with the footage available to them. Finally, in the era of digital filmmaking, the VFX get continuously tweaked up until release, so almost all big-budget blockbusters will have unfinished effects in the trailers. This also makes it easier for the studios to make deliberate changes to the trailer footage to obscure the true plot of the movie This trope is especially common with short "teaser" trailers, which are released long before a film's premiere; so long, in fact, the work itself may still be in production. Teasers commonly feature footage or scenes that were never intended to be used in the film, such as clips made specifically for promotional purposes or re-purposed early production tests Contrast Trailers Always Spoil , where the audience has already seen the choicest bits of the story before they ever watch the film

The term Missing White Woman Syndrome describes the fact that Western media will focus on the murder, kidnapping, or disappearance of Caucasian females — usually pretty, young, and middle- or upper-class — to the exclusion of male , minority, poor, or disabled missing persons.

The origin of the term is unclear. Although Professor Sheri Parks of the University of Maryland claims to have coined it circa 2005, it apparently has been in use among journalists (and Fark .com) for years before that. It's also been referred to as "missing pretty girl syndrome" and " damsel in distress syndrome". In particular, the United States (and to a lesser extent Canada) has the AMBER Alert, which is a special alert code for child abductions and was named for the young white daughter of influential parents The most likely ignored missing person is the Disposable Sex Worker and/or the Disposable Vagrant . For more information, including a detailed breakdown of the coverage cycle and links to dozens of cases, see at Wikipedia. at CNN.com has some thoughts on it, and in the years since this trope entry was first written many more writers have weighed in on the topic In fiction, writers tend to be more savvy and aware of the use of this trope, but often invoke related cultural sensibilities like Vasquez Always Dies and Final Girl Compare If It Bleeds, It Leads , Local Angle , Worst News Judgment Ever

The briefing before a mission, of whatever form In one form of this, the boss gets an aide to turn the lights down and run through a series of slides as he gives the briefing. One of these slides will be "the best photo we could get" of the Big Bad or The Dragon , and there will usually be a line to the effect of " we lost three men getting this out of Commie Land " or wherever Military briefings will either take place in a proper briefing room or theatre with relevant information displayed on The Big Board , or consist of a bunch of officers hunched over a map table Sometimes this is used for comedic effect when The Plan has to do with something non-military, and often not deserving of such seriousness. (Such as planning out how to get ice for the barbecue). Might be a way of lampshading Serious Business . Occasionally this is done by a person giving a briefing without an audience. Alternately, the comedic effect might come from a serious topic being briefed with whatever random objects are lying around standing in as props Allows a character to be Mr. Exposition about what will happen next in the story Naturally, these are frequently given before levels in Real-Time Strategy , First-Person Shooter , or Simulation Games Occasionally, the Mission Briefing will include This Page Will Self-Destruct and/or Obstacle Exposition . A character or group of characters who, rather than accompany the hero into the field, offers assistance with information and technology from the other end of a phone. Alternatively, a sapient computer that travels with him, but is incapable of rendering assistance physically. In the modern wired era, can provide valuable field assistance by hacking into the local technology by remote, or using ROV's and other remote devices. The opposite of his partner in the field in many respects. Most times, Mission Control is more intellectual than the heroes , being a planner and strategist rather than a doer. Mission Control prefers to sit back and plan, while the hero is brash and forward. If the hero is strong and invulnerable, Mission Control is weak and frail . Various other contrasts may also be built up: if the hero is the strong silent type , Mission Control will be cheerful and will crack jokes. This will often lead to some sort of friction between the two and Character Development as time goes on. The defining characteristic is that the character provides banter, exposition, information and support, while the hero is still physically alone and isolated. Losing contact with Mission Control can be used as a plot element. Often the hero will mock his backup's unwillingness to risk it all in the field, and be punished when he loses their valuable help temporarily. He'll be all too glad when everything's back to normal, he's risking his neck and MC's back in his chair. In some series, Mission Control makes up one half of a Spy Couple. If the hero is male, this character is often female, attractive, and in love with him. This type of portrayal is reminiscent of a fifties TV housewife. ("Stay here and mind the base, honey! And don't call unless it's important! Yes, yes, I'll bring back the macguffin ; no need to nag.") If a series with a Mission Control runs long enough, they will inevitably be forced into a truly threatening situation. The hero could be captured (see All Up to You), baddies could invade their HQ (a Die Hard scenario ensues), or someone could just catch them off duty. Either the hero will coach them, in a role reversal, or they'll be held captive as a hostage

and the hero will have to do his own thinking. Once in a while this results in the death of Mission Control, either we see the death but the hero has no idea, or we and they hear/see it but can't stop it. This often sets up a Dead Sidekick , or if it's in Flash Back , a Dead Little Sister revenge arc. May also fall into A Death in the Limelight . Sometimes, the bad guy will hack the communications and impersonate mission control , using voice filters and CGI to fool the hero into doing his bidding. Mission Control has become increasingly common in video games, to put a face and voice on otherwise boring mission objectives and briefings. In such games, as in long-running series, there is roughly an 80% chance (higher in cynical games, lower in idealistic ones) that the Mission Control character will be killed, kidnapped, threatened, have their frequency hijacked by the Big Bad, or otherwise be rendered useless about halfway through the storyline.

Contrast Sinister Surveillance , where the bad guys are watching your every move. Contrast and compare Mission Control Is Off Its Meds , where there's a voice, but it's misleading, hostile, insulting, or just insane. Missing Mission Control is a subtrope, which describes any situation where the Mission Control is killed, kidnapped, or otherwise incapacitated. A particular group has been tasked a certain mission or project. This group can be as small as a single unit, or even a single man; it can be as large as an organization, an institution, a government, or a group of nations. In all instances, their original purpose was a particular task or mission, and they proceed to carry out that task, and here's the crucial thing, they succeed. At first anyway Mission Creep is what begins after</ initial success. You see sometimes, success is not enough, it turns out your original goal was a woefully small part of a larger problem. Alternatively your solution can only solve that problem temporarily but you are unprepared at providing a long-term solution. In this instance, the original group decides to start expanding and takes on other goals and tasks to supplement their original goal. The original goal is still the main story quest for them, but along the way they find some fun side-missions that buttress their original goal. Initially, it seems that the group can handle these tasks and responsibilities but over time, tensions seep in because of the gap between original project and new responsibilities and without some way to address that gap and come to terms with the change from expectations to reality, mission creep can backfire, destroy or finish the group In short, it's the institutional and professional equivalent of a Greek Tragedy. Complete with promising beginnings, tragic inevitability, hubris, hamartia and resignation. It can lead characters to question whether their original goal and so the effort they expanded in that project was really worth it alternatively, characters may decide that their original idea was too vague and unclearly defined, or simply Entertainingly Wrong based on a non-malicious misreading of a situation, but now they have to adjust with a clearer approach to the problem Mission Creep is similar and related to Motive Decay , with the difference being that the original motives and goals still exist in some form. In cases where it is closest to decay, the goal becomes The

Artifact , but other instances exist of that goal still being primarily the main purpose but now intricately entangled with other related and/or separate goals, new responsibilities and unintended consequences. The Other Wiki has an on Mission Creep noting that originally it applied to military operations in The '90s which gradually became more and more complicated forcing planners to constantly update and alter initial plans to better serve the original goal but eventually facing up to inadequacy in completing the original task within its current framework. It has since been applied in many non-military situations to describe problems and roadblocks in the life-cycle of any group or mission Nearly always present in Minor Crime Reveals Major Plot situations

Sometimes, a sequel to a video game is completely different from the original; perhaps the designers got a little overexcited about creating new things Other times, however, you get just the opposite: Essentially, extra levels for the original game. Either it's the same engine, or the feel is identical, or what have you; but nevertheless, the player feels slightly ripped off. Any way you cut it, you're paying full price for an Expansion Pack Some gamers enjoy mission pack sequels when they are obviously such, because then they know exactly what they're getting into, and sometimes extra content for a fun game is a good thing. Other gamers don't trust their favorite companies to innovate, and would rather they stick to what they're demonstrably good at Thanks to the general contrariness of many gamers, not</ producing this kind of sequel when expected to can result in They Changed It, Now It Sucks! . Critics, on the other hand, tend to be Sequelphobic . This trope provides exclamations of It's the Same, Now It Sucks! To compensate for the lack of new play mechanics, a Mission Pack Sequel may feature harder levels than the original game, with more and/or tougher enemies It's important to realize that, until the early '90s, this was usually the standard for video game sequels. They were generally expected to offer the same experience as the first, except with new levels, a new enemy or two, maybe a couple new power-ups but little to seriously differentiate them from their predecessors This, in fact, was a key reason for the divided reaction Castlevania II: Simon's Quest received upon release . It wasn't until games like Super Mario Bros. 3 </ demonstrated how to significantly depart from your source material while still maintaining everything that made the original great that it became more permissible for video game sequels to seriously distinguish themselves from their predecessors Some old games did this in a manner similar to Divided for Publication , when ported to a system which couldn't fit all the stages onto one cartridge. Also, older consoles usually did not allow for actual</ expansion packs due to hardware limitations, leaving Mission Pack Sequels as the only way for developers to add new content to an existing console game And recall that Tropes Are Tools . If the core gameplay is already solid and fun, and the designers still have more ideas of what to do with it, why fix what ain't broke? That said, a mission-pack sequel can easily lead to the games becoming bloated and/or samey (especially if it extends beyond a single sequel) Remember that just being part of a series doesn't make a game an example of this. Having a similar game system is part of the definition of being a series; a game only qualifies as a Mission Pack Sequel if the sequel adds almost nothing in the way of innovation or new features - if you could imagine the old game with the new one's levels, enemies, and the like, and nothing would seem out of place (or the

opposite, such as the developers or fans porting the old game's levels to the new game without having to change much of anything to get them to work) An installment that embraces this, like the Half-Life 2 </ Episodes, Company of Heroes </ expansions, or the various Guild Wars </ campaigns, may be marketed as a "stand-alone expansion" instead of a full sequel, which usually means a lower retail price. In the modern day, content that would have, in earlier times, perhaps constituted a Mission Pack Sequel is often instead released piecemeal as episodic Downloadable Content for the base game. The collective DLC packs of many games in the (for example) Fallout </, Dark Souls </, Mass Effect </, Borderlands </, or The Elder Scrolls </ series add campaigns totaling between twenty and sixty percent of the base game's with dozens of new weapons, enemies, abilities, and so on If it looks</ like a Mission Pack Sequel, but isn't a sequel, then it's probably a Gaiden Game Compare Serial Numbers Filed Off . Characters assume another character's age, often based on common assumptions of traits that character has, or there can be other reasons A common one is an aunt (or uncle). For whatever reason, a character is convinced that he's died and is now in the afterlife. If there's someone nearby (especially if they're very attractive), they tend to be taken for an angel. To find that nice local bakery that makes the chocolate croissants Somehow The Protagonist has been Mistaken for Badass, through no merit of his own other than some well-timed ducking , a little obliviousness , and a lot</ of incredible coincidences . He's a bumbling, perfectly normal Nice Guy that has gotten mixed up in a very real, serious, and deadly affair. Maybe he muddled his way through some Spy Speak and convinced the CIA he's the MI6 operative they sent, or somehow knocked out or killed a highly lethal assassin before they made a hit, or otherwise had the MacGuffin fall on his lap. Or he's the only survivor of that nasty mess-up he was caught in, due to inhuman level of luck , maybe not even realizing just how deadly it was. Everyone believes an Innocent Bystander would have no chance of doing this, so not only must The Tourist know</ what's going on, but he has also proven</ himself as the most competent of all the dangerous people involved. It helps a lot that there are often several sides who will never sit together and add up everything they know about the case, but will watch each other just enough to overhear their rivals' suspicions and assume that the other side "knows something" This guy does not just survive the attentions of those interested, but does so in a way that convinces the bad guys he's a Badass who is Made of Iron . Of course, they conclude he's using a deep cover Crouching Moron, Hidden Badass act. All things considered, this is not that far from the truth This character can be mistaken for The Paragon of any profession that requires a lot of training and competence, not just spies but also martial artists, cops, thieves, or what not In the most extreme instances of this trope, the protagonist doesn't even notice what he's doing. </ He may kill every assassin dispatched against him with casual obliviousness, disassemble the evil plot with trivial ease , and otherwise destroy the bad guy's evil empire without ever becoming the wiser. Sometimes, they do clue in to what's going on about half way through the plot but still keep it up anyway This can be done completely straight in an action movie or drama, with the character panicking once he realizes just what he's gotten into. On the flip side, this can be amazingly funny in a comedy by using both slapstick methods of beating opponents and making fun of all these "professional" organizations out to get our hero Clueless Detective may be overestimated the same way. Similar to Mistaken for Gay , this is when a character is wrongly accused of cheating on his spouse or girlfriend because of a series of misinterpreted clues. Usually these clues look very suspicious (a bra left in his apartment , lipstick on his collar , a piece of Affair Hair , a romantic note) and the real story is hard to believe and/or involves secrets the accused character doesn't want to reveal. The wrongly accused may protest "Wait! I Can Explain !" or "It's Not What It Looks Like !" If the spouse or girlfriend is another major character, the conflict will be resolved; if the love interest is a Girl of the Week , she may storm off, thus ending the relationship Shows aimed at kids also have a version where it's the kids who wrongly suspect that one of their parents is cheating on the other. Other variants include the love interest discovering that the would-be boyfriend thief is actually a relative , a member of an Incompatible Orientation , or in rare cases, even the wrong gender One notable property of this trope is that it can be used on shows that, because of their genre or their scrutiny by Moral Guardians , could never use a plot that involved actual adultery. This plot may be the first time we've heard them explicitly say they're not</ gay (whether we believe them or not is another matter) A slight subversion occurs when a character is suspected of being gay and takes this as a compliment , since that person deeply sympathizes with gay people For such characters to qualify, they have to be mistakenly assumed to be homosexual, even if the G, H, and L words are not used. However, these characters don't need to retaliate or tell those who have mistaken them that they aren't gay as such characters can easily disprove these mistakes through other means such as a revelation of a straight relationship See also Mistaken for Index . This is a variation on Accidental Pervert , in which the accidental part is not so accidental This trope generally comes in two variations. First, are instances where someone intends to initiate romantic/sexual contact with a significant other or romantic interest, but touches the wrong person. This will usually be because someone looks similar to the real target of affection In other instances, a character actually means to sexually harass someone (usually a Ms. Fanservice character), but for the same reasons as above, picks the wrong person (usually a gonk or otherwise stern and/or unattractive character) The victim and perpetrator can be of any combination of genders. When both are straight but of the same gender this may result in Ho Yay and Les Yay Compare/contrast with Bed Trick and Bride and Switch , wherein there is deliberate deception on the part of one of the parties involved. May overlap with Mistaken from Behind

It seems that, when comedy is concerned, sexual attraction to children is as good a source of laughs as anything else, especially</ when the person being persecuted is innocent (of that particular crime) It usually goes like this: A small child grabs the MacGuffin the main characters are trying to fetch, or is otherwise important to the plot in some way — they might be children of the boss to whom they have to suck up, or even a MacGuffin themselves. As the main characters approach the child, unaware of how to behave and how to act, it seems to onlookers (and to the viewer, if they weren't in on the plot) that the interest in the kid is of a sexual nature The kid might scream, or parents/nannies might overlook the conversation and come to the wrong conclusion, but it usually ends with several parents chasing the would-be-creep with peppersprays, purses filled with bricks and TASER guns . If he's a villain, we laugh. If he's an Unsympathetic Comedy Protagonist , we also laugh. If he's an actual paedophile , the trope doesn't really apply Surprisingly, what never happens is any serious involvement of the police (it seems that overzealous parents are more than sure of their own creep-chasing abilities) or some sort of clarification that the character in question is not attracted to children. Guess they'll have to live with being mistaken for paedophiles all their lives The perpetrator is almost Always Male because of the Double Standard that men are always after sex while women never are . A character (usually male) overhears a conversation or finds some evidence that leads him to mistakenly believe another character is pregnant If the suspected pregnancy is with his love interest, he will freak out over the thought of being a father. The episode will be about his attempts to cope. He will have accepted the idea by the end and will be mildly disappointed when he finds out that it was a false alarm If the suspected expecting woman does not have an established love interest, he will try to determine who the father is. Usually, he will pinpoint some character that she has

romantic tension with but is not sleeping with. He will confront the suspected father but will dance around the word "pregnant", leaving the suspect completely bewildered as to what's going on In any case, he will walk on eggshells around the not-so-expectant Mom and will tell everyone except his suspects what he thinks is going on. This may lead to some One Drink Will Kill the Baby moments as the poor woman wonders why everyone looks horrified that she's sipping at a glass of wine During the course of the episode, everyone will be convinced she is pregnant except for her In order for this trope to work, several characters have to be using the Idiot Ball that week. Yet, it may be Truth in Television An alternative is when a woman is assumed to be pregnant due to having what appears to be a sufficiently large, protruding stomach (which can lead to extreme awkwardness for obvious reasons), or displays quirks that could be mistaken for stereotypical "pregnancy traits", such as random bouts of vomiting , extreme appetites and Wacky Cravings . Fake Pregnancy is when a woman invokes this trope, usually on purpose (for Pillow Pregnancy , she does so by concealing something under her clothes) Subtrope of Innocently Insensitive . Contrast its inversion, Surprise Pregnancy

Sometimes, a good-looking person (most often a woman) in the "wrong" part of town will be accosted by someone who's looking for a prostitute and thinks he's found one. This is often Played for Laughs in fiction, but can be a real danger in Real Life . Police departments that are cracking down on the sex trade have been known to arrest women based on appearance profiling. When treated as comedy, whether the mistaken-for person decks the accoster or flees there will always be a followup scene where that person asks if she really dresses like a sex worker. The answer is always Yes. Don't be surprised to find some Values Dissonance or Unfortunate Implications here, in the form of "nice girls don't wear _____". It doesn't necessarily have to be clothing items either; this is one area where Makeup Is Evil isn't a Forgotten Trope . A variation is when a woman is nice to a nerdy male who assumes she must be a prostitute looking for work because why else would any woman be nice to a nerdy male? Oh look, it's Lady Drunk coming right over - gee they're so - Oh? She wants you to walk her dog ? Groom it? And there she goes, leaving the annoying yappy thing in your hands before your mouth could form around "Wait, I'm not...?". Congrats, you just got mistaken for the hired help! This is an almost-anytime, anywhere trope that can be Played for Laughs or could more rarely be used in more serious works. This tends to play out in four ways: The Helpless Everyman who is unable to correct the other person's error and ends up stuck with either a live creature they have to keep safe until they can give it back , or a valuable that's sought after by some less scrupulous fellows. Generally, he gets no respect for the effort. Sometimes, if the person who mistook them for the help is a Jerkass , they can retaliate. Notably, especially in older (mainly American) works, ethnicity is sometimes a factor in whether or not someone is mistaken for the hired help. If used in more modern works, is generally used

to indicate that the character making the mistake is either bigoted or, more kindly, behind the times. Can often be followed by Actually, I Am Him moment. Actually, That's My Assistant is similar, but it refers to a situation where more than two characters are involved: the mistaker doesn't think someone is their</ servant, but confuses who's who in a lower/higher rank pair. After 9/11, this trope was largely replaced by Mistaken for Terrorist See also The Corpse Stops Here and Mistaken for Badass

A male character gets pregnant through Functional Magic , weird science , gender-bending , Bizarre Alien Biology , body swapping , actually being a seahorse , or just plain bad writing. Usually played for laughs, but it can be done seriously or even tragically, especially when it's from a Face Full of Alien Wing-Wong . Especially common in fanfic . MPreg stories frequently result in the pregnant character being hit with a heavy dose of Ukefication . It is often given no more explanation than The Power of Love overcoming biology . Sometimes MPreg is explained by the action taking place in the future, the pregnancy being of an explicitly supernatural nature , or the man being an alien (especially if the aliens are hermaphroditic). Or if it's otherwise in canon. Regardless of how it comes about, though, fanfic with this often turns into Kidfic . The trope name comes from the fact that male seahorses have an egg pouch. In it, they receive and fertilize the egg cells of their mates, and carry them to term. Not quite the same as a mammalian pregnancy (or the few fish and reptiles that birth live young), but it certainly appears as such to human eyes, especially when the young leave the pouch. This is theoretically possible in real life. A scientist was able to implant an embryo in the abdominal wall of a male baboon, and others report that it is indeed possible to get a man pregnant if the embryo is planted at the proper spot, but only if the man is pumped full of pregnancy hormones. The embryo can create its own placenta . Unfortunately, the abdominal wall is not designed to detach from the placenta, resulting in massive bloody injury . There's also no obvious route of exit, and the baby would have to be removed via c-section. Male volunteers, not wanting to risk their lives on such a venture, have not been forthcoming. The most likely way you'll see a pregnant man in real life is if he's transgender and still fertile. In fact, "seahorse dad" has become an affectionate slang term for such fathers. Fictional examples may involve Bizarre Alien Biology , Bizarre Alien Sexes , Bizarre Alien Reproduction , and Bizarre Sexual Dimorphism . If the other parent is also male, you've got Homosexual Reproduction . Can be Body Horror for men. See also Chest Burster and Ass Shove for the potential non-C-section routes of exit. If the setting permits, male-male reproduction is best achieved with a Uterine Replicator . Probably the most understandable reason to say " But I Can't Be Pregnant! " If the pregnancy reveals that the character is actually female, that's Your Tomcat Is Pregnant . See also Pregnant Reptile for another trope about a character getting pregnant/giving birth when they shouldn't be able too. Has nothing to

The hatch opens, and the aliens step out, repeating their message of goodwill — to your rottweiler What happened here? The aliens Mistook the Dominant Lifeform of Earth, that's what This is a common subversion of the typical First Contact scenario. The aliens, in their studies of Earth, conclude that a non-human species are the real masters of Earth. Maybe they assume that we're the servants of our pets rather than mere caretakers. Maybe they're mechanical beings who aren't used to dealing with carbon-based life and assume that any intelligent beings will be machines like themselves. Maybe they assume that the bigger animals have bigger brains, and therefore more intelligence. Maybe they do possess all the facts, but simply have a different definition of "dominant". Maybe they are biased by first impressions, since they saw the other animal species first and found it very impressive while they haven't had observations that gave them a positive impression of humans. Either way, the results are usually quite amusing Granted, humans might make the same assumption on another planet. The parrot-like thing riding on that humanoid's shoulder may actually be the master, with the humanoid being its mount. Or it might be that the spaceship itself is in charge, and the aliens disembarking are merely messengers Many parodies or humorous examples of the trope may include the revelation or implication that the lower animal actually is</ the dominant or superior species (at least in their own eyes) See also Mistaken for Servant , which is a more mundane trope which sometimes overlaps, and Humans Are Not the Dominant Species

Mithril is a fictional metal from J. R. R. Tolkien 's Middle-earth fantasy writings. It's silvery and stronger than steel but much lighter in weight. The author first wrote of it in The Lord of the Rings </, and it was retconned into the second, revised edition of The Hobbit </ in 1966. In the first 1937 edition, the mail shirt

given to Bilbo was described as being made of "silvered steel". The name "mithril" or similarly spelled variations (mithral, mythril, mythral , and others) is present in other fictional contexts like role-playing games, since the Tolkien Estate did not trademark the term, unlike " Hobbit " or "Balrog". The name is usually used for a special type of metal (often used as armor), or as a denomination of currency, or as a name for a project or device. It's very useful to have an exotic trope metal that is more rare and valuable than mundane metals like steel or gold. Citadel Miniatures even produced a color of (metallic) paint named Mithril Silver. As to whether Mithril was ever based on a real metal, Tolkien never said. Guesses for this metal have been aluminum, titanium, naturally occurring titanium-molybdenum alloy and platinum (and yttrium silver). Titanium comes closest in lightness, hardness, toughness and resistance to tarnishing, yet it is not found whole in nature, it has to be extracted from minerals via a complex process which could not be discovered and put in practice by a pre-industrial civilization. A common way of making monsters or fantastic creatures is to simply take existing animals and combine their parts. For instance, the Chimera (lion head, goat body, snake tail) or the Minotaur (bull head , human body). Also common is to simply take an existing animal and vary it a simple way — Pegasus is a horse but with wings, hippocampi have the heads and front bodies of horses but the tails of fish, etc Another common variant is to make a Punny Name of a real life animal named after a different animal: for example, a "catfish" that is literally half cat, half fish . For those cases, see Pun-Based Creature Compare Fusion Dance and Two Beings, One Body , which is when two characters are combined. Shapeshifter Mashup usually results in this. Mix-and-Match Critters may be the result of Hot Skitty-on-Wailord Action . If both creatures are already mythological/magical/whatever and get mixed, they have a newborn Hybrid Monster and if mundane they can end up with a Patchwork Kid . Application of the principle to humans may count as Bio-Augmentation , see also Mix-and-Match Man . Mons often have aspects of different animals. Puzzling Platypus may count as a Real Life example of this trope

This is an Artificial Human , usually but not always a clone, who is created from the combined DNA of multiple individuals. Sometimes the intent was to clone a single individual exactly, but extra genetic samples were added to the mix by accident. Other times, this is done on purpose to give the clone specific traits from each genetic donor Non-clone Mix-and-Match Men are physically built

from parts of other people, literally stitched together Can be Half Human Hybrids when at least one genetic donor is human and at least one isn't. Can be Mix-and-Match Critters when all genetic donors are non-humans, such as Human Aliens . Both Half-Human Hybrid and Mix-and-Match Critter examples of this trope occur when there is more than one species among the genetic donors. Obviously more likely to occur in settings where Designer Babies are common. LEGO Genetics are a prerequisite for making these out of vastly different species. Patchwork Kids is when an individual produced by normal</ reproduction might as well be one of these, and Extra Parent Conception is a variation of this trope where this occurs as part of a normal conception (or as normal as it gets for that particular species)

Mixtapes are a way to show your affection for someone. Fill them up with Silly Love Songs , give them to the one you like, and see how they react. They can also be shared between couples. In more gloomy occasions, someone can fill a mixtape full of sad songs and listen to it while silently pining after another While less common, mixtapes can also be given for similar reasons between friends and family Mixtapes are traditionally audio or video cassettes, however, due to Technology Marches On this has been expanded to CDs and digital playlists. You're still more likely to see them in cassette format, though. Having a physical sign of the romance can be more appealing. Cassettes also have more of a nostalgia factor than a CD, and are considered by some to be more aesthetically pleasing (not to mention that it's easier to re-record a mixtape on a cassette compared to a CD-R, in which you need to burn a new blank disc entirely) Can overlap or include a Gift of Song

The least fantastic version of this is an exaggerated version of how nomadic societies work in real life. A large group of people moves around, carrying tents, large carts or other shelters either in disassembled form or by hauling them around on wheels, and sets up a temporary city when it decides to stop moving. When the group sets off once more, the city is disassembled and carried off until a new spot is chosen. Most fictional examples, however, go further than this — rather than being moved around piecemeal, a city moves as a single, solid block. This typically takes the form of a large platform, with the city on top, given motile power by huge wheels or caterpillar treads. Some examples give the city mechanical legs, sometimes turning it outright into a colossal, animal- or human-shaped Humongous Mecha so big that a respectable community can live in its insides Most examples of this take place on land, but moving cities can inhabit other environments as well. Some exist on the sea, ranging from nomadic fleets to masses of ships lashed to each other to solitary vessels the size of cities to giant floating platforms with cities on them. Aerial examples also exist, held up by giant rotors, balloons or good old-fashioned magic or Technobabble and roaming the skies of their worlds; see also Floating Continent . Mobile cities may occasionally have minds/AI of their own too . City-sized spacecraft or space stations, while they technically fall under the definition of this trope, don't usually qualify since, unlike other examples, they are not confined to the surface of a planet The chief issue with such cities is that making a large settlement ambulatory requires a lot of complex infrastructure and some way to keep everything powered, whereas a regular static city just needs someone to build

enough houses in the same general area. Consequently, mobile cities tend to be built for very specific reasons. Often, it may be that staying put just isn't an option — perhaps the city consumes too many resources to depend on a single area, or perhaps something, such as climate extremes or enemies, makes staying in one place dangerous. A particularly common science fiction variant involves planets where the day, the night or both cannot be lived through, and the locals need to constantly follow the day-night terminator; for these examples in particular, see Mercurial Base . Alternatively, however, this may be nothing more or less than a cultural tradition or affectation Another side effect of these cities is that they make it very difficult for nations to exist, at least in the traditional sense. Keeping tracks of borders and of whose land is whose can get pretty difficult when every population center can just wander to the other end of the continent should it decide to. As such, mobile city-heavy worlds will either exist under an all-encompassing world government or will have each city be its own self-governing unit, with few hard ties to others. Formal alliances and unions of cities can still exist, but will often be groupings of allied nomad settlements with few or no territorial claims This may overlap with Layered Metropolis , in which case expect Urban Segregation to take place on such cities, with the lowest levels dedicated to maintenance workers and engineers tasked with keeping the cities operational (akin to crewmen shoveling coal in boilers on steam-powered ships back in the early 20th Century). The third-class commoners will generally be stuck living in this noisy and polluted environment. The middle levels will usually be the general civilian area with lots of standard middle-class homes, while the uppermost levels are reserved purely for the rich first-class nobles and politicians who call the shots, complete with extravagant manors and castles to boot For less extreme cousins of this trope, see Base on Wheels and Moving Buildings . Supertrope to Mercurial Base . Compare Turtle Island . And for this trope taken Up to Eleven , check out Planet Spaceship Not to be confused with the city of Mobile, Alabama

When they aren't slouching on a throne , villains can really move around a lot more quickly and easily than seems possible While it takes heroes months</ to gather five Plot Coupons , trudging slowly through swamps, deserts, and arctic tundra, The Dragon will always</ get there moments before the heroes do and waltz off with each piece. If the hero is trying to outrun Jason Voorhees , who seemingly just trudges along, he'll be surprised to discover that thanks to Offscreen Teleportation he just rounded the bend ahead of him and beheaded him with a machete. If on the other hand the hero is in their Supervillain Lair and is trying to catch them, the villain will always be a corridor length away and probably lead him into a Defensive Feint Trap or pit filled with sharks . Even if the heroes can teleport , the bad guys will have the superior Villain Teleportation that can outperform the heroic version by leaps and bounds This is of course a standard way to give the heroes a really</ hard time against the bad guys, who can be everywhere the plot needs them to be despite any logical difficulties they'd have moving around. In a Horror setting, this is used to instill fear in a victim as they can no more outrun the slowly oncoming Implacable Man than the too fast by far monster Compare Teleporting Keycard Squad , Already Undone for You , Drop-In Nemesis Not to be confused with No Delays for the Wicked , which has more to do with villains rarely suffering random setbacks that couldn't

be predicted or regularly happen to normal people, and their evil organization/masquerade working unnaturally flawlessly Used frequently in Samurai Deeper Kyo </. The heroes spend over fifteen volumes of the series navigating their way through the Mibu complex while the villains, the Taishirou in particular, seem to be able to pop up wherever they need to be and then back to their lairs without the slightest delays. They hop in for meetings with the Big Bad mere minutes after they've been messing with the heroes who spend over half of the series just trying to get to the same place

Any villain from a Slasher Movie , natch Metroid Fusion </ has several sequences where you have to either outrun or hide from SA-X , who always seems to show up at the worst moment. There's actually several of them

Alice hides from Bob behind an inanimate object. When Bob moves away or isn't looking, she picks up the object and follows him. The object is most often a bush (hence the name), but it may be anything that fades into the background (such as a cardboard box or traffic cone) Frequently the object will end up somewhere it has no right to be (e.g., a shrub may end up in the middle of a street). Sometimes the object will fall apart almost completely, leaving them with only a few twigs left, which they then either look at and toss away, or maybe continue to hide behind. Alternately, the disguise might work a little too well and get mistaken for the real thing, with humorous consequences (e.g., a fake tree getting "marked" by a passing dog) Often this overlaps with Paper-Thin Disguise , but not always; this can actually be Truth in Television to a degree. It's called . So long as Bob doesn't actually see the bush move, there's a good chance he won't notice that it's in a new location. There are some very fascinating on YouTube demonstrating this. Thusly, if Alice is competent, she may not actually be obvious to Bob, only to the audience Occasionally utilized by Naked People Trapped Outside . If the object used to hide is literature of some kind this can be a Newspaper-Thin Disguise . If the shrubbery is stationary, that's Tree Cover . If you're doing this on stage, it's Playing a Tree

In sci-fi and anime you have your Humongous Mecha and you have... this The Mobile-Suit Human is a Mini-Mecha designed to look like everybody else (more or less), manned by a tiny (usually about rodent-sized) pilot who can operate it to blend in with the rest of the population without being noticed; or to make himself seem more impressive than he otherwise would be. Nobody is ever afraid of anything tiny if it's not a Killer Rabbit Most often employed for comedic purposes, the pilot of the suit is usually revealed at one point or another, to the astonishment and shock or amusement of who or whatever is unfortunate enough to be the one to open it up or see inside it The trope name is a pun on Mobile Suit Gundam </ A potential subtrope of the Monster Suit and Human Disguise . Such pilots typically live in a Mouse World . For stories that depict ordinary humans as metaphorically</ controlled by tiny pilots, see Ghost in the Machine . See Brain with a Manual Control for when an actual human can be controlled like a robot from the inside of their body. For humans who are in mobile life support robots, see Man in the Machine . See Little Green Man in a Can for different

levels of alien and/or mecha For a more specific form of this trope, look to Totem Pole Trench

The friction between two (or more) rival crime factions has broken out and exploded into all out warfare. This can happen between two groups of the same type/nationality (for example two Mafia families going at it) or between multiple nationalities (e.g., The Mafiya taking on a Yakuza group). Two groups of Gangbangers getting into a turf war to settle things once and for all also counts, as does The Syndicate clashing with another Syndicate or group This may be portrayed as an organized crime version of Feuding Families , and as with many portrayals of Feuding Families both sides are evil You'll often see characters express an apparently sincere desire to avoid</ a mob war — members of these criminal gangs are frequently portrayed as businessmen obsessed with profit, and they know well that a mob war is bad for business. Mob bosses and their henchmen will often invest significant time and energy into finding all sorts of ways to strike back at the opposing side without triggering a full-on war. They usually fail, for reasons of dramatic necessity (in which case an Escalating War is the result) Expect to see at least half of the Guns and Gunplay Tropes put into effect, as well as lots of Stuff Blowing Up and lots of Gorn . Compare Enemy Civil War , which is when Mooks from the same faction are duking it out within their ranks, though there can be some overlap

Our heroes have found a golden helmet, a powerful relic, or magic sword, something of great value, they take it to get appraised only to discover that it's actually... junk A hapless man finds a briefcase, locked, in the back of his car. Perhaps it is full of money, secret documents or contraband. When he opens it he discovers... it's full of shredded paper An object of absolutely no significance that the protagonist mistakes, either through misunderstanding or excited imagining, as something of great importance, be it a magic sword or mysterious briefcase. Since a MacGuffin is usually defined not by what it can do, but by what people think</ it can do (and how much they are willing to do for it), a MockGuffin can still drive the plot even though all it turns out to be is completely worthless Compare with It's All Junk , Worthless Yellow Rocks . Not to be confused with All That Glitters or It's the Journey That Counts , which are often materially worthless but at least impart a valuable lesson . See A MacGuffin Full of Money for a plot device that can end in this. If someone deliberately creates a duplicate MacGuffin , that's Fakin' MacGuffin Its opposite is Grail in the Garbage , where a seemingly worthless object is in fact worth a king's ransom

The Hollywood Sign is a sign on Mount Lee overlooking Hollywood, Los Angeles . It consists of 44-foot tall white letters spelling out HOLLYWOOD . Because of the obvious glitz and glamour associated with the area, as well as its proximity to America's oldest studios, the sign is one of the most iconic symbols in American pop culture. Unsurprisingly, it has its own share of mock-ups and parodies, with fictional communities often planting their own white block-letter signs on their surrounding mountains. Bonus points if the sign overlooks a No Communities Were Harmed version of Hollywood When the sign is used to establish a setting as being in or around Hollywood, see Eiffel Tower Effect May overlap with

A character is upset about something. They turn on the radio, only to be confronted with a song that seems to mock exactly the thing that's upsetting them Related to Cold Turkeys Are Everywhere . See also Your Television Hates You . A Super-Trope to Losing Horns , where it's just a musical sting that's used for mockery. Compare and contrast AM/FM Characterization , when the character's taste in radio listening also tells us something about their personality, but by choice instead of coincidence Not to be confused with "The Villain Sucks" Song or "The Hero Sucks" Song , where a character deliberately</ makes music that mocks another one. Also don't confuse with Mocking Sing-Song , that little tune children sing to tease someone

When one character is trying to think of a Freudian Excuse or has experienced a humiliating incident, or is just minding his own business, another character will immediately mock him to the tune of "Ring Around The Rosie" There also seems to be a recurring taunt in fiction, where a character puts both hands to the side of their face, with their thumbs at their cheeks, then wiggle their fingers and go "Nana Na Nana Na" to the same tune. Sometimes another tune will used instead, but the tone will still be one of mocking another It seems this trope is done mostly by immature characters Also a rather common playground thing in Real Life in some places as well Will occasionally overlap with Blowing a Raspberry or Crowd Chant . For musically mocking a character about a relationship or crush, see Kissing In A Tree . See also Playground Song . Not to be confused with Mocking Music , which is when an annoyingly appropriate song plays on the radio

Most often seen in comedy; this is when the universally hated tinned meat (Spam) or some other (usually low-quality) substitution food is used to simulate a meal of higher quality. A character will sculpt a Turkey, Chicken, Lamb, Pig or other food animal out of canned Mystery Meat , or another substitute food Does not cover synthetic foodstuffs in futuristic settings . Compare Poverty Food

This is a Reaction Shot , where a character pretends to be surprised at the sight of another character or an item. The trope is commonly used as a response when one encountered an event or a person that they already expected, as either a Deadpan Snarker or otherwise a bad actor/liar. As the actor in question was either doing it for the snarks or awkwardly improvising to avoid further awkwardness, this is always played for laughs A variation of this would be where one character would say to the other "Fancy meeting you here!", even though the first character already knew that the other character would be there May be used as a weapon of choice for either a Deadpan Snarker or a Tsundere Compare Sarcasm Mode , Hidden Heart of Gold , Faux Horrific . Can overlap with a Suspiciously Specific Denial

A fictional movie shot in the style of a documentary . While the name of the genre implies comedy (such as This is Spın̈al Tap </), the format can also work with horror (The Blair Witch Project </ or other Found Footage Films) and disasters. Fake news reports done by real life newsreaders are common, along with

interviews with 'experts', real or fictional. One thing you won't see, however, is famous actors in these movies unless they're playing themselves . We might intellectually know this is a movie as scripted as any other, but having the camera follow Brad Pitt for 90 minutes would break immersion The BBC did a lot of Mockumentaries in the late 2000s (to the point of two or three a month), mostly of potential regional-worldwide disasters. One BBC newsreader commented he did news reports for these programmes about twice a month Due to the miracle of computer-generated animation, the Discovery Channel has also taken to making mockumentaries about wildlife that no longer exists, such as dinosaurs, or has never existed, such as dragons, in the "filmed in their natural habitat" format See also: the Documentary Episode , a Framing Device or plot used for certain episodes on a drama or comedy series. Meanwhile, the Faux Documentary is what a Mockumentary becomes when it often discards the constraints of a supposed documentary crew. Also see Left It In , when people in the documentary directly request (to the camera) that something be cut or edited out, a request that is denied, since you, the viewer, still get to see it. Found Footage Films are what you get when the characters didn't survive long enough to finish the documentary and only left the raw footage A related trope is Phony Newscast , when a fictional work is presented as a news program Compare Faux-To Guide , Speculative Documentary , and Scrapbook Story . Contrast: Documentary , Documentary of Lies

Don't they look lovely together? Well, of course, they look</ good together. That's the point</ In modeling, couples can be just any two models, but there seems to be a preference for how the appearance of the two complement each other. It's not always the case, but it shows up often enough If the couple is modeling clothes (usually for a Fashion Magazine or ad), as in the pic at right, expect the clothes to complement each other as well, often to the point of Coordinated Clothes . Just that the guy isn't dressing that way because it'll make his girl happy. He's just being paid This can easily apply to families as well, even if the kids are supposed to be adopted or the family is blended. Could also apply to groups of friends, or just a large group in particular Remember, this is mainly for modeling, more than fiction (unless it's fiction involving modelling). Chemistry between these people isn't important, since they don't have to act. That is, unless it's part of an ad, but don't look for anything deep. They're just there to sell the product Compare Fashion Model (and overlaps when modeling outfits), The Beautiful Elite , Those Two Actors , Modeling Poses . Contrast Ugly Guy, Hot Wife ; Hot Guy, Ugly Wife

In Tokimeki Memorial Girl's Side </ DS , Kei Hazuki has an event where the female model for a shoot didn't appear and the heroine gets roped into taking her place, leading to a cuddling shot of her and Kei. For the purpose of making the two look good together, the redhaired heroine wears a blonde wig.

Sometimes, when they're having trouble getting it to look perfect or need to save time, a game's designer or animator might fudge a 3D model . A First-Person Shooter character might not have a proper character model, fast movement might use smears or a

partially hidden character might have their model adjusted to make the visible parts stand out more. Scenery which is only viewed from one angle might be flat, even in 3D games (these are known as "Billboard Sprites"; see Sprite/Polygon Mix), and objects the player is meant to see but not interact with might lack their proper animations or logic scripting Sometimes this stuff is sort of the real-time 3D equivalent to the Conservation of Detail : if the player doesn't see it, don't waste memory and processing power on it. It's what lets a game run without melting your computer- if you've got a laggy game that looks great, they dropped the ball here. However, if you end up seeing it (by accident or through cheats) Hilarity Ensues With characters, skeleton rigs and mesh deformations get processed first- then the engine figures out what's on screen. That chews up processing power, so it makes sense to skip them if the Player Character is mostly seen from the first person perspective (as long as their arms and legs look right!). Parts of a world the player is nowhere near might be subject to "backface culling" ; taken to the extreme, the game might be told to never render objects the player shouldn't be near (like the inside of a mountain, or a building that has its interior stored as a separate level). You as the player will probably care more about the 5 FPS a dynamic spine rig would cost you than whether the bottom of the shirt looks a little funny in the two frames when you can sort of see it This can also be used for aesthetic reasons or to implement something that wasn't intended to be in the game. An animation might look a bit better if the character goes a bit Off-Model for a frame or two. If a Game Engine only allows text boxes to be generated by NPCs, and the designers only want one or two readable signs in the entire game, it's easier to place an invisible NPC in front of a sign than to waste time adding signs to the engine proper. Objects in an FPS might be made larger, so they look right to the player, or animations that appear from off camera might only show the parts the player can see Often results in Obscured Special Effects . Compare Behind the Black (when something hidden from the player's perspective should be obvious to the characters), Cheated Angle (when a specific feature is always seen at the same angle), First-Person Ghost (when an FPS character doesn't have a character model), and Hitbox Dissonance (when models and sprites don't match the mechanics). If these become visible in game it can cause Special Effects Failure

Modeling, whether clothes or other products, use specific moves and stances to make those products look good. All those various poses are actually ways to draw the eyes of potential customers. This has become so prevalent that people will often unconsciously pose when trying certain products (particularly women trying on fancy dresses). What poses are done will depend on the product, and other factors. So when a Hood Ornament Hottie is posing, it will always be in ways that highlight the car. She may just touch it, lean against it, outright drape herself over it, or at the very least point to it in some way When shows have certain products that fit in the hand, the model may hold it up while making gestures directly around the item to keep our eyes on it. When it comes to being a Fashion Model , the poses may vary not only according to the outfit but also depending on whether they are posing for just one picture or more. If there are multiple pictures, or a Fashion Show , then the model will easily be able to show the whole outfit. If there is one picture, like an ad in a Fashion Magazine , then the poses will be more elaborate in order to

highlight as much of the outfit as possible. This is also why store dummies are arranged in poses. In fiction the purpose of these poses is often lost, and it's just fun to have people making silly poses, even when they are still modeling. This frequently overlaps with other pose tropes: A Sister Trope to Notice This . Compare Costume Porn , Rule of Glamorous , Sex Sells . See also Model Couple (who often pose together, in addition to physically complementing each other). Compare/contrast Too Incompetent to Operate a Blanket (the actors visually try to make products look as bad as possible). In a Daria </ episode where Quinn and other students are competing to be models, the recruiter gives them inspiration (such as haughty glee at seeing a rival getting an emergency amputation) for to how to do their catwalk moves, so the girls capture the proper tone as they strut on the catwalk.

The opposite of a Genius Ditz , this character proves competent at almost everything... except his actual job. A sort of adult Book Dumb , the main question on everybody's minds, in- or out-of-universe, is " How on earth did this guy get hired , especially given there are other jobs he would be far more competent at!?" (Though sometimes his Blue Blood may give you a reason to suspect nepotism .) Different from Fake Ultimate Hero in that the latter at least puts on a ruse of being competent that could actually fool someone. When this character's actual job seems to be nonexistent, they are one of The Pirates Who Don't Do Anything . Like the Pointy-Haired Boss , may be a result of The Peter Principle , where he has been promoted from a position which he mastered to one which he has not, or The Dilbert Principle , where someone's been Kicked Upstairs to get them away from the workflow. Compare Genius Ditz , which is a character who is ditzy and unskilled except</ for being brilliant in their actual job, and Bunny-Ears Lawyer , whose quirks belie their true competence. Contrast I'm a Doctor, Not a Placeholder . Civilians also count. A Modern Major General who actually is</ a military leader may overlap with General Failure . If you were looking for the song and works which parody it, see Major General Song .

Sometimes a creator or company will strike gold. A work (film, novel, etc) may spawn sequels, adaptations to other media, and a bonanza of merchandise. Usually, it'll take place in its own distinct universe, the author having significant autonomy, or the time and place keeping it off limit for crossovers, like Star Wars , </ The Lord of the Rings </ or Harry Potter . </ However, sometimes the creator or company will try to replicate its own success, and come up with creations in similar genres. The similarities are noted and sooner or later the separate creations wind up crossing over with each other—either to pool resources that are individually flagging in interest, or just to enjoy the benefits of a crossover . This new Shared Universe is a pretty perfect fit, and eventually it's seen as one giant franchise. However, at some point they may want to reboot only one piece of their mega-franchise, or adapt the simplest, most distilled aspect as it was originally envisioned. Luckily, these properties started out as their own franchise, so they can certainly stand on their own. But what you have is a modular franchise—full of properties that can be self-sustaining on their own, but also easily and even organically marketed as a unit. Similar to Canon Welding , except usually done at a corporate level, and The Merch plays a much bigger role, if not the entire incentive See also Massive Multiplayer Crossover .

Wherein two characters interact and work together, and are designed to emphasize each other's positive qualities. Similar to a Morality Pet , except the boost is directed to the character's cuteness rather than their morals. This can mirror, but not usually replicate, what could be a romantic pairing. Actual romantic stories tend to involve a lot of drama and seeing characters at their weakest and most awkward, occasionally becoming Plot Tumors if they become the sole definition of any given character . Sufficiently cynical fans are always wary of Character Derailment and Shipping Bed Death , while other fans are just very possessive of their beloved characters; they do not even want the potential</ to reach the Die for Our Ship stage. The problem is fans like the idea</ of the situation, but not the procedure and are worried that the hypothetical payoff is not worth it. The main differences between Romantic Couples ™ and Moe Couplets ™ are as follows: RC relationships bring conflict MC relationships bring harmony and balance. Interestingly, the Moe Couplet often exists alongside an Official Couple , with the danger that if either overlaps, the audience might prefer one over the other . Occasionally, later installments featuring them might be hit with Character Exaggeration and actually gain</ official romantic overtones. Other times a show may be made up exclusively of Moe Couplets so Everyone Is Single . In practice, only one of the characters really needs be designed like this, often a younger one whom the audience finds 'safe' and non-threatening. They are extremely popular in yuri and yaoi works, due to the natural maximization of Moe in the audience, but it's also present in other genres (particularly slice of life works that lack romance). The Wholesome Crossdresser (who is usually implicitly gay) has this relationship with Shoujo leads. In shounen , a (usually unattached) female co-lead has this relationship with the male lead if he gets his official girlfriend outside his circle of friends. Couplets are also common gimmicks in designing an Economy Cast . See also The Not-Love Interest .

Coined in Japan in the late '90s, "Moe" (萌え, pronounced as " Mo-Eh ", derived from a Japanese word that means " budding, to sprout/bloom ") is an ill-defined otaku term that means, amongst other things, "cute", "huggable", or "endearing". While it's sometimes used to describe a series or the phenomenon called Perverse Sexual Lust , it's more about a specific ideal or kind of character, similar to Kawaisa . When used as an interjection, figuratively, it's used to convey that "something blooms inside your heart". It has a basis in the Bishoujo genre A common definition is that Moe is the ability of a character to instill in the audience an irrational desire to adore them, hug them , protect them, comfort them, etc. To evoke a sort of Big Brother Instinct or Heartwarming Moments , in men and</ women. Therefore, Moe characters are, generally speaking, cute Moe characters are implicitly youthful. In Anime , they are mostly of high school age, but adult characters are not exempt if they fit the model of adorability; an example of the Moe Archetype applied for adults is the Yamato Nadeshiko . Their personality will reflect an "innocent" outlook on something vital, such as about romance. A related implication is that moe characters are virgins , though mostly in Japan , where virginity and purity still remains important to a girl's appeal The classical Moe character, based on

that of Conservative Japanese customs, is highly associated with innocence, shyness, humility, submission, helplessness and woobie characteristics (e.g., Prone to Tears , Shrinking Violet , Extreme Doormat , Cute Clumsy Girl , The Ingenue , the Healing-type genre , etc., usually drawn with Tareme Eyes). However, modern variations of the Moe Archetype trend towards upbeat, lively, energetic and extroverted personalities that are far more unique, noticeable and recognizable, such as the Genki Girl , Manic Pixie Dream Girl , Broken Bird and benign variants of the Tsundere archetype. Other contributions to uniqueness can also come in the form of quirks, reliance on Costume Exaggeration , odd language , strange hobbies and the like. Occasionally, these quirks are completely unrelated and seem a bit disjointed If a character is plain</, they are "loudly plain" in the way Hollywood Homely characters are "ugly"; sometimes they're just more moderate than the rest of the cast, and the writers implicitly suggest the audience is kind for liking the character for being plain More on these traits can be found although exactly "what is Moe" remains debatable Such characters are prone to be used to pander to the base . A character with no visible personality traits aside from vaguely cute uselessness is termed the dreaded " ". As a result of this, some moe characters are quasi- Animated Actors ; the series they star in need not be related at all, being only devices to enable the viewer to enjoy the character . Many of them feature in Gag Series , and only the merchandise for the series shows off its possibly-intended roots, though quite a few merchandise producers use heavy amounts of artistic liberty when designing products Also, do</ note that the Moe aesthetic in itself is generally not considered to be a sexual thing. Saying otherwise will</ be a Fandom-Enraging Misconception . That is not to say, of course, that Moe characters can never be sexually attractive, and indeed some aesthetics may deliberately blur the line Male characters can also have moe traits, and they figure prominently in Shoujo and Josei . Like their female counterparts, moe boys are usually ridiculously cute. The Adorably Precocious Child is a good example. Bishōnen characters (particularly Troubled, but Cute characters) also tend to evoke feelings of Moe in a female audience and are frequently called Moe by both fans and authors For the non-anthropomorphic equivalent, see Ridiculously Cute Critter . See also Moe Anthropomorphism , Moe Couplet , Moe Stare ; compare The Woobie where the focus is about sympathy. Yamato Nadeshiko has a similar appeal but for older characters. Also see When She Smiles for situations where applicable characters get massive Moe points for finally breaking out a smile. In darker series, very likely to suffer Break the Cutie . Weakness Turns Her On is a sort of Distaff Counterpart that concerns women's attraction to moe</ males. Contrast Rated M for Manly . What Do You Mean, It's Not for Little Girls? when someone mistakes a moe show that's meant for older males for a show that's meant for little girls

Big Hero 6 </: Hiro is an adorably tiny 14-year-old robotics prodigy with Messy Hair and big brown eyes, and he looks especially small when standing next to the rest of the adult characters, including Baymax . And he's an orphan who , which makes him prime-grade Woobie material. The fandom loves to make him the subject of Hurt/Comfort Fic s, many of which involve him getting kidnapped or hurt in some way.

Never try to dismiss critical analysis by asking, "Why can't you just enjoy it for what it is?" When pop culture and fans intersect, there are sure to be discussions on a work's merit and message. These discussions take place on blogs, message boards and even on this wiki. Sometimes certain subjects (such as race, gender, etc) will come up and serious analysis will take place. At some point, someone will say a variation of this question: "Why can't you just enjoy it for what it is?"</ This statement is usually meant to derail discussion and protect their favorite work from criticism (although it may also be done in order to prevent Serious Business from escalating into a Flame War when the topic in question is known to be highly volatile). Moff's law tells us not to do this. The name "Moff's Law" was introduced in ; it refers to a then-recent comment by Moff (known in Real Life as io9 contributor Josh Wimmer So this is not to be confused with a completely different and unrelated non-tropish "Moff's Law" term used within Doctor Who </ fandom and named for its showrunner Steven Moffat) on Annalee Newitz's io9 article . Here is an abridged version of this comment, minus some vitriol: This "law" has spread to other blogs, and in some cases, is actually enforced by bans. It was certainly a welcome voice to many a poster. Roger Ebert actually mentioned this on his Twitter account. This is NOT a "Stop Having Fun" Guys trope. It's not saying that you have</ to analyze a work as if it were the results to a scientific test searching for the cure to cancer. There is nothing wrong with liking a work for what it is without thinking about it too much. Moff's Law is a response to those who tell critics that they're being stupid by analyzing the work and should</ just sit back and enjoy it mindlessly. Contrast Bellisario's Maxim and Measuring the Marigolds . Not to be confused with the other Moff's Law , the , the other</ other Moff's Law "It is the proper duty of every British subject to come to the aid of the TARDIS" , or the other </ other other Moff's Law . Speculative Fiction fanatics are always raving about how "hard" the science is in various stories — but it's not like you can rub a story</ with a piece of quartz and see if it leaves a scratch on the plot</. So what is "hardness" in SF? Why do some people want it? And how do we put a number to it ? Beginning with the first question: "Hard" Science Fiction is firmly grounded in reality, with only a few fantastic flights of fancy not justified by science, or with the technology being nonexistent in today's world but probably scientifically possible at some point. "Soft" Sci-Fi is more flexible on the rules. Even the fantastical aspects of the story will show a divide — in hard SF, they operate through strict, preferably physical, laws, where in soft SF they work in whatever way suits the story best. What this leads to for hard SF is a raised bar for the amount of scientific research the writer must put into the story, and usually this is shown quite clearly . Example: a character is shown a time machine and asks, "How does it work?" "A good question with an interesting answer. Please have a seat while I bring you up to speed on the latest ideas in quantum theory, after which I will spend a chapter detailing an elaborate, yet plausible-sounding connection between quantum states, the unified field theory, and the means by which the brain stores memory, all tied into theories from both Albert Einstein and Stephen Hawking ." "You sit in this seat, set the date you want, and accelerate your DeLorean to exactly 88 miles per hour ." Unfortunately for analytical purposes, this pattern is not universal - hard SF stories can skip

over the details as long as the basic explanation is correct given what's been established so far . Therefore, regardless of the ("If all stories were written like science fiction stories" by Mark Rosenfelder, a conlanger) of hard SF, the only way to define it is self-consistency and scientific accuracy. Note 2:</ Contrary to what one might expect, there is no apostrophe in "Mohs" — the name is a reference to the named for Friedrich Mohs. (Grammatically speaking, an apostrophe after</ the 's' would be permissible; its addition would produce a possessive, i.e., "Mohs' scale", denoting the scale created or promulgated by Mohs. However, it's apparently not used in the standard name for the scale, so its use here would approach a degree of informality utterly unacceptable on The Other Wiki.) Note 3:</ While the term "soft science fiction" is used above as the antonym of "hard science fiction", another common use of the term is to describe soft-science</ fiction: sociological and psychological science fiction. This can, in some cases, make it appropriate to talk about "hard soft science fiction", but doing so is likely to confuse people. By and large, though, science-fiction "hardness" doesn't correlate well with realism in areas such as characterization, views of human nature, or views of human societies. In such areas, some works that barely qualify as SF might be unsparingly realistic… and some of the hardest SF imaginable might deal in out-and-out fantasy. Note 4:</ Sometimes a study hits the news that, if confirmed, would reassign many works on the scale. For example, might have moved works whose One Big Lie was Faster-Than-Light Travel into the Speculative Science category. There are three reasons to be cautious about doing so: first, because mass media reporting of scientific results is often inaccurate due to the difficulty of presenting technical results to a non-technical audience; second, because revolutionary new results (and results in the news</ are generally new) are far more likely to be overturned than they appear (indeed, the OPERA anomaly was); and third, for purposes of the Scale, the yardstick of scientific plausibility is what the science said at the time the work was written</, not what scientists discovered later . If the story in question was based on a scientific model that, while now discredited, was widely accepted in its day, it still qualifies as "hard" science fiction because the author did his best with the information available at the time </ . Note 5:</ As far as this wiki is concerned, Tropes Are Tools . "Hard" and "soft" may be considered as denotations of the quality of the story by those who prefer one over the other, but we don't want to hear about it that way . Note 6:</ In science fiction fandom, classifying something as hard science fiction generally relies on more than just the plausibility of the technology used. "Hardness", in that sense, also depends to the level of scientific explanation used in the story. This scale, however, is based mainly on closeness to real world science and the consistency of the science fiction elements. For this reason you may find examples of works on the higher end of the scale that are not generally described as hard science fiction. Note 7:</ When adding this trope to a work page, don't simply put down the number and leave it at that . This would require a troper to visit this page to learn more about it. That's fine if the troper is interested, but if they're already working down the work's page (and only at the M's), they probably don't want to wander off on a Wiki Walk . You can say the number, but please go on a bit explaining what the number is. For instance:

Which leads us to: World of Phlebotinum : The universe is full of Applied Phlebotinum with more to be found behind every star, but the

Phlebotinum is dealt with in a fairly consistent fashion despite its lack of correspondence with reality , and in-universe, it's considered to lie within the realm of scientific inquiry. Works like Neon Genesis Evangelion </, the various Star Trek </ series, and StarCraft A subclass of this class (let's say 2.5 on the scale) contains stories that are generally sound, except the physics aren't our own. Plot aside, they are often a philosophical exploration of a concept no longer considered true (such as Aristotelian physics) or never considered true in the first place (e.g.</ two spatial dimensions instead of three, like Flatland </). Some of Arthur C. Clarke 's stories fall here. However, given the overlap with fantasy , it can prove tricky to even classify such a story as SF. Physics Plus : Still multiple forms of Applied Phlebotinum , but here the author aims to justify these creations with natural laws both real and invented — and these creations and others from the same laws will turn up again and again in new contexts . Works like Schlock Mercenary </, David Weber 's Honor Harrington </ series, David Brin's Uplift </ series, and Battlestar Galactica (2003) </ fall in this class. Most Real Robot shows fall somewhere between Classes 2 and 3. One Big Lie : The author invents one (or, at most, a very few) counterfactual physical laws and writes a story that explores the implications of these principles. Consider, for instance, Cities in Flight </'s "Dirac Equations" and "spindizzy motor" leading to instantaneous communication, or Mass Effect </'s "Element Zero" being the basis for all of the series' futuristic technology. Other works in this class include most works in Alan Dean Foster 's Humanx Commonwealth </ series, the Ad Astra</ board games, Robert A. Heinlein 's Farnham's Freehold </, and many of Vernor Vinge 's books. This class also includes a subclass (4.5 on the scale) one might call One Small Fib</, containing stories that include only a single counterfactual device (often Faster-Than-Light Travel) which is not a major element of the plot. Many Hal Clement novels (e.g.</ Mission of Gravity </, Close to Critical</) and Freefall </ fall within the subclass. Speculative Science : Stories in which there is no "big lie" — the science of the tale is (or was) genuine speculative science or engineering, and the goal of the author to make as few errors with respect to known fact as possible The first two books in Robert L. Forward 's Rocheworld</ series and Robert A. Heinlein 's The Moon Is a Harsh Mistress A subclass of this (5.5 on the scale) is Futurology</ — stories which function almost like a prediction of the future, extrapolating from current technology rather than inventing major new technologies or discoveries. Naturally, Zeerust is common in older entries. Gattaca </, Planetes </, Transhuman Space </ and the more speculative works of Jules Verne fall here. The Martian </ is famously about as hard as science fiction can go, falling at the hard end of this subclass Real Life (a.k.a.</ Fiction in Genre Only): A Shared Universe which spawned its own genre, known as " Non-Fiction ". Despite the various problems noted at Reality Is Unrealistic , it is almost universally agreed that there is no other universe known so thoroughly worked out from established scientific principles. The Apollo Program , World War II , and Woodstock </ fall in this class.

It's really going to happen this time. They are about to share their feelings with each other after years of keeping them hidden. They come closer together and look into each other's eyes; there has never been a moment so perfect. The stars are aligned, the moon is full and one of them says, "I've never had the courage to tell you this before..." Then her brother walks into the room, asking if she

wants pepperoni or ham on her pizza. Or his/her best friend walks through the door, wanting to talk to them, which sometimes may be an emergency. Or the house phone rings or one of their cellphones rings, ruining the moment. "Ugh!" is their reply, echoed by all of the fans. Whatever was there has been shot down dead. They lost the spirit of the moment and it will likely be a long time before they can get it back. After witnessing their frustrated anger, the brother then asks, "Is this a bad time?" The Moment Killer is the bane of all shippers , and eternally frustrates those who will find any reason to hook up a favorite pairing. The moment is most commonly romantic in nature, but covers the instances whenever</ there is a possibility of a relationship upgrade or change, or during a serious or dramatic moment, including going from enemy to ally or getting that coveted " Well Done, Son ." The exact nature of the killer can come under several varieties: Basic staple of any Will They or Won't They? set up. Compare Interrupted Intimacy and Instant Turn-Off . The most common subtrope is the Almost Kiss . If the moment is about to lead to a declaration of love, then it might be an Interrupted Declaration of Love . Can overlap with Poorly Timed Confession .

Sometimes, undeniably famous, classical actors and actresses (or even loveable, talented, squeaky-clean child and/or teen actors/actresses) take roles in movies that are very against their type. Unlike the Classically Trained Extras , who lament that their talent is being wasted, or the small but legitimate roles of the One-Scene Wonder , or the Old Shame of roles taken when it was the only work available, this trope covers actors who are completely fine with the situation. Why? Money, dear boy Obviously, movies are big business, and the right name at the top of the poster can be the difference between a hit and a flop. And it's hard to argue with the fact that, when offered buckets and buckets of cash for three weeks of shooting, anyone would be a fool not to take it. After all, acting is a volatile profession, as many starving artists can attest, and financial security for you and your family is nothing to turn from: It's not so much selling out, as selling well</ . And furthermore, most creative professions are overcrowded; for every wealthy and successful artist who can afford to sniff at jobs that are 'beneath' them, there are ten or more underworked ones who would kill for a chance at the income. On a cynical note, in the state that America is in today, you shouldn't be surprised to see this more often. Most actors have been seen sliding down the perceived hierarchy of the entertainment field, with the most common "step down" is for actors who primarily work in film suddenly "slumming it" by taking roles on television Still, if you do too many of these, you run the risk of having a rather strange IMDb record and irrevocably ruining your reputation as a creative thespian: so much potential and talent wasted. Some artists, however, can turn this to their advantage; a common reason cited by many successful artists who engage in this trope is that a high-paying job that doesn't greatly interest them means that they have more money to put into funding and appearing in lower-budget but more creatively appealing ones To be clear, however, there is no shame at all for doing a movie for the money, and if the movie happens to be a great one, artistically or popularly, all the better. Even if it is for the money, the level can be kept high and professional and they can turn out something great (like the example with Coppola and The Godfather </). And just because an

actor or director only took a movie for money doesn't mean they'll necessarily dislike the end result If it ends up a mediocre, run of the mill production, that's also excusable. People in creative jobs need an income the same as anyone else, and in fact, many of the greatest popcorn flicks of all time are great primarily because the studio shelled out the money to get actors and directors who would rather be doing something else, but who were still prepared to give the audience a good performance However, should a cash-in movie end up So Bad, It's Horrible , both the audience and the critics are likely to be notably less forgiving than they would be while judging a bad movie with original, artistic premise marred by flawed execution. As a result, rather paradoxically, an artist who takes the job for the money is perhaps best trying to put in a decent (or at least entertaining) performance even in a movie that doesn't match up to their standards. Whether they Took the Bad Film Seriously or end up Chewing the Scenery with Ham and Cheese , they're likely to elicit more respect from the audience than if they took the money but made it clear through their performance that they couldn't care less for anything but the paycheck This is also the reason for the percentage of high-quality foreign artists appearing in crummy American films: Hollywood, even at its most cheapskate, tends to pay much better than any other film industry in the world. Note that this also applies to star in big US television shows; with multi-million dollar deals commonplace, it can allow you to be a lot more choosy for the next few years Similar to getting a healthy paycheck, some actors will just want to do something " their kids can watch ", the kind of roles most actors seek usually being dark and not appropriate for minors A common theme — especially among older actors and actresses — stems from growing up during hard economic conditions, either from a poor economy as a whole or from family hardships. The fear that "The Next Job" may not come, as it often failed to do for their family, drives them to take roles they might not otherwise be interested in. And, again, they're not exaggerating: any actor, young and old, always deals with extremely uneven income flow with absolutely no hard guarantees for the future There's also the common practice of recognizable actors turning up in indie films of varying quality "for scale". The term "for scale" means the minimum daily rate for actors guaranteed by the Screen Actors Guild, thus the opposite of this trope. When more notable actors do this, it's usually because they wanted to establish themself in a dramatic role (like the example with Dakota Fanning and Hounddog </, where her character infamously got raped</). This doesn't stop them from becoming controversial among people, though. As a general rule, if a recognizable name turns up in a movie featured on MST3K or RiffTrax or a "pretentious" low-budget indie film, or has a Golden Raspberry Award nomination for one of their films listed in their "Accolades" section on Wikipedia, this trope is almost certainly why Compare and contrast Doing It for the Art (when artistic value and/or achievement is the primary motivator), and Awesome, Dear Boy (when the actor takes the role for the coolness of it, regardless of how crappy the work is), Vacation, Dear Boy (where they work on the project so they can go to a special location) and One for the Money; One for the Art (where a creator uses the money earned from a purely commercial project to finance one that's more personal and artistic) See also Contractual Obligation Project , Paying Their Dues , I Was Young and Needed the Money (when this trope is given as the excuse for Old Shame), WTH, Casting Agency? , Took the Bad Film Seriously . Not to be confused with Only in It for the Money

, which is when this is the excuse a character uses in-story</
Also notice that if a great actor is in a crappy movie, it doesn't necessarily mean that he's in it just for the money; contrast Awesome, Dear Boy and So My Kids Can Watch

The term Money-Making Shot refers to any really critical scene in a film (especially a scene that makes the trailer of the film). It is, essentially, the bit you bought your ticket for, so one could say that it's the point at which you get your "money's worth." Some films might have more than one Money-Making Shot See also Just Here for Godzilla , where the Money-Making Shot is all</ the audience comes for; Signature Scene , when a scene becomes this regardless of the creators' intentions; and Watch It for the Meme . The Monkey Morality Pose is a visual comedy trope frequently seen in film, television and animation It is based on the old idea of the Three Wise Monkeys, whose example good people should follow to live their lives: See No Evil, Hear No Evil, Speak No Evil with hands over eyes, ears, and mouth, respectively. A fourth monkey, Do No Evil, keeps his hands in his lap — but since that could be interpreted in at least one unfortunate way , it may explain why the fourth monkey is not so well known. According to , the saying dates back to Confucius . When translated to Japanese, it becomes "Mizaru, kikazaru, iwazaru" (literally, "Don't see, don't hear, don't say"). Since "-zaru" sounds like "saru" (which means "monkey") it became known as the Three Wise Monkeys Generally the western world has a more cynical interpretation of this trope, where it is used to convey people refusing to acknowledge things they should be acting on . It may also be used as a shorthand for people reacting to something shocking or horrifying as a type of Battle Discretion Shot , if you will Not to be confused with See No Evil, Hear No Evil . May turn up in shows wherein Everything's Better with Monkeys

A standard thought experiment from probability theory states that a million monkeys hammering a million typewriters (or a hundred, or a thousand) will, given sufficient time, eventually bang out entire works of Shakespeare (or Dickens, or all the books in the British Library) by complete accident. This is a vivid enough mental image that it gets referenced a lot</ in fiction One common joke is to assume that the quantity of monkeys and/or allotted time required to write something is proportional to its artistic merit, so Shakespeare might take a million monkeys a million years, but three monkeys could write The Room </ in half a day. This isn't actually true (in fact, all that matters is the length of the text that the monkeys are replicating), but it is funny . When we start throwing infinity in it (which is implied by the "eventually" in the first sentence of this page), then either one monkey is enough given an infinite time, or among infinite monkeys typing (for example) 400 pages each, one will type a particular

400-page text on the first try While they are part of the most common descriptions of this idea, versions involving "thousands" or "millions" of monkeys may confuse someone into thinking there is some kind of practical</ possibility of producing Shakespeare with monkeys, if we could only wait for a few million years. Some paraphrases of the problem even forget to mention the "eventually" or "infinite" part and say that you just need "a million monkeys for a million years". In fact, even if you replaced every atom in the universe with a monkey and a typewriter, and they all typed a thousand characters per second, the odds of their producing Hamlet </ (as well as the odds of any other specific text of the same length) within an dsafljcxzillion ancjlaeladhaclaketlillion years are still incomprehensibly low</. However, such huge quantities of monkeys and time are no match for infinity</ , which is where the magic happens The point is that the monkeys are flailing at the keys without actually understanding the point of the object they're interacting with. Given enough time or enough monkeys, or both, one of them will accidentally hit the keys in the order "[shift]T-o[space]b-e[comma][space]o-r[space]n-o-t[space]t-o[space]b-e..." There is also some non-infinite yet unimaginably large number of years within which typing Hamlet </ has a probability of 99%, but the chance still doesn't reach 100% until infinity A lot of writers will absolutely jump</ on this as an opportunity for Word Salad Humour . See also Who Writes This Crap?! Robert Wilensky complemented this with the statement that "Now, thanks to the Internet, we know this is not true." For further reading , see

Works which make Mons one of their focal tropes; e.g. where you can expect just about every plot-important character to possess at least one of these creatures, and a lot of battles are won and lost solely through Mon-on-Mon combat (bonus points for also Calling Your Attacks) .

Clowns are supposed</ to be funny. They're supposed to make everyone laugh, especially children. This is the entire point of their existence. A truly good clown is supposed to be a Friend to All Children . Sometimes they succeed. But for some people, clowns awaken There are children who won't go near a clown without screaming Their face is... fake, corpse-like , most often the makeup they use does NOT help , the emotions aren't real, the smile is just painted on. The outfit and big shoes are downright grotesque. There's something seriously wrong with a clown to some people, and this resonates deep within the part of us that still believes that there is a monster in the closet , that will get out if you don't keep the door closed Cue the Creepy Circus Music .. It's startlingly uncommon to find clown characters who are genuinely good</. More commonly, writers tap into the fear: the Monster Clown is a classic villain. Expect the Monster Clown to parody humor, with classic jokes becoming deadly; acid in the plastic flowers pinned to their lapels and joy buzzers with fatal amounts of voltage, among other things. If they work in a circus, it'll be a Circus of Fear . Likewise, also expect them to crack dark jokes while killing them and laugh maniacally. Sometimes, a Monster Clown just LOOKS like a clown, and doesn't do what clowns normally do, like tell jokes or work in a circus or go to kids' parties. If there is a clown in a work that just looks like one,

it's almost guaranteed that it is a Monster Clown. Because, you know, you just don't go about dressing like a clown without doing anything clowny Sooner or later, our heroes will have to put these clowns to the sword. And sometimes not even that stops them . Also take note that many of these clowns may or may not be completely insane and also commit their horrific crimes laughing crazily and frequently , and often with a very high-pitched voice while acting in a very similar manner to an overgrown child Sympathetic clowns are generally a little more muted in appearance and behavior, whether or not this is faithful to the job (in which case, see Sad Clown). Generally, audiences are more receptive to clowns who act more like ordinary people, and have less extravagant makeup. Surly clowns who tiredly work with ungrateful children are more common, probably because they speak to the average overworked audience; they may be an example of Hates the Job, Loves the Limelight Enemy Mime is a sub-trope of Monster Clown. A villainous clown that is Played for Laughs instead of fear is a Villainous Harlequin . The Depraved Kids' Show Host seems to be related. May be combined with Scary Jack-in-the-Box , Creepy Doll , Perverse Puppet , Evil Puppeteer , or Robot Clown . Clowns' ghastly white makeup puts them into White Mask of Doom territory. The Monster Clown is often Affably Evil or (far more likely) Faux Affably Evil . Compare Repulsive Ringmaster . For examples based on the Joker from Batman </, see Practically Joker The opposite of this trope is the (perhaps sadly) rarely seen any more Non-Ironic Clown

When the Big Bad is a monster — especially a large monster — it is imperative to avoid showing us the monster for as long as possible. </ It is OK to show small portions of the monster (tails, claws, etc.) earlier; the filmmaker should be toward revealing such a monster as an exotic dancer is toward removing her clothing. But the full</ reveal of the monster should take a long time — at least several episodes on television; at least twenty or thirty minutes into the film. The larger and badder the monster, the longer it will take for them to become visible. If it's badder</ than bad, the monster may not be shown at all . This law emerges from the cost of special effects and the desire to keep the audience in suspense until the "good stuff" appears . It has become a standard feature of monster movies. Conforming to this law often involves extensive use of reaction shots, shadow shots, or shots of the monster that are obscured by smoke, waves, darkness, blood, etc. Of course, actually showing</ the monster usually heralds the decline of its earlier invincibility . When the monster is implausibly-good at not being spotted in-Verse</, that's Suspiciously Stealthy Predator . An alternative trope is Slow Transformation : A major character (often the lead) starts as human but slowly begins changing into a monster, leaving both characters and audience in suspense over what the end result will be, and the final form is only revealed in the climax.

Monsters are, well, monsters. They're uncouth, messy, dirty, disgusting, barbaric creatures with no sense of honor. The only times they do work together will more than likely resemble something akin to a horde than anything like a professional army But, that's a bit too Cliché for most writers, so it's not that surprising to see many monsters that aren't mindless brutes . Monsters that are trained, with a thought for technique, tactics, strategy, valour , and (perhaps) a sense of honor that would

make them seem almost respectable . A monster that's also a true warrior. They may be serving a Monster Lord , or be part of an army or similar This kind of character is often a Cultured Warrior and a Blood Knight , although they don't have to be. They're also more likely to be a Noble Demon , and thanks to the resonance the hero may have for this character, they may be found on any place on the Character Alignment scale in contrast to the usual Always Chaotic Evil treatment the characters race may receive in other works. This is often a case of My Species Doth Protest Too Much , but doesn't have to be. Because Most Writers Are Human , these characters are often more humanoid -looking as a result Their possibly supernatural nature gives them a higher chance of being a Magic Knight , although the magic they practice is often more of a destructive and dark nature than average If you have an entire army of Monster Knights, they're almost guaranteed to be a Badass Army as well Compare the Black Knight , Monster Adventurers , Dragon Knight and Wrestling Monster . May also overlap with Monster Allies

Hey, wouldn't it be cool if Dracula (or another Classical Movie Vampire), the Wolf Man , the Mummy , Frankenstein's Monster , Gillman , and all those other classic monsters hung out? Short answer: Yes. Yes, it would. This is prevalent in a setting where the heroes live on World of Weirdness as part of a Fantasy Kitchen Sink with a sprawling Crossover Cosmology , especially if they themselves are supernatural. The creatures, rather than become shut-ins, never leaving their designated niche or dark corner of the world... socialize</. The Vampires and Werewolves, though antagonistic , agree to hold up a mutual Masquerade against humans. Fairies and ghosts work together to scare local homeowners. And the wizards work with all of them to Save Both Worlds . This is a common subtrope of Cast of Expies , where many characters in a specific work are lifted from earlier works. On a personal level, individuals of these groups might form loose bands (of Player Characters , usually) that work towards common goals, hang out, or terrorize humans for fun and profit. Or, if the setting permits, are all in on a secret, ancient conspiracy to control, manipulate, or convert humanity, eventually taking over and enslaving us all! Bla-hahahaha! Named after a song by Bobby "Boris" Pickett and the Crypt-Kickers (quoted above) in 1962 that became famous after being played on Dr. Demento 's show; the song was later the basis for a mid-1990s comedy-horror musical titled Monster Mash: The Movie</ which starred Pickett as Dr. Frankenstein. Not to be confused with Monster Munch . You can expect all this canoodling to result in a Hybrid Monster sooner or later. A Sub-Trope of Massive Multiplayer Crossover . Super-Trope to All-Ghouls School , where the monsters (either the younger versions of them or their children) all go to school together. They are often the citizens of a Halloweentown . If they're related to each other, they may be a Creepy Family . Compare Fairy Tale Free-for-All for the fairy tale equivalent and Crossover Cosmology for the religious/mythological equivalent. See Standard Fantasy Races for another typical array of fantastic creatures.

Episodes where the characters fight a villain and the whole story is wrapped up at the end, never to be dealt with again. Essentially, the Monster of the Week serves as the Big Bad of a single episode. Can be seen as the complete antithesis of a Story Arc , or a Story Arc compressed into one episode. Sometimes, use of a plot element like Arc Words can bring together what appear to be unrelated threats ,

but other times they are established as being minions of the ultimate Big Bad from the start. The term (a play on Movie of the Week) was originally coined by the writing staff of The Outer Limits (1963) </, which sought to distinguish itself from its biggest competitor, The Twilight Zone Variations crop up from time to time, though the most generic term is "Villain of the Week". The 4400 </ and Smallville </, for example, are sometimes discussed in terms of the "Freak of the Week". Mystery of the Week is the detective series version of this trope. Sometimes, the monsters get ridiculous , especially in fillers , where they are almost always themed after the plot of the episode Futari wa Pretty Cure </ had a giant vacuum cleaner early in its run, for example; Digimon Adventure </ , a walking garbage dump. This actually is not a bad thing. Monster of the Week (and perhaps Monster Munch) can be used to establish characters or setting. Or perhaps lead to a much bigger Story Arc - such as deliberately showing the characters developing as they have to learn new tactics to overcome their foes, sustain injuries from more powerful monsters, or even setting up things such as He Who Fights Monsters . Additionally, some shows that use this formula have no wider plot whatsoever, and do not need to, since the core "defeat the villain" episodic plot can be more than enough to maintain audience engagement as long as the plots themselves remain interesting. It's actually Older Than Print ... several pieces of old mythologies about folk heroes can be interpreted as a recurring Monster of the Week. Sub-Trope of One-Shot Character . Often used in collaboration with Adventure Towns , may or may not be Monogender Monsters . See also Robeast , Monster of the Aesop , and Single Specimen Species . Contrast Monster Mash , Rogues Gallery and Villain Exclusivity Clause . See Continuity Creep and Not So Episodic , for heavy overlap. Not to Be Confused with Shaenon Garrity's The X-Files </ parody webcomic Monster of the Week </, or with the Apocalypse World </ style Tabletop Game of the same name .

The original member of a line of monsters and said line's progenitor. Thus the oldest and, often, the strongest of the line. Likely to be the top Monster Lord . In some settings, it is possible that killing him would cause all of his line to be exterminated (or, if each of those monsters Was Once a Man , return them to normal). It is common for the Monster Progenitor not to have the Kryptonite Factor or Weaksauce Weakness of his descendants. Just how the Monster Progenitor came to be can vary. Maybe he has always been, or was divinely created. Maybe he Was Once a Man and was cursed or changed. Similarly, how he reproduces can vary. Maybe he does it the old-fashioned way, or via The Virus , for which he is Patient Zero . Dracula is very often made into the Monster Progenitor of all vampires, as are Abrahamic baddies like Cain (see The Descendants of Cain) and Lilith . This is also a trait of darker Fertility Gods . Related to Mother of a Thousand Young . Unlike her, however, the monster progenitor always</ is the same species as his descendants. He may be tougher, but he shares many of the same basic traits, while Mother of a Thousand Young may have nothing</ in common with her descendants. The biological equivalent of Super Prototype . Related to Insect Queen , Maker of Monsters , Mother of a Thousand Young , Mook Maker , and Stronger with Age . Also known as First Of Its Kind , making it the exact opposite of Last of His Kind . If his death destroys his children, he may be the eponymous keystone in a Keystone Army . Supernatural </ :

So you have a setting where non-human beings exist, and their nature makes living among humans difficult. Maybe they suffer from a Horror Hunger , live forever (and it sucks), have customs that don't endear them to locals (such as rampant kleptomania and throwing around Curses like it's going out of style) and/or the stress of keeping up the Masquerade is just brutal. Well, there's a support group of reformed/reforming monsters that is out to help those among them who want to live closer to humanity. Possibly even to regain some of that humanity if they were human once. They may even help convince a newly turned member he isn't human at all The status of this group in monster society can vary. They may be a bunch of Defectors From Decadence and Pro Human Transhumans who are actively hated by their society at large, a fairly neutrally viewed group, or they may even be top dogs and are enforcing the Masquerade via these groups as a form of positive self-policing (with another group in charge of chasing down those who "relapse"). You often get groups of Friendly Neighborhood Vampires forming these kinds of groups, though a group of Fully Embraced Fiends may form such a group to help fledgling Vampire Refugees adjust without going all Hunter of His Own Kind They'll typically help each other deal with mundane and magical matters, like how to ensure their Undead Tax Exemption , keep their Horror Hunger at bay, mask the smell of brimstone/rotting flesh , how to fool human social customs, etc. That said, it's also possible for these groups to focus on blending in not for humane reasons (no pun intended), but to better prey on humans, in which case "disposing of bodies" is usually also on the list of things they help each other do This trope is usually at the "acceptance" phase in the Stages of Monster Grief Subtrope of Tropaholics Anonymous . Contrast Fully-Embraced Fiend . Compare Supporting the Monster Loved One

This trope tends to play out in one of two ways; either the Bob and Alice fall for each other with one or both of them not realizing that Bob is a vampire and Alice is a Vampire Hunter , or Bob and Alice already know</ they're sworn enemies but are either forced to work together for long enough, or have been fighting each other for so long, that they develop an Inconvenient Attraction . This obviously leads to much drama, as Alice and her friends might have killed Bob's vampire buddies, or vice-versa. If Bob turns out to be a pretty decent guy who acts nothing like what Alice has been lead to believe about vampires , she may come to question the morality of her past vampire slayings . If Alice was Dating Catwoman , Bob may begin to feel wrong about preying on people no different from his beloved and decide to become Friendly Neighbourhood Vampire or even a Hunter of His Own Kind . Grey-and-Grey Morality may come into play if both sides of the conflict have equally valid and/or invalid arguments Often leads to Defecting for Love , Heel–Face Turn , Love Redeems , and is almost guaranteed to accompany a boatload of Character Development . Subtrope of Forbidden Love and may lead to Maligned Mixed Marriage . Can overlap with Starcrossed Lovers if their relationship is strained. Compare In Love with the Mark , Predator Turned Protector , Boy Meets Ghoul , Vampire-Werewolf Love Triangle , Interspecies Romance , and Romantic Vampire Boy

Monstrous Humanoids are beings that look (somewhat) human, but definitely aren't</ It can be their original form, but they may also be the result of a monster that starts undergoing

transformations that make it more human instead of yet more monstrous , or a human transforming into a monster but only going there halfway, or doing so much evil that they gradually become monsters . This trope is not defined by the nature of the creature but by its form Expect the more "human" of them to show their true monstrous features at some point. While Lovecraftian Superpowers can act as a qualification, they aren't a requirement, and be careful the example doesn't qualify for Humanoid Abomination instead, as Eldritch Abominations in human form rarely qualify for this trope. See Red Right Hand for examples of monstrous features being used to indicate evilness Uncanny Valley is related, but distinct from this trope, as monstrous humanoids, while human-looking, are still recognizably monstrous</, while Uncanny Valley creeps people out because the creature looks almost indistinguishable from humans except for the one thing that is "off" about them Many mythological beings take this form - as a physical manifestation of intelligence and civilization in the human form and assorted forces of wilderness in the monster, the result being a supernatural Liminal Being . That this form is so common is partly due to Most Writers Are Human , as the monsters become more comprehensible and identifiable as advanced and cunning beings as their anthropomorphism increases, but ceasing it before they become too</ human and progressing into Uncanny Valley More monstrous examples of Vampires may qualify as well. Many Spirits are often depicted this way Compare and contrast Humanoid Abomination , where the creature is not humanoid, but just humanoid

Important characters are serially shown without dialogue, to show where the preceding action has left them emotionally. This typically happens at the end of a movie or episode and serves as a type of epilogue. Those dramatic TV shows (or movie franchises) that rely on cliffhangers and use this technique tend to throw the ending twist just in time for a intensity change that is already in the song that is being played and then fade to credits. A more theatrical than cinematic variation is done with dialogue, replaying clips of each major character saying a meaningful line See also "Where Are They Now?" Epilogue , when this is set in the distant future. Not to be confused with Really Dead Montage . Compare Sentimental Music Cue

Chrono Trigger </ had one of these during its end credits, but for the updated re-releases they added another one helping to bridge the gap into Chrono Cross

Somehow, a disproportionate number of fictional fights break out at easily-recognized national monuments and landmarks around the world One reason for doing this is that at least a portion of the audience will be familiar with the monument in question, whether by general knowledge or by having actually been there. This means the author doesn't have to justify the presence of a massive, ancient structure they just made up. In addition, the audience may feel more involved because the setting is familiar (allowing them to concentrate on the action), awed (because the setting is visually impressive), or concerned (because the setting itself might be in danger, and so elicits its own emotional response in anticipation of its defacement or imminent destruction) This can be justified several ways: the landmark, or something buried underneath it, is said to posess occult powers; there is something of importance about the landmark itself, like a clue left by an

Ancient Conspiracy ; or there is a major delegation of world leaders being held very close by. As often as not, however, it's a simple case of Small Reference Pools

A consequence of The Eiffel Tower Effect , see also Monumental Damage . Compare The Very Definitely Final Dungeon - when the monuments are fictional, and the architects aren't limited by common sense. Or, often, the laws of physics. See also Landmarking the Hidden Base and Weaponized Landmark , which go a little way explaining why some of the battles take place where they do. This can lead to a "Funny Aneurysm" Moment if some disaster ends up later destroying the monument you so gleefully smash in your work.

So you're a marauding monster, invading alien force, overblown natural disaster, fanatical terrorist, or anything that has a tendency to cause massive collateral damage. But you are not going to destroy any</ random building, are you? No, where is the fun in that? You're going to behead the Statue of Liberty , or blow up the White House, or anything recognizable enough that by destroying it, you can show the world that you mean business If you plan on attacking all over the world make sure you target a wide range of easily identifiable landmarks throughout. Due to Small Reference Pools , no one will take you seriously unless you get the Pyramids, the Eiffel Tower, the Taj Mahal, the Westminster Clock Tower (" Big Ben ", that is), or in works made before 9/11 , the World Trade Center (quite a lot of funny aneurysm moments were born out of the latter). Just killing people throughout the world won't cut it Occasionally inverted when an occupying power takes control of a landmark of some kind, forcing the defenders to destroy said landmark A consequence of the Eiffel Tower Effect . Frequently seen in disaster movies . When characters deliberately aim for monuments for symbolic value, this overlaps with Smash the Symbol . Sometimes inverted : The monument — although battered — is the only thing left standing in the city After the End Compare Big Applesauce , Monumental Battle , Rushmore Refacement , The Tokyo Fireball , Tilting Tower of Pisa , and Washington D.C. Invasion . Tokyo Tower gets messed up so much it's also its own trope. See also Weaponized Landmark when the monument shoots back Not to be confused with Monumental Theft

A major city has been completely leveled, whether by a marauding monster, invading alien, nuclear attack, or anything that has a tendency to cause massive collateral damage. The town is nothing but a smoking pile of smouldering rubble. But wait! What's that over there? A few buildings are still standing. And what do you know! It's The White House ! It might be a little worse-for-wear, and probably has chunks taken out of it and bits broken off, but it's still standing and easily recognizable Basically, this trope is when widely recognized monuments are left remarkably whole in an otherwise devastated city. This occurs because, otherwise, no one would be able to tell just which city this wasteland used to be The inverse of Monumental Damage . Sometimes occurs after a Monumental Battle . A specific type of The Constant . It's often related to the Eiffel Tower Effect . Compare and contrast Ragnarök Proofing

As a way to prove their thieving credentials, the best Impossible Theft is to steal something </ Thefts of this trope come from characters who set their sights high, higher than would be even feasible: why raid an Ancient Egyptian tomb if you could steal the pyramid in which the treasure is buried</? Sunken pirate ship? No problem, just pilfer the entire body of water under which it's trapped</. Even if it's anchored to the Earth's core, or is</ the Earth's core, and there's no possible way someone could steal it without</ drawing attention. That is the Monumental Theft It may be considered the inverse to the Sister Trope , Intangible Theft . While an Intangible Theft of the Moon's gravity would cause tidal problems here on Earth, people can still see the Moon itself in the sky. A Monumental Theft would be stealing the Moon, so that no-one can find it. Both tropes are a type of Impossible Theft . Also see Monumental Damage

Fiction often has far extremes. They cover the gamut of emotion, from tragedy to comedy. Sometimes, these two will be so close together that they make the viewer's head spin! Done well, the contrast in moods can make each emotion all the more poignant and effective. Done poorly, the contrast can jar the reader/viewer right out of the story, often resulting in nice, juicy Narm instead Sometimes, Mood Whiplash can extend to entire sequels, where the original was funny but its sequel is rather dark. More often, however, a dark film will spawn a sequel that degenerates into self-parody and farce In episodic media, this trope will often take the form of a light-hearted stand-alone episode breaking up a darker Story Arc . If the work is a comedy and the trope is deliberately invoked , then it's being Played for Laughs This trope often goes hand in hand with Out-of-Genre Experience . Short-term mood whiplash may be triggered by effects such as a Quiet Cry for Help . Compare Mood Dissonance , where two events of contrasting mood play out simultaneously, Soundtrack Dissonance , the musical equivalent, and Bread, Eggs, Milk, Squick , when the whiplash happens midline. Shows that incorporate the Cerebus Rollercoaster are very prone to this. See My God, You Are Serious for a specific version of Mood Whiplash. Mood-Swinger is when the character suffers from this trope in-universe Vile Villain, Saccharine Show is a very specific subtrope of this, where the main villain is far scarier than the tone of the show would usually warrant. See Knight of Cerebus for when the appearance of a Big Bad invokes this trope. Made Myself Sad is a (usually funny) subtrope. Also see Cry Laughing for a way it can be used. Gut Punch is a subtrope. Inner Thoughts, Outsider Puzzlement frequently involves this Ascended Fridge Horror can often be a source of this, by glossing over the dire implications of something one moment and then exploring them the next Not to be confused with Dastardly Whiplash , or one from Emotional Powers . The Mook Horror Show is a scene that plays out like a horror / slasher film, but casts the hero as the monster. Depending on the hero, it could involve Let's Split Up, Gang! and slinking through

shadows, a Five Rounds Rapid followed by a frantic retreat, or any other situation that attempts to show how cool the hero is by emphasizing the terror of his foes . Unless it's a darker Anti-Hero involved, the mooks probably aren't being slaughtered in horrifying ways, unless they happen to be intelligent robots, aliens, or monsters . If the minions are human, that sort of conduct would probably be bad for the hero's publicity (if the public ever has a chance to find out). However, war stories may relax this rule — killing enemies in wartime is more often seen as justified. This trope is a frequent component of the Roaring Rampage of Revenge or One-Man Army , may involve a Foe-Tossing Charge and often overlaps with Villainous Valour , with the Big Bad - or The Dragon , if the Big Bad isn't present — cast as the Final Girl . Sometimes used to demonstrate that Dark Is Not Evil . It's often a key component of the Terror Hero 's act. May also be invoked by a hero to Pay Evil unto Evil to a villain who enjoys subjecting others to this type of thing to give them a taste of their own medicine. They may also play it up for various reasons. Among others, they're probably going to not fight you at 100% if they're too busy screaming in blind terror of you. Not to be confused with a show in which the mooks look like creatures from horror films; that's Red Right Hand . Also doesn't overlap at all with A Clockwork Orange </ — even though it did have mooks as main characters, and they did find many things "real 'orrorshow."

For the sake of funny, a character goes out on a nice, peaceful night. But oh no; they forgot their moonscreen! Now they'll get a severe moonburn and then they'll be in real-trouble ! Moonbathing is a pretty common practice among weirdos and nightowls, and fiction usually portrays it as being just like sunbathing. The moon itself only gives off 7% of the sun's harmful rays, but some characters have a bad habit of getting burns or worse when exposed to it for too long, and there always seems to be a cream to protect themselves from it. Fewer examples even suffer from the same affliction with other natural phenomena, from clouds to planetary alignments and other such wibble-wobble.

Ah, yes, the time-honored tradition of pulling down one's pants and displaying one's buttocks. While the term "mooning" has been in the English language for over 400 years , it wasn't until the late 1960's that it gained its modern slang usage Mooning is typically done for sheer, pointless defiance , to taunt an enemy , or simply for laughs . The general idea is to do it within full view of people who don't expect or want to see a pair of bare buttocks. Cheek Copy is a cousin of this trope that's less direct and can have the perpetrator be a safe distance from the victim with the same net result While this is often a male-oriented behavior, it's not unheard of for a woman to do the same. Of course, when a woman does this , it's often more for titillation than shock or offense Performing the act from the window of a moving car is perhaps the most common form in modern America. This solves the problem of a quick getaway while one's pants are undone. A popular variant is the "pressed ham", wherein the mooner shoves his bare cheeks up against the glass of a closed window In more unfortunate situations, the act of mooning may be followed by an Ass Shove While in fiction this is usually portrayed as harmless with no serious consequences (probably except for embarrassment), in Real Life , many jurisdictions will consider this actually illegal if done in public, with charges of public indecency or even second degree sexual assault

The Apollo 11 moon landing in 1969 is one historical event that conspiracy theorists love</ to... theorize about. The idea of space travel seems so farfetched to some that they would rather believe that it was easier to film in a sound stage because they have no actual means to go to the moon and see for themselves that it happened. As such, the conspiracy itself has been ripe for parody in the media This trope is a Historical In-Joke where the moon landing really was</ staged behind closed doors, or the

conspiracy is otherwise Discussed . Generally (as alluded to in the quote above and as shown in many examples below) Stanley Kubrick is depicted as having directed the faked moon landing, usually in reference to his well-known perfectionism and attention to detail, as well as the "realistic" lunar scenes in 2001: A Space Odyssey </, shot before</ the actual moon landing (which actually</ depict a lunar landscape quite unlike that of the real lunar surface) NASA really did</ land on the moon (many times in fact), and there's an overwhelming amount of scientific evidence to prove it. The MythBusters had a lot of fun proving the theorists wrong many times over on this one . The Other Wiki also has which lists the various pieces of "evidence" for a conspiracy, with rebuttals to each. Please keep your wild mass guessing and theories to the Useful Notes page

Ever since the dawn of humanity people have wrestled with their ethical dilemmas—to eat that delicious fruit despite God telling you not to, to kill someone who has threatened you , or to help someone at the possible cost of your own safety . There's no choice more eternal and more obnoxiously inescapable as the moral dilemma, and that's why it's been featured in every kind of media ever created. Even the ones that wouldn't normally apply Naturally, the "right" choice (if there is one) will vary depending on the tone of the work , the character in question , the morality involved , the reactions of the characters or audience , the morality of the culture , and much, much more. To say that the possibilities are endless is an understatement (even if you Take a Third Option) Of course, that's not to say that not all those possibilities are equal. A Moral Dissonance can result when a character is hailed for making the 'right' choice when it wasn't right at all. Or a dilemma can seem false and contrived when a character agonizes over killing the Big Bad but had no such problem killing random Mooks . Or the audience themselves might dispute the character's decision and wish they did something 'more awesome/badass'. Or the character might make a choice that's completely Out of Character to their previous characterization Unsurprisingly, moral dilemmas are rich with Aesops . There's always a lesson to be learned if someone makes the right choice — or makes the wrong choice and screws themselves over . There can be an Aesop to be learned just by the moral dilemma itself; obviously, someone wouldn't be torn over whether or not to cheat unless they thought cheating was okay on some level And since there's always a lesson to be learned, moral dilemmas are major turning points for character development . A hero character that ultimately chooses to do something immoral may shift into an Anti-Hero or go Jumping Off the Slippery Slope entirely. A villain who chooses to do the right thing can be elevated to a Noble Demon or even redeem himself — because sometimes Even Evil Has Standards Expect a good angel and bad angel to appear on a character's shoulders to debate the dilemma Moral dilemmas may also not apply to people who consider themselves above such petty things

Moral Dissonance is the result of having a hero who has a double standard and the narrative fails to address or even comment on it. It can include any unintentional Double Standard on the hero's part that becomes obvious to the viewer during a walk to the fridge. It's important to point out the hero isn't necessarily acting the

Jerkass , Anti-Hero , or morally myopic villain , and may in fact be likeable and decent, but their actions simply don't line up with their rhetoric and no one calls them on it. Usually results from using either an old Aesop or trope that's a genre staple with different values to those of the hero, usually resulting in a Broken Aesop . For example: Hero believes in giving the villain a Last-Second Chance and will go the extra mile to Save the Villain from his own devices regardless of previous backstabs and never consider killing him because If You Kill Him, You Will Be Just Like Him . The Punch-Clock Villain minions? Doesn't even flinch when he has to kill them because they inconvenience him. Since they don't have a name it doesn't really matter. This gets its own subtrope: What Measure Is a Mook? With an Omniscient Morality License the old Mentor character, especially a Trickster Mentor , or in some cases, God himself if having Jerkass God tendency, can do anything</ because of their absolute knowledge over what will occur . Anyone else even approaching that level of arrogance would be smacked by the plot and smacked hard . Obviously Sociopathic Heroes are exempt as they are expected to act this way. This is named partly for Cognitive Dissonance, the concept psychologists use to describe the tension one feels when holding two conflicting ideas or viewpoints simultaneously . In this case, it can be that the character seems to hold two incompatible beliefs - thus having literal cognitive dissonance - or it can be that they are acting against their supposed moral beliefs, for whatever reason. Moral, because the hero can be an All-Loving Hero and a Technical Pacifist while being very </ moral. Compare Values Dissonance , where the cause is cultural. Also compare Felony Misdemeanor . Contrast "Not So Different" Remark , where the double standard is noticed; What the Hell, Hero? , where they are expressly called out (though particularly infuriating if the person calling the hero out is treated as being wrong) and can even be a driving force of the plot; It's All About Me , where the villain actively holds this kind of double standard, and it's noticed; Tautological Templar , where another character also actively thinks he can do no wrong. Also compare with Moral Myopia if Double Standard is portrayed as wrong in-universe. For The Rival holding a grudge, it's Disproportionate Retribution . See also Protagonist-Centered Morality . See also Jerk with a Heart of Gold who is at heart a good guy but often behaves badly. Consider No Endor Holocaust , where often hero's actions should</ have had some negative effect, but doesn't because they're supposed to be the good guys. Pay Evil unto Evil differs in that you can only</ be ruthless towards villains . Expect the Mary Sue to do this. Oh, so very often. Note that this is about the internal inconsistency. The dissonance is on the part of the character, not the audience. The hero saying one thing and doing another is this. The hero making an argument for his actions that is considered unconvincing, or acting in a way that you don't consider moral is not this.</

The Moral Event Horizon is the deed that renders a villain irredeemable. Like in a black hole, it is no longer possible for a villain past the Moral Event Horizon to get redeemed. Or if the character tries anyway, it will be rejected in-story. If the character wasn't a villain or wasn't played seriously by the story before, they now are. Note the word irredeemable</ at the beginning of this article. It is a demonstration of permanent</ evil. This is the moment which confirms that this character will always be a bad person. The moment where you realize that it's simply not possible

for them to cleanse themself of their guilt . The moment any Freudian Excuse they may have loses all meaning . Their existence is a blight on humanity. They. Are. Vile. The deed is characterized by the following aspects: When people decide in-universe that someone has crossed this line, the character in question is considered Beyond Redemption . The Good Counterpart to Moral Event Horizon is Heroes' Frontier Step , when a character commits a noble deed that firmly establishes that they are indeed heroic and even pure. No Real Life Examples, Please! For one, calling a real person a villain is not allowed here. Secondly, whether or not a real person has crossed this line is way</ too debatable; we already have enough trouble with fictional characters.

People, stereotypically either conservative Holier Than Thou Bible thumpers or Political Correctness Gone Mad liberals, who believe that children — or people in general, but especially</ children — shouldn't be exposed to what they consider to be excessive violence , "perverted" minorities , sex , foul language , alleged support for the "patriarchy" , any negative depiction of somebody in an ethnic minority, laziness , etc. The exact mix of what they object to varies from group to group, but in any case, expect them to be portrayed as Indubitably Uninteresting Individuals who despise anything others find to be fun and exciting. The term "Moral Guardians" specifically describes people who take this attitude beyond the pale as zealous, absolute purveyors of the moral code, and the arbiters of what is best for everyone. Usually, they are self-appointed, and in the case of groups, some have been known to claim vastly larger memberships than they actually have. They frequently complain to the nearest Media Watchdog , often using astroturfing to lend illusory weight to their complaints. The Culture Police are sometimes Moral Guardians taken to a satiric and/or frightening extreme . The Bluenose Bowdlerizers are a form of Moral Guardians in our midst </. Moral Guardians are often responsible for a work being Banned in China , or calling something a " Murder Simulator ". See also Black-and-White Insanity , Condescending Compassion , and Activist Fundamentalist Antics . Compare It's Not Porn, It's Art , sort of the inverse of this trope in which a character tries to pass off porn as a work of art. In the film Matinee </, the in-universe film Mant</ (about a half man half ant) was protested by a couple of purported moral guardians for being obscene. The main character in the movie, a horror-movie-obsessed teenager, recognizes the protestors as character actors that have appeared in some of his favorite low budget horror films. When he calls them out on their identities, they admit that they were hired by the producer to stage a fake protest in order to make the film seem scarier and edgier than it is, under the rubric of there's No Such Thing as Bad Publicity . This is Truth in Television , as some low budget exploitation films of the time actually staged fake protests for the same reason, and because the idea that a film would be picketed by moral guardians would attract just the audience that they were looking for, as well as bringing a lot of attention to the film. In Matinee, it actually works, as we see people who would ordinarily never go to such a film deciding to see it in order to spite the moral guardians. Music

The Morality Chain is a character who is the reason another character is Good. Stereotypically a female love interest, a mother , a daughter, or a little sister; as long as this person is alive, her target of affection will at the very least be a Noble Demon . There is no Restraining Bolt involved; this person is the only</ thing preventing someone from happily killing their " friends " and family . (One wonders whether such a form of "goodness" has much value in it until one remembers that it keeps them from killing their friends and family </ .) If a Morality Chain were to fall , commit betrayal , or get seriously hurt or die, there is nothing </ to prevent a Face–Heel Turn happening so fast and so hard that the unchained character is gladly chopping their former teammates into pieces before you can say " Neutral Evil ". This is more than the Roaring Rampage of Revenge ; everyone </ has to suffer . A similar, and often confused with, trope is the Morality Pet . The difference between the two is subtle: A morality pet is a character who redeems a villain. The villain's affection for the pet starts them down the path of good, and even should the pet get hurt the villain will most likely behave as a hero (or anti-hero) in seeking their revenge or protecting the pet. By contrast, the morality chain keeps an otherwise anti-heroic character (such as a Sociopathic Hero) from going full villain. The loss of the chain would spell doom for any involved party, and likely anyone nearby as well. In a nutshell: A morality pet turns a bad guy good; a morality chain stops</ a good guy from turning bad. That said, the two tropes can certainly overlap: if the character redeems a villain and then also helps keep them from slipping back to evil, they are both a Morality Pet and a Morality Chain. Or to put it another way: The Morality Pet causes</ a Heel–Face Turn ; the Morality Chain prevents</ a Face–Heel Turn . In this sense, the two are actually Opposite Tropes despite their close similarities. Sometimes this is Inverted . The death of the Morality Chain motivates the target of affection to become more determined to be good to honor her memory , or something . Usually in these cases the cause of death is either natural, or because of a villain (especially if it's a buddy of theirs that the Morality Chain had disapproved of). Now, if the cause of death is their loved one,</ either through an accident or because they Kicked the Morality Pet , then they may either go comatose or crazy . Villains are evil. They kick dogs instead of petting them. What if they started petting one dog in particular, and thereby showed some kindness, sympathy, etc. other qualifies not part of their villainous persona? That dog is the villain's morality pet. These can be used when a villain becomes popular enough that the fandom becomes sympathetic to them. Thus, the author(s) want to use them more often and in more situations. However, meshing them into the main cast can be dangerous and disappointing if it leads to a Redemption Demotion . Some heroes wouldn't be quick to accept them, either. After all, they are villains</ . One method of doing this is presenting another character to befriend them . Ideally, this should be someone who could pose no threat or even be demanding, and depending on how the plot goes, the recovering villain becomes fond

of this other character and may draw stability from their presence . The Morality Pet may even be somewhat pathetic (and will be told so), but has often gone through some anguish to which the recovering villain can relate secretly, or reminds the villain of someone they lost long ago. They're usually upbeat, though they might go a little overboard sometimes . If handled poorly, they might become a Satellite Character for the former villain. This also makes for a convenient excuse to help the heroes if needed; an ex-villain can simply claim to have their own " selfish reasons " and save face. Anyone messing with the Morality Pet can expect swift retribution from the ex-villain or antihero in question. If relationship with the morality pet is familial in nature, then Mama Bear , Papa Wolf or Big Brother Instinct (as appropriate) is involved. Sometimes Violently Protective Girlfriend or its male inverse if the morality pet is a love interest. They are a living and recurring incarnation of Pet the Dog , i.e. something to placate the audience regarding the hero's tolerance of the amoral character, while focusing on the true villains. (Unless they Kick the Morality Pet , that is, which leads their character arc in a different direction.) This isn't just for villains, either. Despite sidekicks being less popular in comic books than they were originally, some writers pair them with Anti Heroes in an effort to humanize them. Not to be confused with a magic-user's familiar , the creature type of which often reveals the kind of person who owns it, though if the magic-user is fond of the familiar and treats it well, it could very well be a Morality Pet. If the Morality Pet dies or disappears and this causes the villain/anti-hero to revert back to their old ways, the Morality Pet was acting more like a Morality Chain , a similar trope often confused with this one. The difference between the two is subtle: A Morality Pet is a character who redeems a villain. The villain's affection for the pet starts them down the path of good, and even should the pet get hurt the villain will most likely behave as a hero (or anti-hero) in seeking their revenge or protecting the pet. What is morality? Morality is the system of good and evil and all the shades of gray that come in between. Good always triumphs in the end, right ? Well, not always . The Balance Between Good and Evil gives many villains loopholes to slip through and make their grand return Furthermore, the presence of the Anti-Hero or Worthy Opponent blurs the distinction between good and evil, and in well-done cases, forces us to reexamine our preconceptions of right and wrong. But what is especially interesting (or rather, disturbing </) about the media is

how it appears to favor </ evil in its works. Squeaky-clean heroes are either prone to stretches of unendearing, Knight Templar -style ruthlessness or hopelessly boring , while the villains inevitably have cooler costumes and powers . If they do a Heel–Face Turn , that coolness factor often goes bye-bye thanks to Redemption Demotion – not to mention that once they turn good, they usually don't get to live very long , or if they do, they suffer . No wonder why, for many good-turned-evil characters, Evil Feels Good . Some authors, it seems, can't stand any more of that preachy anviliciousness and turn the tables on the end-all symbol of goodness, writing Rage Against the Heavens plots in which God Is Evil . Fans aren't immune to the siren song of evil, either; an alarming number of them insist on putting Draco in Leather Pants or Rooting for the Empire . But it must be remembered that all tropes in this index refer only to good and evil as it appears in artistic media. In Real Life , good and bad choices are Serious Business . </ See also NoRealLife.Morality Tropes . Please remember that Tropes Are Tools . This is merely a list of how many works in different media have confronted the issue of morality. There is no implication that any of the tropes listed below are either correct or incorrect about how they approach moral philosophy. Even moral philosophers still argue with each other about the correct way to approach moral philosophy!

Clones sure are awful, right? When they're not straight up evil to the core, they have a bad habit of trying to Kill and Replace their natural counterpart. They're a living manifestation of why Creating Life Is Bad , after all Well, This Is Not That Trope Sometimes, Clones Are People, Too . And sometimes, that idea is taken to its logical conclusion. What if the original is just a real scumbag? And sometimes, the duplicate chooses to take a more sympathetic path More often than not, this will be the provenance of a duplicate that is unaware of their true origin (and everything else about their history, to boot). The revelation of their status as a clone or other duplicate, as well as the crimes of their original self, are likely to trigger a massive Tomato in the Mirror moment or the Cloning Blues . If the original is still around, expect them to claim that the copy is Not Even Human and try to force a Heroic BSoD Compare Copied the Morals, Too , for when a clone fails the purpose they were created for because they inherited too much of the original's personality. Also compare Mirror Character , which is a character who significantly reflects another's traits. Related to I Am Not My Father , where the child rejects their parent's morality. See also Evil Twin , for when identical twins are moral opposites, and Preferable Impersonator , which is when someone is replaced by an impersonator who is preferred over the original. Not to be confused with The Moral Substitute , which deals with creating a version of something that's in line with a given group's values Obviously, as this trope tends to be tied up in some pretty intense reveals, there will be unmarked spoilers ahead. A trope whereby some in-universe group moral standard is hypocritical because the morality of an action depends entirely upon who is doing it. It is, in short, a moral double-standard. What is justifiable for one group is criminal for another There could be any number of reasons for this, but they all basically boil down to some innate moral superiority which is taken for granted. Note that moral superiority is often assumed first</

, and justifications come after. This makes it easy to mix and match justifications as necessary depending on the circumstances. A character or group is good because that's "who they are," and therefore anything they do must have a justifiable reason for it, and anything they want they automatically have a right to have, because surely withholding something from such morally good people is wrong Likewise, if they do somehow manage to commit some crime or atrocity, this is considered an aberration: something that goes against their innately moral nature - a mistake soon left in the past, followed by an inevitable return to the right path. Meanwhile if their enemies do the same thing, it is considered a reflection of their innately immoral</ nature, because deep down that is who they</ are, and evidence of an inherent moral defect Moral myopia is common in Real Life , both on a societal level and on a personal level. Most people believe that, deep down, they are a "good person," regardless of the actual morality of their actions, and are likely to make similar excuses for themselves and friends. Meanwhile they are unlikely</ to make excuses for strangers or people they dislike See also Moral Dissonance , Never My Fault , Protagonist-Centered Morality , Revenge Myopia , and Tautological Templar Compare Convicted by Public Opinion , when the general public have already given the "Guilty!" verdict because they personally dislike the accused. A specific way to engage in dramatic license with the economics of crime. Many settings and plots are enhanced by the presence of a criminal element, whether it be a Thieves' Guild , The Mafia , pirates , assassins , bandit gangs, highwaymen , gentleman thieves , or even some guys who are Just Like Robin Hood . However, all these people do need someone to steal from. Sometimes, you can't help but wonder whether the number of available targets is really high enough to support all these people who seem to be preying on them. Are there really</ so many rich aristocrats in the setting that the cunning burglar can rob a new one each week and never run out of targets? Can the poor village-folk really</ be menaced by a roving bandit gang for months without actually running out of things for the bandits to steal? Can the fleet of twenty pirate ships really</ make a living year-round by lurking outside a port containing just two small fishing boats? Does the road from the town to the lighthouse really</ have enough trade on it that the highwayman won't starve? Does the town with only a few hundred people really</ have enough work to support a full-time hitman? Are the people living in an apocalyptic world, where 90% of the human race is dead really have nothing better to do than rob the protagonists when there should be resources sitting around everywhere for the taking? Sometimes, it's all realistic and justified, but other times, the Rule of Cool (or perhaps simply poor research?) has won out. A related phenomenon is when trade on a certain route is said to have been halted by bandits, pirates, or suchlike. This may be plausible in the short term, or if there are bandits/pirates on a route for other reasons, but... why would bandits/pirates still be there</ if there is no longer any trade to rob? Thieves can't thieve if they bring an end to the commerce which they prey on, so bandits/pirates can't have a 100% capture rate and still have a long-term job. Video games, which often suffer from Thriving Ghost Towns , are particularly prone to this, especially when bandits or other criminals are provided en masse as an enemy for the player to fight. You'll get villages with

five houses being menaced by marauders numbering in the hundreds, and the roads between towns will have more bandits than both towns put together have citizens. The Thieves' Guild members hiding in the Absurdly Spacious Sewer could easily constitute three quarters of their city's population, and there are more trained assassins going after the king than the king has employees . A lot of detective series have this problem, too. Never mind the coincidence that all the crimes happen near the amateur detective ... why are there even any criminals left? If the criminals are all successfully pretending to each other that they're not</ criminals, they're a Flock of Wolves . See also Wretched Hive , for a place likely to have this problem, and More Predators Than Prey , for when a whole ecosystem suffers from a similar situation.

More Dakka is the art of solving problems by unloading as many rounds of ammunition at them as possible While Improbable Aiming Skills are all very well and good, sometimes you just need to throw a wall of bullets at the target — perhaps your foe can Dodge the Bullet , or you're up against a whole army of Mooks at once. Modern automatic weapons can achieve the rates of fire required for more dakka all by themselves, but using a whole bunch of slower-firing guns works too. More Dakka can even work against targets where conventional attacks are normally ineffective — even if each shot only does Scratch Damage , it will succumb to a Death of a Thousand Cuts eventually. After all, There Is No Kill Like Overkill ... or so we are led to believe. Occasionally, the only point of a seemingly overwhelming and gratuitous show of force is to hammer home the point that the Monster of the Week simply cannot be defeated through ordinary means . Aim is also a factor: large volumes of fire accomplish surprisingly little in the case of A-Team Firing or if the shooters are graduates of the Imperial Stormtrooper Marksmanship Academy Gatling Good is a common way of achieving More Dakka, and you can expect to see gratuitous camera shots devoted to torrents of spent shell casings produced by the volume of fire. If you're strong enough, you always have an option of taking a heavier weapon off its mount . On a more restrained scale, The Gunslinger may specialize in squeezing More Dakka out of seemingly ordinary firearms with Guns Akimbo , which can also be downright terrifying May result in a Multiple Gunshot Death . See Macross Missile Massacre , which is basically this except with missiles, and Bullet Hell , which is the Logical Extreme version of this trope in video games. There will always inevitably be characters who the fandom must say farewell to, leaving a vacancy for someone new to take their place. Quite often this replacement will be detested , but sometimes the newcomer is received better than the original Perhaps their predecessor was polarizing or outright hated , which necessitated an Author's Saving Throw to get rid of them. In order to make an environment more hazardous, creators of fiction will often include aggressive predatory beasts that occur in far larger numbers than should be possible given the environmental conditions shown. In Real Life , the larger a creature is, the more energy in the form of food from a suitable source it must consume in order to both grow so large in the first place and to sustain itself on a daily basis. If it is very active it will need even more calories just to survive. As a general rule, 100 prey animals are required to sustain the presence of just one individual predator. Despite this, there will often be a veritable horde of wild, aggressive beasts that roam a desolate wasteland or almost lifeless underground tunnels without having prey to feed on and without attacking each other. Such beasts will often be absurdly persistent when encountering humans , attacking them seemingly out of hunger that overcomes all sense of self-preservation. This occurs even if their fellows fall like flies around them, and most will never pause to gorge themselves on these fresh bodies that should appear a ready and far less risky food source to them. If they do</ pause to eat their own dead, it'll be played for horror, to make them seem even more ravenous Such ecosystems do exist, usually where humans have not caused any impact: coral reefs in Real Life , when kept perfectly pristine, play this trope

In fact, they often mutate into something far more powerful than their original form while at the same time getting by with less</ sustenance Some works might try to justify it either In-Universe or All There in the Manual , with the proper food sources simply being unseen Note that not everything that attacks humans needs necessarily be carnivorous. Some larger herbivores like cape buffalo, rhinoceros and hippopotamus are territorial and aggressively defensive. No, it's not Duel Monsters . This is just for relaxation . But it can be any other</ children's card game. In many shows, we will see several recurring menaces relaxing at a table playing a friendly card game. And what is the card game of choice for these dastardly figures? This is handily answered for the viewers when the largest and most visually imposing player rumbles, "Got any threes?" This is a common way to make light of the villains . Games used for this purpose are relatively non-competitive, requiring little player skill, and rarely gambled upon (though it can happen). With no skill or importance, The Magic Poker Equation is a firm zero — anything can happen, and no one is worried about what will. Children's card games get taught early, so any children who want to act out the scene in question can. For slightly older viewers, these

games look like poker if you can't see the table. Sometimes, it will turn out that the game is</ poker (or maybe gin rummy), and that the villain who just asked for threes is so clueless that he thought it was. Western shows often use Go Fish because of the distinctive calls. In Japan, the game of choice is Old Maid. In Russia, it is Durak.

The impersonation equivalent of Paper-Thin Disguise . A character is put into a position (for whatever reason) where they must impersonate someone or pretend to be a member of a particular group The character, instead of simply acting like an X, attempts to do this by constantly announcing they are an X, that they're doing things because that's what an X does, and there is not the slightest chance that they could ever not be an X . Did they mention they're an X? In short, there is no way anyone with two functional neurons wouldn't smell that something</ is up. This sort of behavior almost always indicates that the Rule of Funny is in full effect, so its effectiveness as a disguise depends on whether it would be funnier for the impostor to get caught, or not. If it's funnier for everyone around him to completely fail to see through the ruse — even though the impersonate-ee is someone they've known for years — then that's what's going to happen. At best the Only Sane Man might point out that their friend is acting a little odd, but everyone else will just brush it off as him suffering from stress, fever, or relationship issues. In fiction, only women write fan fiction , and the majority of these are teenagers. In addition, their work tends to contain boatloads of Shipping , Mary Sues , and Ikea Erotica This trope has been in effect since well before the internet made it much easier to proliferate fanfic. Studies of early Star Trek </ fanfiction showed as many as 90% of authors were female in the 1970s, even though at the time such stories could only be shared through fanzines or through sending self-addressed-stamped-envelopes to the authors and having them mail you a manuscript Various theories abound as to why this trope has persisted so prominently, such as the idea that men prefer visual porn while women prefer written porn. Maybe it is simply that reading prose fiction is a more common pastime for women: , and similarly, . It's simply that , leading to the distorted perception that the industry is not as female-dominated as it actually is This phenomenon has been subjected to academic analysis by ethnographer Camille Bacon-Smith and MIT's Henry Jenkins. Named after H. P. Lovecraft 's Shub-Niggurath, the archetype of the Mother of a Thousand Young is one Older Than Dirt , going all the way back to the Sumerian Tiamat The trope itself is based on the concept of a terrible monster that is mother to many, many</ more types of monsters, though she is usually stronger than all of them. Typically, the mother is an Eldritch Abomination spewing biological mashups one after the other, or a diabolical deceiver of would-be mates, sometimes even having the power of shapeshifting, thus allowing for greater variety of half-breed children (and infinite amounts of Shapeshifting Squick). The monsters are usually mortal and less incomprehensible in form than the mother The purpose of the Mother is usually to cause mayhem and destruction, or destroy an ancient foe by being the procurer of a living Diabolus ex Machina , which will cause the inevitable destruction of the civilization in question, unless the hero can prevent it This generally also makes it One Bad Mother The children of the mother are always different from her, and may even be different from their siblings. Some look like smaller, lesser versions of her. For the monster who is the first of a line of identical monsters, see Monster Progenitor . Not to be confused with Hive Queen . An Insect Queen will usually fit the trope. Can easily overlap with Explosive Breeder , Mook Maker , and Weaponized Offspring

Technically, the word "motif" can mean a variety of different things. In trope land, however, a motif is best described by the first

definition above; it's something symbolic that keeps turning up in order to reinforce the main theme of the work. Usually, this is a physical item, although a motif may show itself in other ways — such as through dialogue. It may even be a double motif: a pattern on somebody's sofa, an emblem on the heroine's shirt or a bumper sticker on the hero's car. Sometimes it can be difficult to establish what is a motif, and what isn't. Their defining characteristics are that they appear more than once and they must be significant in some way. A sea shell on its own is not a motif. However, if a painting of a seascape turns up ten minutes later, followed by a tank full of tropical fish, then that sea shell probably is</ a motif - the objects that show up afterwards reinforce the theme of "the sea." Broadly speaking, motifs are employed in three different ways: A single object, or a collection of extremely similar objects, that appear(s) many times throughout the course of the play/film/book. Tends to place a lot of importance on the item itself, possibly at the expense of whatever they are supposed to represent. Example: The titular Glass Menagerie , in particular the glass unicorn. In literature, television or film, it's quite rare, although not impossible, for a motif to be a theme in itself. It's possible that the dead roses the hero and his girlfriend keep coming across are just a reflection on their lack of gardening skills if gardening is a theme of the story. It's more likely, however, that the dead roses signify that their romantic relationship is in trouble. Motifs are a favourite subject for English essays, and they've been responsible for many an epileptic tree - since anything </ can be a motif if you squint hard enough (and can find some way of relating it to other objects). Motion Capture is a relatively new procedure that provides a more realistic alternative to the traditional process of animating a 3D computer-generated character. Depending on the goal (and how well the data translates to the CG character), anywhere from trivial to massive re-animating over top of the mocap data can be required. Motion Capture refers to capturing the movement of the body overall (head, torso, arms, hands, legs and feet), while Performance Capture refers to capturing the facial performance. For it to work, a performer wears a skin-tight suit with tracking points on it: initially this was done with reflective balls, but technology is now advanced enough that high-contrast black-and-white circles can be tracked with a camera array in the picture above, compare the ball on Bill Nighy 's shoulder with the black-and-white headband , although folks tend to talk about the nylon-suit-with-golf-balls imagery since that's a much funnier thing to imagine George Clooney doing. The dots are placed on articulation and movement points (elbows, feet, knees, head, chest, etc), and an array of cameras track their position and movement. This data can then be applied to one or more CG characters (for example, in The Lord of the Rings </ entire armies were animated this way). Performance Capture is a similar version that adds small dots applied to an actor's face, allowing a camera (such as one on a boom arm mounted to a cap) to record data on the facial muscles. Performance Capture exists because Motion Capture typically doesn't record facial data, nor fingers and toes. Before this the face was animated traditionally, and extra details not on the actor also need to be simulated or animated: Bill Nighy's tentacles didn't animate themselves! Motion and Performance Capture have several advantages over traditional animation, namely that it's less time-consuming

to give characters incredibly lifelike movement that would take an animator weeks to do. Its limitations are the sheer amount of animation data created (if you need to adjust an arm, you may have to completely redo its animation), and it doesn't quite look right in more cartoony art styles . Rotoscoping is the manual, pre-computer version of this process. Often a domain of the Serkis Folk .

An animated character can talk, cry, yell, scream or whatever, but while his mouth may undergo any number of contortions, the point of his chin never moves, and the general shape of his face never changes It takes a lot</ of time, effort and artistic skill to animate characters whose faces stretch and warp realistically when their mouths open and change shape. Therefore, as a cost- and labor-saving measure, most of today's animated characters in all but the highest-end productions (or, of late, in CGI animation) are constructed with static heads/faces and a series of mouths that can be overlaid on them. This wasn't always true - the older cartoons had full facial warping with speech, for example - but with the general decline in American animation starting in the 1950s, such shortcuts became standard practice. The exception in a cartoon which otherwise does this exclusively is profile shots; these are (usually) animated with full-face movement because otherwise it looks much stranger than the animators want For similar reasons, the number of shapes required to animate a character's Mouth Flaps is kept to a minimum - some studios get away with as few as three to six mouth shapes (closed straight line/smile, closed mouth, small open, medium open, large "O", and an optional "screaming" mouth) An alternative to animating the mouth at all emerged in the 1960s with the development of " Synchro-Vox ", a technique whereby the mouths of live actors were superimposed on the faces of drawn characters. (The cartoon Clutch Cargo </ remains the foremost example of this dubious development. Well, that and Conan O'Brien .) In addition to reducing the animators' efforts (and thus production costs) to nearly nil, Syncro-Vox had the added benefit of turning what might have been an ordinary cartoon into a surreal experience that could inspire nightmares in an entire generation of children . This was parodied in the extra film on The Incredibles </ ' DVD See also No Knees Since this trope is so ubiquitous, please limit examples to exceptions in 2-D animation

Putting silly things on people who, for one reason or another, are stuck in a particular pose The guards at Buckingham Palace , whose duty it is to never move, are common targets for this. However, people under the impression that TV Never Lies will be in pretty big trouble for actually trying this in Real Life When it hews closer to "they passed out so we drew on them", it's Face Doodling

The Hero is just about to take on a herculean and possibly life-threatening task, be it facing down the Big Bad , barging into a burning building, or even trying to clear a massive Bottomless Pit . All his friends are depending on him, and time is running out, but he still</ may be a little nervous and apprehensive. He needs some sort of Heroism Incentive All he needs is a little peck and he'll be ready to go A Motivational Kiss happens when someone, almost Always Female , gives the main protagonist a kiss that gives him an extra boost in confidence. The kisser will often, but not always, be the protagonist's Love Interest , or at least

someone with whom he's been Ship Teased in the past May sometimes overlap with Forceful Kiss , Last Kiss , Now or Never Kiss , or a (successful) Comically Small Bribe . Inverted by the Smooch of Victory

Motivations are the reasons characters do anything. It brings them to action and directs their choices. These are not WHAT characters do, such as Saving the World or Take Over the World , but WHY they do it, such as For Great Justice or For the Evulz . See the Goals and Objectives Index for what characters are trying to accomplish.

A character dangles some kind of treat on a stick in front of an animal, or even in front of another character, similar to fishing with a rod, line, and bait. This is usually done in order to trick the subject into going somewhere at a fast pace (or sometimes, to run on a treadmill). The classic example is "carrot and stick" dangled before a horse, mule, or donkey to get it to pull a cart Related to Food as Bribe and X on a Stick . See also Food Interrogation . Will often involve a Trademark Favorite Food , or something from the Stock Animal Diet The problem of the bait swinging on the string, so that the target can simply grab it, is never mentioned

When investigating a mystery or a crime, a detective has to go through a lot of steps. The detective must investigate the crime scene to figure out what happened and how it was done, and suspects are identified based on why they want to do this Sometimes the suspect's motive is enough to incriminate him, even if no concrete evidence is presented or it doesn't add up. Quite possibly, an Amateur Sleuth might have gone on a wild guessing spree and thought it made sense but had only jumped to conclusions and ended up making baseless accusations. The sleuth's conclusions may have not necessarily been led by Insane Troll Logic , but he forgot the big detail: you need actual solid evidence and other proof before going out and pointing fingers. In fiction, this is not always the case, and one can bypass all methods of proving who the perpetrator was if a given suspect's motive is reason enough Often this leads to trouble when the suspect is innocent and protests that his motive isn't proof. A repeat offender may state that it's Not Me This Time . May lead to a Clear My Name . Sometimes a prosecutor knows the suspect is innocent but will use this fallacy to his advantage to frame the suspect. The simple (but not easy) solution is to actually bring evidence to light , quite possibly to realize that the prosecutor's accusations were wrong Expect this trope to come out a lot as a Red Herring Twist in Police Procedural shows— especially</ if there was an Asshole Victim . If the victim was really unpopular, this trope could evolve into Everybody Did It , because Everyone Is a Suspect In a real legal situation, motive is one of the least important factors regarding prosecution of a guilty party. It's not required that the reason the defendant had committed the crime be shown, only if he acted with criminal intent. In fiction, motive is the factor that makes a good cohesive story, which is why this trope is able to persist This trope is also popular among fictional and real-life Conspiracy Theorists , who come to the conclusion that if a certain group or government would benefit from a major tragedy, they must be the ones who caused it Compare Not Proven where a lack of evidence

allows a guilty party to go free; Conviction by Contradiction when a flaw in the alibi implicates the suspect; and Conviction by Counterfactual Clue when the evidence proving guilt is totally wrong in the first place. See also Occam's Razor , which states the simpler the solution the less likely it is to be wrong

Basically, this trope is when a character comes to an erroneous conclusion about a villain's motives based on the villain's actions. While the Big Bad is certainly still a villain, how they truly intend to go about it or why they are going about it in the first place turns out to be something for which everyone else's suspicions were way off the mark Sometimes the motivation might be different but just as twisted. And sometimes, the evil scheme isn't actually an evil scheme at all . In either case, the Big Bad didn't try to fool the hero, or leave a false trail, or otherwise trick them in any way. No, with this trope, the heroes were fooling themselves all along. This happens a lot when your hero is either too eager... or simply an Idiot Hero . Sometimes though, it's because the heroes only bore witness to certain pieces of information without access to the remaining pieces Sometimes the result of paying attention to the Red Herring . Compare Hidden Agenda Villain (the villain is concealing their true intentions) and Falsely Reformed Villain (the villain tricks the hero into mistaking legitimate activites for nefarious ones in order to make the hero look bad and make themself look like an innocent victim). Contrast Evil Plan for a more obvious motive (though this trope still might occur), and Disappointed by the Motive , when the reaction of the heroes to this trope (and on those</ examples it's because the motive is a lot more petty and/or mundane than the plot probably hinted at so far) is pretty much them going "huh?". A standard ingredient of The Summation in any Cop Show , Police Procedural , Law Procedural or Mystery of the Week . After the detective has shown without doubt who the killer is, the killer will launch into a long, self-righteous (or remorseful) monologue explaining why exactly they did what they did. This both serves as confession and allows the writers to explain how this solution to the mystery makes sense, even if it's often a " He called my mother a bad name, he deserved to die !" </ kind of sense. It's often the only way to make the perp's feelings obey the Rule of Perception , since they must be hidden until the crime is solved This is a good place for a We Are Everywhere moment The detective will often then give them a Kirk Summation in response, followed by whatever phrase they use to indicate that they're being arrested. If the detective is feeling nasty he'll throw in "The Reason You Suck" Speech It doesn't matter if the character's a timid librarian, a jolly bartender, a butch farmhand, what-have-you, when they are revealed to be the killer they all suddenly snap into the same cookie-cutter personality type: bitter, twisted loony In real life, many people confess to crimes and will happily talk about what they did even though all they should say is "I want to see my lawyer" Also in real life, a criminal that's cornered tends to do things like socking the other guy in the face and running away. This rarely happens in television, despite the detective being so often the only other person in the room with the criminal, and when it does, they are almost always caught after This trope doesn't necessarily have to be applied in the interrogation room. It could

be given by the killer when he thinks that he's got the Final Girl at his mercy, a bit of Evil Gloating Just Between You and Me , or when he's explaining his motivations to an accomplice. All that matters is that the killer explains just why</ he's committing his crime in the first place This trope can overlap with New Era Speech if the villain's goals are particularly visionary This trope is the intended result of The Perry Mason Method . It's often part of a Villainous Breakdown . The Hero might respond by saying Shut Up, Hannibal! , replying with a Kirk Summation , being Disappointed by the Motive , or shutting the villain up with a bullet See also Heroism Motive Speech for the heroic version of the trope

Often there is a row of motorcycles parked at a bar (or restaurant, or any other building, but usually it's a seedy biker bar located on the edge of town). Naturally, someone's going to hit one, and it will fall and hit another, and that will fall and hit another and so on — like the old Disaster Dominoes . That'll get a swarm of (stereotypical) bikers real </ angry and desiring revenge on the offender. Oh, Crap! A variant of this is a hero character walking into the wrong bar or otherwise ending up on the wrong side of a group of bikers and being tossed on to the street beaten and bloody by a jeering mob. The beaten hero then takes revenge by sabotaging the motorcycles in this way with his own vehicle, or doing something like tying them together so that anyone attempting to chase him ends up dominoing their own side. It should be noted that this is Artistic License </ , as in real life groups like this usually have a low ranking or prospective member guarding the motorcycles at all times - and something like this would fail to happen whether accidentally or by design. Used either for comedy or as a distraction. See also The Precious, Precious Car , Human Traffic Jam .

A character who speaks if not constantly then often so quickly that it's hard to make out individual words and with the appearance of not having to stop for breath which sometimes makes it sound as though the audio track has been set to Fast Forward, this is often a facet of the Genki Girl or The Ditz who seems to be able to redirect the oxygen destined for their brain to their mouth whereas if smart characters do this they often fall victim to Sesquipedalian Loquaciousness usually this counts as the specific subtrope Gibbering Genius and it is also a trait of a character who is panicking upset afraid angry worked up or excited and launches into rapid-fire babble because of their emotional state although in a few cases characters who do this anyway end up going into a weird state and start doing it even more BECAUSE OFTHESTATEMENTIONEDABOVEORMAYBEJUST — SHUT UP! In advertisements this is Rattling Off Legal and in Music it becomes a Patter Song and can lead to Something Something Leonard Bernstein while for the absurd comic book examples where this is explicitly not</ addressed see Talking Is a Free Action . Characters may do this during a Character Filibuster or when Holding the Floor to prevent others interrupting. In comics, Wall of Text and Wall of Blather are common. Contrast... Dramatic... Ellipsis... You Talk Too Much! , AND! PUNCTUATED! FOR! EMPHASIS!

The Cool Horse has always been useful in fiction for heroes in all ages of literature, but fictional representations of the blessed steeds are often quite different to reality. In mounted stage combat, the horses are perfectly happy to just stand still next to each other while their riders (pretend to) hack away at each other, something of a contrast to the heat of battle. The riders/fighters have to simultaneously guide the horses into moving around each other so as to make it look like something's happening. Mounted combat is shown in varying degrees of realism, like in the rest of fiction. For help deciding how realistic a scene is, consulting the Useful Notes section on mounted combat may be helpful. This is generally not much used in tabletop RPGs , at least not by player characters due to mounted combat training being something of a Useless Useful Skill to most general-purpose adventuring parties (which don't generally "just happen" to be dedicated cavalry units as well and in any case can expect to see a fair bit of action in places where mounts are either a liability or flat-out unavailable). Suitable NPCs in appropriate environments are a different story. In Video Games , horsemen tend to be very expensive, fast moving and powerful units which are excellent if you can afford them... but also tend to come with one cheap opposing unit which can stop them . And of course, nobody ever targets (or even accidentally hits) the horses themselves . See also:

This is when an object (not a sentient robot or Animate Inanimate Object) stops working, goes missing, or is destroyed or retired, and the characters treat it as though it has died. There exists a belief that novels written by women, at least in certain genres, won't sell as well. Perhaps it's the stereotype that women tend to write domestic novels or "fluff" that have very narrow appeal. Perhaps it's because historically most of the works considered the great masterpieces of the literary canon were written by men. Perhaps it's because certain fandoms (Speculative Fiction for instance) are predominantly male and publishers assume these men won't take books by female authors seriously. Perhaps it's because the publishers themselves wouldn't even bother to read a book with a woman's name on it However, this has not stopped many women from writing and successfully publishing their works. They just have to pull small sleight of hand: conceal their gender. Since authors are usually not on film and therefore not seen, this can be done simply by adopting a Pen Name . Typically, female

authors take one of three approaches Shortening their name to a series of initials which are gender ambiguous Sometimes highly successful female authors will create a Moustache De Plume if they are publishing a type of book well outside their normal material. For instance, Nora Roberts (a romance novelist) published mystery books under the pseudonym J.D. Robb. When she became better known under her real name, the mystery series was credited to "Nora Roberts writing as J.D. Robb." This is ironic, as "Nora Roberts" is itself a pen name. The author's real name is Eleanor Marie Robertson Subtrope of Pen Name . See also Same Face, Different Name , Girl-Show Ghetto Note: This trope is explicitly about situations where the author is credited under a name that will not reveal their gender. One way to do this is to use initials , but not everyone using his/her initials is trying to conceal his/her gender. Therefore, J. R. R. Tolkien , C. S. Lewis , H. P. Lovecraft or L. M. Montgomery (who never hid the fact that she was a woman) do not fit this trope There are, in fact, Spear Counterparts , as in the Romance Novel business Depending on how you look at it, this could be seen as the exception that either proves or disproves the rule that Most Writers Are Male Not to be confused with Girls with Moustaches

A grisly sister trope to Wipe That Smile Off Your Face , in which brute-force means instead of fantastic ones are used to seal a person's lips. Sometimes this trope is applied to living characters as a torturous way to prevent them from speaking or crying out. It's also used occasionally on corpses, often to send a message to whoever finds them that the dead victim had talked too much. Self-inflicted examples also occur, for added Squick Variants may use something other than string, such as wire, pins, or padlocks. Whatever the means of closure, the unfortunate subject of this trope is going to have pierced lips Subtrope of Facial Horror , and the inversion of Glasgow Grin . Sometimes combines with Eye Scream if multiple facial features are sealed Can result in a literal case of I Have No Mouth And I Must Scream , especially if accompanied by other horrors. It's not uncommon for a game to start off on one console and be released on the next generation console. This usually occurs to late-cycle games but can also occur to games stuck in Development Hell . Often overlaps with Schedule Slip if unexpected delays in a game's production pushes its release to near or after the launch of the next-generation There are many reasons why this happens, the most obvious being in order to take advantage of improved hardware. Another common reason is because late-in-life titles don't usually sell that well. With many gamers making the leap to the newest console or handheld, porting or remaking a title for the next gen is the best bet for sales In a certain way, sometimes consoles themselves can have this happen, originating as add-ons or planned features for older consoles before eventually releasing as entirely new systems See also Crossgeneration Video Game , where a game is developed and released on multiple generations of consoles simultaneously

But sometimes it becomes something more . It becomes a symbol, an icon, an emblem... a mascot. This is about characters that

A Movie Bonus Song must be: This often overlaps with Award-Bait Song , especially if the film is gunning for as many awards as possible , since songs carried over from the stage musical aren't eligible for the Best Original Song Oscar Dreamgirls </ is a particularly notable example of this. Jennifer Hudson won the Oscar for Best Supporting Actress because the Academy wanted to give her something . A character whose purpose is to provide Infodumps and explain the plot. Ostensibly, this is for the benefit of the protagonists , but most of the time their real reason for existing is to provide Exposition to the audience. This is why they spend so much time explaining things the protagonists already know . Popular in Science Is Bad stories, where you can bet the Mad Scientist in charge will have a tape recorder with him at all times that he's always dictating his progress to. Mr. Exposition is also an essential component of the Instructional Dialogue . In spite of the name, this is an equal-opportunity position, as the many female examples below demonstrate The Watson , especially if Constantly Curious , may force Mr. Exposition into this role See also Captain Obvious , Expositron 9000 , Haunted House Historian . The Spear Counterpart of Ms. Fanservice , Mr. Fanservice provides similar eye candy for viewers who are into men. It can be an effective way to bring in female viewers, even in a series directed towards males In order for a guy to qualify as Mr. Fanservice, </. He needs to be shown in scenes intended as sexual fanservice. He can have anything between muscular limbs, broad shoulders and/or sculpted abs (between six-packs and eight-packs). The muscles can be either lean or chiseled; as long as you can see them, they count. He may also have long hair though it's not required. Most of the time, he has medium length hair, a swimmer's build, a smooth chiseled chest, washboard abs and no shirt on . However, if he's wearing a shirt, it's usually sleeveless or left totally unbuttoned He tends to be subjected to at least</ one Shirtless Scene , or he can take it a step further by deciding to forgo a shirt all the time —though a Mr Fanservice can also have zero shirtless scenes. In the Beach Episode his choice of swimwear is likely to be a speedo (AKA swim briefs). Just like his aforementioned counterpart, he can wear tight clothing, which shows off his body without baring skin. He can pull off a male version of Bare Your Midriff . He can wear anything (or nothing , that works too), as long as these clothes accentuate or reveal his muscles. In an action-driven story, glimpses of his physical assets may also be accomplished via clothing damage . If he wears some sort of skirt-like garment the female fans will be prone to ask if he wears anything underneath it . He can also gender invert the Reluctant Fanservice Girl , Shameless Fanservice Girl , and Innocent Fanservice Girl tropes An especially easy way to show off his figure would be through the Workout Fanservice , where he flexes his muscles via exercising. Hot Men at Work is when Mr. Fanservice is, well, at work, but distinctly lacking a shirt, regardless of health and safety issues. Bonus points if he's The Charmer . If he wears small underwear, you have Briefs Boasting It should be noted that the trope is not necessarily restricted to Hunk type characters either. Bishōnen and pretty boys can easily qualify as well, and are often intended as fanservice too (particularly in manga and anime, where they are rather common and video games, where they are not as common with some notable exceptions). A rarer type of the pretty boy subseries is the Biseinen who has a pretty face and chiseled muscles rather than being willowy. Biseinen are often unemotional but can still appear in comedic situations which can overlap with the gender-inverted Reluctant Fanservice Girl See also Eating the Eye Candy , Cast Full of Pretty Boys , and Bishōnen Jump Syndrome which can sometimes be the reason for its existence

A woman meets a man and becomes so infatuated with him that she imagines herself married to him. She practices pronouncing or signing her first name with his last name, or "Mrs" plus his surname or "Mrs" plus his full name in a rather old-fashioned way. Men fantasise like this about their secret crushes' or their girlfriends' names as well when they think of them as their new wife. Less frequently, men will try to see or hear how their name would look or sound like if they took their beloved's name for

their own. Artistic types or those who like keeping a Diary might write it down and often combine it with Love Doodles Shippers on Deck and Matchmakers might amuse themselves with these exciting and wonderful-sounding names as well. For them, it's a favourite pastime activity, and it's often a good way to persuade their objects about benefits of the potential match Sometimes the name and the Blue Blood title might be the main thing that is coveted in the prospective marriage, and of course the house, money and upper-class lifestyle that go with it. The man can be just a means of obtaining the cool sounding name Compare/contrast The Maiden Name Debate

This trope describes a situation in a work of fiction, in which a prominent vehicle used by characters in the story is itself endowed with the qualities of being a character in the eyes of the audience. This is especially probable if said vehicle is essential to the advancement of the plot of the work or the actions of the main characters. Such endowment is represented by sorrow or grief in the event of the destruction of said vehicle As any Navy veteran will tell you, especially if they had to watch theirs sink, this is often Truth in Television May overlap with Cargo Ship in weirder cases. See Spaceship Girl or Setting as a Character for when the ship is literally a character. Do not confuse with Spaceball One

Her clothing is mainly there to accentuate her figure. Her wardrobe mainstays are bikinis/swimsuits , lingerie , fishnets, stockings, garters , Dangerously Short Skirts , equally short shorts , thigh high boots or stiletto pumps, and low-cut dresses and shirts. Alternatively, she might be covered from head to toe, thus showing no skin at all, but her costume will be tight and stretchy enough to show her bust and the outline of her hips. Bonus points if she's The Tease . In general, she will appear more often in merchandise aimed towards males to further attract males to the product, with vice versa being the case for Mr. Fanservice . Either way, the camera seems to have the hots for her , and the viewing audience is expected to feel the same way. While the way a Ms. Fanservice is presented often comes across as sexist, there is nothing inherently wrong with the trope itself ; the real trick is to give her a genuine, fleshed-out personality beyond being eye candy , instead of having her exist solely as a Flat Character . (Besides, being "flat" usually doesn't fit this type of character .) Please note that there is no requirement to be single to fit into this trope. Many of these characters are married. For the Spear Counterpart , see Mr. Fanservice . If she also sleeps with most of the crew, she either Really Gets Around or is a Good Bad Girl . Subjected to multiple Double Standard tropes, especially if she gets a nice dose of Character Development or Hidden Depths aside from her hot looks, and yet the fandom refuses to see them (or remembers nothing else about them). Line from the theme song of Mystery Science Theater 3000 </, which encourages the viewer not to worry about details that are irrelevant to the enjoyment of the program. Sometimes referred to as Hodgson's Law</, after Joel Hodgson , creator and original lead actor of MST3K</ . Like Bellisario's Maxim , it is employed in fan communities to ridicule or short-circuit all manner of bizarre fan theories , factual inaccuracy entries, and Stock Parody Jokes . The full line, used more rarely, is this: "La-la-la's" optional. Take three deep breaths and recite when tempted to make a Justifying Edit . Many of our very own tropes (including and especially our Artistic License archipelago) have a tendency to get very nitpicky about following or failing to follow core sciences so even we could do with repeating it to ourselves regarding whole tropes. TV scribe Michael Reaves the sentiment even further: "It's only television." When we consider that the very point of MST3K</ was itself to mock and ridicule movies for breaches of logic and defective storytelling, we encounter a sort of MST3K</ Dilemma: a glib assessment of the situation would have it that the show was hypocritical with its insistence that the viewers subject it to less scrutiny than they themselves brought to bear against countless films, but a more careful consideration should lead us to discern that different subjects should be held to different critical criteria. Indeed, what passed for plot in MST3K One should be careful that they do not go too far and use this to justify saying that The Complainer Is Always Wrong . Yes, there's no point in getting excessively worked up and nitpicky about something that, at the end of the day, is just a work of fiction. But using it as a way of brushing off any and all forms of criticism is an equally dangerous attitude to have, and in creators can be a possible sign of a Small Name, Big Ego at work utilizing Dear Negative Reader . Conversely, anybody who hopes to promote a movie and insists it's "just a movie" and critics should "just relax" while also expecting they take seriously any Aesop , Central Theme , Speculative Fiction , Spectacle , or just anything beyond superficial amusement from it is insulting the intelligence of the audience. This is not about critical appraisal, but what is necessary to tell a story. When criticism targets those things that were unexplained because it is irrelevant to the story structure and motivations, then</ you can invoke Bellisario's Maxim . This concept is Older Than Steam , also being used in William Shakespeare 's A Midsummer Night's Dream </ : Puck's final speech, which starts "If we shadows have offended/Think but this and all is mended..." can be condensed into "'Tis but a play/I'faith, I should really just relax." This was actually a kind of disclaimer, to mollify people in power who may have construed the subject matter of that and other plays of his as blasphemous and obscene. It still applies to this trope, though. In general, this applies to many philosophies, including the mantra of popular events, one being The closest thing this trope has to Truth in Television is the concept of </; as The Other Wiki puts it, "a commonly used phrase, sometimes passing as folk wisdom [...] its application as a means of dismissing dissent or justifying fallacious logic is what makes it thought-terminating." This is a common subtrope of Geo Effects , where boggy or swampy areas drastically impede your movement. So long as you remain in here, you'll move at a snail's pace, vulnerable to passing enemies. Your jumping, if applicable, may or may not be affected by this, and in fact, you may be able to move quickly by repeatedly jumping in and out of the bog In some cases the bog may actually be hazardous to your health, dealing damage over time, acting like quicksand and swallowing you whole if you spend too long within, or applying some unpleasant Standard Status Effects For some reason, you're never able to simply walk around</ the hazardous terrain, as the area is almost uniformly flooded like this. Any safer paths will almost certainly be blocked off with fallen logs , impassible treelines, and so on. However, some mudpits look hazardous, but are actually safe enough to cross.. So, Fingers McStealy is lurking in an alleyway waiting for a victim. Ah, here comes someone, and that fetching hat and coat look expensive. He's smiling too , so maybe he just came into money? Ooo , he even has something shiny under his coat . What Could Possibly Go Wrong? Basically this is when some random crook , and occasionally a pretty stupid one at that, has the misfortune of targeting someone much more powerful than he assumed . When the Super Hero /monster/alien assassin/robot/ sorcerer from the future/ other world / space appears, the criminal acts as a disposable victim they can demonstrate their powers on for the benefit of the audience. Alternatively, The Hero is held up while going about their business If they have a Secret Identity , then it can lead to a Bruce Wayne Held Hostage scenario, but if the criminal attacked them in costume or the hero is just some badass Walking the Earth , then it typically just serves as an introduction. Bonus points if the would-be victim looks particularly vulnerable. When an assailant targets a crowd of people not knowing that Everyone Is Armed , you get this trope with strength of numbers replacing individual dangerousness. Tends to make a good Establishing Character Moment , depending on how (and how easily) the crooks are dealt with. Occasionally this can lead to them recruiting a sidekick or other allies. Can be deeply satisfying. When the person looks vulnerable due to chronological endowment, it's likely a mighty old person . When a Video Game character does this without the game acknowledging how hopelessly outmatched they are, it's often due to Suicidal Overconfidence . See also Dude, Where's My Respect? when this keeps happening with no signs of anyone figuring out the pattern. Compare Colliding Criminal Conspiracies and Unintentionally Notorious Crime . Supertrope of Robbing the Mob Bank . Please note: the trope need not include actual mugging (though it is a popular method). As long as the provocateurs intentionally and excessively antagonize someone much more powerful than they are without</ knowing beforehand what they are screwing with, and get fixed accordingly, then it fits.

This trope is for any situation where a character (usually but not always The Protagonist) is placed in a Love Triangle situation where he or she must choose between rival suitors where one of the suitors has Magic and Powers , is non-human , or has some other property that places them firmly in the category of Speculative Fiction ,

and the other suitor is an ordinary person . Of course, the "magic" option need not use something called magic. In a Science Fiction setting, aliens, time travelers, visitors from another dimension or planet, or similar such characters qualify. In a Super Hero setting, anyone with superpowers would qualify. When the character making the choices is a Muggle, such cases generally represent more than just a choice between persons, but often a Red Pill, Blue Pill kind of choice between living a normal life and living one that is exciting and exotic, but unfamiliar and often dangerous. Generally speaking, you can expect the character to go with the exotic Love Interest , because that is what allows for a more interesting storyline. However, sometimes it will be treated much the same way as a Rich Suitor, Poor Suitor plot, with the muggle picking an ordinary life of simple love over all the exotic things the non-muggle can offer them. Sometimes the Magical option will have distinct disadvantages We all know power comes at a price, and certain limitations may make it difficult for the protagonist to honestly desire a life with them. Maybe they can't be away from water. Maybe they have no physical presence, or have debilitating effects on those around them. Maybe the protagonist just finds the fact that they're not quite human unsettling. Whatever the issue, it makes the expression of love and lasting commitment a problem. The Muggle, on the other hand, is presumably a lovely person but with no such paranormal limitations. Suddenly they look a lot more enticing. If the character making the choice is a non- muggle , one can almost invariably expect them to marry the Muggle, often in the face of resistance, prejudice and even taboos and prohibitions from their community of fellow fantastic beings. By default, it involves Muggle–Mage Romance . Compare to Betty and Veronica and Rich Suitor, Poor Suitor . Children of superparents get superpowers ... except when they don't If you're a protagonist, this is no problem, you'll usually become a Badass Normal or at least an Unfazed Everyman . But if you're a Mauve Shirt … you'll probably become this This trope is a character who's in on The Masquerade , and was born into their world. Unfortunately for them, they're normal. No, not Badass Normal ; totally, completely, and 100% normal . If the lame power of Heart was a consolation prize , the Muggle Born Of Mages never got a draw at the Superpower Lottery in the first place. They're just as ineffectual in adventuring as any other muggle , maybe even more, which is why they usually find themselves having some grunt-work position in the world of the masquerade, such as a janitor, secretary, or The Igor . However, if they're still determined enough to throw themselves into the world of magic or what-have-you despite lacking innate abilities, they might have the opportunity to become a Muggle with a Degree in Magic . Most examples of these characters tend to have bitterness and regret over not being a super as a major character trait, though there are some who are actually at peace with their lack of special abilities; in that situation, any bitterness the character may feel comes from everyone else</ refusing to understand/accept/believe that they're perfectly content with their lot in life It may ultimately turn out that this person actually has some form of Anti-Magic , though this might not be noticed immediately. If this is common in the setting, it may be that characters are

completely Randomly Gifted , so powers aren't always inherited and may spontaneously manifest to children of Muggle parents. If this happens gradually over several generations it's Generational Magic Decline If everyone</ except this person in the setting is a mage, They're an Un-Sorcerer This trope is somewhat Newer Than They Think , since magic-users traditionally learned/sold their soul for their powers, meaning no one expected a mage's child to be anything but a regular human Compare High Hopes, Zero Talent where a character wants to be something, but has no aptitude for it. The super-powered hero is raised by normal human foster parents , sometimes unaware of his true heritage until his abilities manifest . Though they might not get combat training or magic instruction while hidden, they usually find out Upbringing Makes the Hero This is a frequent trope in mythology. If the foster parents are not called the child's mother and father, they are frequently their aunt and/or uncle. This is a throwback to older times, where children whose parents died were often adopted by the parent's brother Don't expect them to live too long once they've served their purpose , and their "offspring" might not be terribly grief-stricken either . A romance, sexual or otherwise, between a Muggle and a magic user The Muggle doesn't necessarily have</ to know about it. If they do, reactions can vary from Understanding Boyfriend to Fantastic Racism This kind of romance can be portrayed any number of ways in media. If it is normal for one half of a couple to just have magic and the other to not, it signals to viewers that the setting is Mundane Fantastic . If society loathes this kind of romance, it can lead to Star-Crossed Lovers while signalling to viewers that there is Fantastic Racism in the setting The couple may also have to deal with issues that may arise where one half of the couple is just that much more powerful . If the Muggle is rather tolerant and understanding though, and both the Muggle and the magic user work at it if necessary, the issue can be smoothed over. If the power balance issue cannot be resolved adequately, it can lead to an end in the relationship. If the inequality between the Muggle and the magic user serves as a "turn-on", with the latter habitually telling the former something like "If you upset me, I will put a curse on you", the trope overlaps with Power Dynamics Kink Factors that affect how the society views this sort of romance depend on the nature of magical society, mundane society, any sort of Masquerade, how magic is acquired (learned vs. inherent gift), other intrinsic differences between muggles and mages, etc Do note that since it is often played the same way, romances between superheroes who are not Badass Normals and ordinary people, Badass Normal or not, can also fall under this trope The muggle partner is very likely to become a Muggle with a Degree in Magic If the couple become a Battle Couple , expect them to be a Sword and Sorcerer If

In a world with Differently Powered Individuals , what use are Muggles ? They're weak, need protecting , are evolutionary dead ends and are of no real use. Even the Badass Normal on a team of supers can start getting depressed from this , and they are useful!</ This usually serves as a motivation for individuals and groups who decide to "do something about it" rather than take it lying down.

Much like a super-power groupie , these people will try to get super powers by mimicking their betters, often at great risk by trying to replicate how heroes get their powers . If enough people get this idea, or the government gets behind it, then it becomes a case of Utopia Justifies the Means . This can include Organ Theft , free Super Serum , cyber augmentations half off, and in general making Emergency Transformations routine medical procedures . Interestingly, though this group means well, anyone aspiring to power (even if they want to share it) is inevitably misguided if not outright evil, because a muggle should Never Be a Hero . The route of Badass Normal seems to have much better odds, on the other hand.

These people usually come to this conclusion by adding some paranoia (justified or not) to Genetic Engineering Is the New Nuke and fear that naturally born supers will out-breed or replace baseline humanity. They interpret the "obsolescence" of baseline humans as an edict to kill all Mutants / psychics / witches in an "Us or Them" fashion, fearing that supers will either forcibly take over or replace all humans . These types are usually spurred on by the villains' attempts to do just that, and end up branding all supers as threats. Previously nice supers, in turn, will interpret this xenophobia as cause to exterminate or enslave all humans... This is usually the fear behind any Super Registration Act . Typically accomplished by calling the Cape Busters . See also Tall Poppy Syndrome . Whether the story chooses to address the underlying insecurity or not varies . When it does, it usually justifies baseline human's existence with a nice aesop like: our limitations drive us to excel , only humans can truly create , a world of all supers would devolve into planetary civil war (like we normals have done such a good job keeping peace without supers)... or, that we're so fundamentally bad that only a handful should have these powers, if at all. Since super-powered heroes are usually the focus of these stories, it's not rare to see a perfectly sensible initiative by the government to have its own supers , either to stop supervillains or to stop a hero if he should go rogue, turned into paranoid and militant unit bent on killing all heroes on the off chance of a super powered Social Darwinist takeover. Post-Cyberpunk stories that include The Singularity often have conflicts between humans and post-humans. Earlier stories had Mutants on higher Evolutionary Levels that likewise were generally incapable of coexisting with their predecessors. An interesting variation has the supers be vampires, werewolves, aliens, or some other "bad"

In a story with Differently Powered Individuals , or a Witch Species , you'll usually have a group of individuals who don't</ have those powers—muggles. Ordinary people. Those who are not special, like the favored of the plot. Mundane folk who are only aware of their own small section of reality. The source from which most characters spring. They're the "normal" for those who crave it and those who would hate it if it happened . Ironically, Muggles often treat extraordinary people like crap, because Muggles are All of the Other Reindeer —although sometimes this happens the other way around , more cynical super-people looking down on them as Innocent Bystanders —a pathetically bland, underdeveloped species. The most common Secret Identity pretends to be this. They are the ones whom the Masquerade is used to hide from, who can't get into (or perhaps even perceive) the Wainscot Society , and the ones who are subjected to memories wipes simply so the more enlightened can retain their secret status . Sometimes reality itself conspires to hide the plot from their minds, in ways like the Extra-Strength Masquerade , Bystander Syndrome , Weirdness Censor , and Invisible to Normals . Then again, they may just not want to know because Apathy Killed the Cat . They are the Victim of the Week eaten by the Monster of the Week . Muggles are to be protected, avoided, manipulated, or abused (in any combination) by the characters or the plot. Expect the Red Shirts to be muggles since non-muggles are usually too plot-valuable to waste. Even muggles with characterization need to watch it: they could be Mauve Shirts . More rarely, Muggles Do It Better comes in to play: mundane people with mundane technology have a real fighting chance in works featuring this trope (often the reason why</ The Masquerade exists—otherwise, once the Witch Hunt starts, the supernatural would get its butt handed over by Badass Normal hunters or mobs with Torches and Pitchforks). In this trope, characters with superhuman powers and abilities show them off by playing Real Life sports and achieving things that would be impossible in reality, like hitting a baseball into space or running a marathon in under a second This trope is often used in Video Games as a way to introduce novelty into them, often in the form of charged, superpowered shots (a la Mario Strikers </ or Head Sports </). A common decision that creators have when worldbuilding is if each planet is going to have a culture that spans the entire world , or if they have distinct ethnicities, cultures, and traditions. This is the latter. Either the writer is attempting to avert or soften the traditional Planet of Hats methodology, or they enjoy Worldbuilding itself. Planets are unlikely to be as heterogeneous as modern humanity — most writers have trouble working that with humanity itself — but there will be more than one defining

characteristic for each race. The goal is to make each race as interesting and deep as a three-dimensional character, instead of a flat template to apply to any character from that race. This trope is most notable for its appearance in Science Fiction ; however, it also appears in other Speculative Fiction . In a science fiction work with only humans, this trope applies when multiple cultures appear in any given area, such as a Space Station or a planet . In a Fantasy story with fantastic races, this trope applies when there are different ethnicities or cultures within the races, such as more than one type of elf or more than one type of goblin . A given work may mix and match the tropes, giving Planet of Hats treatment to the villainous races, and Multicultural Alien Planet treatment to the heroic races If a work has the same alien race on five planets, and each planet has a different ethnicity, then the creator is using both. Often helps contribute to an Ungovernable Galaxy . A Planetary Romance is much more likely to go this route than a Space Opera , since the planetary romance focuses on a single planet. Flash Gordon's Mongo and John Carter's Barsoom are two classic examples. Examples of this trope are species with a tendency to possess diverse and varied cultures. There may be cultural or societal divisions, and ambitious writers might even suggest different languages among members of the same species. However, given the tendency to skip alien languages altogether , some will simply invoke Aliens of London and settle for giving alien species different accents or speech patterns. (Note: If the diversity is only</ in accents, the example belongs on Aliens of London , not here.)

In the pre-digital era, some movies were just too long for one VHS cassette. Some games were just too big for one disc. That's where this trope comes into play For video games, how this is handled depends on the platform. This can either be done by putting the game on a play disc and several install discs which put the assets on the hard drive. If such an option is unavailable, the player must switch disks during gameplay when prompted. Alternatively, modern games might just come with one disc and require the rest to be downloaded off the internet, but this tends to be controversial. In most modern cases, additional discs are used for Bonus Material that came in an Updated Re-release The following section is a history of this trope's usage in games For the LaserDisc format, this was effectively inherent to the medium — one side of the disc could only hold 60 minutes for a maximum of 120 minutes on a single disc, so users had to manually flip the disc in the middle of the format, similarly to a vinyl record; many higher-end players supported automatic side-switching to save buyers this trouble. Any release over 120 minutes would require two discs or more. The successor format, DVD , was also able to come in a dual-sided configuration (and with similar auto-switching high-end players), though oftentimes used it more to divide a release between Pan and Scan and Letterboxed versions of a widescreen release, or between the main film and bonus features, owing to the much greater storage capacity per side. For a film to be split across two sides of a DVD, it had to be very</ long, with the likes of Schindler's List </ and Oliver! </ being among a small few to hold this distinction. Even then, the digital nature of DVDs and support for a second data layer on each side means that studios are more likely to simply compress the film further to keep it on a cheaper, single-sided disc, in part because even a dual-layered DVD of this kind is cheaper to make than a double-sided one Another

common case is with the (VCD), a variant of the Compact Disc popular in developing nations in Southeast Asia and the Middle East. VCDs have comparatively less storage space than DVDs, with video data occupying the same amount of space as audio data on an audio CD, resulting in an identical maximum capacity of 74-80 minutes. Since most movies are considerably longer than this, they tend to be spread across at least two discs on VCD releases In music, multi-disc works are usually related with concept albums , live recordings, compilations, and regional / updated rereleases . Of course, they're not limited to these forms, but they're the most common applications of this trope in popular music; some albums might even go out of their way to be a Distinct Double Album , with each disc having its own concept or theme. It's also becoming the norm for vinyl reissues of albums after the mid-1980s that were originally created with the CD in mind, due to space constraints Tropes like Disc-One Final Dungeon and Disc-One Final Boss are named after this concept, but are not necessarily related. Compare Divided for Publication , where the work is divided into multiple works due to time constraints, budget, or other issues, not necessarily space. Also compare One Game for the Price of Two , where one game is sold on two or more slightly different discs, but you only need one to play

A form of letter or other writing where the least amount of personalization has been made via circling multiple choices or fill-in-the-blanks. The blanks are often names or dates as these are elements that are impossible to make uniform. For example a letter might start "Dear [ ], we were happy to receive your opinions on [ ]" so that the blanks can be filled in and customized with the correct name and information later. In Real Life this trope is simply a practical way to save effort, but in fiction it is often played for laughs as a fill-in-the-blanks letter contains faux-sincere language or is hilariously inapplicable to the given situation. This is actually the concept behind the children's game, Mad Libs</ where a short story is told with blanks left so that a group can yell out random words fill it in creating a humorous nonsense story. A common gag with such letters is for the whole thing to be read in full, including Reading the Stage Directions Out Loud ; "Dear square bracket name of recipient square bracket we are pleased slash sorry to inform you..." When the trope is verbalized it becomes Mad Libs Dialogue . Not to be confused with Multiple-Choice Past which is something entirely different.

Determinism is a philosophical category of theories that brings up the ideas of free will and its relationship with fate and destiny, and comes in a variety of flavors. Hard-Determinism suggests that there is no free will, that all actions and choices made were predestined and preprogrammed with no hope of escaping. Causality is king on the throne of Hard-Determinism and his word is set in stone . In-contrast, Soft-Determinism suggests that there is a balance between causality and free will, that there are many different outcomes and one's own choices that decide which outcome becomes true. There is also Indeterminism , but who cares about that, right? While it is impossible to divine the future in any meaningful way in Real Life , Seers in fiction usually see the future for real and are forced to choose between a multitude of prophecies. When the future is a multiple choice question with no wrong answers, one Self-Fulfilling Prophecy means a near-infinite

supply of Self-Defeating Prophecies . In some cases, this can lead to Alternate Timelines , with various forms of media showing that each probable future (often caused by crucial decisions/different happenstances) has happened and live parallel with one another. ("Good Ending" redirects here. If you were looking for the manga series commonly known by that name, you'll find it under GE - Good Ending Multiple Endings are the most commonly seen form of Story Branching in video games, used primarily to increase their Replay Value , especially visual novels , role playing games , Survival Horror , dating sims , and fighting games . Different strategies or levels of skill in play will result in different endings, rather than all leading to a single predetermined conclusion. Generally, multiple playthroughs are necessary to see all the content, and possibly to unravel certain mysteries. What determines the ending usually involves the path one takes through the game (which can be as simple as choices the game gives in the prompt or as complex as entire alternate levels), whether one completes the 100% Completion , how well one plays the game (generally, scoring high is good and using continues is bad), other characters' Relationship Values towards you (including the Alliance Meter), and/or how high the player got the Karma Meter . Sometimes there are dual-optimal endings depending on which side the player chose to be on . (These can include the Forces of Evil!) The most diverse examples are found in Visual Novels and Dating Sims , including but not limited to: The Standard End</, which usually involves the least effort by the player. This is usually very short or unfulfilling, such as a blank staff roll , if the game is trying to push 100% Completion on you. Alternatively, it ends the story on a decently happy note, but leaves some massive</ plot threads hanging with minimal resolution. Some designers include truly "neutral" multiple ends, letting the player decide whether they're good or bad. The major problem with Multiple Endings is that the sequel, should the developers decide to make one, obviously has to pick only one ending from which to continue the story — probably one of the good ones . This invariably occurs in adaptations to other media, such as novels, comics, and television. Video games have the technical means to solve said problem with an Old Save Bonus , wherein the previous game's conclusion becomes the player's personal canon in the sequel. The other problem is that thanks to YouTube uploads, being able to view multiple endings no longer requires you to replay an entire game (perhaps in response to this, many games now have in-game rewards for getting different endings). Sometimes multiple endings require the player to do different actions or align themselves to different sides

in order to see each ending, even if it means going against the main character's nature and goals to achieve it. This can make the story and characters look disjointed and confuse the player when they see the main character suddenly switching sides because of a few actions they did in a previous scene. When done poorly, having multiple endings can cause the player to have more questions than feel like the story is really resolved. Occasionally, the Multiple Endings are also couched with a non-linear plot — in which case, it can become frustrating-verging-on-impossible to find any of the multiple endings, especially if there are multiple "threads" in the plot. Multiple Endings are an effective way to avert Unstable Equilibrium . Instead of rewarding highly-skilled players with more power, reward them with less</ power, but give them a better ending if they can succeed. The opposite of Multiple Game Openings . Contrast with Morton's Fork . Compare and contrast Multiple-Choice Future and Multiple-Choice Past . As with all Ending Tropes , </ .

Teleportation is a great way to get from Point A to Point B, but too often it's limited by the distances it can cover, for one reason or another. So what do you do when you need to travel farther than your abilities allow? Easy! You just teleport over and over!</ Multistage Teleport is when a method of teleportation that is limited to a set distance can be used to get around that limit by making a journey in a series of shorter jumps. Almost always Justified , though the exact justification varies from work to work. Generally, the justification is less "We literally can't teleport long distances" and more "We can teleport long distances, but it's unsafe to do so", but both are frequently used. The most common justifications include: See also Teleport Spam , which is when a similar technique is used to disorient or overwhelm an opponent rather than to travel, and Light-Flicker Teleportation , which is often used several times in quick succession and thus approximates this effect on a small scale. Portal Networks can overlap with this, particularly when each portal in the network doesn't actually connect directly to each other portal, and a traveler therefore needs to go through each portal on the way. However, it's important to note that if the teleportation in a Portal Network is not explicitly or effectively limited by distance, then it's not actually this trope.

This is usually because they just can't accept the loss of someone who was close to them, and would rather live in an alternate self-created reality where that person is still alive. This loss, of course, can be even more</ crushing if they themselves</ were responsible for their beloved's death in some way The lover or "protector" of the corpse will frequently speak to them and imagine them speaking back, although this is not to be confused with a Dead Person Conversation , which is a conversation that may actually be taking place</ between a character and a spirit from the next world. Or even Talking to the Dead , where a character expects no answer but has to vent. No. In order for a situation to qualify as Mummies At The Dinner Table, one of the participants must be stone-cold dead and the other must be stone-cold crazy . Needless to say, the living one will often come across as a bit creepy to other people, even those who know nothing about their cosy little private life. Sometimes, however, the obsessed mourner will appear to be absolutely normal and personable — up until the Peek-a-Boo Corpse moment when the heroine accidentally walks into the room where their "beloved" is sitting. Then the mourner will go Ax-Crazy , and a classic horror chase will follow which may or may not end in the death of the hapless discoverer A lighter variation of this trope has the mourner obsessing over a beloved pet that he had stuffed and keeps around him, petting it and talking to it as though it's still alive. This is often played for comedy in the shows where this kind of thing is apt to appear There is also an evil variant, with a mortal foe instead of a friend or lover. Note that these cases only fit the trope if the keeper treats the corpse as if it were a live captive; more commonly, the villain knows perfectly well that the victim is deceased and is keeping the body around as a memento, a trophy, and/or a warning to others A Sub-Trope of Mundane Horror . Compare with I Love the Dead , Necromantic , A Love to Dismember . If the character can't believe or accept that someone has just died, it's Please Wake Up (if the denial grows into systematic self-deception, that trope can evolve into this one). If the character deceives other</ people while knowing the truth himself, it's Of Corpse He's Alive . If the target is not dead but merely pining for the fjords , it's Dude, She's Like, in a Coma! This trope also does not apply to a person who is fully aware that the loved one is dead and

treats the corpse as simply a(n often disturbing) form of memento. Such behaviour usually indicates mental problems, but of entirely different sorts

He doesn't really care if he's attacking genuine grave robbers or archaeologists who want to put him in a museum . He just knows that they are defiling his tomb . He's not necessarily smart or powerful, but when his icy hand grips someone's shoulder, even the manliest of men will let out a girlish scream. Sometimes he can announce his entrance with " Who Dares? to disturb my sleep?!" or something similar The mummy is one of The Undead , and typically a Sealed Evil in a Can . When active, its behavior is quite similar to the Zombie, Artificial or otherwise, but its embalmed flesh and ancient magic render it far sturdier than its rancid urban counterparts, to the extent that it is practically Implacable . Which is ironic, considering the opposite is true in real life; a real mummy will crumble to dust if you're not super careful with it More recent examples (mostly inspired by the 1999 film and its sequels) may make the Mummy closer to a lich or vampire , giving it more individuality and brain, as well ample magical powers (such as the ability to command "lesser" mummies and local Egyptian wildlife like scarab beetles) The Mummy completes the classic quartet of Dracula , Frankenstein's Monster , and the Wolfman . The four are the famous villains of the 1930-40s Universal monster movies When seen in kids' shows, brace yourself for a punnicane along the line of "I want my 'mummy'!" , or for people pulling the linen and causing them to twirl like a top. For teen or adult audiences, expect a creep-out reference to how mummies' brains were extracted during the preservation process The other stock Egyptian style villain alongside the Nepharious Pharaoh — there is a high chance the mummy was one of those before he died. See also Mummy Wrap ; for the entirely different type of character, when the mummy is female, beautiful, and serves as a Love Interest , see Seductive Mummy . Compare the Curse of the Pharaoh — sometimes the mummy themselves may be the instrument of revenge against those who dare to disturb their tomb, but this is not required. If the (rare) chance the mummy is friendly, see Chummy Mummy Also note that mummification rituals were not unique to Egypt. Thus, mummies may occasionally crop up from different necks of the woods, with Mayincatec mummies as probably the closest runner-up to the Egyptian variant in terms of popularity The Human Popsicle can serve as a science fictional variant on the mummy concept, depending how dead they were when they were frozen and how normal they are when they're revived

An index of tropes about mummies, which are preserved corpses that are often wrapped in gauze bandages, and they usually end up rising from their tombs as zombie-like beings. A quick overview: The Mundanes promise to eschew.. ... while still providing other instances of Applied Phlebotinum that do not break these rules Thanks to Science Marches On , there is also growing acceptance of very</ limited FTL based on the Alcubierre Drive and wormholes in more recent works, but it will not</ be a method of Casual Interstellar Travel , as the former will be prohibitively expensive and dangerous - effectively operating as a form of Ludicrous Speed - and the latter will be incredibly difficult, if not outright impossible</, to create with human tech, thus often being scavanged from Precursor ruins

A mundane ghost story is a scary story involving rational worries rather than implausible phobias Someone tells a Ghost Story in classic fashion, probably around a campfire or with a flashlight aimed up under the face, only the ghost story is about something that is not really scary in the traditional nightmare sense, but is more like Adult Fears : being stuck in a loveless marriage, living an unfulfilling life, sexual inadequacy, and so on. This is usually played for laughs, avoiding anything involving physical pain or death, dealing with something sillier like having to wear a stupid outfit to school, having a bad haircut, or eating something that tastes terrible This type of scary story usually bypasses fantastic and/or supernatural horrors found in the common ghost story, for something that tends to actually happen in real life to sane people

The usual horror tropes (fantastic monsters, ancient curses, Axe-Crazy maniacs, etc.) do not always work because this is too distant from what we may encounter in everyday life. Therefore some creators use the Mundane Horror The idea is to portray a seemingly comforting and everyday scene, but with some minor details which somehow "do not fit" and have dark implications (i. e. that the character is really in a Dark World , or we're looking Through the Eyes of Madness , or it is all a Dying Dream) A common way to do this is to take a normal scene then apply effects to it. For example, a group of children jumping rope is innocuous or even heartwarming in normal contexts. Slowing the footage down, making it black and white, desaturating the colour balance, blurring parts or all of it - or a combination thereof then altering the soundtrack so it's Creepy Children Singing an Ironic Nursery Rhyme instead of the normal lighthearted jumping cadence and you get a totally different effect from what is ostensibly the exact same scene Often features a Wham Line or a Wham Shot , and may overlap with Crapsaccharine World ; Bread, Eggs, Milk, Squick ; and Surprise Creepy . Can sometimes result in Fridge Horror if you don't immediately see the weirdness. A frequent result of A Glitch in the Matrix See also Uncanny Valley , when this trope is applied to characters rather than situations. Contrast Mundane Made Awesome

When you think about it, the vast majority of things we do in our everyday life are incredibly boring . Sports games? A bunch of people throw a ball around. Lunch? You put food in your mouth and chew it. Sex? A couple of people rub their genitals together. Talk about dull.

In the world of fiction, however, this kind of mundanity simply will not do (unless you're such a good writer that you can pull it off). This is especially</ noticeable when plot-relevant events of ''huge importance" are going on! Looks like we need some editing work from Doctor Fabulous if this is gonna get anywhere. To an otherwise mundane scene, we will thus add Gripping orchestral music (bonus points for ominous Latin chanting) Rock music also works. ...And all of a sudden, we've got something exciting</. Well, in theory anyway. Simply by reading this page , you've made it substantially more obvious to yourself when the film editor is just using these disclaimers to screw with your emotions, and indeed, overuse of these tone-changers will be obvious to nearly anyone. Of course, effective use of this trope will blind the viewer with sheer awesome to the point that they won't notice. Large Hams are the living embodiments of this trope. This trope is highly likely to contain Melodrama . When this gets overdone, you often end up with Bathos (which becomes Narm if not done on purpose). Compare Fence Painting when this technique is used by a character in-universe to draw people's attention to otherwise boring actions. See also Mundane Utility (for awesome</ tools that are used to do mundane things), Invisibility Flicker (which reminds you that stealth and awesome don't mix, except when ninjas are involved), Hair Flip (a common way of making a small head movement dramatic), and Mundane Object Amazement (more focused on characters being amazed by mundane objects). Contrast with Unusually Uninteresting Sight .

A character that is oblivious to the world around him has acquired or encountered a normal, everyday object. These objects can range from umbrellas, elevators, computers, doors, kitchen sinks, mirrors... anything that could be considered mundane and common to the culture that it comes from. This is usually followed by the character exploiting or praising the particular object while being amazed by its usefulness. This can also be the Running Gag for the series. These characters are usually one of the following: Generally, this trope is played for comedic effect. However, in some cases, the segment will be drama. Perhaps the character had too much fun or overestimated its usefulness, destroying the item in the process. Or perhaps they just ran over a stroke of bad luck, damaging it in the process. Either way, the character will cry over the object, and the ending will be set in a Heartwarming Moments way. Compare Incredibly Lame Fun , Easily Impressed and Kids Prefer Boxes . A subtrope for Mundane Made Awesome . Contrast Worthless Yellow Rocks . If the object is used to threaten, it's This Is My Boomstick .

Awesomeness put to mundane use. Just let loose your fire conjuring hands and... cook, or use ice powers to instantly chill your favorite drink, or something. Hey, sometimes With Great Power Comes Great Perks When you really get down to it, this is actually quite sensible — it's not like superheroes and superheroines are saving the world/fighting for their lives 24/7, and in most cases, it's not like they can simply "shut off" their powers . If it's more convenient, then why not</ make your life a little simpler? Call it " practice " if you have to justify it (or just ask them " What do you mean, it's not awesome? "). Similarly, if Everyone is a Super , not everybody will be keen on fighting or committing crime. That doesn't mean they won't find some way to make use of their abilities Failure to see possible uses other than this one

is a form of Misapplied Phlebotinum . Overpowered characters with a job description like this become Super-Powered Robot Meter Maids . Characters who are outright omnipotent who fall to this trope are All Powerful Bystanders . Martial Arts for Mundane Purposes is a subset of this trope, for when martial arts abilities are used for reasons other than fighting. Also an opposite of sorts to Cut Lex Luthor a Check , Inverse Law of Utility and Lethality , Reed Richards Is Useless and Useless Superpowers . If this is applied to killing someone (such as, say, a gigantic nuke against a feeble human), it may become There Is No Kill Like Overkill Diametric opposite to Just Think of the Potential . For an adult variation, see Power Perversion Potential . For a sister trope which takes this Up to Eleven , see Boxing Lessons for Superman . When done with wishes and boons, this might be a Mundane Wish . If the mundane utility would make for a career in its own right, then These Look Like Jobs for the Superman . And if the mundane utility is used for sports, then it's Muggle Sports, Super Athletes (usually defied) Also compare Utility Magic , for when the primary purpose of something which is awesome (magic, in this case) is something mundane, and Utility Weapon , for when something is designed to function as both a weapon and a tool. Compare Priceless Paperweight , which is using a priceless or important item for a mundane task

If your world is a Fantasy Kitchen Sink where the heroes spend every week battling vampires, aliens, ghosts and fairies, one easy way to mix things up a little is to scrap the supernatural element altogether for a chapter and have the heroes fight something relatively mundane, be it a serial killer, a robber or even just a murderously grumpy animal Of course, since the heroes spend most of their time putting down creatures that are generally more dangerous and powerful than human beings, it's common to make these villains even more of a threat — expect to see your heroes knocked about (physically or mentally) more than usual. Cannibals are a common choice, largely because they border on monster-level weirdness anyway and aren't quite as played out as the Serial Killer To help make the threat even more convincing, you can expect the writers to make these episodes darker than the usual fare, possibly through gruesome horror or psychological tension. The latter is particularly useful, since it can lead to the characters inflicting nasty violence on humans</ rather than monsters for once. If the heroes can't kill humans then expect a Karmic Death . And if the show is given to platitudes you can expect some " the real monster is man " philosophising at the end — even though the werewolves, zombies and demons that appear in all the other episodes make it clear that man is only one among the other real monsters</ The Mundanger may be part of a "Scooby-Doo" Hoax — though with deadlier consequences than Scooby-Doo would often encounter. Contrast How Unscientific! , where a show set in an ordinary world features a seemingly real supernatural event in one episode Compare They Look Just Like Everyone Else! and sister trope Mundangerous for superpowered beings being taken out by similarly low threat objects. A somewhat baroque means of murder, the killer shuts their victim in a coffin (knocking them out first is optional) and feeds the coffin into a crematorium oven. This both kills the victim and disposes of the body in one fell swoop. Occasionally the killer will opt to dispense with the coffin, or use some other incineration device such as a document burner. This trope can also be easily combined with Conveyor Belt of Doom . Furnace Body Disposal may come into play Note that in Real Life this wouldn't entirely work for the disposing of the body part, since cremation alone is insufficient for fully destroying the bones of the body (this being done later by placing them in a special grinding machine). Works great for the murder portion of the evening, though Useless trivia: a crematory oven is called a "retort" A Sub-Trope of Kill It with Fire . Smokestack Drop is a more accidental version. Love Triangles are tricky business. Trust us, we've already done the math It can get particularly twisted when some sides of the triangle are completely one-sided. Bob is in love with Alice, but Alice not only fails to realize it but is already in a relationship with Chris. This is a classic recipe for drama (or humor) but sometimes, it goes too far Sometimes, somehow, Bob gets the idea that Chris is the one in the way of Bob's happiness with Alice, and if Chris were to somehow have an "accident" , then surely Alice would come to love Bob instead. It's true — Love Makes You Evil and these characters are really</ Not Good with Rejection Not always the best thought-out plan, no. Sometimes, Bob may not even consider what would happen if Alice ever found out. In fact, in a lot of these situations, Bob doesn't even make any effort to hide his actions from her and seems to be convinced that she'll somehow fall in love with him as soon as he kills Chris If this isn't The Reveal for a Yandere , it's still very likely to be their most shocking moment Compare Opposites Attract Revenge and Comforting the Widow . This can overlap with Death by Woman Scorned if the hypotenuse in question is actually interfering with a relationship. Contrast I Want My Beloved to Be Happy , which may be subverted into this trope, and vice versa. Also compare the Scarpia Ultimatum , where the threat to murder the hypotenuse may or may not be carried out. Contrast If I Can't Have You... , for when it's the Cathetus (Alice, for those a little rusty on their geometry) who will be murdered. If this is done indirectly by setting the hypotenuse up to be killed, it's either an Uriah Gambit (if Bob does it intentionally) or Death of the Hypotenuse (if the intent is limited to the author). Extreme Sub-Trope of Removing the Rival When the official authors do this, it's Death of the Hypotenuse . When the fanfiction writers do this, it's Die for Our Ship . When Hazardous Water indirectly trying to kill you isn't good enough, it's time to take this to the extreme: The water itself has somehow developed a mind of its own. Current desire? Kill the meatbags. For obvious reasons, actual water trying to murder someone is a little unlikely, so a common workaround is that the water is being possessed or manipulated by a malevolent force — in which case, the only way to stop it is by taking out whoever is doing the controlling . (This doesn't always mean killing</ them; sometimes the heroes can reach an agreement, such as doing a favor or request in return for stopping the water's deadly rampage.) Compare and contrast Evil

Murphy's Law is summed up as "If something can</ be used or done a right way and a wrong way, and the wrong way will lead to catastrophe , it will</ be used or done the wrong way ." As originally applied, Murphy's Law — coined by, and named after, U.S. Air Force engineer — was intended not as ironic humor but as a serious admonition to engineers: a device shouldn't be made so that it can</ be used incorrectly in the first place, a practice commonly referred to as Idiot-Proofing or "defensive design". For instance, the loss of several F-111 (TFX) aircraft during the Vietnam War happened due to the backwards insertion of a graphite pin in the rudder assembly Had Murphy's Law been heeded, the pin would have been designed so that it could not be inserted backwards</. One of Murphy's co-workers would later sum up the engineer's idea as "If there is any way to do it wrong, [the technician] will [achieve it]". In other words, anything that can</ happen, will</ happen. Murphy's Law is also the most commonly used term for the infamously pessimistic maxim, "Anything that can go wrong, will go wrong" applied to life and fate in general. The creator was not happy that his important advice was taken out of context — this itself became an example of Murphy's Law in action . Given that the actual Murphy's Law is something different, we cover this mutation under Finagle's Law instead. However, on this wiki, it references quite a few things, so we've made this page to help people figure out which one they really want. Arthur Bloch's 1977 book Murphy's Law, and Other Reasons Why Things Go WRONG</ popularized the term , if only mostly with the above deviation. The first sequel, Murphy's Law Book Two</, disseminated Hanlon's Razor , which is often a good explanation for

why the wrong way was employed. Another way of looking at this law is the '50-50-90 Rule', which is described as 'If there is a 50-50 chance, 90% of the time it will go wrong'. If you want... Also, Murphy was an optimist.

In Real Life , a person's physique, if not their physical size, is generally a dependable indicator of their physical strength. Muscle strength (force applied in Newtons) is proportional to the 'physiological cross-sectional area' (PCSA) or the total number of fascicles of the muscle. All things being equal, more muscle translates to more strength. In fiction, all bets are off. Muscles? Who needs 'em? The Pintsized Powerhouse is able to physically outperform heavily-muscled guys ten times his size and is more than capable of sending them flying with a single punch, physics be damned. A thin, wiry character may have no difficulty lifting or punching way above their weight class. This is generally done to show just how badass they really are. Usually lampshaded by Super Strength , and often more dubiously by a Charles Atlas Superpower . Alternatively, The Big Guy may not be very strong at all, but usually his strength is simply dwarfed in comparison. The Big Guy being physically dominated is usually a Giant Mook or similarly unimportant character. Generally, when it comes to important Big Guys , Muscles Are Meaningful . Weaker characters beating the stronger characters is often a demonstration of the fact that skill and other factors can trump strength in a fight, which is Truth in Television to a certain degree, but their methods have nothing to do with this trope. There are several related tropes: Note that this trope is specifically about instances in which the person with the seemingly weaker body possesses more actual strength</ than a heavily muscled opponent. This does not include characters who only win because of other characteristics that make them superior to their enemies, like speed or weapon proficiency. It's a common occurrence in Fighting Games that a speedy character is considered superior to the Mighty Glacier due to their speed and ability to perform Combos , but they only fit here if they are not only faster, but their attacks actually pack more of a punch as well. Contrast Stout Strength , where the character has the muscle, he just has fat on top of it as well, and Muscles Are Meaningful , where the muscles DO make a difference. When it appears on comic book heroes, it is always a case of Heroic Build . Compare and contrast Clark Kent Outfit , when a character looks</ meek... until he takes his shirt off, and it's revealed that he has abs of steel. Musicalis Interruptus is a form of Musical Gag . A song is gearing up or getting into full swing, and something interrupts the singer, so the music abruptly stops. Heroes will interrupt villains. Villains will interrupt the hero. Sidekick types will interrupt either or both. Sometimes the singer will even interrupt himself. Occasionally used by Media Watchdogs to allow the song to flavor the scene, but stop short of something they consider objectionable for the audience. In any case, the song usually will not continue after the interruption For added effect, there is sometimes a Record Needle Scratch just as the music/action stops. The silence that follows may be punctuated with one or more sound effects such as a glass breaking, or a cat yowling in the distance (or perhaps both) This can even happen a breath or a word before the song would've been over anyway

In the movie 9 </ , the song "Take It All" in the film stops abruptly In about three words before the song actually finishes. This is used In for dramatic effect, the director said in a commentary about it, In because "there is nothing left to say". 3 Idiots The Adventures In of Super Mario Bros. 3 </ episode "Dadzilla", Kootie Pie and In Big Mouth take over the Hollywood Bowl and perform their own In concert. A specific musical cue—not in the BGM , but in actual music being played by someone or something In-Universe —serves as the trigger for some event. The more dramatic the event, the more likely that the trigger occurs at the end of the song, in which case the song functions as a melodic (and quantum-mechanical-anomaly-proof) form of the Dramatic Countdown Clock Diabolical Masterminds are particularly prone to incorporating music into their master plan. Maybe manipulating a public performance to their own ends is their way of showing off their Chessmaster cred, or maybe they're just Wicked Cultured . The downside of this, of course, is that any hero can bring the plan crashing down simply by disrupting the song The Xylophone Gag is a very specific subtrope of this. Music Stories are like Sports Stories , but instead of sport players and teams trying to win games, the Music Stories are about musicians or music groups trying to overcome challenges related to performing music or using musical activities to solve other problems in their lives. Series about the every day lives of a fictional or fictionalized music star might also be considered Music Stories or partial examples if musical performance is a regularly featured element of the story. Sometimes the music group also gets involved in non-musical adventures that may cross into other genres, however musical performances will still play a major role Some of the many common plots include individuals or bands trying to make it big in a competitive and sometimes hostile music industry, music teachers trying to make a difference in the lives of their students either in an established music group that has declined or by creating a new music group, fictionalized Biopics about historic Real Life musicians and composers, and kids (often troubled) pursuing their musical dreams by joining school choir or band, and then trying to balance their musical training with their academics and personal life. Sometimes the existence of the music group might be threatened with a funding cut that would destroy it, and the musical group must revitalize and revamp itself in order to impress the powers that be with their newfound talent and popularity to retain their funding source. Other times the music group might be raising money for a charity outside of itself Unlike The Musical , dialog and exposition is not told primarily through song, and characters mostly confine their music to performances and practicing rather than, say, spontaneously breaking out into an elaborate choreographed song and dance number during their high school lunch break. Music Stories are mostly not musicals, but a few musicals are Music Stories because their plot centers on music training and performance. Art produced in Germany has had a startling tendency to be viewed by non-Germans through the prism of is this Nazism or not?</ This especially applies to German music. And, indeed, to any music that "sounds German" regardless of whether or not it was made in Germany Music To Invade Poland To refers to any music that gets accused of being Nazi because it sounds "Germanic," "Teutonic," " Wagnerian ," or the like For the most part, this stuff does not advocate National Socialism. Unfortunately, the use of bombastic, dramatic, "Germanic-sounding" Orchestral Bombing as soundtracks in World War II films has cemented the association between grandiose, orchestral marching music set to relatively steady tempos with authoritarian and warmongering political movements This is not yet a Discredited Trope . The Trope Namer is a particularly infamous review of Rammstein 's album Mutter</; the review described

the album as "Music To Invade Poland To" (although Rammstein, who are a bunch of lefties from the former East Germany, have nothing to do with neo-Nazism, unlike real neo-Nazi bands like the infamous, supposedly reformed "Böhse Onkelz" do). This trope is actually very common in Germany to this day, where it isn't even limited to music. Pretty much everything that could invoke similar associations creates the same feeling of unease with most Germans Not to be confused with Loud of War . May be associated with Germanic Depressives Actual military music from the Third Reich tends to be banal and uninspiring (e.g. , a chirpy little ditty featured in Battle of the Bulge </), and was more often than not intended to be sung while... you know, actually invading Poland.. Incidentally, German music earlier came under attack during the anti-German hysteria of World War I . A generation before it became "Music to Invade Poland To", German music was denounced as "Music to Invade Belgium To"

Going back in various mythologies is the idea that supernatural beings — such as vampires, ghosts, demons, witches, what have you — cannot enter into a home unless invited to do so. Often such beings will try to gain entrance by tricking a person into believing they are someone else. Once invited, don't expect locked doors to be an obstacle to their entry This trope is very old. Traditionally, this trope applied to mythical creatures in general, and there's a load of things that are supposed to invite them in, like putting new shoes on the table, or bringing white hawthorn into the house. Now you know Its applications to different types of supernatural creatures have expanded over the years. More often than not the original conceptions of these mythical creatures are identifiable by this trope. Oddly enough,

its application to vampires begins with Bram Stoker— Varney and Lord Ruthven , for example, never had this problem. Other creatures strongly associated with it are ghosts and demons For any story that examines the trope in detail, expect to see creatures dealing with common buildings where the public is invited, invitations are explicit or implied, and the concept of revocation of invitation to be played with. A particularly common gag involves the implications of putting a "Welcome" mat outside your door Sub-Trope of Supernatural Repellent . Related to Sacred Hospitality , which also treats the etiquette of hospitality as Serious Business . Invited as Dinner , in which the predator invites the unwitting prey instead of the other way around, can be considered an inversion of the examples regarding vampires

So, The Hero has been on his epic quest for quite a while now. Never tiring, he's been following the Big Bad valiantly, and now he's finally going to catch up to him. Ooh, there's so going to be an epic fight soon.. Another version of the trope is when the Hero has actually caught the Big Bad, who is due to be tried and sentenced. However, there's some kind of loophole in the system, or the Big Bad's got the best legal assistance ever seen, or the Big Bad's status is enough to get him special privileges. The Big Bad's going to walk, or at least get a lesser sentence, and the Hero can only watch This trope is often used to enforce a Status Quo in works, to put off the final fight, or to bring back a Big Bad later for the heroes to finally fight Related to Conviction by Contradiction , and might be followed by We Will Meet Again . Not to be confused with Forced to Watch , or Watching Troy Burn

He's the joker of the group. She's the Emotionless Girl or perhaps the Tsundere , maybe both. He makes it his mission in life to make her let out one of the most powerful emotional responses. It's a matter of personal pride. If he can break through her shell, he can brag about it for years Said girl's friends will wonder why she puts up with it. Don't expect his jokes to actually be funny. The comedy really comes from her reaction, or lack thereof . Compare Straight Man and Wise Guy for a similar setup This is often played as romantic interest. After all, guys like girls that laugh at their jokes and girls like guys who can make them laugh. And even if she doesn't laugh, she does at least listen. If it's meant to become a romantic relationship, don't expect them to resolve it anytime soon Most of the time, what finally makes her laugh wasn't even intended to be funny Can result in a When She Smiles moment, where the guy falls even harder for her when he finally sees her radiant smile

A common misconception about law enforcement. A drug dealer or prostitute is chatting with a potential customer. But before they can actually go through with the deal, the pusher/hooker asks a simple question. "Are you a cop?" According to pop culture, an undercover cop has to answer truthfully, otherwise they're guilty of entrapment. The cop may employ careful use of Exact Words , saying something to the effect of "Do I look like a cop to you?", in an effort to dodge the question without outright lying, or in rare cases, may come right out and admit the truth. Contrary to popular belief, this is not</ Truth in Television : Entrapment is specifically when

a law enforcement officer induces another person into committing a crime when they would have been unlikely to do so had the cop not approached them</ . An officer has the complete legal right to lie about their identity if the job requires it. It isn't entrapment because whether or not the person is a cop would have no effect on a criminal's intentions to commit illegal acts, and undercover stings would be pretty useless if a cop was required to blow their cover whenever asked a single question. Ask this of a real life undercover cop, and they'll just say "no, I'm not a cop." All that said, one of the reasons that this trope still exists in pop culture and the public consciousness is because cops are in no hurry to correct it. Letting this misinformation float around helps the police with their job, after all. If people think that an undercover cop has to say they're a cop when asked, answering with a straightforward "no" can ease the tension in an undercover sting. As humans evolve , some will start showing abilities that will scare the living snot out of the normal people around them. If enough of these people are walking around, you can be sure the normal population will demand a government organization dedicated to observing and controlling these evolved people This organization's first act will be to make damn sure that every one of these evolved people is a member of said organization whether they want to be or not At one level this makes some sense. The sudden presence of telepaths, telekinetics, teleporters, phasers, etc . could throw society into chaos as long held concepts of privacy and security might be in danger of being thrown onto the scrap heap. But the new organization will almost always go overboard as it was initially formed out of panic . The normals who control the organization will start to see the supers as weapons or tools to be exploited . Eventually an organization composed mainly of superhuman mutants may start looking at the normals around it as an impediment to their natural supremacy . Things will go rapidly downhill from there There will be mutants who will want no part of this organization, seeking only to live their lives in peace. As if they will be given the choice . The organization will hunt down every mutant it can find to bring into the fold . Those who refuse can look forward to imprisonment, death or life on the run , except for those few who completely renounce the use of their powers Even though they coerce superhumans into working for them, the Mutant Draft Board is not always portrayed as completely evil. It is not uncommon for the superpowered individuals to end up working for the Board willingly, though often with reservations about their manipulative commanders See the Cape Busters for an organization of non-supers attempting to wage a war against supers. See Fantastic Recruitment Drive for a cuddlier variant. See Superhuman Trafficking for cases where supers are exploited rather than merely monitored and regulated

In Warhammer 40,000 </, humans in the Imperium who are gifted s with Psychic Powers are trained by the Adeptus Astra Telepathica,s in cooperation with the Inquisition . Given the source of these s abilities, and the potential "perils of the warp" , it is perhapss

Unregulated psykers deemed uncontrollable (and especially s those affected by warp entities) are treated harshly , whilst s those who are merely too weak or undisciplined to serve are put s to other use Grrl Power </: Variant. Supers are not drafted, s there's no Super Registration Act , and in fact powers are s protected under Second Amendment rights. Working for ARCHON is very</ lucrative, and s the team has successfully rehabilitated several villains simply s by offering them job s

Mutants, also known as Deviants and Freaks, are, by general definition, organisms that have undergone a permanent change to their genetic structure relative to the norm for their species. Sometimes this results in a new race or breed, or even, as mutations accumulate over time, a new species (speciation), and sometimes it's a one-off that produces effects that don't breed true, or are so negative that they prevent the individual mutant from successfully surviving and breeding. Technically, any deviation in a person's genetic code that isn't a "simple" combination of their parents' alleles would be a mutation. On average, human beings have 150 to 175 mutations each (mostly minor transcription errors or swapped chromatid segments), the vast majority of which are undetectable. So technically, we're all in some sense mutants. Mutants in fiction follow this same basic idea (though normally portrayed in biologically implausible or impossible ways), but have a much wider variety of phenotype effects than Real Life mutations because of Hollywood Evolution . Fictional mutants are often Super Heroes , because "mutation" is a very easy way to get multiple power sets from a single Super Hero Origin (this is why X-Men </, the first major comic to have Loads and Loads of Characters introduced all at once, starred a group of mutants). Just as often, humans or other animals are mutated somehow into hideous Always Chaotic Evil monsters for the heroes to fight, or pitiful misunderstood freaks . Because even low levels of radiation can be deadly with prolonged exposure, it's common for stories to have Radiation-Immune Mutants who can survive, thrive on, or require</ radiation to live. There are two different ways to use the word Mutant: it can refer to characters who were born with a mutation, such as most members of the X-Men . Marvel Comics , the storytellers that have to be the most specific about this kind of thing, refers to these as . The other definition is things that have had their genetic code changed after birth, whether by radiation damage , gene therapy , or a pandemic disease . Marvel calls these . Usually in fiction, these after-market mutations also alter germ cells and get passed on to the mutate's kids . For clarity's sake (and in accordance with the Mutant Registration Act), we keep the examples of these two different kinds of mutation separate. The mutates variety (and certain mutants with an Unstable Genetic Code) are prone to experiencing Transformation Horror in some form or fashion. May overlap with Evolutionary Levels if the mutants are " superior " to mankind. A type of Super Hero Origin . Very frequent targets for Fantastic Racism . Outside the superhero genre, mutants are most often encountered After the End . A large body of examples of fictional mutants can also be seen on Wikipedia :

Expect a lot of Clothing Damage and an attitude of Tranquil Fury . Can be just as easily Played for Laughs or Played for Drama — the latter can work as a subversion of Just a Flesh Wound , as it shows that what doesn't kill you can still slow you down a hell of a lot Rasputinian Death is a subtrope where the injuries are each of the No One Could Survive That! variety, and the final fatality actually sticks Compare: Crush Parade when characters and objects are repeatedly run over and trampled by different things; Covered in Scars when a character bears the marks of past injuries for the rest of his life. Serial Prostheses might result from this. Contrast Death by Disfigurement , where one lasting wound will spell a death sentence not very sooner

In Show A, you watch TV. In show B, the TV watches YOU. This is a special kind of crossover trope in which the characters from Show A will enter the universe of Show B—both shows of which are "real" to us. In other words, neither is a Show Within a Show . In addition to finding out that they're trapped in the universe of Show B, the characters of Show A discover that they themselves are the subject of a Show A in the universe of Show B. The characters from Show A are, in essence, simultaneously</ Trapped in TV Land and a Refugee from TV Land . This isn't Real World Episode , since both universes are depicted as being equally "real" . A situation in which Show A is fictional in Show B and Show B is fictional in Show A isn't an example of this trope if they never share a continuity; if in A's continuity B is just fiction and vice versa. This could happen with two completely unrelated works that each incorporate real world elements that happen to include the other work. This is a relatively common trope used in Crossover Fan Fic . Strictly speaking , this kind of crossover should never logically be allowed to exist. At the very least, the particular episode of each series or work which references the other should be assumed to not exist within the other's universe . Otherwise, you would have a situation wherein it would be distinctly possible for the main characters to see the TV show of their entire reality within said reality, realize their entire existence was a lie , and freak out . And we wouldn't want that, now would we? One possible justification would be if the two worlds are simply Alternate Universes and the "shows" in question are based on visions people have from the other world . In this case, expect the characters trying to establish what in this show is correct and what is not. It could also be the case that the creators of Show B, within the universe of Show A, simply decided to set Show B in a world where the main characters of Show A don't exist , but acknowledge their impact by making them fictional instead - though this explanation breaks down if the world at large, and particularly the media, shouldn't know about the events of Show A in the first place. Unfortunately, the Fiction Identity Postulate proves that all fiction is equally unreal. And anyone living in an Alternate Universe may be, by definition, fictional. This is where Recursive Canon meets Recursive Reality . May create an accidental Intercontinuity Crossover . See also Celebrity Paradox . Comic Books Are Real is a one-sided version, usually dealing with a Show Within a Show instead of another real-life series. Compare Faeries Don't Believe in Humans, Either , where each side believes</ the other is only stories prior to meeting, but both have always been fact and that's what the stories are based on. Contrast Stable Time Loop , which leads to a similar Ontological Paradox .

Due to the very nature of The Masquerade , one of the toughest things about it is finding other people who are also in on the Masquerade. This is justified since it wouldn't be very good form to go around asking everyone you meet if they know that there's a secret society of aliens or magical creatures living among normal people. If everyone does their job right, everyone in on the masquerade should appear like ordinary Muggles ... even to each other</ . This trope can lead to some really magnificent misunderstandings, especially in romance situations, and the most obvious sign is when you find yourself thinking "Now if they'd just been honest with each other, we could have avoided a lot of trouble here." Of course, this type of situation could lead to many surprises. Suppose you're a mystical creature living in a world where mystical creatures are thought not to exist, and you must maintain the persona of being an ordinary person. You know that there are others like you that exist, but other than your close friends and family , you don't know who or where they are. You try your best to maintain your disguise, lying to all the muggles at school and at your job. But one of them is getting incredibly close to your secret. You've known this person for years, and never thought him to be anything more than an ordinary muggle. But when he discovers your secret , it's actually okay, because he has the same secret himself! In Fantasy Kitchen Sink situations (or crossover) they might have a completely different secret. If not a directly opposed faction, it's usually not a problem, as it is easy to agree to "not reveal your secret if you don't reveal mine." Of course, it could work the other way around too. The trope is invoked whenever a character maintaining the masquerade discovers that another person, whom they've thought of for a while as an ordinary muggle, is revealed to them to also be a part of the Masquerade. Whether the second person has already known of the first person's involvement in the masquerade is irrelevant. Related to Right Hand vs. Left Hand . In extreme cases can result in a Flock of Wolves .

You probably know her. You might even live</ with her. A mother who tries too hard to control their children's lives. Often (but certainly not always), they are the mothers of sons, and for whatever reasons can have a bit of trouble cutting the apron strings; as a result, no matter how old the boy (or, for added humor value, man) is, he'll be mothered relentlessly , his mother absolutely smothering him with parental affection... and authority. Using either carrot or stick (sometimes both), his mother will go to any lengths to make sure that, whether he wants to or not, he's not going to be leaving his mother's embrace any time soon. Any attempts on his part will usually result in a passive-aggressive guilt trip for trying to break away and do his own thing. Her poor son, as a result of such domination and badgering, usually ends up a Momma's Boy . A lot of these mothers are Jewish for some reason, though they are also oftentimes Catholic, serving double-duty as a conduit for Catholic guilt The family where the Beloved Smother lives usually feature a Disappeared Dad . The Smother may be a single mother, or the father is a Henpecked Husband ; either way, he takes no independent part in raising the child, passing all control to her. The child usually has no siblings and more often than not is born late in their mother's life. Bonus points if the Beloved Smother has had trouble getting pregnant or if the child themself has or had some illness to protect from and take care of The greatest threat, however, as perceived by the Smother, lies in the opposite sex. To a son, she will constantly preach that all women are Gold Diggers who are plotting towards a Divorce

Assets Conflict ; to a daughter, that All Men Are Perverts who will leave her barefoot and pregnant, literally. Any Love Interest that her son may attract will be immediately regarded as a rival for the son's love by the Beloved Smother, and the woman will be belittled, harassed and spied-on to varying degrees of obsession. (Hell, the Smother might actually have been through it herself.) If her son happens to break free and marry the woman he loves, then that unfortunate woman will find herself coping with the Mother-In-Law From Hell , who will be hyper-critical, dismissive and condemning of everything she does to the point where it may even break the marriage apart if her son doesn't do something to curtail his mother's interference Alternatively, if she spots a potential mate for her son of whom she does</ approve, she will relentlessly try to pair them up , ignoring any signs that the "happy couple" are losing interest in each other (or never were romantically attracted in the first place) In the most favorable depiction, the Beloved Smother genuinely does love her son and wants him to be happy; she just has a little bit of trouble letting him go, and her plot arc usually revolves around the gradual realization that he's his own man and that she needs to cut the apron strings for his own good (and, usually, hers as well), and that his moving away from her doesn't equal that he doesn't love her in return. At worst, she's a Control Freak Evil Matriarch who will stop at nothing — not even murder — to make sure that Mommy's Little Angel remains with her at all costs . For added Squick value, Mommy and Son may be a bit too close in the wrong kinds of ways .. It is rarer for daughters in fiction to have trouble with the Smother, but not unheard of; if the girl is unlucky enough to have a Smother, then things will be much the same (although rather than actively preventing their children from having a life outside of her, a Smother who has a daughter will usually instead start badgering her about why they aren't married and providing her with grandchildren on a constant basis). With daughters, however, the dominance may sometimes have an edge of competition as well, as they</ tend to view their own daughters</ as rivals. Smothers of daughters are often ex- Alpha Bitches or cheerleaders who tend to bully and harass their daughters into following their footsteps as a way of living their past glories through their children Like most tropes, it's a Truth in Television ; psychiatrist Carl Jung identified this archetype as the Terrible Mother, an over-nurturer who, in smothering her child, ends up stifling them to the point of hampering individuation and personal growth. In contemporary psychology, the behavior of the Smother is consistent with parent-child codependency, a trait of Borderline Personality Disorder When a queen is acting as regent , she often will smother the young king as well, and expect to control the king after he comes of age If she actually succeeds in taking control of her children, those characters will end up with Mommy Issues May double up with Safety Worst . May overlap with Meddling Parents and Education Mama Compare Overprotective Dad and/or Fantasy-Forbidding Father . Contrast Hands-Off Parenting . If it's a more action-based series where the offspring being "smothered" is in trouble and the Smother is an Action Mom , see Mama Bear . If the mom was a child star and pushes her kid into stardom, she's a Stage Mom . Often overlaps with Obnoxious Entitled Housewife if the mom constantly makes demands in the name of her child. May lead to Calling the Old Man Out or an Anti-Smother Love Talk . If the mom is not just controlling but a straight-up villain using their son as a pawn, see Villainous Mother-Son Duo

The character is a noble, or at least decent, soldier, who doesn't like the policies of their nation and/or state, but fights for it anyway. This person is loyal to their nation, not its leader. Exactly how</ noble or decent someone can be while helping their organisation do questionable deeds because it is "their duty" varies depending on the specific character and their actions. Moral Dissonance is something anyone can have and evil leaders are very good at promoting and exploiting nationalism , particularly when it comes to inter-national conflict and war. One does often wonder why someone so honorable fights for an evil cause rather than deserting At worst, this sort of thing can lead to the "I was Just Following Orders " defense. More positively, it may result in them questioning their Blind Obedience and defecting or rebelling. The title is a common variation from a quote from the USA's naval commander Stephen Decatur...which is all too often taken out of context . For immediately beforehand, Decatur had toasted: "To our country! In her intercourse with foreign nations, may she always be in the right." Later, the USA's Senator Carl Schurz gave his own interpretation of the statement: "My country, right or wrong; if right, to be kept right; and if wrong, to be set right</ ." This latter take, along with similar anecdotes from others, has also come into prominence in how both nationalism and patriotism are portrayed. (G. K. Chesterton analogized the simplistic version to saying "my mother, drunk or sober." It still fits with the more nuanced version: you may well be loyal to your mother drunk or sober, and still take a different approach to the two situations.) No Real Life Examples, Please! Which country is "wrong" or "right" is extremely subjective because widespread, unconscious belief in the principles of nationalism makes people believe that their chosen nation is always 'more right'. Let's not start up a Flame War over this, thanks guys. (Even though the trope doesn't have to be only about who is "right or wrong" among the country leaders, but about unquestioned or blind loyalty of (mostly) soldiers towards them due to patriotism, be it genuine or indoctrinated, including historically) Compare Realpolitik , Honor Before Reason , My Master, Right or Wrong , Lawful Stupid , Just Following Orders , Tautological Templar , and Culture Justifies Anything . Contrast My Country Tis of Thee That I Sting , where someone's love of country inspires them to want</ to criticize it.

While patriotism can be noble or nice, there can be times when one is ashamed of their country. Usually it's politically or socially motivated. Some people dislike the imperialistic, militaristic, chauvinistic or nationalistic approach of their own government and fellow citizens. These are the people who feel that My Country, Right or Wrong is mostly wrong and have nothing but contempt for Misplaced Nationalism . They will vocally criticize their own country and feel that they are in their right to do so since they were born there themselves. Though they can sometimes be categorized as misanthropes or a Boomerang Bigot there are also enough examples of people having good reasons and/or arguments to criticize their country of birth. This can result into active protest marches with the intent to change things. Or, in a less drastic fashion, result in Self-Deprecation comedy, done for satirical purposes. In some countries such criticism is seen as highly unpatriotic, even treasonous. Dictatorships are the most obvious example, but even in some democratic countries expressing such opinions can bring people into serious trouble, and politicians opposing those in power will take pains to emphasize that

they love their country despite their disagreements. Yet, in a truly free society criticism of your own country should be respected. Lots of sociological revolutions and changes have occurred just because people questioned the ideas of their government and society, and many modern countries trace their founding date to such uprisings, celebrating them with patriotic songs and holidays. People who embody this trope usually consider criticism of their homeland as an act of patriotism in itself, reflecting the other part of My Country, Right or Wrong : if wrong to be set right.</ Contrast with Propaganda Piece . See Misplaced Nationalism for criticism of one people or country towards another. Offending the Creator's Own would be the religious and ethnic equivalent of this trope. See also Cultural Cringe , when this is done against a creator's culture, and Biting-the-Hand Humor , when this is done against the production's distributor. Compare Hail to the Thief , when criticism is directed toward the head of state, often in song. Please make sure that only examples are added where the criticism is made by a person born in the country they criticize.

Somewhere in between the Law of Disproportionate Response and Berserk Button Alice and Bob are fighting. Alice manages to destroy/ruin/mangle Bob's shirt/sunglasses/hair/whatever. This unhinges Bob and he suddenly goes into Determinator mode. While the destroyed item is often a #1 Dime , the reaction usually comes out of the blue Not necessarily something to make him go berserk, but to Bob, it's like she kicked the dog . If Alice was bad before, now she's unforgivable Can be a Stock Phrase . Compare Lost Food Grievance and Wardrobe Wound

A standard comedy trope which, at its core, takes the form: It is often expanded to mention two or more groups that form a supergroup: In either version, Bob</ is already expected to be among the group(s) in question, but is singled out as if he's not , usually at Bob's expense; "Bob" may be anyone, including the Butt-Monkey or an Acceptable Target . In extreme cases, the group will be received with cheers, and the name of Bob</ will be received by Chirping Crickets . This can be Played for Laughs in cases where it's literally impossible for Bob not</ to be a member of the groups mentioned. It can also be used to deliver a Stealth Insult : "We welcome members of all benevolent professions, as well as lawyers ." Or, inverted, it can even deliver a compliment: "You morons, and Bob." In cultures with a tradition of adventuring, there is often a yearly tragedy in which families are temporarily split up because some of the men have to be away trading , or fighting or bringing animals to market or the like. This brings in the character known as My Girl Back Home. She is almost Always Female (hence the title), though a child or an old man would work. The male version of Girls Back

Home waiting for female adventurers are only a recent storytelling innovation, as adventuring was mostly masculine work in most cultures and time periods and stories reflected that. Girls Back Home tend to be spouses or lovers though anyone with whom the character in question has a close relationship will do. Expect a Girl Back Home to be The Woobie , though she will likely hide her emotions under a shell of stoicism , at least until she is alone . In the meantime, they will always worry about her and feel guilty for leaving. That never persuades him to stay home, of course, because otherwise we won't have a story. Another trait of Girls Back Home is that they often occupy only a small part of the story except in the thoughts of The Hero. Also, no matter what happens, if you have a girl back home, show a photo of her to anyone! Related to I Will Wait for You and Long-Distance Relationship (although that one is a bit more gender-neutral in who gets left behind). You may have to return abruptly for You Have Waited Long Enough . Compare and contrast Dad's Off Fighting in the War . Aversion (sort of) of Battle Couple .

A well-intentioned but misguided character — very likely a Tragic Hero , a Tragic Villain or Anti-Villain — comes to realize that their actions have caused incredible damage, physical pain, emotional pain, or even loss of life. The usual line that comes after this is the title of the article (with or without the "My God"). Tears of Remorse may accompany it Often the realization only comes when someone/something close to the person is hurt or destroyed. In quite a few cases, that "someone/something close" is the very entity they were trying to get rid of to begin with Usually delivered dramatically, sometimes, well, over-the-top . A villain might utter this line if they're about to take the Last-Second Chance . Or a hero after being freed from The Virus , being Brainwashed and Crazy , or a Superpowered Evil Side , or after making an unintentional but catastrophic mistake Sometimes followed by Must Make Amends , other times by an Ignored Epiphany . This trope is almost always the cause of The Atoner's Heel–Face Turn with the memory used as a constant reminder of why they must follow the path of atonement. Can also lead into He Who Fights Monsters or a Guilt-Induced Nightmare These Hands Have Killed is related but distinct, because it can be a reaction even to a justifiable killing See also Screaming at Squick and Bleed 'em and Weep Often the result if the protagonist becomes an Unwitting Pawn . Sometimes combined with Heroic BSoD or Despair Event Horizon ; common with Villainous BSoD . Can be a self-inflicted What the Hell, Hero? Contrast I Did What I Had to Do , Be All My Sins Remembered , and I Regret Nothing . Compare It's All My Fault , Heel Realization and Kick the Morality Pet . See also Out, Damned Spot! , Being Evil Sucks , Nice Job Breaking It, Hero! , and Sympathetic Murder Backstory . This sort of moment is often why a Regretful Traitor feels that regret. If it's done by two or more characters who are fighting, then it's Dissension Remorse . May be the result of an all too successful Pygmalion Plot to Teach Him Anger . When a work tries to deliberately invoke this as an audience reaction, that's You Bastard! (whether it's successful or not). Although they are not related, it's possible to overlap with What Have I Become? If "My God " is taken literally, it may lead to a Heel–Faith Turn

Nothing defines a hero better than his morals, and the biggest sympathy point can be guilt over some monumental screw-up that taught the hero to buckle down and stop taking his job too lightly. This is sometimes related to the origin of a Superhero , but has more impact when the hero's career has otherwise been going well for a while. From a philosophical standpoint, this makes sense — if someone wins all the time, as heroes tend to do , they would be more defined by their failures than their successes. In Marvel Comics , this is sometimes a consistent psychological flaw (the "Marvel Flaw") which occasionally prevents a hero from succeeding. The hero will often declare " It's All My Fault " while their friends and family say " You Did Everything You Could ." The hero may recover from this and when they do, it's usually a sign they have grown , although retcons can cause an unpleasant return to status quo . The Failure Knight has this as part of his backstory to explain why he is so devoted to his new charge. Often produces a combination of Past Experience Nightmares and Anxiety Dreams . See I Let Gwen Stacy Die for one of the most common failures. Might result in We Used to Be Friends . Often happens to heroes who fail to make amends . Can be a Career-Building Blunder . When the failure is what put the character on the path to being the current (better) person s/he is now, it's Necessary Fail . If the plot brings about an opportunity to correct or make up for their failure, you have My Greatest Second Chance . If failure puts the hero in a funk that takes years to shake off then you have a Scrap Heap Hero . For Real Life examples from creators, see Old Shame .

I will not buy this trope description, it is scratched. A character thinks they can speak Hungarian (or whatever), but fails comedically and says something entirely different than what was intended — often complete nonsense or something rude. Consulting a (dirty) Hungarian-to-English phrasebook, they then proceed to walk into a tobacco shop and ask the guy at the counter, "Can I please buy some matches?" but they end up actually saying "My hovercraft is full of eels." Hilarity Ensues . This typically has nothing to do with bad translations; the original speech was incorrect. For bad translations, see Either "World Domination", or Something About Bananas , "Blind Idiot" Translation , or Translation Train Wreck . However, if the language being spoken isn't the language of the work as a whole, there's usually a translation back so that the audience can see just how wrong the character's speech actually was. For example, Bob thinks he speaks French well. He speaks in French to a waiter, who looks at him oddly and says "Monsieur, I do not think that you really meant to say that there is a blue banana in your navel." Although this trope is Played for Laughs , rare serious examples are known to exist where Poor Communication Kills . This is only rarely Truth in Television , mostly in relation to tonal languages such as Mandarin Chinese and specific (such as the Spanish word "embarazada," meaning "pregnant"). Most of the time, someone who speaks a language poorly just speaks it slowly, with a poor accent, and stumbling over vocabulary and grammar. Even if this does occur, the listener can usually tell what mistake the speaker made; if someone said "I like to eat pincakes," in English, you wouldn't assume that they are thinking of some sort of cake made from pins. In English</, "My hovercraft is full of eels" sounds nothing like what the speaker intended to say, but the mistake was made because it does</ sound at least somewhat similar in the language in question. Also happens sometimes with written language:

some languages (such as Hungarian and Arabic) rely on diacritics to distinguish similar-looking words, and ideographic languages (such as Chinese and Japanese) have complicated characters whose meaning (and pronunciation) can completely change with the difference of a few strokes. A common explanation for the trope is that the character making the mistake has been taught something rude by a mischievous native speaker, playing on their ignorance to purposefully give an obscene translation for something reasonable. A subtrope of Fun with Foreign Languages . Often used in conjunction with Eloquent in My Native Tongue . Also compare Either "World Domination", or Something About Bananas , which is about inept translations, Separated by a Common Language , in which similar problems happen because of differences in dialect, and Malaproper , a character who does this in their native</ language. Dinner Order Flub is this applied to restaurant settings. Not to be confused with I Need to Go Iron My Dog (which, though, is a totally legit result of My Hovercraft Is Full Of Eels if your first language is Russian: "to pet a dog" and "to iron a dog" sound identical in that language). Note: If you are interested in learning how to say that your hovercraft is full of eels in many languages, has a Real Life Examples: In 2021, the German parody party 'Die PARTEI' had an that consisted of the phrase "We love you" in a few dozen languages, including Klingon. Unfortunately, it was rendered as "yablIj. maH". Ignoring the period in the middle, that actually means "We are your mind"...

Who says Evil Is Not a Toy ? Some fictional children's toys are so dangerous, they have no business being children's toys! Some clever (and/or crazy) minds may even use them to fight and kill people. Values Dissonance often comes into play, due to cultural perceptions both of what is and is not dangerous for kids and how long it takes for kids to "grow up." (Theodore Roosevelt reportedly could fire a gun at age 10, whereas most kids that age nowadays might still be playing with Play-Doh.) Olympus Mons could be considered the organic equivalent — just replace "toys" with "pets". For a specific Sub-Trope , see The Most Dangerous Video Game . The trope name is a pun on My Little Pony </, and should not be confused with My Little Phony , nor with a Crossover between MLP and Girls und Panzer </ ( ). Or with mein little tank . It's also not a Perverse Puppet or the like; a My Little Panzer is inherently dangerous to use, but it doesn't have to be malicious</, or even living. Compare other failures to regulate safety in TV Land: No OSHA Compliance , No Product Safety Standards , Happy Fun Ball , Social Services Does Not Exist , There Are No Therapists . Compare specific cases of toys as weapons: Killer Yo-Yo and Battle Tops . Not to be confused with wonderful toys (although those are often effectively the same thing).

Before a duel begins, one character announces himself to his opponent without any prompting because he wants his target to know who is about to pound him Causes can be Genocide Backfire , You Killed My Father , or there could be nothing personal and the hero is just doing this For Great Justice . It can lead to But for Me, It Was Tuesday , but is more likely to be caused by it This trope is also very common in Japanese anime, manga, and videogames regardless of the situation: It was part of the Samurai code of honor to tell your opponent your name before fighting them and not

doing so was considered rude May directly accompany a Heroic Second Wind . Which, for those of you wondering, is the new name of the old trope that used to be called My Name Is Inigo Montoya Compare Transformation Name Announcement , In the Name of the Moon , Say My Name , I Am X, Son of Y , Verbal Business Card , I Am Your Opponent . See also My Name Is ??? , Badass Boast . Contrast Full-Name Ultimatum , where someone else saying your name spells bad news for you

Whenever someone is handing out gifts to a group of people, one of them is going to be massively disappointed Typically, almost everyone gets a really spectacular gift that is exactly what they wanted. Except for this one guy who gets, say, a nickel The jilted character will feign delight, but as s/he watches the others enjoy their gifts, his/her annoyance will grow until s/he finally explodes at the gift-giver. This character might also have to write a note saying 'thanks' despite not feeling thankful at all Typically, it will turn out that the gift has some great hidden value, and that their gift has really been the best gift of all, just not in any obvious way. Like the nickel is a rare coin worth millions Sometimes, the lame gift is just something of great sentimental value to the giver, in which case it reflects deep affection and is a very touching gift, though it's still a bit lame- see Crappy Homemade Gift Sometimes, the universe just hates him/her For the superhero version of this, see Blessed with Suck . Kids Prefer Boxes is a juvenile variation of this trope. I Got a Rock is the trick-or-treating version. When Elemental Powers are in play, you'll have What Kind of Lame Power Is Heart, Anyway? May result from Convenience Store Gift Shopping or a Homemade Sweater from Hell . The subtrope that drives the engine of an Unwanted Gift Plot . For the polar opposite of this trope (where the character finds an item most people would consider cool to be lame), see Worthless Yellow Rocks Of course it's possible that It May Help You on Your Quest

This door is absolutely impenetrable. It's made of 100% Indestructium , is guarded by robot monkeys with crossbows, and opens only to authorized personnel who pass the DNA test, pass the retina scan and present a valid birth certificate. Yes, no one will ever force his way into — "Open!" Says Me . WHAMM!!! Wait, did you just break the door off its hinges?</ This is Crippling Overspecialization applied to architecture. A designer puts immense effort and resources into a structure, most often a defensive point such as a wall, door, or window, but fails to notice a large weakness in the design that makes all of this easy to circumvent. The most common flaw being that for all that the door itself is indestructible, the wall around it is less so. This is especially so in Chinese and Japanese media where many walls are made out of paper. Often, the floor will also be vulnerable to burrowing. The door itself may not be that hard to open, especially if We Have the Keys . Often played for laughs if the way through the apparently impenetrable defense is particularly obvious or easy. Sometimes serves as a Surprisingly Realistic Outcome for whoever thought that they or their stuff would be safe in such a place. A common justification in-universe, which is also the reason for most Real Life examples, is that the designer Didn't Think This Through . However, the reason is sometimes that the writer</ is unfamiliar with secure design, in which case characters who should

have known better are not called out in-universe for making an amateur mistake. Compare Dungeon Bypass , Cutting the Knot , Override Command , Steal the Surroundings , Absurdly Ineffective Barricade , Inventional Wisdom . Contrast There Was a Door .

Simply put, a Stable Time Loop where one is his own ancestor. Of course, this implies an Identical Grandson , and an Ontological Paradox which results in a quarter of one's DNA being created from out of nowhere The trope namer is not an example, however. The song </ by Lonzo and Oscar in 1947 is about how the singer's character became his own step</-grandfather through complicated marriages . This trope is about being one's own biological</ ancestor If they're just pretending to be their grandchild, then that's My Grandson Myself . See also Kid from the Future , for more time-travel and offspring-related hijinks, and Time-Travel Romance , which could also lead to this trope See also Grandfather Paradox

Fiction gives us many weddings. Sometimes, the couple is forced to Altar the Speed , maybe due to meddling parents or a baby on the way . The couple doesn't want</ to move the date up, but something or someone else is forcing them to do it. Sometimes, the couple just elopes, and avoids the big wedding mess altogether. But every now and then, a couple ends up having TWO weddings — one for themselves, and one for everyone else. This usually takes two forms: : The couple elopes, but before they can tell anyone, somebody says something to make them feel guilty for not including everyone. So they end up planning a large ceremony/reception after all. The couple will have to jump through hoops to prevent anyone from finding out they're already married. The secret may or may not be spilled, but ultimately, it won't matter. In this case, the couple is planning a big wedding, but everything starts to fall apart. With all the arguments and drama, their friends and family are driving them crazy. They decide to run away after all. Expect a very</ random Justice of the Peace as they find a quick and easy way to get married. Afterwards—though this is not guaranteed—they might return to planning a big wedding to have a wonderful stress-free time, with their families being none the wiser. In this case, the secret will almost never be revealed. Either way, this is almost always a Heartwarming Moment . The couple is showing that getting married</ is far more important than having a big flashy wedding, and they'd rather handle things on their own terms. Arguments about flowers and who escorts whom take away from the beauty of the day, and they refuse to let that happen. But they still care very much about their friends and families to deny them their celebration. But the real</ ceremony will always be the one the couple cherishes. Both types are a major Truth in Television . The Trope name is a play on the title of the film My Own Private Idaho </, which has absolutely nothing to do with this trope. See also Altar the Speed and Metaphorical Marriage .

One fun aspect of being a fan is that you can ascribe Word of God selectively. Sure, Alice may own the franchise, but it's Bob — the writer, the producer, whatever — who left such an indelible impression on the property that, in your opinion, Bob</ is the one who made it good</ This trope is naturally more

common with long-running properties with multiple creators, which is why there are so many examples from American Comic Books . When a character like Batman , Superman or Spider-Man has literally thousands of stories told by hundreds of writers over a period of many decades, it's not surprising that this trope comes into play Compare Adaptation Displacement , Can't Un-Hear It , Better Than Canon , and Covered Up . When done with a singular character, it may be a result of being the Creator's Favorite . Contrast Running the Asylum , where such people are often regarded as evil step-parents , and Only the Creator Does It Right , where fans think a work is better when its creator is actively involved in it. Not to be confused Family of Choice , where the characters</ decide who they feel their real parents are

It's safe to say that society as we know it couldn't exist without rules. Without rules, power would be the only source of order in the world, either in terms of destructive capability or material resources . And like any tool that can be used for the common good, rules have the potential to be abused</ . Rules have power, and their ability to level the playing field can also be used to unbalance</ it in favor of whomever makes the rules in the first place. So what can you do? You can always break the law, but the more clever will figure out how to beat them at their own game. There are two ways this can happen: The rules can hang you, but the rules can also save you. Obstructive Bureaucrats and the like may think of the rules as a hammer to crush unworthy peons with, but the people who wrote the rules may have had other ideas: an apparently mean-spirited and arbitrary rule might have a reasonable exception buried in its text that the tyrants in charge prefer to conveniently ignore. Alternately, the roles may be reversed, and a villain who apparently has been caught dead to rights by the authorities finds a convenient loophole to wriggle through. An easy way to subvert Can't Get Away with Nuthin' . See also Screw the Rules, I Have Money! . Compare Screw the Rules, I'm Doing What's Right! and Chaotic Good , where Lawful and Good are on opposite sides, and Loophole Abuse . Any Rules Lawyer often uses the first variant, and is afraid of somebody using the second on him.

Maybe it's to explore a new world. Maybe it's to be better and stronger than before. Or maybe it's a mistake and it leaves the person Trapped in Another World Regardless of why, this trope involves a person who can be (or who is) downloaded into a remote interface to interact with others or another world better (or at all). This other self is otherwise an Empty Shell that does nothing. Sometimes when the remote version of himself is damaged or killed, he is hurt/killed back at home or in 'reality' , but the idea is, while the main body 'sleeps', a different body acts and works remotely by his commands. This is used to play games, interact with computers, or interact with an alien world Unrelated to We Are Our Avatars </

Unresolved Sexual Tension is always fun when played for laughs and amusement. Two characters are totally into each other but it's never acknowledged, just heavily implied. That is, until a character with some form of Super Senses comes into the picture See, Super Senses let you see things like body temperature, pheromone levels, or simply a better ability to read body language. What can you infer from those signs? Why, UST of course. This

person just proclaimed for all to hear that one character is attracted to the other, or two characters are attracted to each other. This usually causes embarrassment on the part of the other characters and everyone tries to ignore it for the sake of awkwardness. It can be seen as a form of lampshading the UST Usually the character announces this innocently, due to not being aware of This Thing You Call Love . Sometimes, though, they're deliberately trying to play The Matchmaker or just amusing themselves at the aroused person's expense . Be aware, if you are possessed of unusually keen senses, that doing this in Real Life is not</ a good idea. Real people tend to take it a lot worse than fictional ones Of course, it doesn't always have to be UST. Sometimes it's a one-way Love Interest , or just simply sexual attraction because, well, it's what the sensors indicated Frequently phrased in Spock Speak . Also, compare Dirty Mind-Reading (for telepathic examples) and Or Are You Just Happy to See Me? (for examples where arousal is readily evident without the need for special senses) Depending on the situation, can easily be a Moment Killer

If you are friends with a man for more than 24 hours, then dating his sister is off-limits without asking permission, and sometimes forever. Some reasons behind this are: Not uncommonly, the sister tells her brother to get lost, or otherwise actively ruins his attempts to prevent the potential boyfriend from dating her. After all, she may not take kindly to anyone</ — not even her brother — trying to control who she can and cannot date. This may lead to the brother trying to save face with If You Ever Do Anything to Hurt Her... and then backing off. It's Truth in Television , as most any guy with a sister can tell you. While the title says "sister," variations of it also include mothers and other female relatives (such as cousins), and for girls, the Gender Flipped "My Brother</ is Off-Limits." This doesn't include daughters or sons, because Overprotective Dad and My Beloved Smother , respectively, already covers that. Exes fall under The Bro Code instead. This may also be a symptom of a character having a Big Brother Instinct . Could lead to a Knight Templar Big Brother . This trope is almost indispensable for any Brother–Sister Incest works, where it builds the initial Incest Subtext in story. Contrast Best Friends-in-Law , where the guy is all too happy for his good friend to end up with his sister. A My Beloved Smother might have the same feelings towards her child Unrelated to Big Brother Is Watching . (although...)

So you're walking along, minding your own business, playing with your iPod in a neutron storm next to a nuclear plant during the equinox, and suddenly some Applied Phlebotinum grants you a magnificent gift: an entire library's worth of information is downloaded directly into your head , along with all the intellect , memories and wisdom needed to use it. You become an instant genius at everything from knitting to astrophysics, and you can suddenly Techno Babble your way out of any problem! Except ... for this problem: The thing about super-human knowledge and intellect, is that often you don't get a super-human brain to put it in , and there's only so much room in there. As your brainpower goes up, your survival rate goes down . Time is running out, and you either have to figure out a way to ditch your new super-smarts or die — either by hemorrhage, cranial explosion , or body strain. Maybe the knowledge contains

details about things man was not meant to know , and your body will try to adapt to it involuntarily with your new knowledge . Occasionally, dying isn't the problem: It might be non-fatal, but have some other significant drawback if you don't get rid of it soon, such as madness, head-splitting migraines, overwriting of memories or knowledge, or permanent brain damage. Perhaps you simply become unable to store new memories until you clear some space. This often leads to "Flowers for Algernon" Syndrome when the character returns to normal, warning others about the dangers of get-smart-quick schemes. Fairly common in Cosmic Horror stories when a protagonist obtains a legible Tome of Eldritch Lore and doesn't stop reading it soon enough before they Go Mad from the Revelation . Compare Deadly Upgrade and Too Much for Man to Handle . Also compare The Fog of Ages , where an immortal being has been collecting memories for so long that they're overwriting the oldest ones. Not to be confused with My Brain Is Big , where the skull literally</ runneth over and the brain shows outside it. See also Super Intelligence and A Mind Is a Terrible Thing to Read .

When you're on the Planet of Hats for too long, someone's hat is going to fall off. The probability of this happening seems to be directly proportional to the flamboyance of the hat . That is, if Bob's planet is filled to the brim with Blood Knights , who proclaim "The greatest glory is to die in battle!" and "Only the strong survive!" over dinner, expect Bob to be a Pacifist . There are a number of reasons why this happens: Often happens to races who seem at first to be Always Chaotic Evil , resulting in them proving themselves to be Not Always Evil thanks to the occasional Token Heroic Orc . May lead to an Enemy Civil War as those who reject the hat fight the ones who love it. Despite the fact that the Klingon Scientists Get No Respect , they may not believe this trope and choose to "rebel" in order to enable their peers to wear their hat. This trope's name comes from the oft- (mis-) quoted line from William Shakespeare 's Hamlet, Using the example from above, Bob's warrior species "protests too much" by overly avowing violence, when all Bob wants to do is flirt with Alice the Granola Girl . It could also work with the modern definition, in that they are protesting against Bob's behavior. Related to Cultural Rebel , Stop Being Stereotypical , and Stereotype Flip . All of the Other Reindeer is a variant of this. Square Race, Round Class is when the character's job</ (not necessarily their personality) contrasts with expectations of their species. Rogue Drone is an instance of this within a Hive Mind . Compare Father, I Don't Want to Fight and Pro-Human Transhuman . If Bob is seen as more admirable by outsiders for having rejected his hat, You Are a Credit to Your Race may be invoked. When every</ member of a race that we see subverts their supposed attribute, it becomes an Informed Attribute .

People have always wondered about what mysteries might lurk in unexplored regions. At first, it was just the place over the hill. As we explored more, the mysterious unknown was pushed further and further back, until eventually we had the whole of Earth's surface pretty much explored The last continent to be explored and mapped out was Antarctica , which was long suspected to exist but ultimately dismissed as myth until 1820, when it was finally, officially, sighted by humans . Even now, pretty much its entire surface has only been mapped by satellite. Incredible cold and

lethal winds conspired to keep humans away, which made it a fertile area for stories about mysterious buried technology, aliens, and monsters. This trend continues today — after all, who knows what may be under the ice? In reality, what's under the ice seems to pretty much be... more ice As time goes on, of course, Science Marches On , and the more fantastical versions of this trope are just as Discredited as the presence of civilizations on the very definitely inhospitable Mars and Venus as portrayed in many an early Planetary Romance A particularly common variant is the Eerie Arctic Research Station , which despite the name applies to both the Arctic and Antarctic. See also Grim Up North (the polar opposite), Polar Bears and Penguins , Everything's Better with Penguins (hey, penguins live in Antarctica). And Human Popsicle , since Antarctica appears to be a good place to stumble upon In</ human Popsicles

A type of messenger , the mysterious informant exists to feed information to the good guys, often just enough to keep them on track to expose The Conspiracy . The information is usually fragmentary and/or in cryptic Spy Speak . They tend to meet the main character in secluded areas like parking garages or shadowy alleys, be impossible to find unless they want to be found, always wear a Conspicuous Trenchcoat , and are usually masters of the Stealth Hi/Bye , to prevent heroes from pursuing them. He also insists that I Was Never Here In police shows, this role may be filled by a snitch . In shows involving conspiracies , the mysterious informant is usually an anonymous insider. In Speculative Fiction , this role is often filled by psychics and prophets The Trope Maker and a major inspiration for Stock Shout-Outs is Deep Throat (decades later revealed to be W. Mark Felt, a deputy director of the FBI), the Washington Post</'s mysterious informant during the Watergate scandal that drove US President Richard Nixon out of office. The real-life Deep Throat , being Properly Paranoid , did in fact deliver vague, cryptic information in the dead of night in a parking garage and take other extreme precautions against being discovered Compare and contrast Mysterious Employer : he tells the characters what to do, but provides minimal information

A mysterious note from a stranger changes the plot in some way. Generally, it is shoved under or into something such as a locker, postbox, or a door. If the recipient sees the note drop on his mat and dives for the door, he will occasionally catch the messenger in the act of posting the note; however, the messenger usually leaves so fast it's as if he teleported. Can be anything at all, for example: Not to be confused with Brown Note or any other sound related trope, although it can contain, or be a recording of any kind. In Ore-sama Teacher </ , both Mafuyu and Hayasaka receive notes in their lockers saying "360 degree warning". This presages the appearance of a new character, a wacky fake 'ninja' who is trying to destroy the Public Morals Club. The Incredibles </ . The "note" is in the form of a digital tablet with a video message inviting Mr. Incredible to do secret superhero work.

Murder by Death </ . While Sam Diamond and Miss Skeffington are in their room, they hear a ticking sound. A note is slipped under their door that says, "That ticking sound is a bomb that will go off in 30 seconds. Signed, The Murderer."

Home </ : Frank Money receives a note that says, "Come fast. She be dead if you tarry." This causes Frank to start his journey home to save his sister.

In The X-Files </ , Agent Mulder repeatedly receives revealing documents on various conspiracies from his informants. They try to be sneaky about it.

In Whodunnit? </, Hardboiled Detective Nick Spade receives an unsigned note asking him to meet someone in the basement of Tony's Palace. It's actually a setup for an ambush by the murderer.

Silent Hill 4 </: Henry can receive messages from the dark world if he slides blank pieces of paper under his door. Better go check on your neighbor!

In Autumn Bay </, Intrepid Reporter Felicia Kingsley receives one from "a friend" when she is supposed to meet a contact. It is pinned to a post and has her name on it.

When the reason for Parental Abandonment of a character is revealed, and the parent is someone important to the world of the story, or at least the events. Occasionally alluded to constantly but vaguely for maximum surprise. This is often coupled with some startling revelation about the child too, such as if the parent was/is a scientist and the child was created in a lab experiment , or are following in a Secret Legacy of the family; if the parent is/was royalty, may result in a Really Royalty Reveal In anime, said parent is usually the same sex as the child This trope can also apply to more distant relatives or siblings, although their existence isn't as intuitive Interestingly, real-life relationships can be just as tortuous and surprising as the fictional ones; for a famous example, Jack Nicholson learned just days before the premiere of Chinatown </ that his recently deceased "sister" was in fact his natural mother, and that the parents who raised him were in fact his grandparents (similar switches occurred in other people's lives, such as singer Bobby Darin) Compare with Luke, I Am Your Father . Also compare Chekhov M.I.A. , when the missing person actually shows up in the flesh, and Mama's Baby, Papa's Maybe , which is one reason why the parent is more likely to be the father than the mother. Subtrope of Mysterious Stranger

A character has a mysterious past which is hinted at but never fully revealed This trope provides the writers with enormous freedom to have previously unknown (to the viewer and possibly also the character) relationships to other characters, special skills , prior histories with the Big Bad , knowledge of prophecies or the future itself, a MacGuffin , or other examples of Ass Pull as needed. In effect, since nothing is known, anything can be true. This is limited to such elements as can reasonably be fit into the time period. A thirty-five-year-old can't have sixty years' past (unless they're Really 700 Years Old but that is only an option in fantasy or science fiction). Failure to submit to this limit results in an Expansion Pack Past A character can have a partially mysterious past as well; for instance, Alice was Bob's childhood friend, but when they meet up Alice has KGB agents on her tail

and the ability to fire guitars from her eyes Often a Former Teen Rebel 's old rebellion will be part of their mysterious past. Any dark deeds done in this period are part of a Dark and Troubled Past A Noodle Incident or ten might have happened in such a Past. The Spook is this trope taken Up to Eleven , as we don't know anything</ about the person's past, and maybe not even their real identity

All right, contestant, you've made it to the final round of everyone's favorite Game Show The Trope Is Dope </ . Now you have a choice to make between two fabulous prizes. The first is an all expense paid trip around the world, complete with a complimentary Rolls Royce and $5 million in cash. The second is... the Mystery Box! What's inside it? No one knows. It could be week-old garbage, or the keys to your new mansion. Maybe it's filled with rocks and mud, or maybe fabulous diamonds. It could be anything! Troper, make your choice! Although this is mainly a game show trope, this can apply to any medium. Compare Crate Expectations , Loot Boxes (this trope's gaming-related sister), and Blind Bag Collectables .

I hereby welcome you to the accusing parlor to discuss... the Mystery Episode The Mystery Episode is an episode where the characters attempt to solve a mystery . The mystery in question can be something as mundane as a stolen item to something as serious as murder. The characters will look for clues, make deductions, and finally finger a culprit. The consequences may be suitable for the crime, but not always As you'd expect, this only applies if the characters don't solve mysteries on a regular basis, so Detective Dramas and Police Procedurals will not be accepted. Sister trope to Noir Episode and Heist Episode . Thriller on the Express occurs when this happens on a train. And no, this does not refer to episodes that are so ambiguous you can't tell what show they're from

Also known as a "mystery story" or simply a "mystery", Mystery Fiction is a genre where the plot revolves around a mysterious happening that acts as the Driving Question In a standard mystery, the explanation for the mystery is gradually revealed by the investigative process of the protagonists. This is accomplished through a mixture of intelligence, ingenuity, the logical interpretation of evidence, and sometimes sheer luck Detective Fiction is a type of Mystery Fiction that focuses on a detective solving a crime, and the term is often treated as synonymous with Mystery Fiction

Tropes associated with Mystery Fiction and Detective Fiction .

When The Plague is brought about not via natural evolution or the machinations of science , but is instead created through the

supernatural powers of a person, creature, or group, whether by accident or design In classical works, Mystical Plagues are brought about by the gods or God to punish society for some collective sin. The plague invites some investigation into who offended the divine and how to make up for the damage Fantasy uses of the trope are less positive. Perhaps a Necromancer is summoning dark magic to bring about the Zombie Apocalypse , worshippers of the God of Disease call upon their master to bring vengeance upon their enemies, cults of Eldritch Abomination obtain Lovecraftian Superpower or a shaman uses a forbidden curse in the vain hopes that it keeps his people from being wiped out. Whatever the reasons behind it, the human use of disease-based magic is always seen as an evil act for the sheer amount of suffering it can bring about Mystical Plagues need not be limited to just attacking the physical being of those who contract it, and thus are not limited to the standard vectors of transmission of common illnesses. A curse may be designed to infect the spiritual essence of a creature, or even to only infect other magic users as they cast spells of their own. While this versatility may seem to make a magically created plague more reliable than other types, it is still not uncommon for the caster who created it to be killed as well , either directly by being infected themselves, or in the aftermath that the disease's spread causes A subtrope of The Plague . Compare Synthetic Plague , The Virus , and Depopulation Bomb . Can overlap with Fisher King , in cases where the Mystical Plague is caused by the actions of a kingdom's ruler. May also overlap with Maybe Magic, Maybe Mundane , or In Mysterious Ways , if the exact</ cause of the problem is either not understood or not explicitly stated

In fiction, white locks on a young character mark them as mystical and arcane, whether it means they are outright magical or not. In sci-fi and fantasy, it's often the only non-human hair color you will see on new species or race of people, especially in elves or Human Aliens . It is a common mark of a Mysterious Waif and a Mystical Waif The popularity of this trope probably stems from its status as a borderline-natural hair color : white hair on a young person strikes that delicate balance of being unusual but not blatantly unrealistic . The color also lends itself well to symbolism It bears repeating that these are young (or at least young - looking) characters, and their hair color is not indicative of age (or of premature aging) May also come with an Ethereal White Dress See also White Hair, Black Heart , which is where having white hair is a sign of evil instead of magic, superpowers or otherworldly origins; an albino power's white hair being seen as a sign of evil or the supernatural may be indicative of Albinos Are Freaks . If a character's hair turns white due to a disease or illness, it's Disease Bleach . If a characters hair turns white when they use their powers, it's Power Dyes Your Hair . Sometimes can be a result of Locked into Strangeness

A Mythology Gag is a sort of Meta- Continuity Nod , wherein a reference to some facet of a show's mythology or past production history (which is not always considered Canon in the context of the show) is made. This trope is usually taken largely as a bit of gratuitous humor, since if the program you're watching is "real" then the characters shouldn't be thinking in terms of any</ continuity, alternate or otherwise. (Sometimes this will be

hilariously lampshaded by the characters, who wonder how they could possibly know such a thing. Also, the Celebrity Paradox might come into play.) The terms myth and legend are used more or less interchangeably in everyday language. When things are interpreted a little more strictly, then myths are lore about gods and other entities of cosmic relevance, while legends are narratives with human protagonists. A third segment of mythology is so-called "low mythology," which encompasses folk beliefs about lesser non-human mythical beings Mythology is one of the oldest known genres and exists in different media. It's certainly grounded in Oral Tradition , but all known and troped mythological stories are necessarily Literature . Mythology has inspired copious visual Art since ancient times and, in some cultures, Theatre . The modern Fantasy and Mythopoeia genres are also strongly influenced and inspired by mythology Mythological stories are (or were) not usually considered Fiction by the people or community which create(d) them — instead, they are often interpreted as true accounts of past events or the present state of the world. As such, mythology is directly relevant to the society that made it: Myths especially form an important part of Religion and shape the worldview and the practices of worship of their believers. Legends supposedly record history and may evoke a sense of cultural or national identity, as well as reinforce a society's social norms and values. All in all, mythology provides a people or community with ideas about their own place in the greater context of the universe and history. This doesn't mean it can't provide more mundane services like entertainment, too Overlaps with Legends and Fairy Tales , which tend to be more cultural than religious

Mythopoeia (from the Greek words that mean "myth-making") is a narrative genre in modern literature and film where a fictional mythology is created by the author or screenwriter. The word mythopoeia and description was coined and developed by J. R. R. Tolkien in the 1930s. The authors in this genre integrate traditional mythological themes and archetypes into fiction. Mythopoeia is also the act of making (creating) such mythologies. Notable mythopoeic authors aside from Tolkien include C. S. Lewis , Robert W. Chambers , H. P. Lovecraft , George MacDonald , and Lord Dunsany , among others. While many literary works carry mythic themes, only a few approach the dense self-referentiality and

purpose of mythopoeia. It is invented mythology that, rather than arising out of centuries of oral tradition, is penned over a short period of time by a single author or small group of collaborators As opposed to fantasy worlds or fictional universe aimed at the evocation of detailed worlds with well-ordered histories, geographies, and laws of nature, mythopoeia aims at imitating and including real-world mythology, specifically created to bring mythology to modern readers, and/or to add credibility and literary depth to fictional worlds in fantasy or science fiction books and movies Mythopoeia can be created entirely by an individual, like the world of Middle-earth , or can be formed as a result of an amalgam of writings, like the Cthulhu Mythos . An Expanded Universe can result in the creation of one of these, particularly for Long-Runners The Nobilis</ game designer writes the web fiction Hitherby Dragons </ which also has a mythology of sorts

A character whose inexperience with the world presented by the show lets them act as the Audience Surrogate . The trope's popularity comes originally from the pin-ups American

soldiers brought with them during World War II ; a common motif were titillating shots of women in otherwise normal domestic situations, such as cooking or cleaning. These pinups were emulated by Japanese artists around the same time Manga began to develop as an art form in the years after the occupation of Japan (1945-1960). In Japan this trope is called "Hadaka Apron", which, unsurprisingly, translates to "Naked Apron". The appeal of the trope (outside of the obvious) is due to it allowing for the character to appear with modesty preserved from the front , but with a risqué surprise awaiting the viewer . In a somewhat meta sense it is just as frequently used as a surprise for the audience. Examples can be split between a character holding a perfectly casual conversation with another character who, upon turning around, reveals that they were in fact, nude; and the character being fully aware of it but the audience not seeing it until a certain panel — a Reveal Shot of a very revealing shot. Frequently mixed with other such risqué Japanese tropes, such as bloomers and school swimsuits , or more generally, lingerie or a bikini (for when the character wants to pull this off, but is too modest). This trope is extremely popular amongst couples in Japan, as it is considered a traditional form of foreplay between newlyweds. As such, it comes up extremely often in anime and manga for Fanservice , especially in Harem Genre and Magical Girlfriend shows. A traditional outfit of Ms. Fanservice and The Vamp when attempting to attract a more innocent target, or when attempting a more long term relationship. The Innocent Fanservice Girl also might end up dressed like this, because she doesn't understand you're supposed to wear something under an apron — in which case the viewer will have to explain it before any misunderstandings occur. The Shameless Fanservice Girl might choose to wear this, because it's technically required wear for cooking (splatters hurt</), but has no qualms about how technically risqué the ensemble is. All in all, a frequent source of nudity as comedy — often without actually showing any nudity! Very similar in theory and practice to Theiss Titillation Theory ; whereas Theiss's Titillation Theory states that the higher chance of a Wardrobe Malfunction causes an outfit to be sexier, a large portion of the Naked Apron's appeal is the fact that it's a nude body that's "covered, but only technically", and any number of poses or gusts of wind would cause a Wardrobe Malfunction . The fact that almost all shots of Naked Apron are also examples of Vapor Wear (almost invariably due to Sideboob and "Sidehip" being shown) also adds to the Theiss Titillation Theory element. Can also be worn by men, in which case it's usually played up either for laughs or for Ho Yay — sometimes both. Compare and contrast Theiss Titillation Theory , Body Paint , Godiva Hair , Scenery Censor , Sideboob , Stripperiffic , Barely-There Swimwear , Toplessness from the Back and Vapor Wear .

Nudity is one of the last great taboos, particularly in The United States . Whereas it's OK to show violence, blood, and to a certain extent hate speech on TV, a tiny bit of nudity will cause an outright scandal. Just ask Janet Jackson and her "nip slip" , which got more attention than the show she was putting on at the time, despite its sexually suggestive content that some say bordered on sexual assault by her co-star. The proper term for the above phenomenon is gymnophobia</ (fear of nudity). It often reaches the point where people are afraid of so much as seeing</ nudity, even accidentally. One main reason so many people are afraid is the fear that they might like it . So while nudity itself is right out, the insinuation of nudity, as well as the (usually gymnophobic) reaction to it,

is just titillating enough to make it onto the air, especially on comedies. Naked people are funny , after all, especially paired with a prudish costar to react to them, or in a situation where they're not expected or wanted. A character who ends up naked (or at least in only their underwear) in a situation they don't expect, such as losing their Modesty Towel (and they will</ lose their Modesty Towel) in public, may have a Naked Freak-Out and need to employ a Hand-or-Object Underwear . And if not, their naughty bits may still be hidden — from the camera, that is — by other forms of Censorship Tropes such as Scenery Censor (bonus points if it is a Gag Censor). Almost always they'll end up meeting another character , meanwhile, the audience will have to make do with, at best, a Toplessness from the Back or Shoulders-Up Nudity shot. The Invisible Main Character probably can't wear clothes, if only because the insinuation that he or she is running around naked makes it funnier — plus when the character does inevitably materialize, it'll invariably be in front of as many people as possible. The Innocent Fanservice Girl won't understand why everyone's freaking out, while the Shameless Fanservice Girl won't care. Ms. Fanservice and The Vamp will understand, but... that's the idea. It's tempting to suppose that nudity is funny precisely because it's so unusual in the "civilized" world, and weird things are naturally funny. However, this logic goes out the window when you learn that nudity has been a prominent ingredient in humor for at least 3,000 years . Even the ancient Egyptians found naked people funny, and they weren't themselves shy about wearing little more than loincloths . So maybe the humor lies primarily with boobs and penises , which have been shameful to expose since Neolithic times. Special mention goes to nudism. Nudism is a philosophy that basically boils down to "There's nothing wrong with being naked in certain situations, including some group situations". The Theme Park Version of this is "Hey, look, naked people," and is a great way to throw some Fanservice (or, even funnier but much grosser, Fan Disservice) into your show. Nudists tend to be shoehorned into a few specific roles, depending on their role in the plot: If a character is introduced as a nudist, that character will be either extremely young and attractive or extremely old and ugly, depending on whether the character is being played up for Fanservice or comedy, with few exceptions. Middle-age and underage nudists do not exist (although the latter have some very obvious reasons for their omission). Has a touch of realism in it — real nudist organizations often have a pattern of children dropping out as they enter adolescence, then returning in middle age after they become comfortable with their bodies again. Especially common during Sweeps . See also Useful Notes: Nudism . For specific examples of nudity as humor, see: Contrast Full-Frontal Assault . For "Hollywood Nudism", see Innocent Fanservice Girl (Clueless</ about the Nudity Taboo) and / or Shameless Fanservice Girl (Doesn't Care</ about the Nudity Taboo). Has nothing to do with a nudity-oriented People Are Funny</ .

Characters find themselves locked out of a location, which would make for a considerably less socially awkward situation if not for their also being nude. Hilarity Ensues , because Naked People Are Funny although it can more rarely be Played for Drama The sequence normally involves the character struggling to find/acquire their clothes or a way back inside without being seen, possibly resorting to Bankruptcy Barrel , Clothesline Stealing , Hand-or-Object Underwear , Improvised Clothes , Mobile Shrubbery or Stripping the

Scarecrow . They will often fail and get caught or seen by someone, usually resulting in a Naked Freak-Out Note that the characters in question don't necessarily have to be naked; in their underwear , a bathrobe or a towel is close enough. The Rule of Funny here is based on the awkward situation more than it is the actual nudity. Well, most of the time . Sometimes this can be Inverted , with the character trapped naked inside a room while people are outside; in that case they're likely to Open the Door and See All the People Can be started off by Clothing Damage , Gone Swimming, Clothes Stolen , Shapeshifting Excludes Clothing , Slippery Swimsuit , Stripping Snag , or Undressing the Unconscious . May involve the use of Scenery Censor , Shoulders-Up Nudity or other Censorship Tropes to keep any naughty bits concealed. If the character fails to stay hidden, they might make a Naked First Impression . Or they might get back inside, only to find a Birthday Suit Surprise Party If a character keeps getting into this kind of predicament for some reason, they're probably a Reluctant Fanservice Girl ...unless the character in question is not ashamed of their state of undress, then the humor will instead come from other people's discomfort, with them likely telling the character to Please Put Some Clothes On See Chained to a Bed for when an underdressed character is chained to an object, see "Not Wearing Pants" Dream for when this sort of scenario happens in a dream and see No-Gear Level for when a character is stuck somewhere without their gear

In Agent X </ #2, Alex and Outlaw are assigned to try to take out The Punisher and steal his Colt .45 handguns. They fail miserably and are caught by him, but he surprisingly spares them in exchange for info on who put the bounty on him. But he still takes all of Alex and Outlaw's clothing, and steal Outlaw's car, leaving both stranded naked in the streets. We later see both in a phone booth telling Sandi to bring them clothes, while a crowd forms around them to ogle the naked Outlaw as she uses her hands to try and cover herself .

The name of an alien race will almost always be derived from the name of their home planet. This trope seems to have started with fictional creatures from a real planet or star; the aliens hail from Mars or Polaris, so it made sense to call these creatures Martians or Polarisoids. But by now it goes beyond that, into cases where the aliens' home world is every bit as fictional as the creatures themselves. This trope is the reason why, as detailed in Humans by Any Other Name , aliens will tend to call the human race by a word like "Earthling." Bear in mind, of course, that there is some logic to all this. We Puny Earthlings do, after all, refer to our nationality as being a variation on the root word of our country's name (technically it's often the other way around, linguistically). For aliens, though, the name derived from the planet is usually used to refer to a species as a whole rather than just those individuals who are actually from</ that planet. May be an odd side effect of Translation Convention or Translator Microbes . Often a side effect of a Planet of Hats . Also applies to humans on occasion, if a work refers to humans as Terrans, our homeworld as Planet Terra , or both. See also Species Surname .

There are human characters in fictional works that have a given name not normally given to humans. A common explanation for the name is that it comes from a non-human source, such as an alien,

animal, monster, Demihuman (dwarf or elf), or ghost. This way, the human character has a reason for bizarre nomenclature Sometimes, instead of a human character named by nonhumans, the character in question is a nonhuman character named by a different species of nonhumans Can overlap with Aerith and Bob . Often goes hand-in-hand with Raised by Wolves . Compare to Multiethnic Name , which is the more mundane version

In the real world, many things are named after the person who invented them or made them famous. The most oft-cited example is a certain easy-to-prepare meal popularized by John Montagu, 4th Earl of Sandwich. (And then there's , but that's another story, which we won't go into here.) There are a number of ways of twisting this concept for comedic effect, as invented by the famous comedian Hitomi Namesake : Depending on the setting, the trope may be used to avoid or hang a lampshade on vocabulary with Orphaned Etymology . Not to be confused with gags referring to the book and Film of the Book titled The Namesake </, nor indeed jokes on a story's actual namesake .

When unrelated shows have characters who have the very same name. Most of the time it's unintentional. Nevertheless, sometimes the similarities in situation or personality are strong enough to inspire quite interesting Crossover Fan Fiction and Epileptic Trees . This is, in essence, an Aversion of a Shout-Out (although there are occasional cases where it's actually done as a Shout Out). Said characters happen to have a few similar attributes and the same name ( ), but it's meaningless, or not overly significant. Alice Allusion , My Hero, Zero , and Name of Cain are subtropes. Compare and contrast One Mario Limit and One Steve Limit . See also Unfortunate Names , Acronym Confusion , The Danza (when this trope applies to a character and his/her actor/actress) and Named Like My Name (when a character acknowledges that that character has the same name as a celebrity). When imposed on a character by the character’s parents (or other namers) may lead to a Who Names Their Kid "Dude"? . May lead to Historical Character Confusion . In articles or discussions of obscure works featuring such a character, first mention of said characters name would be followed by the phrase, "No, not that one". This is more typical when the character shares a name with a much more well known counterpart. (Do not do this on TV Tropes, not unless it's a defining aspect of the subject. Most of the time, it's Trivia, and belongs in the Trivia tab.) When this applies to a title, they are Similarly Named Works . When there is a large number of entries in a section, they will be ordered in alphabetical order by last name first, to make it easier to find previous entries and the name that more than one party or thing has will be in bold. If you add an entry to a subsection organized this way, please go along, thanks. Asian Animation

Anime , as in Japanese animation, has not only been around for a few decades, but it was quite self-contained for much of that period. It therefore has a select number of people who were extremely influential in its development. It is useful to know these people, as their personal style has formed the foundations of many Japanese Visual Arts Tropes found in this wiki Not to be confused with Essential Anime : that's about programs

People make a big deal out of names, and writers are no exception. Even if they eschew Theme Naming and other Naming Conventions they'll still use names they think are cool and dignified, powerful and appropriate, or sinister and fearsome. This is why there are inevitably certain Names To Run Away From Really Fast. For much the same reason it's unlikely Bob will turn out to be the outrageously stylish villain bent on absorbing the planet's life stream t o ascend to godhood , well... and someone with a name like oh, say, Hannibal Murder von Uberbastard, probably won't be selling cookies for charity. If he does, don't eat the cookies These come in various flavors (not the cookies, the names), some of them used by Anti Heroes from the Dark Age of Supernames and villains of the fearsomely competent and world destroying kind, for whom the mere mention of their name can bring down Dramatic Thunder Note that this is different from all those characters who got their names because </ they are a badass. It's one thing to be called Blade because you use one on vampires; it's another when a deadly fighter has the birth name "Blade" for no in-story reason So basically, when the villain's name hints towards some sort of disaster in history, mythological monster, or just means something bad, this trope applies Note that a villain having a name like this isn't necessarily a bad idea. Some names like this are downright cool A subtrope of Meaningful Name , Obviously Evil and sometimes Awesome McCool Name See also Red Baron , The Magnificent , Speak of the Devil , and What Did You Expect When You Named It ____? ; often overlaps with "Darkness von Gothick" Name Compare Fluffy the Terrible , Tom the Dark Lord , and Just the First Citizen , where the name fails to describe the nastiness, and Deathbringer the Adorable , where the nastiness fails to live up to the name Contrast Names to Trust Immediately For location names, see I Don't Like the Sound of That Place This trope applies only when the name is an indicator of the character's true nature, and if the character thus described is evil, deceptive, dangerous or (if not evil) in other ways commanding fear or respect. As always, aversions are usually not worth listing, but subversions are probably fair game. Total inversions should go on Unfortunate Names instead Also, as to why the character lives up to their scary name. Just listing the character's name with no explanation is a Zero-Context Example , something we don't want

There are obvious basic trends in character names. Outside a Badass Bookworm , you will probably never encounter a tough-guy character in a drama with the name "Eugene" or "Adelbert." Except maybe Adelbert Steiner . Or Eugene "Flynn Rider" Fitzherbert . Outside a Genius Bruiser , you will probably never see a computer geek named "Rocco" or "Lefty". "Ethel" is always dowdy Except maybe Ethel Hallow . , while "Jennifer" is either a bombshell or a fresh-faced girl next door Society has stereotypes that go with most names, and television writers play to those stereotypes. Comedy — especially broad or satirical comedy — can play against type with names, and sometimes talented writing can spawn a new stereotype to go with an old name. The rest of the time, though, writers go with what is known or expected, or else they risk having the characters dismissed by the viewers for reasons that they only vaguely understand themselves Foreign and outright alien characters have more leeway, but even with them, certain practices have become standardized A primary example of gleeful inversion would be Terry Pratchett's Discworld </ — you would expect</ Death's white

horse to have a formidable, dark-sounding name. Instead, it's called Binky See also Language Tropes . Compare Title Tropes

So! You've left Earth and settled a new world ? Good for you! Now comes the part where you name it. You might want to follow the traditions laid down by the settlers before you: New Something : Take a place on Earth, any place at all. Now add "New" to the beginning. Great! you've named your world! Welcome to New Detroit! Or New Paris! (Or Nova Lutetia !) New North Wales! New New South Wales! New New York! Or New New New York! Why bother to be creative when it's so much easier just to steal somewhere else's name, and have Truth in Television on your side into the bargain — a lot of cities and landmasses use this very same convention in reality. A variation is to change "New" to "Nu", symbolizing gradual language drift phoneticizing the planet's name, or the use of other languages' words for new (i.e. Nova Tierra, Neau Terre, Neue Erde, etc.) Be warned that depending on the name you chose you might be Tempting Fate , leading to What Did You Expect When You Named It _____? See Numbered Homeworld and Egopolis for examples of planets named that way

In Latin , nanus</ means "dwarf." In science, the prefix nano-</ means "one billionth" of something. is technology on a scale of 1-100 nanometers (1 nanometer being one billionth of a meter). Nanotechnology has become an all-purpose magic substitute for soft science fiction and sci-fi-flavored fantasy. Nano is the latest Sci Fi Name Buzzword ; it is the new pseudo-Greek for phlebotinum . Nanotech supplies a myriad of exciting powers with a satisfying patina of plausibility. As a result, Nanobots lead to interesting plots and settings even in otherwise hard science fiction . After all, if one could make a tiny robot at the nanometer scale and that little robot created another, and those two robots made four... Once you have a vast mass of these robots, all ready to accept orders and shuffle stuff around at the molecular level, they can potentially do anything nature does and much, much more. Real-life nanomachine research is being done in areas such as medicine, manufacturing, and chemical engineering. More often, fiction delights in taking nanotech way, way beyond the plausible. Nanomachines, "nanites" or "nanobots" are a writer's best friend . Writers are not expected to show</ the nanomachines doing whatever it is that they do, all they have to do are the results. And the results can be anything</. Nanomachines can be depicted as masses of cloud/liquid in external "colonies", Voluntary Shapeshifting Blobs , or syringes of stuff</ to be injected into humans and have fantastic results , usually in the form of superpowers , but sometimes in the form of a Baleful Polymorph , Unwilling Robotization or Harmful Healing . Real-life physics, however, puts constraints on what nanomachines can accomplish. For starters, without some source of energy, they will just sit there being molecules, or at best work veeeery slowly using ambient energy. Besides that, there's the issue of heat. The basic laws of thermodynamics state that there is no machine that can convert energy into work with 100% efficiency (I.E. without losing any energy in the form of heat), and the Square-Cube Law states that many small machines have a lot</ more surface area through which heat can leak out as opposed to one big machine. If you put two and two together, it means that any swarm of nanomachines is

at the constant threat of building up enough heat to cook its fragile components. Finally, there's also the so-called "sticky fingers" problem that quantum-sized particles simply don't act</ like macroscopic matter, such that simply picking them up, moving them, and (most of all) putting them down again</ is a much, much</ thornier problem than is popularly understood. But most writers rarely study the subject in any detail; it's easier to just use them as Green Rocks that can do anything the plot requires. One reasonably common science-fiction scenario involves nanomachines being programmed to build copies of themselves using materials in their environment. If not stopped, such nanobots could theoretically grow exponentially, turning all available material on Earth into more nanobots and ending life as we know it — this is known as the " Grey Goo " scenario. Some scientists have expressed concern that this scenario could actually happen in real life, although most consider it extremely to be accidentally built. Because it is so powerful, in settings where science is inherently</ bad, expect nanotech to be way up there on the Scale of Scientific Sins . Nanotech is a fairly common cause for the drastic scenario called The Singularity . The concepts of supply and demand change utterly when humanity becomes capable of mass-producing machinery that can turn anything into anything, ensuring supply is as close to infinite as is possible. And our basic nature is thrown up into the air once we direct nanites to work on us</ . Nanites themselves will usually either be dumb as bricks , or networked into a fully sentient mass Some works may invoke Mechanical Evolution to make the nanomachines smarter/better/deadlier. An important note, though: While many of the listed examples, and indeed fiction in general, may lead you to think otherwise, nanotechnology does only involve nanomachines. Nanotechnology is simply any kind of technology that operates on the scale of atoms. This can be about anything, like making surfaces waterproof, increasing the surface contact for faster (chemical) reactions, or using silver nanoparticles as antibacterial component Son!

This trope is the logical conclusion of an overconfident obsession with oneself . However, it is distinct from It's All About Me in that it does not focus simply on characters who frequently display self-centered behavior (often for comedic effect), but explores the mindset of characters whose behavior is The narcissist appears to be literally in love with themselves , presents themselves as perfect , and expects you to agree . When these expectations are not met, they react with indignation and hostility towards those who dare deny them that to which they feel entitled . Moreover, while highly self-conscious of how others view them , they are generally indifferent to the harm that they cause others in furtherance of their goals . The Trope Namer is Narcissus of Classical Mythology . The best-known version of the story is from Ovid (in The Metamorphoses </), according to which Narcissus coldly turned down a beautiful woman named Echo, who as a result faded away to nothing but a literal echo. Angered by his callousness and vanity, Aphrodite cursed Narcissus to fall in unrequited love with the next person he saw—which was his own reflection in the river, which he did until he died, whereupon his body was transformed into a flower. This is a perfect (if minimalist) description of the conflict within the narcissist—somebody who loves themselves, but at the same time never feels loved by</ themselves. Thus, they try to fill this hole with the love of others. Real Life Narcissists often

have rather fragile egos when things do</ go wrong for them, and they may well do so since the Narcissist is rarely as clever, talented or charming as they think they are. It is insufficient for a character to simply be vain or excessively preoccupied with their selfish desires to qualify for this trope. Rather, the following requirements must be met in order to qualify. A common characteristic of an Alpha Bitch , Bridezilla , The Bully , The Fighting Narcissist , Jerk Jock , My Beloved Smother , Pointy-Haired Boss , The Prima Donna , Selfie Fiend , Spoiled Brat , or a Stepford Smiler . Particularly sinister and dangerous examples often include the aforementioned clinical/true sociopaths, The Social Darwinist , The Übermensch , and General Ripper . The most absolute extreme</ of this trope is in the phrase A God Am I </: psychotic megalomaniacs who consider themselves divine and destined to subjugate everyone and everything to their will . Compare Small Name, Big Ego ; Inferiority Superiority Complex ; and Black-and-White Insanity . Compare and contrast The Sociopath who, while often displays extreme self-centeredness , and vanity (though not always to the same extent a narcissist would), with an insatiable craving for stimulation , a complete lack of conscience , as well as an inability and</ unwillingness to form ANY emotional bonds with those around them. Contrast Heroic Self-Deprecation .

During a dramatic moment, there is Narm : a line is said too emphatically , or the alien is obviously a guy in a rubber suit . So why isn't the entire audience laughing? Perhaps the rest of the work is so good, and they are too wrapped up in it to be bothered. Or what's cheesy is more the fun kind of cheesy , so they are happy, but not laughing. Or maybe Rule of Cool is working its magic. Or maybe it was supposed to seem somewhat cheesy. Or perhaps the Narm feels natural in the scenario presented. This is Narm Charm, something that by all reason should kill the drama, but doesn't. Some people will still find the scene to be true narm and others will find no narm at all. To some, it's Narm Charm and all part of the fun. Often invoked as a form of ageism, when something that was considered normal for the time something was made is seen as narm by audiences of a later generation (for example, the fact most actors in the early days of cinema were theatre actors who, naturally, needed to overact a little on stage and knew no better when on camera, or silent-era actors who similarly acted differently than sound-film actors might). The interval between a production's release and it being seen as narm by new audiences is decreasing rapidly (to the point where Avatar </ is already starting to be seen as narm by some audiences). This is a common characteristic of many a Guilty Pleasure . If a remake does away with this, it can result in opinions that the original was So Bad, It Was Better . Compare Camp , Ham and Cheese , So Bad, It's Good (when something is liked because of the Narm).

Do not state you disagree with an example, or that other people would. No example here is meant to be absolute</ .

Narm is a moment that is supposed to be serious, but due to either over-sappiness, poor execution , excessive Melodrama , unneeded use of foul language , or the sheer absurdity of the situation , the drama is lost to the point of surpassing "cheesy" and becoming unintentionally funny. Sometimes also known as "Cringe": evoking

dissatisfaction or even disgust from the poor execution, but said poor execution also evokes a kind of humour to make fun of. It is named for in the last season of Six Feet Under </ . In it, a main character briefly grabs his right arm and complains that it's numb. He then suffers a brain hemorrhage while repeating the words "Numb arm". However, it quickly degenerates into "Narm! Narm!" before he comically rolls up his eyes, snorts loudly, and then drops to the floor. Even though the scene was intended to be frightening, fans and critics overwhelmingly found it to be funny. Were you to discuss this phenomenon in a scholarly work or literary circles, the word you would probably use is " Bathos ". Narm and Bathos are similar, but Narm is for unintended</ humor. Narm can be subjective, as different audience members may find different things unintentionally funny. It can stem from a failed attempt to pull off an awesome (if it comes across as either too underwhelming or ridiculous to be taken seriously), heartwarming (if it comes across as sappy) or heartbreaking moment (if the audience fails to be sad). Anything that falls under Wangst and Deus Angst Machina runs the risk of falling under Narm, as what is intended</ to be sad can instead come across as over-the-top ridiculous and absurd. In subtitled anime , Narms are often created through the use of badly used English . In dubbed anime, Narms are more likely to result from the combination of a budding William Shatner reading an overly-literal translation. In CGI movies or video games, unrealistic movements or facial expressions may result in Narm. Dated special effects during dramatic scenes can cause Narm for younger audience members who were raised on nothing less convincing than The Phantom Menace </. Totally Radical dialogue in cartoons or commercials pandering to children can also be a rich source of Narm. Even a good performance in a bad movie can evoke Narm if the actor's performance isn't enough to keep the scene from becoming comedic rather than serious. Sometimes, this happens completely</ due to the audience's reaction. Actors may end up alluding to past roles they were famous for (sometimes, that's the intended reaction) but the audience instead just ends up seeing their character. This especially happens with voices - with only a limited pool of voice actors to choose from, sometimes it's obvious a character is Talking to Himself . And that's not even getting into what sort of things can be done with customizable uniforms in video games, or even weird costumes in general . Serious moments can be ruined by putting the characters in very</ silly looking outfits, especially if they and other characters do not respond to it. Bonus points if the game doesn't acknowledge that you stripped a character to their underwear or gave them a swimsuit costume. Much of the strength of a Narmy moment comes from the severity of Mood Whiplash caused by it. Compare Narm Charm , which is when a scene still works even with the cheesiness included. Contrast Dude, Not Funny! , Level Breaker , Comical Overreacting . Sometimes Narm examples come from a moment being too realistic, in which case it falls under Reality Is Unrealistic , or from overshooting its mark and making it come off as trying much too hard to sell the drama, pathos, or sense of awe the moment is meant to evoke. Not to be confused with 'Nam , or the Narn , or OMM-NOM- NOM-NOM , a certain heavy-set Boston barfly (or his Lurian counterpart), or a talking koala . Also not to be confused with the National Area for Retired Mills , , or the . Despite having it as a part of his name, the Pharaoh has nothing to do with this trope either. See also Snark Bait , Nightmare Retardant for "scary" narm, Fetish Retardant for "sexy" narm, and So Unfunny, It's Funny for "funny" narm. If this trope is intentional on the writer's part, see Failed Attempt at Drama . Please do not place examples that

better belong on Bathos here or on any main page. In other words, only unintentional humor belongs on this page. </

Travel between different universes can be a tricky thing . Sometimes, time passes more quickly in your home universe , so that when you return from a trip to another one, everyone you know is dead. Other times, you can spend weeks, months, or even years in another world and come back only a short time after you left Sometimes, however, the relative movement of time isn't that consistent. You might be able to re-enter your universe at any point you choose, effectively combining dimensional travel with Time Travel . Other times, the relative flow of time between the two universes is out of your control: you might return at the exact moment you left, hundreds of years in the past or future, or anywhere in between. And the next time you make the same trip, the results might be radically different. These time jumps could be random , or they might be revealed to serve some higher purpose or destiny This is Narnia Time, when the relative flow of time between two or more different universes changes to serve the needs of the plot May include or</ contrast with Year Inside, Hour Outside and</ Year Outside, Hour Inside . Can also cause Time-Travel Tense Trouble . See also Timey-Wimey Ball . Compare with San Dimas Time where time passing in the "home" universe is equal to that experienced by the time travelers

Filmmakers and playwrights use the term to describe moments in the screenplay that should evoke particular emotional reactions in the audience. Although derived from this term is less about timing and much more about pacing</ — the cyclic shifts in emotional direction and intensity that keep the audience engaged with the story. Narrative beats therefore don't have any specific duration, and can, in fact, be found as often as at every line of dialogue or as rarely as at the key turning points of the plot. In movies, beats tend to be spaced apart regularly; a string of scenes between two beats is known as a Narrative beats are not the same as Beats and Beat Panels , which are presentation techniques of pausing the dialogue/action to let something important sink in with the audience (although that "something" is often an underlying narrative beat).

The trick to keeping the audiences on the edge of their seats throughout the whole story is a varied progression that generally slopes downward (towards fear) but intersperses negative beat resolutions with hopeful ones at just the right times. Not all beats have to resolve positively or negatively, however: neutral or ambiguous resolutions can be used effectively to maintain tension, but too many of them result in indecisive and forgettable narratives beats revolve around the protagonist's external or practical goals and evoke a sense of suspense, advancing the overall plot with little personal investment from the characters. For example, the hero may be giving chase to the villain to stop his nefarious plans : in a positive resolution, he is able to intercept the bad guy; in a negative one, he loses track of him Procedural and Dramatic beats are the two main workhorses of fiction: 80% of any narrative consists of them, with the

exact ratio between the two determining its place on the Sliding Scale of Plot Versus Characters . Pipe, Question, and Reveal are collectively known as "informational beats". The Question-Reveal combo is a particular darling of Lit Fic , whose authors use it to maintain narrative suspense in lieu of jeopardy-inducing Procedural beats preferred by adventure and genre fiction

move the story forward or organize a scene or sequence. </ The following lists of narrative devices are not categorized elsewhere. Beginning Tropes : Tropes pertaining to how the story begins.

Most works follow The Law of Conservation of Detail . If you see something, chances are it's important — either for the plot, or for establishing character or setting However, some works thumb their noses at the Law and decide that, more than anything, they want to engage in Worldbuilding . They want to show realistic diction . People may actually have to drive around for a bit to find a parking spot . They may actually have to go to the bathroom (and not due to a Potty Emergency , either). There may be offhand conversations that have nothing to do with the plot In short, these are works full of details that are pretty but not required for the story — filigree, in fact. It's where the actual narrative is full of things that aren't really plot. Of course, a lot of things that aren't plot-relevant will still tell you something about the characters . It's also a great way for a good author to hide Chekhov's Gun , as they can bury a seemingly-innocuous fact that becomes important later mixed up with any number of other little details that don't (and thus indirectly encouraging readers to start cultivating their gardens of Epileptic Trees) Slice of Life stories often fall into this, but not always — some of them are a set of vignettes, with each capsule story adhering to the Law individually. Many sitcoms also apply, because jokes (at least those that aren't Brick Jokes , Overly Preprepared Gags , or Chekhov's Guns) tend to be one-offs Because many video games don't have linear narratives, this trope does not categorically apply to many of them. Only the story contained in cutscenes and dialogues of the more heavily plot-based (and linear) games would qualify. Sandbox-style games , while sometimes possessing central, driving storylines, are arguably defined by the huge quantity of narrative filigree contained in them, so mentioning this trope in the context of such games is almost superfluous. If an extreme number of internally-consistent details are present, then visit Developers' Foresight for examples Compare Establishing Character Moment , Cryptic Background Reference , Left Field Description , Random Events Plot , Garnishing the Story . Can result in Purple Prose when used carelessly and/or taken Up to Eleven . Also see Cow Tools for a visual Sister Trope . Story Breadcrumbs is an inversion/opposite tropes, where plot details small enough to normally count as filigree actually relate crucial plot points

Simply put, a narrative poem is a poem that tells a story. This format is Older Than Dirt — in fact, it may even predate prose. Such poems were popular in ye olden dayes, as the rhymes, rhythms, and alliteration helped the storyteller remember how the story went when no writing existed. Despite originally being designed for reciting by heart, narrative poems remained the most popular form of narrative fiction well after writing was invented and popularised. However, they started to decline in popularity with the advent of

the printing press as the production of fictional prose became cheaper and easier. They persisted in popularity for several hundred years, and even in the 19th century book-length narrative poems were not unusual. Nowadays, though, narrative poems are rarely written . Subtypes of narrative poetry include: Subgroups of ballads that have their own page on this wiki are the Murder Ballad , the Revenge Ballad , and the Morality Ballad . For a related format, see Rock Opera .

An Intellectual Animal in a cartoon just saw something strange land in the cornfields. It is something beyond description. The animal wants to tell his owners about the dangerous thing he just saw. Unfortunately, he can't talk . So how does he convey what he saw? He alters his physical appearance to resemble the strange thing he just saw It's a form of Voluntary Shapeshifting in which one character changes his appearance to tell a story or warn of a danger , especially if that character cannot speak or has trouble speaking . It could be especially jarring if the character shows no signs of being able to shapeshift in any other time The character does not have to be The Speechless in order to invoke this trope, and may indeed combine shapeshifting with spoken dialogue to get the idea of the story he is telling across A minor variation is when a speechless character attempts to warn the others of the impending danger by playing a nice game of charades Compare Metaphoric Metamorphosis , which is when a character morphs into a Visual Pun or other imagery to convey a particular emotion or trait

The elements of storytelling.</ You may be looking for NoRealLife.Narrative Characterization And Plot Tropes , which is for when these tropes aren't applicable to Real Life .

" Describe Narrator here. </ " That's what the sign had said, anyway. And so, as if compelled to do so , Stanl- I mean the Troper sat down at their computer screen and began to type... A character, sometimes part of the story proper and sometimes completely external to it, who acts either as the storyteller or as a framing device. A Narrator by definition breaks the Fourth Wall by addressing the audience to tell them the story. Sometimes, the Narrator is also responsible for presenting An Aesop to the audience at the end of the story (as in The Twilight Zone (1959) </ and its imitators). To be a Narrator, the individual must directly relate to the story in some way, if only as the person telling it. For example, Alfred Hitchcock was not</ a Narrator for Alfred Hitchcock Presents </, because his footage was independent of and had no bearing on the story or stories it appeared with. Rod Serling was</ a narrator, because he specifically introduced each story individually, often provided a lead-in to set them up, and provided a closing after the story footage ended; (okay, and in one episode he actually was</ assumed to be present in-universe, since an in-story character erased him from existence as a closing joke). Sometimes the Narrator can also take on aspects of a Greek Chorus or be otherwise weird , but a pure Narrator does not offer their own opinion on the action; he just lays it out — and occasionally delivers a punchline or moral. A Narrator is one of the primary ways of providing Exposition . One way of subverting

this trope is to have one or more in-story characters able to hear the narrator (as in most instances, the characters do not hear the narrations), and refuse to do what the narrator describes. Another is to make the narrator a complete liar . See Narrator Tropes for specific types of narrators.

Tropes about the Narrator — the helpful invisible person that fills in the blanks of the story. Compare Dialogue . See also Point of View , Framing Device . Do not confuse with Narrative Tropes .

Other tropes:

Big-name actors tend to get major roles in media, so when you see a big-name actor in what appears to be a small role, it might be a case of The Cameo or a One-Scene Wonder , but it also might be because the character's role is larger than it first appears . When the plot of the story involves a mystery, this often means that you can deduce at least part of the mystery purely on the star-power of the actors: narrow down the suspect to the guy you recognize Complications can come in when the production is an All-Star Cast , so every</ suspect is someone you recognize. It can also get confusing when an actor playing a small role gets more famous after the work was filmed Sometimes you can narrow it down before you even see the work because the trailers spoiled the big-name actor's appearance . If the big-name actor hasn't shown up by the third act, he'll probably be revealed as the final Hidden Villain Sometimes called Chekhov's Guest Star. See also: Traitor Shot , Not-So-Small Role . Compare also to Chekhov's Gunman , where the viewer is made suspicious by the strange irrelevance to the story of an apparently minor character rather than by the casting of a known actor Contrast Dead Star Walking , where a well-known actor appears to have a major role but is doomed because they're too expensive to be a regular cast member

Stereotypes regarding people of specific nationalities. Some of them are a little bit Truth in Television (certain others more so), due to having some basis in reality. But remember, stereotypes are either half-true or dishonest exaggerations; nations are not Planets of Hats where everyone always look and act the same, and there are always differences and exceptions within groups. If anything, the true face of the country in question is often either not as expected or entirely different This page serves as an index of tropes pertaining to any kind of ethnic/national/racial stereotyping. Please see Analysis.National Stereotypes to read more detailed, in-depth information about overall stereotypes

We are standing in the plains of Medialand. We can see Snarkus majoris, the Common Troper, stalking another cliché. Watch as she creeps silently towards the overused plot device. Soon... there she goes! She leaps onto the cliché and sinks her snarky teeth into it. Look at it writhe! It can't escape! Soon it will be another entry in the Troper's Lair. </ Documentaries in which animals are filmed in their natural habitat. Or not, as the case may be. There are two variants: one where a narrator explains whats going on over

a clandestinely filmed scene. The other is where the host goes out and wrestles the animals to show off the beauty of the unspoiled nature. Perhaps the Ur-Example for television was The Undersea World of Jacques Cousteau </ which ran on American Television for a decade and inspired an entire genre of underwater adventure documentaries (as well as a lot of affectionate parodies). All modern TV nature documentaries owe something to Cousteau. Commonly parodied in various media as the Wildlife Commentary Spoof . Super-Trope to Narrative-Driven Nature Documentary .

You've found yourself alone in the woods. No big deal, nature is a perfectly fine place to spend some time, wandering around. But now you can't see the edge of the forest anymore. And you realize that you can't see the sun, either, so you can't tell which direction to go in to get out. Let's add some scary strange noises. Watch yourself randomly running in some direction, looking for a way out, screaming for help, as the sun goes down and afternoon turns into dusk, which turns into a moonless night.. Oh, what's that? You wanted is how Mother Nature operates, and if you out there treating her as something out of a Disney movie , she will chew you up and spit you out</ like the sheltered weakling you are Soon you'll learn that Nature Is Not Nice This trope comes into play when a work's creator chooses to subvert the romanticized, saccharine image of nature as harmonious and maternal by portraying its uglier</ aspects: the horror, danger, amorality, and ruthlessness of untamed nature that works tend to gloss over. It's prime material for a Rescue show where the rescue team has to find a person lost in the wilderness, or a Nature Hero has that task. Any cute or pretty creature will likely be shown being devoured by fierce predators, or even subvert What Measure Is a Non-Cute? by being shown to be equally ruthless and violent to drive the point home The truth is, nature isn't consciously cruel; it just doesn't care about you. The forest is a big scary place in which you can get lost, or killed by disease or wild and ferocious animals. The desert has only about a hundred ways for you to be injured or die. The jungle is even worse . Even a lake or a river is a dangerous place for a person who isn't prepared This is also why Appeal to Nature is a Logical Fallacy ; just because something is 100% natural doesn't mean it's good for you Related to the Naïve Animal Lover , who doesn't realize how brutal wildlife can be. Compare this with Death World . Contrast this with Ghibli Hills , though the tropes are not always incompatible, since nature can be portrayed as beautiful even though it has harsh elements. When you combine the two tropes, you get Green Hill Zone . Inversely related to All-Natural Snake Oil . A supertrope for Nature Is Not a Toy . See Gaia's Vengeance for when nature strikes back in a more dramatic scale

A character either witnessing a nauseating sight, or describing something nauseating, is completely unbothered by it. Bonus points if it makes another character nauseated. Frequently Played for Laughs Often leads to a Vomit Discretion Shot or Vomit Indiscretion Shot See also Autopsy Snack Time . Additionally, the Vomiting Cop is frequently found with a more jaded cop who isn't nauseous

This is not Squick , even though they are related. Nausea Fuel

are scenes and events that are specifically meant </ to be disgusting. While Squick only makes some people go "ew, gross" and is extremely subjective, Nausea Fuel is created (and is often considered by everyone) to be sickening and horrifying For example, someone getting punched in the face and bleeding profusely is Squick. That same head getting crushed , graphically</ , is Nausea Fuel. When there's no gore involved, this trope is most commonly invoked by motion sickness or anything involving bodily functions Paradoxically (or maybe not), Glurge can also find itself in this category Also related to Shock Site and Gross-Out Show . Eye Scream and Gross-Up Close-Up are subtropes of this. Frequently overlaps with Fan Disservice , Gorn , and Nightmare Fuel

That's why they call it the "Boom"! Don't Explain the Joke —For the sound it makes when it hits you in the head. Not really, but an old sailing joke On a small, single-masted ship, the sail will be large and the deck so small you have to watch for the boom — it's the spar under the sail. So when the sail moves, it's likely to swing suddenly across the deck and knock the sailor unaware in the head. Sometimes this results in unconsciousness. Sometimes the sailor is knocked into the water. And sometimes, the sailor is knocked unconscious into the water In some cases, the target of the boom will get a warning that it's coming... but usually the warning comes a mere second before the impact, doing the target no good whatsoever Very much Truth in Television . When the boat is jibing (changing the sail orientation by moving the stern into the wind, as opposed to tacking, turning the bow into the wind), the boom can very suddenly swing across the deck at high speed, which can lead to a concussion (or worse) for anyone not paying attention. Keeping your head down is one of the first things taught to beginning sailors Compare Plank Gag

A naval blockade is a tactic and/or strategy that prevents the movement of goods, supplies, and forces by sea. The greater the volume of traffic to be prevented, the greater the blockade—and the greater the resources needed to maintain it A close blockade is probably what most people think of, a fleet within weapons-range and probably the direct sight of the enemy. This works better for a visual medium. A loose or distant blockade is beyond the defenders' weapons-range and probably beyond their direct sight as well. A distant blockade will take place on the open sea, such as the one imposed by the Royal Navy in the English Channel and North Sea in both World Wars. A close blockade is often more effective, taking advantage of narrow inlets, but often entails more clashes with the enemy and operating further from one's supply and repair bases. How these would work in space depends on the author Under current rules of warfare, a blockade is an act of war. The dispatch of a trade-interdiction/blockade fleet is often an ultimatum to either agree to certain terms or declare war There are always those foolhardy enough to try Running the Blockade May overlap with Gunboat Diplomacy . Contrast Hold the Line , for when the good guys are trying to keep their enemies from overrunning their position, and Easy Logistics , which this is used to counter

The Nay-Theist is not</ an atheist or agnostic — they are well aware of the existence of the gods (or God), and freely admit it; they just refuse to worship them or to "believe" in them in any strong spiritual sense beyond merely acknowledging the fact of their existence. Perhaps they have some personal grudge against the gods for something they did (or didn't do); perhaps they refuse to accept divine judgment because the gods don't measure up to their</ moral standards; perhaps this character is just the independent type by nature; or perhaps they simply think (or know) there is Always a Bigger Fish , making searching for an "all-powerful" creator a pointless venture They may go through the motions of worship, but if so, it's only to avoid getting struck by lightning or stoned by an angry mob, not out of any sincere religious feelings. Alternatively, they may spend time voicing their dislike of the powers that be to anyone who'll listen , possibly while daring the powers-that-be to strike them down This should not be confused with the Flat-Earth Atheist , who simply doubts the existence of the divine despite overwhelming evidence to the contrary. Nor should it be confused with No Such Thing as Space Jesus , where the " gods " in question are actually aliens , computers , time travelers , or whatever. The Nay-Theist only applies to worlds where there really are</ genuine gods who are actively worshiped as such by most people. The Nay-Theist will be a favorite of a Stop Worshipping Me style God The protagonist of a Rage Against the Heavens plot will have this worldview by necessity, but Nay-Theists are by no means limited to that story Clap Your Hands If You Believe may be a reason for this; the character doesn't want to give the gods more power through their "belief" The technical term for this position is if the person believes in but does not worship God(s), and for the stronger version where the person believes in but also hates God(s). Of course, it's likely a misotheist would also be an alatrist, since it's hard to imagine someone worshiping a god or gods which they hated (at least voluntarily). For media portrayals of atheists as misotheists (among other misconceptions), see Hollywood Atheist

Now that</ was close! This trope describes circumstances where the narrow</ aversion of a Groin Attack is Played for Laughs This usually happens when a male character is on the floor, scooting backwards away from some kind of disturbance. Suddenly a piece of debris or similar hits the ground between his legs, right</ where the family jewels were located mere seconds ago. Our hero will then usually display an Oh, Crap! expression, inviting the viewers to share both the male pain and the male relief As well as being (obviously) an aversion of Groin Attack , this trope is sister to William Telling . Can also overlap with Knife Outline , where sharp objects will hit a wall around</ a character's body, pinning them by their clothes. Often the final object will land disturbingly close to a character's crotch. The unfortunate male checking himself afterwards is a Testes Test

A person nearly</ rapes another person. The first person then takes a step back, goes into My God, What Have I Done? mode, and reacts with horror. They often run from the scene. Basically,

it's the realization that "If I keep going now, I will have raped this person." In return, the near-rape victim is always badly shaken but often forgives their attacker later because they had the self-control to stop This trope also covers other My-God-I-am-nearly-a-rapist situations, such as drunk people stepping back just in time, grudgingly paying attention when your partner says no, or realising that maybe your rough consensual sex is getting a bit too</ rough and taking a deep breath for a minute Keep in mind that this is not about remorse or guilt after the act, but the attacker must stop of their own free will (although a degree of persuasion on behalf of the potential victim is allowed), not as a result of being fought off or somebody else stopping them. Contrast Date Rape Averted , Attempted Rape , Dude, She's Like, in a Coma! In Real Life , the victim is generally less forgiving , as even when it doesn't go all the way it is a shockingly traumatic experience

Appearing most often in less realistic spy/action fiction, the Nebulous Evil Organisation is the natural enemy of Heroes "R" Us Often led by a Diabolical Mastermind , and sometimes developed enough to have its own bureaucracy, It is a vast, deep-pocketed machine</ with one apparent goal: The proliferation of evil across the globe, maybe with some personal profit on the side Like The Syndicate , it has a hand in every conceivable kind of nefarious dealing, from murder to terrorism to grand robbery to bad traffic . However, its criminal activities have some grand goal, almost always to Take Over the World or The End of the World as We Know It - which is, by sheer coincidence, nebulous enough that nearly any anti-good act can be shoehorned into it. Price-fixing of consumer goods, killing political leaders, blowing up buildings, stealing the gold from Fort Knox, and attacking the heroes for no stated reason at all are all things the organization gets up to. Expect vast armies of mooks , a secret underground lair , immense amounts of advanced technology and a clever name that often does away with any notion of subtlety See also Nebulous Criminal Conspiracy , which the operations extend beyond one single organization. Compare and contrast Generic Doomsday Villain

A villain may believe that the Ends (involving a Utopia or the survival of the species) justify the Means, but either has in no way lost his conscience , or otherwise had a Heel Realization during his deluded time. He knows full well that what he's doing is evil and that heroes may try to bring him to justice for his crimes. He may in fact be counting</ on it, feeling it to be a just punishment for what he feels he must do . He may bear the heroes no ill will, and may instead commend them for trying to stop him Oftentimes, in the event that he succeeds in his goal , he will flat-out refuse to take part in his newfound paradise: the things that he did to create it are inexcusable in the new society This is the more Anti-Villain version of the Well-Intentioned Extremist . Likewise, the Knight Templar often sees himself as this. They will regularly Shoot the Dog and carry out a Zero-Approval Gambit . A Necessarily Evil villain is, by definition, AWARE that what he's doing is wrong. Otherwise you have a Tautological Templar He does what he has to do , because he knows that something far worse will happen if he doesn't.</ He knows he must pay the price for his deeds, but not before his goals are accomplished. What a Senseless Waste of Human Life ... In some cases, said actions

may be unnecessary towards that goal , and there may be a better option , but the character is either too far gone in morality or sanity to see the light. If they realize the suffering they caused, they could very well conclude that what they did was Not Quite the Right Thing and regret it for the rest of their life This trope inspires a tremendous amount of Values Dissonance in Real Life . Some believe firmly that certain immoral actions can be 'necessary', and others believe that thinking of evil acts as 'necessary' encourages amoral behavior and creates considerable unnecessary suffering The polar opposite of the Sociopathic Hero . See also I Did What I Had to Do and Token Evil Teammate . For mundane examples, see Cruel to Be Kind

There is a direct relationship between the power and ability of a device and the drawbacks attached to actually using the damn thing. This means that the more powerful something becomes, the more likely it is to seriously harm its user in the process In stories, this balance exists for several reasons, but especially for two important ones: to keep an audience interested and to avoid making things difficult for the writer . Without this balance, it calls into question why someone doesn't use such a weapon in the first place , or why everyone in the world</ isn't using it, if there is no drawback. For example, the invention of accurate, rapid-firing firearms killed Sword Fighting outside of gentlemanly sports contests. One plausible reason why only one combatant would use a weapon or power is if they're the first ones to find, invent or create it . Another plausible reason is that they are The Only One who has it, because the blueprints have been destroyed or it can only be used for a short time before it's gone for good In games, this helps to create variety. For example, you might have a game system in which broadswords are powerful and have a wide range, but are slow and heavy, while daggers are quick and light, but with a short range. Perhaps the Combined Energy Attack and Wave-Motion Gun requires a few seconds of prep time to use correctly, and even then it is usually a one time deal , or at most maybe three. Guns likewise have range; but have to be nerfed so that people would actually look at other weapon types out there. A Game-Breaker is something that ignores</ this rule, which means that everyone</ either has to do it or they will</ lose If the drawback is that the enemies are more powerful because you have become more powerful, it can be factored into So Last Season and the Sorting Algorithm of Evil . The Kryptonite Factor is also a part of this, as is Weaksauce Weakness . Characters such as Superman and Vampires will have these weaknesses automatically or else there is no drama involved, just an unstoppable force. Just giving someone a simple problem like " They care too much " is enough. Mary Sues are often hated because they don't have any drawbacks . To avoid that, authors usually build in a Fantastic Fragility to powers and devices There is a danger, however, that inept balancing can lead to too much drawback without enough benefits. If the drawback is worse than the effect, it can become Awesome, but Impractical . Drawback without added practical benefit can further slide into Cool, but Inefficient . At the other end is Fake Balance , where the developers thought they had balanced a character but didn't have enough Foresight and failed to remove a Game-Breaker aspect or two Compare the Competitive Balance character builds for how fighting styles and video game stats are evened out. See also the Inverse Law of Complexity to Power . Difficult, but Awesome can be a subtrope; the thing works well, but the drawback is ease of use

A subtrope of the Butterfly of Doom ; this trope is sometimes used to " prove " not why You Can't Fight Fate , but why you shouldn't want</ to Whereas the Butterfly of Doom trope shows you everything that goes horribly wrong when you try to Set Right What Once Went Wrong , this trope demonstrates that what was once wrong was actually needed to make the present (or future) better Perhaps that the whole village getting nuked caused folks to denounce war. Maybe losing his wife caused The Hero to launch into his crusade to save others. Or maybe being used by the villain gives the hero knowledge and experience that will come in handy later. This is almost certainly the case if the wrong involved Hitler Note, this is not strictly a Time Travel Trope ; sometimes the characters or narrator may simply reference the fail as a part of backstory. But it can indeed be used in time travel stories to demonstrate how removing that downer event can lead to things being much worse See also My Greatest Failure , Misery Builds Character , A Lesson in Defeat , It's a Wonderful Plot , Career-Building Blunder , Mistakes Are Not the End of the World , Enemy Mine , and Taught by Experience

As a logical extension of Tropes Are Not Bad , many tropes that might otherwise come across as gratuitous, offensive or just plain wrong in most genres are considered not just accepted in certain genres, but are practically a part of the genre. Complaining about the simple use of the tropes (as opposed to particularly offensive variations) in said genres is rather short-sighted and pointless, since, well, it's in almost every</ other work in the genre Can often be the cause of an Enforced Trope . Some Acceptable Breaks from Reality are Necessary Weasels to particular genres as well. Also compare the Anthropic Principle , where certain factors, no matter how improbable, have to occur for the story to happen. Contrast with the Writing Pitfall Index , an article listing tropes that can lead to real (versus merely perceived) flaws. See also Trope Enjoyment Loophole , for when somebody's Pet-Peeve Trope is handled in a way that makes it no longer annoying (or vice versa) A related concept is the doctrine of scènes à faire</ in some countries' copyright law. This doctrine denies copyright protection to elements that are considered necessary to a genre or setting. For example, a court of appeals in the United States has held that a movie set in the South Bronx is expected to show certain features associated with the South Bronx at the time in which the movie is set and that showing such features is therefore not copyrightable expression

Next to " Off with His Head! ", snapping a person's neck is one of the surest ways to kill someone in media Typical procedure: Alice stalks Bob . Catching him unaware, Alice grabs Bob's chin with one hand and his opposite temple with the other. Bob just has time enough for his eyes to go wide with the realization of how screwed he is when Alice wrenches his head to the side with a hideous cracking of bone . Bob is always killed instantly and usually with his eyes open . Sometimes Alice appears to put in an effort (or has superpowers or something) but often is remarkably blase about it Note that in Real Life , it takes a considerable amount of strength and/or training to snap a person's neck, especially if the character getting it snapped is considerably big and strong.

Even though hangings , for example, were created as a humane way of killing people via a neck snap, if not done from a high enough place with a long enough rope to generate enough force, they will fail to do so, leading to death by Sinister Suffocation . It's possible if you can pin your opponent and know where to grab and twist to get leverage. In real life, spinal/neck manipulation is allowed in certain martial arts competitions such as the UFC and other MMA events. However, it looks very different than in the movies, and there is almost always time to "tap out" before injury, much less permanent or lethal injury. To perform the "neck snap" like in the page's image you would have to be super humanly strong Also note that in Real Life nothing dies instantly from a fractured neck unless it sends vertebrae fragments into, or contorts, the brain-stem in such a way as to shut down all lower brain functions. A broken neck is no guarantee of a "silent kill" either as, if the aforementioned brain-stem damage is not inflicted, all you are left with is a quadriplegic victim, severely injured but not dead, and still able to speak and scream. In addition, as mentioned above it takes a lot of strength to pull this off - fail to incapacitate the target, and you’ve given yourself away in a seriously vulnerable situation. Furthermore, if the spinal cord is not damaged at all, a cervical fracture can heal with proper treatment The frequency of this in film and TV is possibly because it offers a fairly brutal way of killing someone without having to use or show any blood. It is also often used as storytelling shorthand for "this character is a Badass". Not to be confused with Neck Cracking As a Death Trope , expect spoilers

A situation where a man (and it almost always is a man) is dragged off or restrained by his necktie, which serves as a sort of "leash" for whoever's holding it. The one holding it is almost always a woman, and this trope can be seen as the visual equivalent of "pussy whipped", possibly serving as a visual cue for a Henpecked Husband or Mistress and Servant Boy . It's also a way of suggesting that some major league smooching (or beyond) is going to occur later off-screen Obviously, a tie serves as a handy holding strap for anyone to grab—but of course, Freudian psychologists are prompt to note that a full cravat is a — hence women using them to lead their men around This trope is usually used to indicate who has the control in a relationship and is almost always Played for Laughs , though very rarely you'll ever see it happen with a man holding a woman like this and have it be seen as funny. Also, women don't wear neckties as much . Instead he'll lead her off using the Standard Female Grab Area . See also Angry Collar Grab

Commonly used in crime dramas Once the detective has done The Summation and revealed the guilty party, we will get a Flashback of the crime being committed with the perpetrator completely visible, showing how they did it. This is particularly helpful if the murder method was fairly complicated, as a picture is of course worth a thousand words Sometimes there will be more than one flashback during the investigation as the detectives think out a theory; in this case, the theories and therefore the flashback may not even turn out to be correct. Sometimes it will be blurred with distorted sound and washed-out colors Compare Once More, with Clarity! which repeats an earlier scene but adds new information which changes our

perception of what went on in that moment, and Flashback-Montage Realization which shows a series of flashbacks that may include new footage. Nothing to do with Necromancy

Willem Dafoe's character in The Boondock Saints </ not only does this, but he also walks around in the scene Dead Zone style.

Most of the film/television adaptations of Agatha Christie 's works include at least one 'true' (and usually several 'false') versions of this as the detective crosses off potential theories in the finale.

A practitioner of a specific kind of Whatevermancy , Necromancers are the masters of the art of death. Necromancy, the magic of Interrogating the Dead , has been practiced since at least Ancient Greece , where it was known as Necromantia</ , and probably earlier In typical media they're the epitome of the Evil Sorcerer , showing none of the respect Due to the Dead , using The Dark Arts to create an army of skeletons , zombies , undead animals and undead monsters (or any kind of Undead being) to ravage the countryside or enslave souls of the damned for their own evil and twisted purposes. Any villain that practices necromancy is guaranteed to fall hard onto the far side of the evil scale, and any hero who dares to dabble in it can kiss his position on the good side goodbye . However, necromancy didn't always have the evil connotations that it has in media today The word necromancy</ comes from the words nekros</ (dead) and manteia</ (prophecy), meaning that necromancers are more likely to summon spirits for divination than armies of rotting zombies. It was widely practiced across the world until the Renaissance when it was equated with demonology and got its bad reputation. This means that sometimes necromancers are seen in a more sympathetic light , using their powers to commune with the dead , heal others , or use their power over souls for good ends. Most stories involving naive and inexperienced necromancers include the Aesop of how you should respect the cycle of life and death. In other cases, it involves the phrase " Be Careful What You Wish For " when those necromancers try to bring back a loved one. As it usually results in the resurrection going wrong and forcing them to kill their loved one. But since that's not nearly as interesting as zombies , the idea of a necromancer unleashing waves of zombies still persists. Of course , that doesn't stop them from unleashing the hordes on the bad guys instead! Commonly overlaps with Necromantic ; either someone attempts necromancy in order to bring back their loved one, or this was the start of their descent into evil . Sometimes a character will approach a necromancer for their help in bringing back their beloved (which never ends well). It's not unheard of for a necromancer to be one of The Undead themselves, often a lich . Even if they aren't liches or other forms of undead themselves, they are likely to have unlocked other ways of prolonging their own lives to unnatural lengths. Furthermore, they may become partially </ undead . Since necromancers are typically seen animating not only still-fleshy corpses as zombies but also completely skeletal remains, Fridge Logic may raise the question of why there exists an arbitrary point past which a body is too decomposed to reanimate. After all, if the necromancer's magic can both hold together the bones of a skeleton despite the absence of ligaments and provide it with motor functions

despite the absence of muscles, why then does the skeleton suddenly cease to function anyway when those same bones get pulverized by the knight's warhammer? Following this, one might wonder if a necromancer could animate the ashes from an urn, or that hamburger you ate yesterday currently inside your small intesitne . In another case of Fridge Logic , many writers have recently begun to question whether this form of magic would even be inherently evil in the first place Depending on the specifics of the setting, it shouldn't logically be any different from repurposing some old worn out shirt that someone else has discarded, for example. Only metaphorically related to Thread Necromancer , where one resurrects dead forum threads. See also Animate Dead , Tested on Humans and The Necrocracy . Precursors ; kindly ancient civilization or deadbeat parents? You decide, on today's episode of </ The Adventurer Archaeologist claims that the Neglectful Precursor has left this galaxy and not provided a proper means of child support. He further alleges that the abundance of sealed evils with flimsy seals and easily found keys , the leaving of outstanding debts with ancient enemies bent on collecting from humanity, and the presence of civilization-shattering plagues are

clear signs of neglect. The plaintiff demands that the ancients stop leaving dangerous weapons lying about for villains to acquire, or else make access to them morality-sensitive , so only heroes can use them to pay off previous debts. Claims that since they've become Energy Beings thousands of years ago, they have evolved past conventional morality but are nonetheless caring for humanity or "testing it" </, evidenced by their "wise" decisions to hold back Lost Technology until we're ready to use it, and scatter the keys to important technology so it can be used again. They defend their "long distance parenting" as character building, making sure the threats humanity faces are in line with its skill, and that there's always one more</ Lost Superweapon around for each. They assure the court they "always knew we would win." And finally, the defendant argues that there needs to be a cutoff point where their actions, inaction, and remaining artifacts stop being the excuse for everything bad that happens in the universe— that they did the best they could under circumstances beyond our comprehension— and where the younger races start realizing that they are responsible for their own mistakes.

A trope often found in situation comedy, it's where the boss (often a somewhat unpleasant one) places a relative or in-law in a position of power. Invariably, the relative will be incompetent or worse. A variation on this trope might be to actually have the relative be the protagonist, and have to earn the respect of his or her subordinates before they can actually accomplish anything meaningful. The trope can also be subverted if the relative is actually competent</, in which case the grumbling can quickly subside. It can be averted in cases where nepotism is expected</ , such as a prince becoming king when his father dies, in which case most people just accept it as the way things are supposed to go. Very much Truth in Television , and sometimes a way for the relative to get their feet wet in the business , especially if they're being groomed to take over the business when the current owner retires or is otherwise unable to make decisions. In some cases, two weaker networks are "merged" into one, meaning, one network absorbs the programming and other elements of the other At the end of the day, unless the new network is able to find an audience with its programming, it won't be able to generate any ratings, which leads to low revenue When a network is shut down without a rebrand, it's almost certain any show being carried on that network will die with it . In some cases, though, a show will prove successful enough to outlive its former network and manage a last-second Channel Hop , usually a result of the show's rights being sold to another network This trope is related to, but not the same as, Network Decay . As noted above, Network Decay can lead to Network Death, but the channel must</ be given a different name and focus, keeping only its slot on the cable listings When this happens to an individual show</, it's called Cancellation . When a dying network decides to do something to commemorate its end with a bang, it's a Network Finale

Many cable channels are created to fulfill a specific programming niche , and their name is Exactly What It Says on the Tin — the Golf Channel shows golf, the Game Show Network shows Game Shows , and so on. Some channels, however, are not as wedded to their original concept as others. Meddling executives look at the demographics to whom their channel appeals and decide that, hey, since the people watching their Speculative Fiction channel are mostly 18-31 males, and Professional Wrestling is hot among that demographic, surely no one would mind if they started showing pro-wrestling! The fans of the original programming will</ mind, of course, but the channel tends to keep going regardless. This may show up with only a couple of odd programs in the schedule, but far too often, given enough time, a channel will have pretty much abandoned its original concept. Whether or not the former invariably leads to the latter is a subject for debate. Since the network is strongly impacted by the ratings, and the highest ratings go to generally the same few demographics, this tends to lead to networks becoming more and more like each other , either in similar programming or outright airing the same shows. Some changes can be chalked up to the changing landscape of TV . As the number of channels goes up, networks re-align themselves to try and hold some of their market. That, or the parent companies who might own seven or more cable channels each shuffle stuff for "synergy" or to reduce redundancy. Competition with new media is prevalent as well — classic reruns give way to DVD box sets, On-Demand channels, (and the real</ killer, Netflix and similar streaming services), music-video channels give way to YouTube and iPods, and info-dumping all-text channels give way to the data display in a digital cable box, smartphone apps (once again, the real</ killer) or some new-fangled webernet site. Other times, it's just shifting to whatever the network feels will attract the biggest audience — and the audience that lets them charge the most for ads (especially the lucrative young adult demographic, needless to say). Depending on the network and how the decay is carried out, changing concepts

can be either good or bad for the channel . If the Network Decay works out, it may expose the channel to thousands, if not millions of new viewers, who would normally never watch the network in the first place. Or perhaps the earlier direction just was not working out and the network made changes in order to get better and more profitable programming. Furthermore, there are several good shows floating around in Development Hell that wouldn't stand a chance of getting picked up unless a network decides to spread its wings. If the decay doesn't work out, however, then it can create a Broken Base among the channel's viewers, and can throw the network into a Dork Age . Even if</ the decay works, the expanded viewership would come for naught for the various programs now squeezed out of the network's scheduling - once again, pointing out that good and bad can come of it, depending on the viewer. Also called a on That Other Wiki . See Magazine Decay for the print equivalent. See also Artifact Title , They Changed It, Now It Sucks! , Screwed by the Network , and Adored by the Network . Public Medium Ignorance may be a cause for some of the listed networks. If the network decays so much that it's renamed to fit the new focus, then the older network no longer exists and it's a case of Network Death . If it starts overlapping with politics, then it can cross over into Strawman News Media .

Once upon a time, there were companies that transmitted radio and television signals to the extent of their signal strength. These companies bought entertainment content from a single source. The content sources bought the content they resold from a wide variety of entities called "studios". The companies with the transmitters thought it would be a good idea to have a brand to identify with. The companies that sold content thought it would be a good idea for that brand to be related to them. The studios thought, "What the hell. You want to buy content? Call it whatever you want, just send money." The notion of "network" was born. In today's world — where distribution of content is by cable, satellite, DVD, or internet — the folks with the transmitters are becoming increasingly irrelevant. Viewers care less about the "network" brand. The shows are becoming more relevant than the networks that broadcast them, meaning that the show is the brand. Which means that the "studio" is now what it is all about, for the viewer. Not so much for the networks. In the USA, other than the "big four" (the original big three of ABC / CBS / NBC , plus latecomer Fox ; in the early years, DuMont was also counted as a fourth network) , the purpose of "network" now mostly serves to identify a niche outlet on cable/satellite; for example, the Food Network and Animal Planet tend to have a lot of cooking shows and wildlife shows, respectively . Going back to "the show is the brand" concept, many if not most "home-brew" "networks" and "channels" on the Web (say, on YouTube) are really best described as shows.

CTV Two, a secondary network to CTV which airs overflow programming with younger or more niche audiences. It is the successor to the NewNet group of independent stations (named because the stations were originally known as "The New XX</ " using the last two letters of the callsign; i.e. "The New VR" for flagship CKVR, and "The New WI" for CHWI in Windsor) formed by CHUM in 1995. Took on the A-Channel brand in 2005 after CHUM switched its A-Channel stations Western Canada (which it had obtained through its purchase of Craig Media) to Citytv, and was acquired by CTV in 2007 and later re-launched as just A. In 2011, alongside the transition to digital television, A re-launched as CTV Two. The system also includes CTV Two Atlantic (the former Atlantic Satellite Network, a cable channel in Atlantic Canada that served as a partial CityTV affiliate) and CTV Two Alberta (formerly Access, an educational TV service owned by the provincial government), as well as two former CBC affiliates in BC that Bell received via its purchase of Astral Media.

. Primarily involved in entertainment programming, especially game and reality shows (they are also responsible for the Netherlands' entries in the Eurovision Song Contest). AVRO was the very first broadcaster in the system, with a liberal ideology. TROS was established in 1964, and, unusually for the time, was focused strictly on entertainment programming rather than trying to serve a religion or ideology. Its popularity led some of the other groups to similarly broaden their programming for wider appeal. There are two public service broadcasters in the system; (which handles "informational, cultural and educational programs"). There are also other religious and philosophical groups, designated as "special" broadcasters, who receive airtime for their shows. Some of them have merged with or partnered with the larger groups. The NPO runs five channels carried primarily on pay television providers; The NPO also formerly ran a sixth channel — NPO 101 — a youth channel programmed by BNNVARA. It became NPO 3 Extra in March 2018, and shut down entirely that December, with NPO 1 Extra and NPO Zappelin Extra becoming 24-hour channels. There are also other commercial channel groups too: Talpa, owned by John de Mol of Endemol and The Voice </ fame. Talpa's channels are part of a joint venture with Sanoma known as SBS Broadcasting, who acquired ProSiebenSat.1 Media's Dutch business. Talpa had run a channel of its own called Tien, but it didn't perform well, and Talpa sold it to RTL (who replaced it with the aforementioned RTL 8) in exchange for briefly holding a share in RTL's Dutch subsidiary.

Studios turn down good scripts, networks cancel , screw over , or fail to pick up good shows, and publishers refuse to publish great books all the time. Usually, the suits</ a) never liked it, b) liked it but it was too expensive to produce, c) liked it but didn't think it would get a large enough audience, or d) they just didn't get it Sometimes, a movie, show, book, or video game is an iffy bet, at best. But sometimes a Studio/Network/Publisher (or more accurately a visionary Executive at said organization) realizes that this work is simply brilliant and will make sure the product has all the resources to fund it, promote it, and make sure it gets made. This loyalty stands even when the movie has

passed its budget twice, or the series is number 10,371 in the ratings. When the product is a hit, such boldness and support can result in Moments of Awesome for those Executives who defied the predictions of failure from their colleagues and instead stuck by the creators of the work The quote above comes from Alan Ladd, Jr., the 20th Century Fox executive whose unwavering faith in Star Wars </ helped that movie get made when even its own cast and crew had doubts about it. Fox demonstrated similar patience when Titanic (1997) </ ran way over budget, failed to meet schedule deadlines, and encountered myriad problems in filming Sometimes, a network or studio will destroy a good product and learn from its mistakes . Fox built up a reputation for never sticking with its shows due to Profit</, Arrested Development </ and Firefly </. (Though Arrested Development </ was given second and third seasons and a cushy timeslot, making it a case of this trope as well.) However, the network turned around and poured tons of money into promoting and producing Bones </, 24 </ and House, M.D. </ (although the last-named came from Universal), shows that were big gambles and have since become massive hits. Even more dramatic, Fox even went back and uncanceled </ a show they had previously screwed, twice — Family Guy </, one of their biggest hits, with sister show American Dad! </ completing its eighth season in 2013 and direct spinoff The Cleveland Show </ making it to four (before it</ got the axe). They even gave a second season to Dollhouse </ , a move which surprised many, though the show was canceled before the second season finished its run (which many feel was done just to avoid what happened last time) Where TV is concerned, sometimes Network to the Rescue can result in, or be the result of, an un-canceling , as was the case with JAG 's </ move from NBC after its first season (1995-96) to CBS , where it stayed on the air for nine more seasons</ and spun off a popular show which in its tenth season (2013) became the highest-rated prime-time drama . Not to mention that the spin-off has two</ successful spin-offs of its own Network to the Rescue is not quite the same as a network grudgingly</, or reluctantly</, taking back a show because they just don't want to upset viewers, as happened with Star Trek: The Original Series </ (or Jericho (2006) </). Both shows came back, but were dumped shortly after for good. No, a production entity has to willingly believe in and be fully committed to the product's success and be willing to put up with quite a few bumps in the road to success, as was the case with Paramount 's commitment to Star Trek: The Next Generation </. Paramount gave the series the kind of budget that only theatrical action movies had back then, and stuck with it even though the first few seasons were blah This trope doesn't apply to sure bets or things that are relatively low-risk. For instance, whereas Fox performed a Studio to the Rescue for the first Star Wars </ , by the time they decided to make the prequels it was a foregone conclusion that they would make tons of money Compare with Adored by the Network and Channel Hop . Contrast with Screwed by the Network ; some examples of Network to the Rescue are instances of networks cleaning up their own messes. Note which article has the most examples (though this may not be a case of Accentuating the Negative as much as networks simply screwing over shows more often than saving them)

This isn't a case where she's trapped, incapacitated, physically impaired, or any less experienced than the hero, himself. This is an able-bodied woman with some established ability who is just standing around on the sidelines, helplessly watching while the men do all the dirty work So no trying to improvise to assist the hero. No calling for help. No making any attempts to stalk off while the villain is distracted; anything that could possibly enable the hero's success. Not even cheering the hero on to boost morale. You could replace her with an inanimate prop for all the good she's doing The situation doesn't necessarily have to be Hero vs. Villain. It can also apply between good guys, especially in terms of romantic competition . The point is that the girl is still</ not helping either of them nor doing anything to stop the fight, not even by saying something that could</ settle everything between the combatants There are cases where her inactivity or lack of involvement in a fight can be justified. As stated above, she may be injured or Bound and Gagged and thus unable to move. She could be lower on the Super Weight scale or lack experience . Another reason could be This Is Something He's Got to Do Himself (where none</ of the hero's allies help him) or the hero insists on an honorable one-on-one duel . An especially fickle heroine may simply be waiting to see which man comes out on top, since Women Prefer Strong Men What differentiates her from a regular Load is that it's established she has abilities or has choices at her disposal but when confronted with duking it out among the boys she's suddenly rendered inept by virtue of being female . Compare to Damsel in Distress but with a case of Faux Action Girl ; which often serves as both the source and result of this trope. The distinction is that the Faux Action Girl is consistently failing to live up to her hype. It is a character trope. This trope here is more of a situational trope and it could have some justifying context (This Is Something He's Got to Do Himself for instance). Thus, not every Neutral Female is a Faux

Action Girl Also compare Standard Female Grab Area which is where being caught by the wrist or upper arm is enough to impede her. Both tropes are often caused by the writers' unwillingness to have a woman fighting (and thus being hit by) a man. Polar opposite of the Defiant Captive , who may be helpless but won't let that stop her from telling her captors exactly what she thinks of them Not to be confused with female RPG characters with a Neutral component to their Character Alignment

This trope is what happens when someone refuses to choose a side in a conflict, and it ends up biting them in the ass. Perhaps they spend the war sitting on their hands, or maybe they try to play up to both sides. Regardless, at some point one side or the other will come calling for revenge, if Laser-Guided Karma doesn't catch them first Contrast With Us or Against Us and Neutral No Longer , where the neutral party is forced to pick a side during the war, either because they got conquered by that side during the conflict, or because one side's atrocities drove them into the other side's camp Compare with Pacifism Backfire , No Points for Neutrality (which is about gameplay effects of alignment), and Alien Non-Interference Clause . Can overlap with the Golden Mean Fallacy , Stupid Neutral , and Bystander Syndrome . If the neutral party is attacked by the bad side because it is vulnerable without a potential ally, then this is a case of Head-in-the-Sand Management . If the neutral party is attacked as retaliation for not aiding the good side, then it is a case of Accomplice by Inaction However, this trope can be Subverted at times; in some situations, staying Neutral and out of the way can often be the safest (and wisest) choice for one to survive. It can even at times (such as when the conflict is Evil vs. Evil) be more ethical to choose neutrality than to pick a side Note: Aversions of this trope go under God and Satan Are Both Jerks , Screw This, I'm Outta Here! , Take a Third Option , or some combination thereof. Or in extreme cases, Omnicidal Neutral

What happens when you have a Purity Sue , and remove the Purity part? You get a Neutrality Sue. This one, much like the Anti-Sue , is not afraid to be flawed. In this case, however the distinction made is not that the character is trying to be flawed, but that any flaws are Hand Waved by them being neutral characters . But, here's the interesting part... this means they have license to do anything</. Want them to save a kitten from a tree? They can. Want them to kick the kitten in the very next moment? They can, with no contradiction of character In terms of personality, this trope usually is either devoid of emotion , or varies from deadpan to emotional to outright unstable . The Neutrality Sue basically thrives on being somewhere between extremes, and thus able to do everything in between Related to the Fixer Sue , a combination of Purity Sue / Villain Sue , and in some cases the Sympathetic Sue (if backstory and personality flaws are played out heavily). Compare Cloud Cuckoolander

When Germans Love David Hasselhoff is applied to the protagonist in his world. So you've saved the universe many times, taken down many multi-dimensional threats, and have generally done lots of good stuff. You're a celebrated hero! Everyone knows your name, the kids want to grow up to be like you, and people may even be selling

merchandise based off of you! At least, in places other than the town or world you came from. There, you're just that annoying kid at best, or another one of the faceless masses at worst. There are many reasons for this. Maybe you have to keep up a Masquerade , maybe the heroics you did are in Another Dimension , or maybe your current cred isn't enough to change how the locals have always seen you . Whatever the reason, while you're popular everywhere else, at home, you're still just a part of everybody else. And that's if you're lucky... Note that this does not apply to heroes with a Secret Identity . Their normal persona may be unknown, but their alter-ego is clearly famous to the locals. However, a Super Hero who is looked down upon in their hometown, but is widely regarded as a hero everywhere else, does count. The temporal version of this trope is Dead Artists Are Better or Vindicated by History . Compare with All of the Other Reindeer , Ungrateful Bastards , What Have You Done for Me Lately? or Mexicans Love Speedy Gonzales ; contrast with A Hero to His Hometown or Americans Hate Tingle .

This is an insidious trope where a female character's success is undermined by the narrative of a male character providing advantages necessary for them. She's usually framed as someone's sister, girlfriend, or love interest. And if she's a military or political leader of some sort, then you can bet that she got the position with help from her father or another male relative Under this trope, a female character's membership in a field — usually male-dominated — is implied to be mostly due to motivation and training by her male relatives or acquaintances who are active in the same field, rather than her own independent ambitions. However, there may be a certain element of Double Standards present in this aspect of the trope; namely, the notion that a strong woman's achievements — no matter how genuine her efforts were in gaining them — aren't worthy of recognition if a man was involved in making her the person she is now in the past — even if he only gave her training, support, and advice to aid her rather than grant her any advantages that undermine her efforts — or simply if she has any ties to men at all</ . A woman receiving help from another woman in working towards her goals, a man receiving help from another man, or a man receiving help from another woman are seen in a far less negative light than a woman receiving help from a man, even though none are any different from the other in practice This character stands in contrast to Self-Made Man , where a character (usually male , but not always) was able to accomplish goals well beyond their advantages. In short, this is another example of Double Standard . Due to stereotypes about separate gender roles, writers will often use this trope to justify to viewers (presumed male) why they should care about the female character at all, as it is assumed the female character would not have taken an interest had it not been for the presence of that male character Going hand with this is Men Act, Women Are , which is about what comes from the man, and where the woman comes from; and Females Are More Innocent , where if a woman is evil, it’s usually the fault of a man. Also compare Lineage Comes from the Father , which deals with bloodlines. I Have Brothers is a more mild version of this trope that nonetheless associates a woman's less traditionally feminine interests with a male influence rather than her own volition Keep in mind that this is not the strict inverse of Self-Made Woman and does not apply to every instance of a female character being helped by a male friend, relative, or love interest to reach her position. Rather,

the male character must be implied to be more important to the plot or setting than the female character is, and the main force responsible for her position (e.g. the token female of the squad is a skilled soldier, but she's introduced as "the general's daughter" first and foremost, whereas her male companions aren't defined in the same way) Please don't add any "aversions" to the example list. Unless the trope is near omnipresent, examples where it's not used are not "aversions". For more info, see the Averted Trope page Also note that male characters owing their success to more powerful women are generally not "inversions" of this trope unless the setting carries the same implications (women are expected to be self-made while men are not)

The most frightening thing isn't being in peril or danger—it's that you'll always</ be. Forever.</ In this situation, a character realizes that the safe, worry-free life they once enjoyed is over. Whether they stumbled across The Masquerade , are being stalked by an Implacable Man or Super-Persistent Predator , are on the run from Murder, Inc. , or are afflicted with Demonic Possession , they know that no matter what they do, one careless Moment of Weakness , one lapse of attention or concentration, one instant that they stop looking over their shoulder, and it's all over. From now on, whatever problem they've acquired had better be their new life, or they won't live at ALL</ . This trope is effective because all of us crave some sort of normalcy, safety, and security in our lives. When that's taken away from us, and we realize that it can never be gotten back (or not without great risk/cost), and that our safety/survival/fate is dependent on always living in fear , it can become pure Nightmare Fuel . This trope should be limited to deadly threats specific to a single character or relatively small group of characters. While it technically applies for any instance of The End of the World as We Know It , any Death World , or any person diagnosed with an incurable/terminal illness, this trope implies that there is</ a "normal life" just dangling out of reach for the character if the antagonizing entity would just go away</. If an entire world or major setting is like this, the trope you're looking for is Had to Be Sharp . For deadly diseases or ailments, see Your Days Are Numbered . Further, any "solutions" to the problem should be either impossible, improbable, or such a huge risk that it isn't worth it . See also Is It Always Like This? , when a character has entered a new status quo well beyond what they expected. Also, if it's a Broken Masquerade , this probably overlaps with Ignorance Is Bliss or These Are Things Man Was Not Meant to Know . Also overlaps with The World Is Always Doomed , especially if the character now has the responsibility of protecting it . This can also be a Fate Worse than Death , such as knowing that some sort of demon or malevolent entity is after your immortal soul, or they've already taken it, and there's no way out. A Curse , being a perpetual Doom Magnet or being Claimed by the Supernatural will lead to this, as might going into Witness Protection . If the character does try to fight back, it's probably because they're Tired of Running . This is one possible consequence of the As Long as There is Evil rule since this continuous, torturous existence means that the world is never really safe from darkness and that the character who deals with it, is even more attached to it and can never really hide and leave it behind like others. Sub-Trope of Paranoia Fuel . See also The Problem with Fighting Death . Compare And I Must Scream and Inescapable Horror .

A character is killed off, but their death occurs in such a way

that no body is recovered. No matter how all laws of physics and biology indicate No One Could Survive That! , remember, this old rule trumps all: " Never count someone dead unless you have the body in front of you ." (And in some cases, not even then .) The daytime Soap Opera frequently uses this trope combined with Put on a Bus . The actor is leaving the show and the producers want to take advantage of the opportunity for drama. The character is in fact being written out and will be presumed dead indefinitely . However, they leave themselves an out without closing the door in case the actor decides to return. A common inversion of this trope can be seen in shows where Everything Fades ; if there is</ a body to be found, try not to get too used to his absence . Compare No Body Left Behind . Subtrope of Uncertain Doom . See also Left for Dead , when the body is seen</ but left behind without confirming it's dead</. May lead to declarations that He's Just Hiding! . When those left behind proceed to put the disappeared person's house in order, that's declaring the person Legally Dead . If the mortal remains are eventually found, it's Finally Found the Body . If someone wants to hold a Meaningful Funeral despite the lack of a body, it may involve Burying a Substitute . Compare Chekhov M.I.A. and Faking the Dead .

Prison is not a nice place. There are lots of reasons for this: the loss of freedom, cruel or brutal guards and wardens , possibly being treated like you're not even human , vicious sociopathic inmates, wondering which fellow prisoner might decide that some petty grudge needs to be paid back by killing you , the toll that things like Solitary Confinement or Prison Rape can take on your mind , bad food , and it can always get worse So, it's not surprising that a character who has finished serving their prison time or has managed to escape makes "never again" their motto. To them, being imprisoned, especially for life, is a Fate Worse than Death . They frequently show an intense fear or hatred of going back, and this can make them all the more determined to be and stay a Reformed Criminal ... or it may lead to deciding that Suicide by Cop or killing themselves is better than being confined again . The latter sort may be considered akin to a Dangerous Deserter , as they may do anything during the course of a crime to avoid capture Contrast Self-Restraint , Prefer Jail to the Protagonist , and "Get out of Jail Free" Card

This is the usual response most people have when they hear a comment or joke they've heard a million times or more; particularly when said remark has long since stopped being funny, and moved past tiresome. (The trope name is an instance of Sarcasm Mode , in case you couldn't tell.) For instance, when a person mentions Aquaman , they might mention that he talks to fish and nothing else. The reaction of a comic fan? "Gee, I've never heard that one before". The recipient of the joke may also simply say, " It wasn't funny the first hundred times ." A variant is when a person can tell that his/her new acquaintance is just dying </ to drop that line, and says with resignation some variant of "Go ahead; just say it. I know</ you're thinking it." Other times, the character may silence the other with a Preemptive "Shut Up" before they can even utter said line. Often subverted by having a character who really has</ never heard that joke before. Truth in Television : This happens in Real Life to people with distinctive or Unfortunate Names , names linked to something with pop cultural significance or, Heaven forbid, a

Punny Name . Or another obvious distinguishing feature: for example, working at a company that has the same name. It can also arise as simply a common joke in a certain line of work. Can lead to anger if done too frequently or the wishes of the person on the receiving end to cut it out already aren't respected. The person who says this may be a Phrase Catcher or have a Real Joke Name . Compare Discredited Meme and Never Live It Down . Umberto Eco , whose surname means "echo" in Italian and Spanish. He writes of how tired he is of everyone making jokes about how he "always answers back", and journalists writing articles with titles such as "Eco's echo", "A book with echos", etc.

Many people have the tendency to take some characters and narrowly define them based on one action or event, to the exclusion of other, often more important, actions of that character Sometimes, this is perfectly understandable, if that action or event stands out more than anything else the character did. But just as much, it doesn't, and it can seem as if some people just haven't been paying attention Let's take a hypothetical show, Bob Loves Alice </. There is a fan favorite episode where Bob gets caught up in a game of darts. He isn't that good, and he never really tries darts again. A bunch of fans like that episode enough that, in loads of fan fiction , Bob sucking at darts is his defining characteristic and it's what everyone knows him for, when in actual Canon , it's never really mentioned again In short, it's like Flanderization , but instead of the canon actually making the character like that, fanon causes everyone to think</ the character is like that. Sounds silly, but it's all too real On the internet, it is usually the person's never-lived-it-down aspect that undergoes Memetic Mutation This can also turn even worse when those fans start Running the Asylum in that show's later seasons, and now everyone on the show talks about how Bob sucks at darts (maybe even calling him " Sucky Dart-Playing Guy " or suchlike) while ignoring all the other things Bob has done since then. But you never see Bob playing darts, because surely we've seen enough of that. No, we haven't. We've seen it once. And since this is placing all of Bob's more prominent traits and events behind this minor one, it even risks taking away a dimension of Character Depth Die for Our Ship victims are a subset of this, best remembered for being the ones that got in the way of a lot of people's OTPs Compare Flanderization , Dead Unicorn Trope , Audience-Coloring Adaptation , Best Known for the Fanservice , Plot Tumor , Two Decades Behind , Overshadowed by Controversy and I Am Not Spock . Stock Parody Jokes often result from these moments When the show decides to remind you that Bob-The-Sucky-Dart-Player is not his canon personality, that's Forgot Flanders Could Do That Remember When You Blew Up a Sun? seems like this, but it merely harks back to a character's achievements, not pretend that's all the character does. Also related is One-Scene Wonder , where a small guest star starts to dominate Fan Fic Keep in mind that in order to qualify for this trope, a person has to have done good things as well as bad ones. An outright criminal or psychopath deserves</ to be remembered solely for being evil, especially if he/she never had a chance to become famous otherwise Has nothing to do with a character who can't forget their sins. For that</, see My Greatest Failure , Be All My Sins Remembered , The Atoner , My God, What Have I Done? , or Cartesian Karma . Fallen Hero and Face–Heel Turn are

the two most tragic examples of this For In-Universe examples of characters being repeatedly reminded of their past failures or embarrassments, see Once Done, Never Forgotten

It's never easy to admit that we are responsible for our actions and deserve to be blamed — in fact, for some people it's one of, if not the</ most difficult thing(s) to do — and it is often far more comfortable to play the Blame Game and convince ourselves that it is the fault of another, even though this is the coward's way out. We may blame others even when we know deep down in our hearts that it is our fault. Due to the Rule of Drama , fictional characters will blame themselves for things going south most of the time, but there are some cases where the character who really</ is to blame will blame everyone else instead. Common variations include: The person stuck with the blame fails to defend himself, perhaps out of sheer dumbfoundedness at the other person's gall . Sub-Trope of Psychological Projection . This is a frequent component of Comedic Sociopathy and Revenge Myopia . Also tends to involve Moral Dissonance . The diametric opposite of It's All My Fault or At Least I Admit It . A character prone to this will likely try Glad I Thought of It , too. Compare Hypocritical Humor , which can involve a similar blindness to one's own flaws, and Implausible Deniability . See also It's All About Me and Narcissist , which are key reasons why a character would fall into any of the above. Also compare Backhanded Apology , an insult disguised as an "apology" where the perpetrator attempts to shift blame onto their victim e.g. I am sorry you were so stupid as to fall for my deception. If the character doesn't blame others, but isn't sorry for what s/he's done, see The Unapologetic (however, the two tropes can overlap, generally when the character says " I Did What I Had to Do "). This trope is the defining characteristic of The Unfair Sex . Can overlap with Everything Is Racist , when the person blames their failings which are clearly their own fault on societal prejudice and hatred towards people of their race/gender/sexual orientation/taste in music/whatever. If the person is upset that their victims dared to fight back, s/he is likely Feeling Oppressed by Their Existence . A rebuttal to this trope would involve Stopping the Blame Game . The formal term for this is , and it is a key personality trait of both The Sociopath and the Narcissist . Related cognitive biases include the as well as the Compare with Mama Didn't Raise No Criminal , for parents that try to shift blame off of their kids, rather than themselves. Subtrope of the Sin of Pride . It should be noted that in fairness, many times this can be partially justified (not entirely, but partially) by the other person they are deflecting the blame onto having at least contributed to their mistake or not done anything to prevent it. From a certain point of view, the other person may be just as guilty or even more. NOTE: Please remember that examples of people blaming others for something that's clearly</ the fault of someone else (i.e. a third party) is not an example of this trope; that's Misplaced Retribution . This trope is only for when people attempt to shift the blame off of themselves.</ (Although it CAN lead to Misplaced Retribution by a third party; say one guy does something bad and blames another. A third person could punish the second guy for what the first one did.)

So you've invented a new product that does exactly what it's intended to do, but it has only one teeny tiny infinitesimal flaw: it doesn't do the one thing everyone expects it will. Or it can't be used in

the one way everyone will assume it's meant to be used. So what do you do? You turn that frown upside down and spin that flaw into an asset! Those thin, brittle serrated knives that can't be sharpened suddenly "never need sharpening". Those silicone oven mitts that fall apart in the washing machine "clean up with plain water - no detergent needed!" And so on. Allows the advertiser to show people Too Incompetent to Operate a Blanket attempting to sharpen knives, etc. and failing miserably. Compare and contrast Our Product Sucks , where product flaws are described more honestly, and Good Bad Bugs , which is (generally) a software and gaming trope when a bug makes its way into the game, isn't picked up or fixed by the developers, but ends up left in the game for some reason (usually because it's harmless and funny). Also compare Asbestos-Free Cereal , when the advertisement is trying to sell the product on trumped-up claims that are technically true but also insignificant in the first place. Deceptively Simple Demonstration is also an upside framed deceptively, only it doesn't tend to be an actual flaw. See also Deliberate Flaw Retcon , when the creator of an artistic work claims that flaws in the work were actually put in there intentionally. See also Polish the Turd and Damned by Faint Praise .

It doesn't matter how the hero stopped the villain's nefarious plot (be it through outsmarting the dastardly fiend , merely finding a weakness the insidious fiend overlooked, or sheer dumb luck). When his plan to take over the world is stopped, the villain has to start completely from scratch. He can't retool the previous plan to prevent the hero's method from working again ; rather, he has to think up some new and creative way to bother the hero. This usually causes the villain to quickly run out of plans, something that may or may not be lampshaded . Sometimes, the villain will take on the attitude that, since the scheme failed once, it won't ever succeed. Other times, the villain will openly insist</ on coming up with a new way of doing something every time, even though the previous version would have worked if they only changed one tiny thing. This is probably due to Rule of Cool , because if the villain did the same scheme over, modified to account for the hero's last successful attempt, the viewers would expect the bad guy to win (and then there'd be no more show/comic/book/etc.), and if they tried and failed with the same scheme, the villain would get predictable and the viewers would get bored. Furthermore, much of the action in many of these stories revolves around figuring out what the villain's scheme actually is, or discovering that there even is a scheme in the first place. If he's just doing the same thing again, there's no mystery, and you must now stretch the typically climactic act of thwarting him across the entire episode. At the same time, a villain who modifies his prior scheme is liable to be predictable to the heroes or anyone trying to stop him. After all, given what the heroes will know what to expect, it would just make it easier unless the schemes were different enough (and even then, the difference probably would not be enough.) Compare So Last Season , Forgotten Phlebotinum , Holding Back the Phlebotinum , No Plans, No Prototype, No Backup . Compare Adaptive Ability , where it's the heroes that can't recycle the original means of the villain's defeat, and Reed Richards Is Useless .

Certain concepts considered "too sensitive" are only ever referred to by euphemisms. The most common example is euphemisms for death in children's shows, even in cases where a character is killed </

and they are thusly rendered dead</, the script will never use those two words. Almost always, the writers don't even get very creative with poetic descriptions, and will apply basic synonyms of "destroyed" to living things that we usually associate with inanimate objects, or have the characters unable to finish their sentences. ("Is he...?") Hell</ is also constantly neutered; when the plot absolutely needs something similar, they often resort to calling them "Nether-something" (of course, except for the Netherlands, aka Holland) or even "Another Dimension." Another frequent method is to hastily add dialogue that suggests the people we've just indirectly seen killed didn't really die , e.g. showing a city being destroyed, and having a character note: "Good thing everyone in that city evacuated at the last minute!" For one reason or another, children's shows also shy away from using "God." Whenever religion comes into play, it is generally replaced with something along the lines of "the big guy." Similarly to the die and kill examples below, if a situation is serious enough in cartoons aimed at slightly older children, God's name may be used as a suitably f-bomb level expression of shock or horror. If a character is actually discussing religion in a cartoon, God's name is used with a similar level of gravitas, but may be much more frequent, or used in a genuinely cheerful context. It should be noted that one likely reason for this trope is because the writers and producers seem to think that their target demographic is too immature to grasp the concept of somebody dying, or alternatively will be horribly traumatised - rationales that in fact cancel each other out</. Some people reason that the belief</ that since children may not be able to understand death they should be subjected to a villain who plans to destroy</ them, insults and desensitizes everybody. Another point is that if death is too sensitive for children of a certain age, they probably ought not to be watching a show or movie in which people, you know, die</ . If you as a writer are aiming specifically at children that age, maybe write stories in which no one dies or is in danger of dying. This trope could be seen as the writers trying to have it both ways One major exception is the verboseness of a Big Bad usually makes the trope work for him. Occasionally, shows that usually follow this rule may break it, usually to highlight the seriousness of the situation shown or discussed. Sometimes, this is used to prevent imitatable acts, in this case, a character, or a character's parent, will remark on the dangerousness of a situation a character has (just barely) extricated themselves from, often saying something like, "I'll never do that again! I could have been killed!</ " Also note that just because a character didn't mention any variation of "dead," "die" or "death," that doesn't automatically make it an example of this trope. Saying something like "It's time to smash you into pieces!" isn't this trope. Saying "It's time to defeat you!" is, because "defeat" is directly used in replacement of "kill." "Smash you into pieces" is used for specific wording emphasis. This is not a trope for every single examples where a villain uses wording to do with something other than death when confronting the hero, or vice-versa.</ It should be noted also, that this isn't for examples in which a show has a character being "taken away" instead of killed. If the character really was</ taken away, then it's not an example of this trope. If the character was obviously killed but instead they refer to their death with "they were taken away", or if a certain version of something changes a character's death scene so they never died, then it is an example. Please note as well, that this also isn't for complaining about examples where a disaster of some kind resulted in no deaths. If said disaster is something where

it's insane to think that no one got injured at all, then it's an example. If it's a disaster in which no one getting killed isn't an unreasonable occurrence, then it is not. This is sometimes Played for Laughs when what seems to be a euphemism is in fact a Literal Metaphor — "Grandma's gone to a better place; I hope she enjoys her Caribbean cruise" — causing people to mistakenly believe the person died ; in those cases they're No Longer with Us . Usually a form of Executive Meddling . Compare with: Gosh Dang It to Heck! , Unusual Euphemism , Frothy Mugs of Water , The Disease That Shall Not Be Named , Conveniently Empty Building and No Endor Holocaust . Coming closer and closer to becoming a Discredited Trope . When used as an actual in-world element, it's Double Speak or a Deadly Euphemism . Contrast Try Not to Die . Often, but not always, foisted on the Badbutt , who will instead use words like "toast" or "beat." If they're allowed to say</ "kill" and "die" but aren't allowed to actually</ kill characters, then it's Nobody Can Die . If you're looking for a character who never says die — who never quits and won't back down even in the face of death — then it's Determinator . If it involves outright Lies to Children about what really happened to Tropey, that's Dog Got Sent to a Farm . Be sure to bear in mind that the above does not</ apply to the Western culture as a whole as not all of us really live in America or any other Anglo-Saxon country for that matter. In most of Europe, for instance, creators usually don't shy away from using words like "die" or "kill" (or those with religious connotations) as long as their shows are aimed at least at school-age kids. If you're looking for the album Never Say Die</, go here .

There's been a string of weird killings lately. The victims come from all walks of life, with only one thing in common. They were asleep at the time. It's time to break out the Coffee and Red Bull to fight Sleep Deprivation because no one can get a good night's rest until whoever or whatever did this is caught. Depending on whether or not the killer works internally (kills you in your dreams) or externally (just plain kills you) a main character who does succumb to sleep, and doesn't get killed off, might have to fight a Battle in the Center of the Mind in order to defeat the monster once and for all. This isn't necessary for the trope, but it still happens a lot This is a horror trope where the monster or killer targets people who are asleep or otherwise unconscious, and the main characters have to stay awake to stay alive. The "Killer" is loosely defined here, it can be a disease or inanimate object, what's important to the trope is that the victim is at risk, or at least at a substantially greater risk of death if they fall asleep. Can make pretty potent Paranoia Fuel as it ties in with basic primal fears of the scary monster in the closet or under the bed who's only waiting for the lights to go out and you to fall asleep to come out and get you. As we all know Dark Is Evil , and since we sleep in the dark, it's only a short step to "sleep itself is dangerous." After all, a person is most vulnerable while sleeping, as there is no way to see, and fight their attacker See also Things That Go "Bump" in the Night , Your Worst Nightmare , and Your Mind Makes It Real . Not to be confused with a Real Life prion disease that progressively erodes a patient's ability to sleep until they die from not sleeping Not to be confused with The Sleepless , which is where someone never needs to go to sleep

In Detective Drama and other types of Mystery Fiction that focus on finding the culprit of a particular crime, the plot often follows this particular pattern: A crime is commited. This plot formula is typically used in fair-play whodunnits and other types of mysteries where there are several suspects. The obvious suspect functions as a Red Herring , and the story often culminates with The Summation , where the unexpected culprit and the reason why they committed the crime are revealed. Writers like to use the above formula because it adds a twist to the story. Discovering the culprit becomes an interesting puzzle instead of the detective simply finding the number one suspect and arresting them. However, this trope has become so common that the audience is now used to it, which means they pretty much expect the real culprit to be someone else than the obvious choice. In most cases, the twist is also Spoiled by the Format : if a detective show lasts for 45 minutes, and after the first 15 minutes the detective already appears to have caught the guilty party, it's almost certain the real culprit will turn out to be someone else. Sometimes the writers like to play with audience expectations and subvert the trope as a Meta Twist by having the detective dismiss the most obvious suspect and go through others, only to discover later on that the person originally suspected was </ guilty after all. This is usually accompanied by some kind of unexpected reveal that explains how the obvious suspect was able to appear innocent. To use the example above, if the murder was commited by a right-handed person, and the detective rules out the obvious suspect because they are a leftie, it may later be discovered that they are ambidextrous, so they were the murderer after all. See also Arkham's Razor , where a scenario like this is played for humor, Orgy of Evidence , which can apply to the first suspect, and Red Herring Mole , when the obvious suspect is (not) a spy. If the obvious suspect is ruled out by being the second (or third, or twelfth) victim, that's Suspect Existence Failure . Since this trope deals with plot twists and surprise revelations, the examples below may contain !

For some reason, encountering yourself — whether as a time-traveler or in Another Dimension — is frequently Very Bad; either it's unhealthy for you in particular, or it creates a Temporal Paradox This may result from attempts to apply causality to time travel: you can't meet a past version of yourself without having memory of it and the future version of yourself cannot be surprised to see past you, having had to be there to see it to make it possible. However, this can be easily avoided if you fail to recognize yourself, such as through an Alternative-Self Name-Change . As a result it's generally correlated with time travel of the Timey-Wimey Ball variety, and negatively correlated with Stable Time Loops (though there are exceptions). Compare Future Me Scares Me ; contrast Screw Yourself Alternatively, the show might say that you're both made out of the exact same atoms, and the universe gets wonky when you have matter touching itself Note that this trope is now so well known that movies which use Time travel often only throw out a one-liner warning: "Whatever you do, don't meet up with yourself!" It's now becoming a trope in and of itself to make the reason for not meeting up not a dire end-of-the-world reason, but merely for convenience of the Master Plan. These often result in My Future Self and Me A closely related trope is Only One Me Allowed Right Now . Contrast Future Self Reveal

hair, and once it's gone, it's gone for good. Which is why a bald character is bound to try using some kind of product that promises to grow back their hair. This product never works . Or rather, it usually works too well , with way more hair sprouting than necessary , and often in places that it wasn't wanted. Other side effects may occur as well, including, but not limited to, the hair turning an unnatural color or what little hair was left falling out completely Truth in Television : most over the counter baldness remedies don't work or don't work well</ , especially when used once the condition is sufficiently advanced. Prescription systemic treatments are somewhat more likely to work (though they also come with bad side effects for men — namely, they work by reducing testosterone and/or its effects on the body in most cases). The gold standard of baldness treatment is hair transplant with ongoing maintenance, as it is the most likely to actually be worth the money spent on it with the least systemic side effects For similar forms of hair-related hilarity, see My Hair Came Out Green and occassionally Kaleidoscope Hair . If Covers Always Lie , trailers can, too. Sometimes Tonight, Someone Dies or hyping The Reveal might not be enough. And with the Internet an open window these days for writers and directors to viewers' likes, dislikes, hopes, predictions, and Shipping loyalties, it's easy to know exactly how to bait fans into watching the next episode. Be careful not to believe everything you see, though, because as all Fan Vid makers know, any scene can be mixed-and-matched with another to look completely different from their real context Of course, Tropes Are Tools , as used correctly this can be a very clever way of averting Trailers Always Spoil (by not mentioning or downplaying the real main plot) Indeed, the creation of fake trailers to make a movie look like it's from a completely different genre has become one of the Internet's most beloved recent art forms, such as The Shining </ as a , Mary Poppins </ as a , Elf </ as , Luke Cage </ as a , or the one that started it all, The Ten Commandments </ as a Another way it can backfire is if you can't find</ enough good footage to make a decent trailer, audiences can extrapolate just how bad the rest of the material must be If it sounds too good to be true, it usually is See for more examples

Weasel Words which attempt to give the impression of radical improvement in the quality or performance of a product which might not actually be there. In fact, US government regulations require only that there be a small functional change in a product or its packaging</ to qualify it to use this description. Thus, changing the design for the spout on a box of detergent would allow the manufacturer to tout it as being "new and improved". Changing the quantity of the product can also be a "new and improved" change, even if the change isn't in the direction that would qualify as an "improvement" for anyone except the manufacturer's accountants. Your favorite cereal might become "new and improved" when they increase the size of the box but decrease the amount of cereal in the box. Your favorite shampoo might become "new and improved" when they add a strong fragrance that makes your hair smell awful — or, worse, makes you sneeze A favorite trick of manufacturers is to "improve" an item by adding "botanical" ingredients. This is generally done by putting a handful of herbs into a strainer, then dipping the strainer into a 500-gallon vat of hot water for a minute or two. Two drops of the water is then added to every bottle of the product, which is then priced fifty cents higher than it used to be Comedian George Carlin observed that the phrase is perfectly meaningless in the first place. Which is it, a new product, or an old one which has been improved? Logically it cannot be both "new" and</ "improved".. If the ad is specific about what they improved, it's We Don't Suck Anymore . If the ad emphasizes that the product is still the same</ despite a change in its packaging, it's New Look, Same Great Taste! . The moment in the lifetime of a community, usually a fandom, when the number of newcomers explodes . This is often the result of a remake , an adaptation, an English translation, a Colbert Bump or any other development that introduces something formerly obscure to a whole lot of new folks. These inevitably rush to find out as much as they can about this new big thing. Bad things can happen when they meet the original community . The tendency for characters undergoing a "Freaky Friday" Flip , Grand Theft Me , Demonic Possession , Reincarnation or experiencing any other Transformation Causes , to maintain any abilities they had in their original body It doesn't matter if those abilities shouldn't be compatible with the physicality of the new body, the new host can call upon them regardless, as if the abilities are tied to the person's soul, spirit, or equivalent, rather than their physical body. As a result, this is often a Justified Trope if the abilities are explicitly tied to the soul or the mind through one means or another Often a given for any Demonic Possession —

as in many cases the entire point of it is to give the demon a new body through which to use its powers. If said body belonged to someone else (i.e not a dead body or a new artificial body), that overlaps with Powers via Possession . They may or may not retain their original voices as well

Long before the start of the story, ecological disaster drove humanity undersea, or underground, or into space, away from a ravaged Earth . After living for quite a while in a City in a Bottle , it's a safe bet that someone will eventually find the way out and discover that the Earth has cleaned itself up nicely and now looks like the pristine Ghibli Hills , or why not, the Yosemite National Park Often used to make the point that the Earth would be a so much better place if it weren't for all the people , or more succinctly, that Ludd Was Right . If a group of survivors in space is smaller and not planning on a disaster, that's But What About the Astronauts? Naturally, this is the perfect setting for an Adam and Eve Plot . So you've run across a trope or story element that seems unspeakably old . It simply drips with antiquity and grandeur, so you assume that it must have been around since the first caveman. But then you research it a little more, and discover...that it was invented by a Los Angeles advertising executive in 1989? Congratulations: You've learned that some things are Newer Than They Think — a relatively recent invention that people tend to assume has much deeper roots in history and popular culture than it actually does — or the roots are considerably further from the end result than you realize. It usually arises from the myth being tied into an older myth; or the assumption that because the mythology is old</, it hasn't been changed</. Sometimes the trope really is</ as old as they think, but it's only become popular within recent historical memory It may also tie into Our Monsters Are Different , as many "standard rules" seem like they should come from folklore and legends, but really come from more recent media. The development of fantasy RPGs has been a major mover in both tropes, as RPG creators have freely raided, adapted and bastardized from folklore and literature in order to fill their manuals, scenario books and bestiaries. Some neologisms can be mistaken for being very old as well. Compare Lost in Imitation (well-known elements of a story are a lot more recent than the story itself), The Newest Ones in the Book . Convincingly well-done Retraux is a common factor in this trope. See also Dead Unicorn Trope , where a trope that is thought of as old and Cliché wasn't actually present in the original work. Contrast Older Than They Think , which goes the other way.

New Game Plus is the option of starting a new game by accessing a previous finished game, allowing you to start with improved stats, new costumes or items won beforehand. The main reason for this can be so the player has a shot at things like multiple pathways and Multiple Endings . Indeed, playing through the game twice or thrice may be the best way to power up so you can face the Bonus Dungeon . A more basic reason is getting over the initial "hump" of the First Town playthrough. Another possibility is making the hopeless

boss fight at the beginning of the game anything but, and getting a nice bonus reward for beating the Final Boss Preview . Plus, it is always nice when you don't have to grind yourself numb to make the character the badass hero that they are supposed to already be. It also can be very satisfying when you can walk up to that boss who had you tearing out your hair last time and crush them like a bug on a windshield . It also gives you a chance to use the Bragging Rights Reward on something more significant than Mooks , allowing you to see just how powerful it really is (or isn't). Of course, no matter how many special skills and items you can bring over to a new game, the characters almost never are able to remember the game's plot and fix any mistakes they may have made , or they are told that " You Shouldn't Know This Already ." You can also just pretend that New Game + mode is playing a new game while averting the With This Herring trope since you start off this time with much better gear. On the flipside, the early game becomes a cakewalk unless the enemies are beefed up accordingly . In some special instances, going through a New Game + run is the key to fighting the True Final Boss , either by taking advantage of options that were not available the first time around or simply because NG+ makes certain changes to the narrative to allow for a fork unique to this run. This is named after the mode that is unlocked in Chrono Trigger . However, the concept itself dates back at least as far as the The Legend of Zelda </ series . Simply put, a phone call in which only one half of the conversation is heard, though this trope isn't limited to just phone calls . This trope is sometimes used in conjunction with a Noodle Incident or Noodle Implements (see the Saturday Night Live </ example below) It can involve Repeating So the Audience Can Hear , if the audience is intended to understand both sides of the conversation. It becomes quite funny when the speaker repeats the exact words from the other side of the line, for no other reason other than this. Alternatively, the audience can be deliberately left in the dark and forced to imagine what the person on the other end is saying. This can lead either to drama and tension, or be played for laughs Alternatively, both halves of the conversation may be heard, per se, but from the audience's perspective, the words being spoken by the person on the other end of the line come through as comically sped-up babbling or some other form of unintelligible gobbledygook (sometimes done to imply really vulgar language). If the audience eventually gets to hear both headlines of the phone call, it may lead to Once More, with Clarity! Named after Bob Newhart , who used it in his Recorded and Stand-Up Comedy routines in the 1960s as well as some of his works below

An episode where a character gets a new job for a week or so . Often happens in teen sitcoms and teen dramas, where a character is forced to get a job by their parents to teach them An Aesop about responsibility or the value of a dollar. At the end of the episode, they're usually allowed to quit so things can Snap Back . It also might be some career, such as singing or cooking, that the character temporarily decides to pursue before something impedes them or they lose interest. If a character has George Jetson Job Security , they might be forced to go through a New Job Episode every so often till Mr. Spacely rehires them Compared and contrast New Jobs As The Plot Demands , where a previously-seen character already has a new job for the sake of an Economy Cast . Related to Business as Unusual If the character is a teen, expect them to work at a crappy fast food joint , a tacky mid-level chain restaurant , a kiddie arcade/pizza place for snot-nosed brats and their parents celebrating their birthdays , or in retail hell (bonus points if it's an Expy of WalMart)

A common Advertising Trope (and Stock Phrase) used when the packaging for something is redesigned. To reassure the consumer that, although the wrapper has changed, the underlying product is the same and there is no reason to be alarmed, the new version will proudly proclaim, "New Look, Same Great Taste!" or a close variant thereof, thus signaling to existing fans of the product that they have nothing to fear from the strictly-cosmetic changes. Sometimes, the phrase used will be simply "Same Great Taste!" since anyone already familiar with the product will immediately recognize anyway that the packaging has changed. The changes might be purely cosmetic for the consumer, but there are practical purposes for the company. Afterall, the industry often has better things to do with their time and money than attempting a visual makeover on a product with no other practical purpose that may or may not actually grab consumer's attention. Examples include changing wrappers including the use of better materials that does not damage as easily during shipping, recycles better for a greener environment or a better physical design that has less empty-wasted space inside thus allowing more of the packages to be shipped on freight at a cheaper price than delivering the same number of products on multiple trucks. (Of course, this also means that... the changes were strictly cosmetic, so guess what: if you were dissatisfied with the product before, you won't be any happier now.) Also known as "Fresh Meat". Still wet behind the ears and fresh out of boot camp, the New Meat may look like a soldier, but he lacks the combat experience to actually perform up to the fighting standard of The Squad . Generally young; some men may characterize him as a child He's a bit loathed by the rest of the men because he constantly asks questions or makes mistakes that hinder their progress . Prone not to appreciate A Father to His Men 's stern but necessary discipline. Some of the more seasoned members may

even consider his rookie status a risk and petition the commander (s) to get rid of him Usually, this is reconciled only by New Meat doing something notably competent or heroic in battle, after which he's accepted as "one of the guys" . Then the next New Meat comes along Otherwise, New Meat serves little function other than to get killed so that others can brood over his corpse about what a waste his death was — "the kid never had a chance". The New Meat is also a writer's shortcut to introduce the characters of an already established team. Since they have been working together for so long, it is difficult to justify why they would talk about their past. The New Meat character is introduced so that they can tell him the backstory Often portrayed as skinny or physically smaller than the rest of The Squad members to show he hasn't yet grown into the role of battle-hardened combat vet Used as a variant of the Red Shirt and killed off when the writers need to provide extra motivation for The Squad to disobey orders, kill innocents or act in other ways out of the ordinary. Ironically, the New Meat may be on the short list of survivors when the writer decides to Kill 'Em All , so their Older and Wiser self can welcome their own New Meat as a Bookend to their story See Ensign Newbie if the guy in question has a commission and is in charge</. There's always going to be The New Rock & Roll , that new fad or thing that causes whippersnappers to act all crazy and wild like they've all gone bonkers. Typically, this is a fringe phenomenon, and political and religious radicals will be bewailing the development while the media just reports on it At other times, though, the negative press goes far beyond basic opinions and phenomena that we can document on camera. Speculation goes on that devious things are afoot. When this goes too far, a reporter is at risk of spouting "New media are evil!" Otherwise-rational people faced with uncertainty about what the New Media is actually like decide that — just to be safe or to grab some attention — they should go with the most inflammatory, headline-grabbing description they can come up with The motivation to demonize a medium can go much deeper than the desire of the media itself to make headlines. In our giant, pan-corporate world, there's a good chance that some news outlets are owned by a guy who owns a major recording label. All of a sudden HQ's interest in stories about devious pirating activities becomes quite noticeable. To an audience generally uninformed about what the New Media is like to begin with, whether or not the story is true is irrelevant: the ring of truth is what becomes important Bear in mind that the impression given can largely be due to ignorance, the Cowboy BeBop at His Computer misstep taken by someone who is already predisposed to distrust this " Cowboy Bebop " character in the first place Take the Internet as an example; though it has come to dominate our lives today, it had a much greater mystique in The '90s when it first became mainstream. People taking up professions in the media industry as a career and most of the people involved today still</ don't have a full grasp on what the Internet is, so when the assumption is that It's a Small Net After All , all of a sudden every little instance of graphic pornography or 4chan vandalism ends up speaking for the Internet as a whole. This mentality decreases a great deal once the industry and society have adjusted to major technological advances and sees them as the norm . In

other words, when the Medium stops being New, it stops being Evil This is by no means limited to the Internet, although the sheer density</ of information we receive today can make it seem that way. Almost every new medium of communication or expression that has appeared since the dawn of history has been accompanied by doomsayers and critics who have confidently predicted that it would bring about The End of the World as We Know It by weakening the brain or polluting our precious bodily fluids The same thing has happened to basically every type of media in history, making this trope as old as mankind itself. Writing itself was hugely suspicious for example, as people feared that it would cripple the ability to memorise things, as this was now no longer needed as everything could be written down Sometimes the doomsaying has a kernel of truth. New media do change old media, sometimes for a net loss of quality in art or information. Most often, though, the new medium allows a new freedom from the old medium that makes for more opportunity. This is Older Than They Think , as you can see from the very first examples Supertrope to Social Media Is Bad and Digital Piracy Is Evil . See also: murder.com , Everything Is Online , Clickbait Gag , There Should Be a Law , TV Never Lies , You Can Panic Now , Books vs. Screens , Cyberbullying , and Appeal to Tradition . If books or other forms of written communication are portrayed as superior, it may also be an example of The Power of Language The inversion of this trope, when new media develop a similar attitude toward the old boys' club, is Old Media Are Evil Don't forget that Old Media was NEW back then

"New media" for our purposes means computers, the Internet , and everything on them: blogs , podcasts , online video games , web originals , websites , and — since we are here — wikis . The Old Media organizations tend to have a bee in their bonnet about infringement, since a lot of New Media stand in a sort of gray area in regards to copyright See also Fan Works and Fanfic Recs , as fanfiction accounts for a large portion of new media content

When a major city or province is destroyed during The End of the World as We Know It , and it gets rebuilt After the End , instead of going back to the original name for it (or naming it something else), it's common practice for the builders to tack on "New" or "Neo" to the original name, probably to show how this incarnation is nothing like the old, destroyed one. If there's still ruins of the old city left, you can bet that the remaining townsfolk will refer to it as "Old"-whatever, as a show of how much they want to forget what happened and move on Settlers and colonists also frequently use this in order to name new cities, countries, and planets after their homeland, whether the original still exists or not — in this case, it's to show that their new home will be a new, better version of the old. Because of Planetville tendencies, it's not uncommon to see entire planets named things like "New London" This trope is a time-honored hallmark of the Cyberpunk genre. There are a variety of reasons for this. Perhaps Old Tokyo was destroyed in the Great Offscreen War ; perhaps nebulously-defined environmental collapse or nuclear fallout rendered it uninhabitable; maybe the occupants were forced to flee when the usual suspects took over the world , and rebuilt it

somewhere else Because of the phenomenon of Creator Provincialism , the city in question will nearly always be New York or Tokyo , although in the first case it's generally Played for Laughs , for obvious reasons

A gentle Retcon to allow a previously unmentioned love-of-their-life to pop up for a main character in an episode. Characteristically a Temporary Love Interest , this is a simple way to skip all the boring foreplay and jump right to the intensity. Sometimes the long absence and sudden reappearance is explained by a Fallback Marriage Pact Usually, it ends in death, Put on a Bus , death on a bus , or with some similar Reset Button ; a less dramatic way to end it is for the couple to simply realise they don't have the same connection they once did . It's theoretically possible that this kind of reunion would result in the old romance rekindling to its former glory or something still greater, but in most cases, Status Quo Is God and this would create too many difficulties Often, the character with the New Old Flame is already (re-)married , and it turns out it's not just the audience that's surprised Clumsily done, this can mess with the memory of a previous relationship carefully established over a Story Arc , and anger 'shippy fans. In 1992, a film scholar named B. Ruby Rich coined the term "New Queer Cinema" for a trend of films she'd been witnessing appear over the last few years. This movement was initially described as the independent and LGBT-themed movies of the early 1990s that were gaining popularity despite their transgressive form and content. Nowadays, the term is more loosely used to incorporate the queer-themed films from about 1989 in which, most notably, the characters don't have to end up dead or miserable to appease Moral Guardians or the Code : it refers to queer films that freely reject heteronormativity. Many New Queer Cinema films incorporate elements of the Postmodern , especially because of their overlapping time periods and concern with deconstructing the normal. Many also draw from poststructuralism and the opportunities to reinterpret film form and meaning. While we're speaking of " post- s", New Queer Cinema is also a movement in queer history that is Post-Stonewall. Originally, the key to the genre appeared to be a film's portrayal of protagonists who are somehow rejected by or rebelling against society, but not in an overtly political way. More recently the term has evolved, though. To wit, most independent, arthouse-type queer films would count, if made in the Anglosphere after about 1992 (accepted examples do start from 1989, being the ones that were used more to define the genre). There's also the strange connection of many of the films being very heavy in dull shades of blue . This probably isn't a requirement as much as it is a common artistic choice. The movement is seen as ongoing to about 2020, as by the later years of The New '10s queer films were becoming more inspired by New Queer Cinema than a part of it. Many of the popular New Queer Cinema directors also slowed or stopped their productions by this point. Not to be confused with Queercore , a social movement spanning

roughly the same period. Queercore is founded in punk music and is more outwardly angry towards society's homo- and transphobia; New Queer Cinema is obviously founded in cinema and is instead merely presenting alternative genders and sexualities in an equal or at least "real" light. Games have rules. Those rules are around to make everything fair and give everyone a reasonable chance for success. They do not always make logical sense, but they're there However, sometimes the story isn't paying attention. This trope is where the rules of a game within a given work are made so vague or complex that there is no possible way they can be understood. Sometimes, the story just makes things up as it goes along. Hopefully, the improvisation will make sense This is not about the differences between rules in a work and rules in a game it's based on (the former will often be inherited from the latter), but when the rules of a work don't make sense and violate their own internal logic Deliberate and clear cheating which acknowledges that the characters are bending the rules, or finding some technicality to exploit, is also not this trope. The key is implausibility and being unbelievably complex If it involves liberties with the rules of real sports/games it's Gretzky Has the Ball . If there really aren't any rules (or the rules change very frequently), then it's Calvinball . If a new</ rule is specifically crafted to prevent an existing abuse, it's an Obvious Rule Patch Also compare How Unscientific! , New Powers as the Plot Demands , Gameplay and Story Segregation , Screw the Rules, I Make Them! , and Loophole Abuse . Ostensibly factual presentation of current events of note, usually in a half-hour form. In the United States, News Broadcasts are generally evening shows, with 6 PM and 11 PM slots being the most common; in the Central and Mountain time zones, 5PM and 10PM newscasts are the norm. Most networks provide an early-evening nationwide news feed going out live at 6:30 PM Eastern, which affiliate stations then run back-to-back with a locally-produced news program; the late-evening news is usually also a local production as well. Many stations also produce a Noon news. The UK's similar, with a "parent" news broadcast and the "regional" broadcasts immediately after on, although this is now only common on The BBC and their competitor, ITV. Local news broadcasts are very much</ Serious Business in the industry, evidenced by the fact that no scheduled event ever</ preempts or even shortens the late local news: only a breaking national/world news story. If sports run long, the delayed local news is shown in full</ and then the network's late night offerings are pushed back along with it. Typical features of a News Broadcast: In addition to these there are, of course, sports, and occasionally traffic reports. Note that 24-Hour News Networks do not usually follow the same structure as a broadcast network/local news show. Audiovisual phenomena associated with news broadcasts: Compare Phony Newscast , which covers the fictionalized version.

On occasion, a film or TV show will feature a news segment discussing events happening within the show. The fictional scene will star an actual newscaster who delivers that sort of segment in Real Life In Sports Stories , this can take the specialized form of a Sportscaster Cameo Related to Practical Voice-Over , where the voices are frequently recognizable newscasters. Sometimes achieved

in dramatizations by use of Stock Footage Sister Trope to Leno Device , which uses a talk show or other nonfiction entertainment, rather than a straight news program. Subtrope of As Himself and The Cameo . Compare Phony Newscast . Not to be confused with Kent Brockman News , though it can certainly take that role

In movies and TV, the primary method for showing that something has become the</ news item of the moment is to have somebody flick through the channels on TV and find that every single channel is covering the same story simultaneously. To make things more convenient, sometimes every time they switch channels they find a new aspect of the story being covered, so that this random succession of sound bites adds up to a fairly cohesive television article. For example, Bob the jewel thief watches the news triumphantly: Bob switches channels. Bob switches again. And so forth. It's sometimes parodied by having him turn to a channel that normally wouldn't have the news — a cartoon channel, or MTV — and yet it's still talking about it. Another common gag is to have the different reports literally Finishing Each Other's Sentences or answering each other's questions . Expect a news-phobic Apathetic Citizen to stop flipping immediately if they do manage to find anything else on. Makes varying degrees of sense; when the story is about, say, a nuclear threat on the White House, you'd expect nothing less. But when it's something like a chimp loose on the freeway, it starts to get dubious. And even if it is important, flipping through channels never gives repeat information, even though it's highly unlikely that each broadcast started at the exact same time and covered all the points in the exact same order. Plus eventually you have to get to some shopping channel or college/school billboard or public access channel which would never break their format (or even have the ability) to report anything at all. Nevermind the fact that the various news channels are watching each other's broadcasts, and therefore information on breaking developments doesn't stay exclusive for long. This trope has for all intents and purposes replaced the Spinning Paper montage, which in movies of the thirties, forties and fifties was used to this effect by having the story appear as the front page of every major newspaper. No, perhaps not. The dialogue sounds very unnatural. The opening scene of Back to the Future </ (the first one) pans over a bunch of clocks and a corkboard. Pinned onto the board are two news articles, which hint at Doc Brown's life before the film takes place. Pictured above.

Before the Internet and Webcomics , the only place to find daily, serialized comic strips was (and for many people, still is) the back page of your local mainstream or alternative newspaper Comic strips can cover a wide range of formats, topics, characters and artistic styles. The Far Side </ and The Family Circus </ are one-panel gag strips. Bloom County </ and Pogo </, while light-hearted on the surface, were thick with Story Arcs and political commentary . Other strips, like Peanuts </ and Calvin and Hobbes </, delightfully portray the experiences of childhood, and thus have broad, long-term appeal. There have been countless serialized adventure strips like The Phantom , </ Flash Gordon , </ Prince Valiant </ and Dick Tracy </; soap opera/slice-of-life strips like Gasoline Alley </ and Rex Morgan, M.D. </, and strips that fall in between, like Little Orphan Annie </ Compared to other media, newspaper comics can have incredibly long tenures . New Peanuts </ strips appeared daily for over 49 years. Doonesbury </ has been running since 1970 and Garfield </ has been coming out since 1978. Neither show any signs of stopping. Even more impressively, Blondie </ has run since 1930</, Gasoline Alley , and most impressively of all The Katzenjammer Kids </ (from 1897 to 2006)! While traditionally, a 10-year run was considered tremendous for a television show, when Calvin and Hobbes </, The Far Side </, Bloom County </ and The Boondocks </ each ended production after around a decade, it seemed far too soon (let alone Cul de Sac </, which ran for barely five years</) Actually, one of the reasons why Webcomics have gotten a lead over Web-based indie music distribution (let alone non-corporate Web movies) is that "making it big" in sequential art has been traditionally defined as "being able to support a middle-class lifestyle without a day job". Actually, many top cartoonists got stinking rich (for instance, Bringing Up Father</'s George MacManus was able to make a fortune, lose it after the 1929 crash, and become even richer) and even reached stardom</ in some cases, at the same time keeping a degree of anonymity most celebs wouldn't dream of The downside is that, since the 1990s, newspaper comics went from being an American institution read by millions to become a byword for stodgy humor mainly read (at least as the stereotype goes) by the old fogeys who still read newspapers these days (particularly in the Web, including The Comics Curmudgeon </, The Punchline </ and Wondermark's Comic Strip Doctor), with Long-Runners being regarded as not being funny anymore, if they ever were , derisively described as "zombie strips". One of the chief reasons comics haven't adapted to the more cynical comedy tastes of the 21st century (or non-English-speaking countries) , being seemingly stuck with the tired jokes and premises associated with 50s/60s-era sitcoms lies in the fact newspapers see features as a means of attracting readers in general (while, since the 1990s, the rule has been the exact opposite , especially as comedy goes). Thus, Darker and Edgier humor, political- and/or current-events-based humor must be handled carefully, lest they cost more subscriptions than they gain (this counts for both the paper andThis was the key reason The New York Times As a result of their financial woes, newspapers have also been cutting down on the amount of space that comic strip artists are given in which to practice their visual, art-based medium, resulting in simpler art and abbreviated storytelling. And the newspaper itself has become a victim of the Information Age; not only can consumers get the news online, they can get comics</ online too Successful newspaper comics usually find their way into other media , but are most fondly remembered as simple pen-and-ink drawings on cheap newsprint Sometimes you'll hear the term "Underground Comix" ; in the USA, at least, this term refers to pen-and-ink comics not distributed by a syndicate and normally published in "alternative" papers, 'zines, etc. Webcomics and the consolidation of the supposedly "Alternative" newsweekly industry have put a dint in their circulation, but Cerebus </ and American Elf </ among others started out this way, and the latter still appears in alternative weeklies, or at least the one in the author's hometown Also, these have a very high chance of Breaking the Fourth Wall , but only</ when they do a very common " look at the reader at some other person's comedy or comedy failure " See Born in the Funny Papers for tropes from newspaper comics. Extra! Extra! Read All About It! Newspapers as we know them first appeared in the 17th century, some time after the printing press was invented, although other methods of written news had been around for longer . Up until the second half of the 20th century, it was the dominant means of communication before the advent of television with many publications for almost every metropolitan area (some of them evening papers). Since the 1990s however, newspapers and print media in general have been struggling due to diminishing interest with the consolidation of 24-hour-news cable channels and radio formats, as well as the arrival of The Internet , and the beginning of the 21st century has seen many publications shutting down. Most newspapers focus on general information; namely local, national and world news. Also common are sections dedicated to financial and sports news, gossip and comic strips and puzzles. However, there are notorious differences in the amount of given information: The New York Times</ focuses on international informations, while The Washington Post</ dabbles in U.S. politics. On the other side, papers such as The Sun</ emphasise crime and celebrity news. Publications are also differentiated by their political slant, either conservative or liberal. "Weekend" editions (primarily those published on Sunday) are usually bigger and more extensive in information terms, often running special sections not published on weekdays, such as color magazines. Other papers focus just on one kind of news, most notably financial publications such as The Wall Street Journal</ and Financial Times</ . Sports papers are also the most popular in continental Europe. And local newspapers outside the U.S., Canada and Australia will most likely feature local events solely. The perceived blandness and banality of mainstream newspapers in general has given rise since the 1970s to alternative weeklies, which tend to focus on investigative journalism and pieces deemed too provocative for regular publications. Rolling Stone</ and Village Voice</ (actually founded in 1955) were part of the first wave of the "underground press". News presented with a satiric and snide tone May be the entire premise of the series, or constitute one segment within a Sketch Comedy , such as the "Weekend Update" segment in Saturday Night

Live </, or the "Laugh-In News" on Laugh-In </ Note that, although some of these shows give plenty of useful information, watching one is less effective than reading a newspaper, a warning which Jon Stewart in particular works hard to make clear. Whether watching the "real" news shows that these shows parody is effective at all is more debatable A variation is the show or sketch, which satirizes elements of legitimate news shows but doesn't use factual information. The best examples are the British radio show On the Hour</ and its TV adaptation, The Day Today </, both of which feature writing and acting by Patrick Marber, who was later nominated for an Oscar for Notes on a Scandal </. The Day Today</ had its own spin-off, Brass Eye </, which spoofed the Prime Time News format. The most famous Faux News outlet in the US, on the other hand, is not on television: it's The Onion </ (which uses a mix of real and imaginary events), which has spread its tentacles to the Internet and other areas, as well. In the age of the Internet, a Shallow News Site Satire will often spread News Parody Not to be confused with Kent Brockman News , a Show Within a Show parody of news shows, or (as "Faux News") with a common pejorative for Fox News Channel

A news program shown in cinemas, typically . These were almost always in black and white. Many of them had a propaganda element to them, subtle or blatant. A fictional example of the former: "Soviet troops enter Warsaw. The people of Warsaw cheer the end of Nazi tyranny and the restoration of freedom." To give a fictional example of the latter: "Comrades, the mighty Red Army continues to crush the evil fascists. The brave men of the Rodina</ have now taken Warsaw and liberated Poland from their evil grip. Casualties were heavy, but the Red Army prevailed." Pretty notorious even in their own day for being flamboyantly</ censored and emotionally manipulative (edging dangerously close to Documentary of Lies territory in some cases), and for often outright ignoring "troubling" topics in favor of "cute" human-interest stories . The footage recorded for these newsreels is one of the primary audio-visual records of the first half of the 20th century, especially the Second World War; the Allies in particular would send each other footage to appear in their respective newsreels. As a result, it will often appear in documentaries and if you watch a lot of them, you will start seeing the same clips turn up a lot. Faded away in the 1950s and 1960s due to the rise of TV network news, and often mocked up in period pieces. The last documented newsreel in the Western world, See also Propaganda Piece .

Toilet Humor may or may not be involved; if it is, whether or not the person hearing it thinks it's funny is another factor entirely. In fiction, it's common for the nighttime to be portrayed as much more dangerous than during the day, and for most deadly creatures to be nocturnal , and usually also Weakened by the Light and the arrival of the sun . In more fantastical settings, it's common for The Undead to become active at night and to be destroyed or banished by sunlight. In more realistic settings, the dangers of nighttime are chiefly due to nocturnal predators becoming active after sundown and, in more urban areas, nighttime being when most criminals, lowlives, and other unsavory sorts go out to do their business This is very common in Survival Sandbox games — usually you start off at sunrise and have until sundown to gather materials before night comes along with unwelcome visitors Most Cassette Futurism films (The '80s version of Cyberpunk) involve street gangs that have control of the cities and mostly come out at night. Mostly Most cases of The Night That Never Ends will have at least minor levels of this in play By and large, this trope is due to humans being chiefly diurnal animals whose primary sense — eyesight — is at its most useful in bright light, leaving us blinded and disoriented during the night, in addition to most predators of early humans — especially big cats — being nocturnal or crepuscular and quite active under the cover of darkness Compare Darkness Equals Death and contrast Daylight Horror . Expect to see a Frequently Full Moon . Often found in conjunction with Nocturnal Crime

The Nice Guy (or Girl) is nice . If not an All-Loving Hero , he's definitely not unpleasant , obnoxious or an edgy rebel . These characters are friendly, psychologically well-balanced, morally good and socially balanced in most cases, and in short, someone anyone would like to be around and have as a friend , which is often what they are to the hero and/or his extended cast. He won't engage in jerk-like behavior , but probably responds in kind to Vitriolic Best Buds . If done right, it can demonstrate why a guy has beautiful women attached to him: he really is a remarkably wonderful and compassionate person. The Nice Guy can be engaging, likable or The Protagonist ; all it takes is giving them a personality outside of "nice" such as: a scholarly refinement , a chivalric attitude , some engaging relationships, and a pinch of Hidden Depths . Having the right actor with the thespian skill to take those character qualities and wield them with charm and sincerity can help, which is how master actors like Christopher Reeve and Chris Evans took archetypal Superhero paragons of pure goodness who superficially seemed bland and colorless, Superman and Captain America respectively, and made them compelling characters audiences loved. Nor does it mean being nice means they're not tough , or an Iron Woobie . If combat intellect or combat ability are involved, it's akin to Obfuscating Stupidity or Crouching Moron, Hidden Badass because you naturally expect</ the dark , tormented loner to be rough and tough, and the nice guy to be a Non-Action Guy . So, when it comes time for "No more Mr. Nice Guy" , heads roll . On the other hand, with the All of the Other Reindeer trope in play, the nice fellow can be a redeeming factor as a person whom the beleaguered hero realizes is on his side

and who lets him know he's not alone . (That is, unless the nice guy is the beleaguered hero; then he's screwed.) Often, authors go the abbreviated route and give them a Dark and Troubled Past triggered by a Berserk Button . Either way, you can expect their niceness to be in spite </ of whatever tragedy or drama is in their lives; kind of an equal and opposite reaction to it. If done too suddenly, it implies a level of secrecy and acting that a Stepford Smiler would be jealous of. When done well, a more troubled character will rebuff their advice or friendship with "What do you know? You've never had X happen to you! " to his " I did ", thus revealing healed-over scars. Furthermore, the Nice Guy trope can overlap with Innocently Insensitive , in which case the character can be just as insufferable at times as the Jerk with a Heart of Gold or even the Jerkass , but not at all mean-spirited like them. However, if the setting is comedic with many Chew Toys around, you can't always count on them to be the sympathetic ones. Another trait Nice Guys often exhibit is being Easily Impressed . Most people like to be complimented or appreciated, so writers will often give the Nice Guy low standards to give a mediocre or upset character a boost in morale. Unfortunately, doing this will often make them incredibly reckless or inflate their ego a bit too much. If the Nice Guy has a rougher male character as his Foil , they're a Noble Male, Roguish Male or Sensitive Guy and Manly Man duo. Occasionally, however, the treatment goes the other way around: Perhaps in a world set upon Black-and-Gray Morality or Grey-and-Gray Morality , this Nice Guy actually stands out because he IS a Nice Guy. He doesn't have the excuse to be cynical or mean, nor does he need to have a tragic backstory. He's so nice, friendly and helpful... that he eventually becomes a fan-favorite due to how much he stands out amongst the more cynical cast members, like a refreshing breeze. Contrary to the beliefs that Nice Guys Finish Last or All Girls Want Bad Boys , a genuinely Nice Guy can indeed be considered very attractive in the romantic department by people who value his kindness: that's Single Woman Seeks Good Man . Conversely, the Dogged Nice Guy trope may be in play if he has Unrequited Love , but note that that trope overlaps with people who act "nice" as a means to an end, which a real Nice Guy in this</ sense wouldn't do. Usually, the result of Upbringing Makes the Hero . Though, watch out if you've pressed his Berserk Button . Exact oppositions of this trope are: Jerkass , Lack of Empathy , Jerk with a Heart of Jerk , and the Complete Monster (extreme opposition). If the villain is a Nice Guy in spite of his evil deeds, then he qualifies as Affably Evil . Super-Trope to Nice Jewish Boy , when the nice guy in question is, well, Jewish , to the delight of potential Jewish mothers-in-law . See also Adaptational Nice Guy . Nice Guys also tend to be Animal Lovers . Fortunately, this one trope has many Truth in Television examples. So many, in fact, that there's no need to list them here; thanks in advance. This trope refers to genuinely</ nice guys. If you're looking for the Internet definition of "Nice Guy," that's at Wants a Prize for Basic Decency , Entitled to Have You , and some cases of Dogged Nice Guy . On a D&D alignment chart, nice guys practically represent the Neutral Good alignment. Exceptions are if the guy is extremely respectful towards rules , if he's kinda undisciplined , or, in very</ rare cases, if he's polite and pleasant but actually amoral .

A trope based on a Darwinian view of the world in which a man can't compete with other men for money and status (and by extension, women) without a willingness to be ruthless. When played straight, the

character is a Dogged Nice Guy who may or may not end up defying the expectations of the cynics and finishing first after all. Sometimes, however, a male character (who may not be particularly nice at all) will get frustrated with his lack of success with women and conclude it's simply that All Girls Want Bad Boys , not realizing that he may actually be just as much as a Jerkass as these ruthless alpha males he assumes get all the women, just whinier and more self-pitying. Expect much Playing the Victim Card . Others will either sympathize with him or call him out on really not being that much of a nice guy at all. Jerkasses sometimes use this line as a rationalization for being such tools , as do Jerkass nations. When used in non-romantic observations, especially by someone on the extremely sour end of the Sliding Scale of Idealism vs. Cynicism , expect the phrase to be punctuated with "... if they finish at all." The trope name is a misquote . There are several supposed sources and original quotes (and ironically, one of the people who is often cited as the origin of the quote was a Jerkass baseball manager who repeatedly lost to his genuinely kind and Benevolent Boss rival), but the fact that it's a misquote is the only certain thing. Opposite of Cheaters Never Prosper and Single Woman Seeks Good Man . Related to Loser Protagonist , Romantic Runner-Up , and The Social Darwinist . For characters who actually finish last because they're nice, see Dogged Nice Guy . Also see Then Let Me Be Evil .

To show that you mean business , it's important to have style</. Enter: the nice hat</. It may actually have utility — even conveying special powers — but more often than not it just looks cool , or even just sexy . Fedoras are the most common Nice Hat, probably because they inherently invoke 1920s to 1940s era Gangsterland and Film Noir we all know and love. Sadly, it may be losing some of its cachet as it gets more and more associated with the creepier sort of "nice guy" , or just with generally uncool nerds trying and failing to look cool. Wizards and Witches have their own style to worry about. Commissar Cap is also a common enough version of this to have its own sub trope. The crowns of the ancient Egyptian pharaohs (since crowns are always cool) make this Older Than Dirt . In fact, the Cool Crown as Requisite Royal Regalia always overlaps with this trope. A Sub-Trope of Costume Porn . A Super-Trope to: Compare Cool Mask , Pimped-Out Dress , Pimped-Out Cape , Nice Shoes , Coat, Hat, Mask , High-Class Gloves . Often an important part of a character's Iconic Outfit . Contrast The Hilarity of Hats . Has nothing to do with Planet of Hats , unless it's taken to literal proportions , or downplayed as a Gang of Hats .

The hero has accomplished their goal; they've killed the Big Bad , or defeated them forever, or at least scored a major blow against the antagonist. They've done what they set out to do... ...but not so fast ! It turns out that by the very act of success, they've unwittingly made things worse . Maybe the now-dead antagonist was actually holding back an even greater evil . Maybe the villain, having been defeated or damaged, is now transformed into a new, ultimate, unstoppable, invincible, angry form , often against the villain's will . Maybe the villain, despite their villainy, was serving some other greater good — keeping the world/universe/nature/whatever politically or literally balanced — and their demise throws things into chaos. Maybe the so-called villain was actually a Hero Antagonist , and you just unwittingly handed a huge victory to the real villain . Maybe that princess

you saved is a cold-hearted tyrant at the head of an oppressive regime, or even a Sealed Evil in a Can . Perhaps taking down the villain has resulted in an Evil Power Vacuum , and now even worse guys are fighting to fill the void that the previous villain left, causing even more havoc than that previous villain could have ever dreamed. Or perhaps the only means of foiling the villain involves questionably massive "collateral damage" and is so extreme that the hero is now the worst example of He Who Fights Monsters , My God, What Have I Done? , or Full-Circle Revolution . For whatever reason, the hero's victory over death and destruction directly or indirectly leads to an even greater wave of death and destruction, or something else that puts a Downer Ending spin on everything. Oh dear. Maybe the villain themselves will warn the hero about the possible consequences , as a last-ditch attempt to save their own skin, or as a bitter "parting shot" to ruin the hero's victory ("You fools... do you even know what you've done?"). Villains being villains, this may just be a bluff. Or maybe the villain will just lament over how the hero defeated them despite all their efforts - it wasn't some sort of plan of theirs</ for the hero to "win" and thus make things worse (if it was, that'd be My Death Is Just the Beginning). Then again, Poor Communication Kills often comes into play as the villain will usually be uselessly vague and give no concrete reason for why foiling him would be bad. On the other</ other hand, a clear warning might be taken as Cassandra Truth anyway. You can't win. If the mission was a rescue, it was an Unwanted Rescue , and the former captive may bitterly inform them of the true facts. In most cases, of course, the hero will take full responsibility for their actions and be haunted by them, horribly traumatized . Now their new mission is to stop the new danger they've unleashed, preferably in a way that doesn't spawn ever greater menaces. Darker plotlines may end the story right there instead, and it's always possible the villain's demise inadvertently resulted in the irreversible destruction or horrifying mutation of the world. If used excessively, this trope often leaves an audience with a sense that the hero shouldn't have tried to change things for the better and indeed shouldn't have even left home . Can also be a moral about getting seriously involved in things without learning much about them. This trope can be annoying in video games as often-times Stupidity Is the Only Option , particularly in the case of a MacGuffin Delivery Service ... It is not particularly fair to try to make the player feel guilty about a course of action they had no control over, and indeed, might've gotten a "Game Over" if they attempted to not</ fulfill the objectives in question. The term " Pyrrhic Victory " has the same connotation and originated from the Pyrrhic War fought by King Pyrrhus in 279 BC, which makes "Nice Job Breaking It, Hero" Older Than Feudalism . The tropes overlap, but Pyrrhic Victory is when someone succeeds at their goal with a very high price, while Nice Job Breaking It, Hero includes actions that might not be necessary or even intentional. In addition, this trope sometimes results in no victory at all, not even a Pyrrhic one. Sometimes a badly thought-out plot for the sake of action has exactly the same effect when Fridge Logic catches its tail. That's one of the reasons why a good Game Master habit is writing the plot starting from the "what happens if Player Characters aren't here at all or do nothing" point. This trope is a common problem with the Small Steps Hero . Compare Create Your Own Villain , What the Hell, Hero? , Unwitting Pawn , Must Make Amends , You Already Changed the Past , Two Rights Make a Wrong , Nice Job Fixing It, Villain! (but note that villains are also subject to this</ trope — they can do something careless that screws them over or helps out a worse</

villain). Compare We Want Our Jerk Back when the hero/villain makes the villain/hero powerless, only to have it backfire and give them a worse villain/hero/ fate than expected, resulting in them wanting things to go back the way they were. Better the Devil You Know is a similar situation, where the utter defeat of one villain can lead to a completely different and greater</ evil taking over. This trope may lead to a Redemption Quest in an attempt to make up for the mistake. Has very little to do with Nice Job Breaking It, Herod! (in fact, that one usually leads to the biggest cases of the complete opposite Trope .) Hitler's Time Travel Exemption Act , in certain cases, is a Sub-Trope of this. See also Had to Come to Prison to Be a Crook , which is this as applied to a legal system. (Or at least a well-intentioned one.) May overlap with Self-Fulfilling Prophecy . No Endor Holocaust is what happens when this is ineptly averted. And if the hero dies following the reveal and is unable to stop the new menace, you've just read a Shoot the Shaggy Dog story. Despite obvious parallels, most Load-Bearing Boss in video games do not fall under this category. When this happens with fandoms, it's Why Fandom Can't Have Nice Things . Pacifism Backfire is "Nice Job Sparing Him, Hero". Compare Tragic Mistake . It frequently overlaps with No Good Deed Goes Unpunished . No real-life examples are allowed (Truth in Television as it is), and for that, you have no one to blame but yourselves .

Basically, the heroes have a problem. It could range from personal, to being vital in their quests. Then an antagonist does something, either accidentally or deliberately but with an unintended effect, that . It's like a Kick the Dog , but instead of hurting the dog, it pops one of the dog's dislocated bones back into place. Sometimes it can be a single act. Sometimes it can be just one too many moves The Chessmaster makes, and the villain becomes their very own Spanner in the Works . Say the Evil Overlord decides to smash the hero's Orphan's Plot Trinket just For the Evulz , and then it turns out that trinket was a Power Limiter that the hero wasn't able to break himself (or wasn't aware had that function), and now The Hero lays a No-Holds-Barred Beatdown on the overlord. This is often Played for Laughs . Sometimes the Minion with an F in Evil is responsible for this. This trope on its own just has the villain do this independently of the heroes. If the heroes trick the villain into fixing their problem, then this trope combines with either Briar Patching or a Batman Gambit . May overlap with Dick Dastardly Stops to Cheat if the villain had victory in hand before he did whatever he did. Compare Hoist by His Own Petard (when the villains foil their own plans), Villain Ball , Bad Guys Do the Dirty Work (like this, only intentional), Poke the Poodle , Phlebotinum Rebel (when the villain creates</ the hero), Tactical Suicide Boss (when an enemy can only be beaten by exploiting a certain move) and due to the G.I.F.T , Why Fandom Can't Have Nice Things (when fans do it). Contrast Nice Job Breaking It, Hero! , From Bad to Worse , Two Rights Make a Wrong . Super-Trope to Create Your Own Hero . This is not villains hurting their own plans or failing to break something (like resistance against them). "Fixing" in this case means solving a problem they did not know existed, or were trying to exploit. WARNING: Unmarked spoilers ahead!

Some characters have quirky, fancy, or otherwise unusual footwear, which the narrative makes a point of mentioning. If pimped out enough, it can even be an Impractically Fancy Outfit (especially

The gag works because the channel is boring in two different ways. Even if you somehow manage to find the boring subject matter intriguing, the channel is implied to be repetitive ("We're all X, all the time" or "X, 24 hours a day.). As if that wasn't enough boredom, some shows add to this gag by having an extremely bored sounding man narrate the channel's programming in a bland monotone. To put it simply, a show you're watching makes up a TV channel. If the gag works, you'll be asking yourself one question about that channel. "Who would watch that boring crap?" Soldiers often come up with a name for the enemy that's easy to remember, usually quicker to say than their actual name (or if they never learn the enemy's name). Sometimes this is a racial or ethnic slur (and in some cases becomes such a slur); sometimes it's a cultural reference, and sometimes refers to appearance. Doing so is commonly a form of Demonization and has the effect of 'Othering' the enemy, making them seem less human, thus keeping the troops from considering the enemy's humanity , and thus making it easier for the troops to kill them. For that reason, the practice is often encouraged (or at least not discouraged) by the troops' superiors while the war's going on. In science fiction or fantasy settings, this is made even easier when the enemy is not the same species as the troops . In such works this trop may also be the result of the real name being forbidden, or a summons These designations often find a way into propaganda and slogans used to whip up civilian support for the war effort, and continued use of these terms after the war can indicate a person who lived through the war and either adopted the term as a habit of speech or is having trouble moving past those years A subtrope of Demonization . Someone cannot be harmed. Merely fighting them won't make them go away; if at all possible their defeat requires one to figure out how</, which is a legendary quest in and of itself. Usually the ability of the Big Bad in sci-fi and fantasy settings, few heroes get this one. (Except in Super Hero series, with Superman being the flagship example.) Either one has to find their Achilles' Heel , or else summon up a nuclear-bomb's worth of power in the last episode, either through The Power of Love or Ki Manipulation or really</ heavy armaments (e.g. When All You Have Is a Hammer...) and hope for Villain Decay . Sometimes a vaguely defined nigh-invulnerability is a way to make a hero only as tough as he needs to be to advance the plot . There's a number of ways one can have Nigh Invulnerability. Sufficiently strong characters might</ be able to knock them through a wall or mountain , but just one hit like that won't have any lasting effect. This is generally what people first think of when referring to this trope. A combination of limited super-toughness, super-pain tolerance and regeneration is a popular power set to render a character effectively nigh-invulnerable while still being shown to suffer temporary pain and injury in a way that gives recognisable stakes to physical threats, even if we know they won't be fatal. The Physical God , Implacable Man , The Juggernaut , Blob Monster , Iron Butt Monkey , The Chew Toy , and anything Made of Indestructium all probably have some form of Nigh Invulnerability. Compare of course Immortality , for the ways in which characters cannot die. Contrast Made of Iron , where no explanation is given for an individual's incredible resilience. See also Immortal Life Is Cheap , which applies to such cases as Multiple Bodies or Regeneration; and Trainstopping which tends to have this as a requirement. The human face is supremely important on a social and biological level. Most of our non-verbal communication comes from reading subtle facial movements, and its importance in our cognitive thinking is best shown in our tendency to see faces in inanimate objects (think of how many times you've looked at a rock face and thought you'd seen two eyes and a mouth). So there's something genuinely disturbing to most people about seeing a face visibly distorted, mutated, or rearranged ... so, naturally, this type of Body Horror is one of the most common Horror Tropes . A Sister Trope and effective primary component of Nightmare Fuel . It is in fact at least Older Than Feudalism — armies over the world have based their war masks around this trope, and in mythology and folklore, just about any self-respecting demon or supernatural evil will have one. More recently, it has also become a staple of Surreal Horror . This is a main symptom of Coming Back Wrong. Most humanoid examples of Our Monsters Are Weird will fit this trope. This trope is commonly doubled with the Jump Scare in a Screamer Prank . Sub-Tropes include: See also: Interesting tidbit: this is one theory as to why some people are afraid of clowns . Exaggerated mouths, bulbous noses, and pin-prick eyes are downright terrifying to young children who haven't yet figured out that the person is just wearing make-up and not deformed</ . Warning : Many of these examples contain image links. Read at your own risk if you are prone to losing sleep, especially if you're on a touch device where you may accidentally tap and therefore open links. At the time of episode of Guinness World Records </ , Leonard McQueeny holds the world record for most extensive facial

prosthesis. And yes...he can remove it.

This character is happily intrigued by whatever is strange, dangerous, disturbing, and/or frightening. If this character is "part of The Team ", their fellows may regard them oddly. Indeed, what's Nightmare Fuel or Squick to other characters could very well be a fetish or Squee! to this character. For example, a Nightmare Fetishist may consider Halloween their favorite holiday, harbor an obscure or oddly specific kink, think that the monsters they're supposed to be fighting are cute, or simply be born with this trait as part of their species or family In wackier portrayals, a Nightmare Fetishist might also be repulsed and horrified by things most people would consider wholesome and tame. Possibly as a good version of Bad is Good and Good is Bad (though evil characters can be Nightmare Fetishists as well) This kind of person is very difficult to coerce or break through the usual methods; as they can be Too Kinky to Torture or Too Spicy for Yog-Sothoth . Note that this trope is a sliding scale that does not always include a literal, sexual fetish ; Nightmare Fetishism can range from a harmless fondness for morbid stories to a literal sexual fascination with the life-threatening Gustave Flaubert said that "One mustn't look at the abyss, because there is at the bottom an inexpressible charm which attracts us." In this case, people who find a very strong aversion in someone or something will slowly become desensitized to it and may even eventually develop an interest to it See also Freaky Is Cool , Freakiness Shame , Fluffy Tamer , Boys Like Creepy Critters , Admiring the Abomination , Nightmare Fuel Station Attendant , Creepy Good , and Creepy Awesome . There are a lot of things that are Harmful to Minors . There are a lot of writers who like to subject kids to them anyway. Whether it's parental abuse or a run-in with the Monster of the Week , the child ends up traumatized and left with a creepy tendency to draw whatever it was they saw over... and over... and over.. The combination of a disturbing image rendered in a crude, childlike style is a powerfully scary one in and of itself, but just as unsettling is the window onto a child's view of sex/violence/Cthulhu that it gives us. The idea of innocence being exposed to things it finds frightening, or things it can't understand , is a classic way to play off Adult Fear and at the same time deliver a bucketload of Nightmare Fuel rendered in red crayon It gets extra points if the suburban mom decides to hang it on the fridge rather than call a child psychologist or an exorcist If a Creepy Child draws pictures, they will be this trope. If it's the Monster of the Week the child has been drawing, expect the Nightmare Fuel Coloring Book to come in handy when the heroes come along - after all, now they've got a wall full of pictures of their enemy Compare Room Full of Crazy , Nightmare Fuel Station Attendant . Scary stuff. Really scary stuff This is the stuff so horrifying that it can give people the creeps for years. This scares the pants off of just about anyone to the author/creator's delight. This makes you shrink in the back of your chair (or maybe even hide

behind the sofa), look over your shoulder, and remind yourself that what's going on is (usually) only fictional For many horror films, achieving this effect is the whole point (and many in-universe examples arise because Kids Shouldn't Watch Horror Films). For some reason , many of us like to be scared on purpose. There may be a euphoria generated by surviving something that seems scary, or maybe we know that fiction can't hurt us (not physically, anyway) and the idea of choosing to be scared without the danger is fun. Some think it's cathartic or therapeutic in some way to explore our fears from a position of relative safety. In any case, this is normal for the genre. Others are fascinated by the very things that most people avoid . Many a time, it overlaps with Squick Similarly, some Public Service Announcements choose to employ terrifying imagery in order to keep people away from doing dangerous things . These can be sources of Fridge Horror as well, as those from different cultures or eras past can demonstrate some intensely creepy Hard Truth Aesops On the other hand, Nightmare Fuel doesn't exist just in the horror genre and is not always the main focus of the films and shows in which it is present. In the case of such movies and shows where Nightmare Fuel or anything related to horror is far from the norm, it can be unsettling when it does occur due to the stark contrast , especially if the genre of the film or show is far from horror, such as comedy or animation, or when in a show with a very specific target demographic Experiences may vary from person to person. Some people, for example, may find the invasion of monstrosities which are treated as benign to be a far more terrifying prospect than things which we need to explicitly fear. Think the difference between the monster who lives under your bed when you're grown up versus the monster who lives under your bed and fist-bumps your parents when you were a young child This is an Audience Reaction , so leave it on YMMV and Nightmare Fuel tabs and don't get too worked up about what specifically goes into it — what's Nightmare Retardant for one person may well be Nightmare Fuel for another. Focus on what frightens you</ , not what you think may or may not frighten someone else Tropes used to invoke this feeling are Horror Tropes . Tropes about</ the emotion of fear itself are Fear Tropes . If it is unintentionally</ scary, it's Accidental Nightmare Fuel . If it is meant to scare but fails to deliver, and becomes hilarious instead , it devolves into Nightmare Retardant . Characters that are this In-Universe are The Dreaded The aftermath of frightening moments, such as death or trauma or violence inflicted upon likable characters, can easily overlap with Tear Jerker . For examples where this trope comes about as the result of Fridge Logic rather than anything occurring onscreen, please see Fridge Horror All Nightmare Fuel examples should be specific and provide details. Don't write in first person

Who's that behind you?

A character, often a Cloudcuckoolander , whose innocent attempt to make something (typically a drawing) come across as Nightmare Fuel to the other characters. Unlike with normal Nightmare Fuel, other characters in the show will notice how horrifying the drawing/poem/song/story is, but the innocent NFSA sees nothing wrong with their tale of baby-eating zombies or the drawing of a "miniature poodle" that looks more like the ungodly offspring of a hellhound and a C.H.U.D More generally, this kind of character will be simply a casual observer to some frightening or grotesque

phenomenon who either doesn't bat an eye or responds with some kind of snarky comment (and no, they're never meant to be a Stepford Snarker). It will often be a child or a "simple" person who doesn't comprehend the danger, or else a Jerkass or Misanthrope Supreme who genuinely doesn't give a damn what</ happens. Either way, you can expect that saner characters will be almost as creeped out by this character's reaction as by the actual threat

Frequently combined with Room Full of Crazy , Creepy Child or Dissonant Serenity tropes when the writers need to give their characters that extra little bit of creepy. Compare Nightmare Fetishist , Nightmare Fuel Coloring Book . The very existence of (unintentional examples of) the Uncanny Valley proves this trope is Truth in Television . Not to Be Confused with Creepy Gas Station Attendant (not that those can't be this). Tropes invoking a Nightmare Fuel Station Attendant:

The polar opposite of Nightmare Fuel : Something meant to be truly terrifying (or at least somewhat frightening or disturbing) which instead comes off as stupid, laughable, cute, or all of them. As with Nightmare Fuel , examples will often be subjective; what one may consider this, another may still find terrifying as heck . Often caused by Special Effects Failure or Stock Sound Effects ; sometimes, for older titles with now-outdated special effects, it can simply be an example of "Seinfeld" Is Unfunny . Also often unintentionally invoked when a character looks or sounds like a less frightening character from another work. Of course, when used intentionally, it could be an Intended Audience Reaction May be caused by, or be the cause of, Villain Decay Many B-movie creature features, especially those featured on MST3K , were chock full of this since most of them had very low budgets and had to rely on puppets and guys wearing carpets over their heads for their creature effects On the other hand, this effect can be deliberately invoked by the artists. For instance, there can be scenes of horror and of menacing evil, but it can be countered with reassuring images and music as powerful heroes learn of the menace or are otherwise called into action to stop it Compare Faux Horrific , which involves horrified reactions to mundane objects and occurrences played for comedic effect. Contrast Nothing Is Scarier , which is a possible way to avert this trope by not showing the monster at all and letting the characters — and audience — scare themselves with the fantasy of what it might be See also Narm . Compare Fetish Retardant for the Fetish equivalent, and contrast Lightmare Fuel where the horror aspect is made fun of but still manages to be scary

Some dreams are heart-warming visions of hope, filled with cute and cuddly creatures, so delightful they make you want to fall asleep right away . Other dreams...aren't There are nightmares that chill your soul . They are a journey through a warped mirror of reality where Transformation Horrors abound and Primal Fears are on public parade. All our comforting certainties melt away, and chaos reigns supreme. Quite frankly, after a dream like that it would almost be a relief to encounter the Outer Gods dancing to the eldritch music of blasphemous flutes These nightmares can show off the emotional

confusion and torment affecting a character. An effective way to show a character is having bad dreams is just to go into them and show the nightmarish sequence itself. Each bizarre image can dissect the issue facing them, showing the distortions the mind puts on them These dreams are often, though not always, associated with Deranged Animation . Hallucinations and supposedly funny nightmares also fall under this trope May overlap with Catapult Nightmare , if the character having the nightmare wakes up by flinging themselves up from the bed in fright. Flashback Nightmare is a subtrope of this (and Past Experience Nightmare) where the nightmare is shown as a flashback the character's Dark and Troubled Past . Many people enjoy swimming from time to time, it's fun and a complete sport. Maybe you even like taking the waves . Or maybe you just like the relaxing feeling of the sea. Or maybe you enjoy the water in company . But if you are in a fiction work you should only go for a swim in broad daylight, otherwise things tend to get a little messy.. No matter the place: the beach, a lake, a river, open sea or a swimming pool, if you go for a swim after dark you will die in the water or shortly after. It may be a Sea Monster out for dinner, it may be a Serial Killer stalking you, it may be an Eldritch Abomination coming out of the sewers or maybe you manage to drown by yourself but no matter what, you are in for a gruesome death This can be Truth in Television to some degree, as swimmers are less likely to see aquatic predators such as sharks and crocodiles at night, and such predators are often more active at night too. This is why many beaches close at night or at least warn people that night swimming is dangerous. In a similar vein, a human killer can take advantage of the water , darkness and often solitude of a night swimmer. Drownings also tend to take place at night, though this may be generally because it gives people plenty of time to have got drunk first Compare Darkness Equals Death where darkness means trouble, Hazardous Water where the water indirectly contributes to your death and Murder Water where the water itself is trying to kill you As a Death Trope , spoilers ahoy

Night vision goggles on TV and in movies are seldom shown correctly Modern night vision goggles merely amplify light from wide spectrum with a CCD-based optical sensor. CCD sensors are however highly sensitive to near-visible infrared radiation. This means that normal night vision binoculars will display "infrared" as if it was visible light, and many of them also have an "infrared" lamp fitted, which produces visible light to the wearer of the glasses, but not to the unaugmented human eye The confusion comes from the fact that "infrared" is also the spectral range used by thermal imaging. All objects at temperatures found in the earth's biosphere do produce radiation in the infrared, but not necessarily in the frequency range that CCD sensors are sensitive to. The infrared range regular CCD cameras operate in is "near-visible" — an object glowing at 400°C is glowing brightly to someone who uses a CCD camera, but is still pitch black to the human observer, who would only begin to see a red glow at around 450-500°C CCD are useless for obtaining a thermal image below a few hundred degrees Celsius, so for ordinary thermal imaging applications, other types of sensors are used, which then in addition are frequently (but not always) cooled below environmental temperature, depending on

technology Confused? Most writers don't figure it out either. Most people don't even understand how incandescent color relates to temperature via Planck's law of black-body radiation Ever wondered why the pictures from your webcam has colors that are just slightly off? That's because your webcam uses a CCD sensor too, with a cheap IR-filter. The near-visible infrared light is distorting the colors. Some photographers go as far as filtering out all the visible light for taking beautiful IR photographs To give you an idea of the numbers: The visible range of light is 400-700nm, which works out as temperatures from roughly 500° to infinity, with peak visibility at around 6000°C. "Infrared" ranges from those 700nm to 300'000nm, where microwaves start. The range of "Near-infrared" that CCD are most sensitive in is 700-1000nm (~350-450°). Thermal imaging usually operates at 9000-14000nm because this is the peak radiation spectrum of the human body at 37°C What this eventually all works out to is that many games and movies don't quite seem to know how their night vision goggles are supposed to work. Thermal effects and night vision are wildly mixed, confused, or combined into a single device: The background is shown in the glowing green of a starlight scope, with living things shown in false-color orange and yellow. Video games also commonly feature "night vision" in which living beings glow as though they were thermal hotspots and leave a trail of Fluorescent Footprints See Predator </ for the titular alien's mode of vision . Can't see through stuff, either . Compare Vein-o-Vision The version most often seen on TV is actually an

Stock phrase in commercials for non-prescription products with some purported health benefit — especially items which are not actually health care items, such as sugar-free gum. Sometimes phrased as "Nine out of these</ ten doctors agree," showing you a group of men in white coats with stethoscopes. This is a clue to what's really going on. Your brain hears "Nine out of Ten Doctors Agree", and reads it as "90% of doctors agree." But that's not necessarily what happened — the sample size and population can be anything the advertiser wants it to be, including literally having a panel of only ten doctors asked (and cherrypicking doctors until they get the result they want). Alternatively, the claim may reflect reality, but what is being claimed isn't the same as what is being sold: listen carefully. Did nine out of ten dentists really say that their brand of toothpaste was best, or did nine out of ten dentists just agree that toothpaste in general</ is a good idea? Did they say they would recommend this</ brand over all other brands, or did they just say they would recommend it? In fact, if you catch wise to the fact that what the nine of ten doctors are agreeing to is something much more generic than what is being sold, you might start to wonder: What's up with the one</ out of ten doctors who thinks smoking is cool? As a result, it has become fashionable for some commercials to poke fun at the trope, implying that the tenth doctor would</ have endorsed their product, were it not for some external force (he was reaching for the "agree" button when a venomous snake bit him, sending him into a convulsion before he could agree). For the classic disassembly of these sort of statistics, may we recommend Darrell Huff's How to Lie with Statistics</? The 1950s were a lot less naive than you might assume. Indeed, this is a subtrope of Lies, Damned Lies, and Statistics . This trope has nothing to do with Doctor Dolittle , Doctor Octopus , Doctor Faustus , Doctor Horrible , Dr. Phil , Doctor Slump , Doctor Strange , Dr. Strangelove , Doctor Fate , Doctor

Zhivago , Doctor Jekyll , Doctor Wily , Doctor Manhattan , Dr. Eggman , Doctor Steel , Witch Doctors of any denomination, or any of the Doctors from Doctor Who </ because it's Not That Kind of Doctor , though you probably could find something at least nine of them agreed on (with the common joke being "Nine out of ten Doctors agree — Four's scarf is too long").

The shadow warriors of feudal Japan, reputedly possessed of all manner of mysterious powers known as ninjutsu</, including invisibility and intangibility. Able to infiltrate even the most heavily guarded fortress without being detected. If they are caught, they may trick their pursuers by mysteriously swapping places with a log . They may be portrayed as cutting down any opposition with superhuman swiftness. Traditionally dressed in black bodysuits with black masks or veils to hide their faces (or sometimes in white). They are the ultimate spies and assassins, gifted with their own deadly magic and martial arts. Born in hidden villages , they are trained from birth to obey nindo</, an alternative Code of Honor to bushido</; to show no pain, feel no emotion , and remain loyal to their clans under pain of death — or the third code of getting as much money as possible. Or so popular legend has it. While ninjas did indeed exist, their reputation for invisibility and infiltration more likely stemmed from their willingness to dress as members of a lower social class when no one else in Japan would consider doing such a thing. Their "invisibility" was part psychological</ in cause — by dressing as a peasant, they were ignored and dismissed, or never even noticed at all , by the upper classes, a useful thing despite the oft fierce travel restrictions on the lower classes. Superior knowledge of survival skills, a lot of actual stealth, poisons, assassination techniques and unorthodox tactics (added to the fact that the ninjas actively encouraged the spread of rumors of their magical abilities) were the most important though. A popular myth states that ninjas came from lower classes (at least compared to the samurai) and they were often hired to do the dirty deeds honorable samurai would not do, but in reality ninjas were usually samurai, or in rare cases, mercenaries hired by samurai. Ninjas were mainly deployed for espionage, sabotage, and sometimes assassination. Ninjas were also quite skilled with a variety of tools, such as the multipurpose kunai</. Plainly put, while a stereotypical ninja would jump around on rooftops in ridiculous clothing , a real ninja most likely would simply infiltrate the household staff and poison a meal. Among many other things, a good ninja always knew where his sanjaku tenugui </ was . The "classic" black ninja costume is, in fact, the outfit worn by stagehands in traditional Japanese theatre. Japanese stagehands are frequently in full view on the stage, but the audience was meant to ignore them and thus they are considered "invisible" by the audience. It became a practice to hide ninja characters in full sight by putting them in the same outfits as the stagehands, for a startling effect when characters were suddenly attacked by "thin air" . The stereotypical black "ninja outfit" would be actually horribly conspicuous, even at night. For night stealth, real ninjas wore dark blue outfits; someone dressed in solid black will stand out like a silhouette. Usually, though, ninjas simply dressed like ordinary people (peasants, monks, merchants, scholars, etc). That way, they can move about unnoticed, day or night. Even the split or toe-divided boots which are a trademark of the ninja costume are actually an Anachronism Stew : toe-divided shoes or were actually invented in the 20th century, and only some modern ninjutsu schools would adopt them

for practicality reasons. Female ninja are often called kunoichi</ in a pun on the kanji for woman (女, onna<//jo</), which looks like it's made up of ku</ (く), no</ (ノ), and ichi</ (一). Kunoichi are often portrayed in media as experts in seduction and poisons. Or both at the same time. Kunoichi are also often seen in outfits that combine a hodgepodge of traditional clothing , fishnet , bared skin , and strategically-placed weapons , and tend to be given the Punny Name of "Shinobu" in media. There may be some Truth in Fiction , as real-life kunoichi would often use their attractiveness to lower the guards of their male targets in order to assassinate them in privacy or bribe information. The most common weapon for them is twin knives, which they Dual Wield and have at least one of them in a Reverse Grip . In some works of fiction, ninja are divided into three ranks: genin</ (lower), chūnin</ (middle), jōnin</ (upper). Legendary ninja include Fuuma Kotaro , Hattori Hanzo and Sarutobi Sasuke . During the Sengoku Jidai, the most prolific shinobi were of the Koka or Koga province and the Iga province, rugged, secretive clans notorious for guerilla warfare, unorthodox tactics and selling these services to warlords. Their mysterious histories and supposed rivalry have been popular fodder for Japanese fiction for years. While commonly thought to have originated in Japan, ninjas Historically, the word "ninja" was not generally used; in Japanese historical documents, shinobiStrictly speaking, the word 'ninja' wasn't proper Japanese at all, originally; according to The Other Wiki , it comes from an alternate on In American movies, especially the ones from the '80s with "ninja" in the titles, only the hero ninja and the Big Bad ninja make any pretense of stealth or invisibility — and sometimes, not even them . Any underling ninjas will be the class of mooks known as Highly Visible Ninja . In the late 20th Century, they the arch-enemies of Pirates , for no reason other than the Rule of Cool . Samurai Shinobi is when you mix samurai and ninja together either for Rule of Cool or Artistic License – History . One of the earliest Japanese cultural tropes to make it to the West, where it has now branched out into the McNinja franchise. Expect the ninja to make use of the Smoke Out , the Flash Step , the Fuuma Shuriken , Kite Riding and the aforementioned Ninja Log . Compare The Hashshashin , the Middle Eastern counterpart. They're likely to be Stealthy Mooks . See Ninja Tropes for everything related to ninjas.

When cool things are combined, the combination is cooler than the sum of its parts. This combination is usually physically impossible or contradictory, like the title of this page. If the cool things somehow cancel each other out, if it's just so overwhelming the Willing Suspension of Disbelief snaps like a brittle twig, you may get left with a piece of camp that is at best funny and at worst disgusting… often falling into the realm of Cool, but Stupid . So simple in its gameplay, yet so epic in its scope! Ninja Tropes! Ninja Tropes! Compare with Bushido Index , contrast with Pirate Tropes .

The Nintendo Entertainment System was known for two things: reviving home console gaming and having ridiculously difficult games. Back in the '80s, video games didn't have today's sophisticated storylines. Excuse Plots were the norm. Therefore, much of the feeling of accomplishment one could get from playing them was from overcoming the insane difficulty they provided, if only so that one could brag about it to their friends. A plethora of enemies and difficult jumps were not just the name of the game, they were</ the game. And these games weren't just hard; they were Nintendo Hard! </ Since games cost a fair amount of money at the time, and could usually be beaten in 15 minutes if you knew what you were doing, a game that was easy had little value. It was simply not possible to make very long games in the modern style that take hours to beat even if you are good. So games had to be difficult so players would feel they got their money's worth.

For further building blocks of Nintendo Hard, see Classic Video Game "Screw You"s . When Nintendo Hard is taken to its most sadistic extremes by deliberately adding cheap deaths and Trial-and-Error Gameplay , you get Platform Hell and/or Bullet Hell . Keep in mind though, the difficulty of the game might have nothing to do with how the game looks aesthetically , but they're not tailored for young kids either . When only one or few levels or areas of the game are Nintendo Hard, you're probably dealing with That One Level , Brutal Bonus Level , or SNK Boss if it's the end. If the game reaches an obscene difficulty at a certain point and never looks back, look for Difficulty Spike . Examples of Nintendo Hard head-to-head fighters generally go under The Computer Is a Cheating Bastard , since crazy-hard opponent AI is nigh-universally the culprit. Earn Your Fun is a common argument for those who like such abusingly difficult games. A lot of arcade games were, and still are, Nintendo Hard for the purposes of encouraging a steady flow of quarters into the machine. The arcade owners have to make money somehow</ , you know. Also, remember that by "hard", we're only talking about the difficulty in playing the game . While Nintendo products themselves are physically</ hard (to break, which is fortunate when playing games like this), that's not this trope but Made of Indestructium . And the fact that several classic Nintendo games are is not relevant either. The section of GameFAQs is a good measure of a game's difficulty as long as it has a sufficiently large number (50+) of difficulty votes. Games that are rated 4.0 or above on that list represent the top 3% hardest video games ever released. (Note: it is effectively a 2.5-4.0 scale) The contrapositive corollary is Sequel Difficulty Drop . Though, contrary to the claims of some derisors, modern games can still be Nintendo Hard, it's just not as common. then it is not an example .

Nitroglycerine is an unstable substance, prone to explode at the first serious physical shock , and handling it is a nerve-wracking experience. What better way to ramp up the tension level in a story than to have the protagonists be forced to transport some a long distance through a hostile environment? This trope describes a plot where the heroes are required to move nitroglycerine (or some other unstable, highly explosive substance) across bad terrain (rough ground, winding roads, etc.). A common substitute is dynamite — while the whole point of it is that it's much more stable, it has a narratively convenient downside of "sweating" nitroglycerine after long periods of storage. See also Explosive Stupidity . There is a series of "Nitro Express" firearm cartridges in varying sizes, which are designed for hunting African megafauna. The "Nitro" in these refers to nitrocellulose (which is relatively stable), not nitroglycerine. Any examples of "Nitro Express" firearms fit much better under BFG . Nor should it be confused with Nitro Boost , which makes cars go faster.

It takes more than the good intentions of the Love Martyr or the delusions of Mad Love to make a relationship work . When a relationship gets rocky or outright implodes, the resulting mess just goes to prove Love Hurts , and that's when everyone involved was trying their best to make it work. Then, of course, there's No Accounting for Taste . This happens when two insufferable people choose to suffer each other and stay married, or when one ostensibly nice person marries an unrepentant Jerkass The former has both parties held together by force of habit, and basically tolerant of each other although there's very little romance or chemistry (though plenty of sass and backtalk). The latter has the whole relationship held together by one person. The second type appears to be what happens when the Love Martyr actually gets some sort of relationship with their target. Both halves of the couple acknowledge that they're part of a pair, but otherwise, the whole affair's so inexplicable/unequal that it's a marriage/love affair in name only This is similar to The Masochism Tango but milder. It's a subset of how so many Sitcom characters are so dementedly quirky that they'd wind up on Jerry Springer </ in real life. Handwaving this often uses Aw, Look! They Really Do Love Each Other . Comedic Sociopathy ultimately makes you wonder why anyone</ would put up with that guy Often overlaps with Ugly Guy, Hot Wife , which - depending on your point of view - either further makes a couple with this look ill-matched, or makes an Ugly Guy, Hot Wife pairing all the more inexplicable with this trope Third-parties may wonder What Does She See in Him? See also Awful Wedded Life , Dead Sparks , Happy Marriage Charade , and Why Would Anyone Take Him Back? Most of the time, adaptations are seen as a positive thing and many works are made with adaptations or merchandise in mind . The works listed here are the exception. They cannot</ legally have

For most of the world today, if you get caught doing a crime, you do the (sometimes metaphorical) time associated with the crime. The justice system is there to ensure you get a punishment that fits what you've done But in fiction where Big Bads can plot to Take Over the World or commit countless atrocities in pursuit of their goal, the heroes might find that there is no adequate punishment for the Big Bad 's crimes. If they'd killed a person they'd have been charged with murder, but what if they caused a World-Wrecking Wave and spoiled the lands on top of the already uncountable death toll - how do you punish that? Good question, because often crimes with No Adequate Punishment are so unthinkably evil , bizarre , or stupid that literally no one in a position to mete out justice has had the forethought of what to actually do</ if someone went and did them Don't expect this to mean that they get Off on a Technicality since there Ain't No Rule though. In most cases, people who commit crimes like these are left to deal with the consequences of their actions , charged with something else in an attempt to at least get some measure of inadequate justice , or just outright killed or given a Longer-Than-Life Sentence to put a stop to further crimes on the pile. It's not justice, because their crime is such that there is no adequate justice to be had, but it's an attempt </ an example of this trope. On the other hand; If "The harshest punishment imaginable" is invoked as a Plan B in a vain attempt to cover the crime, it is</ an example Contrast Failed Execution, No Sentence , in which the law does</ has an "adequate punishment" (in this case, death), but the fact that the executionee survives leads to the law being at odds of what to do, and There Should Be a Law for when someone believes what they have come across should</ be illegalized and punished by law, but isn't. May lead to an Obvious Rule Patch being subsequently applied in the form of a law specifically designed to mete out adequate punishment. Sub-Trope of Language Equals Thought , and related to Moral Event Horizon for actions which might have adequate punishment, but still serve to prove to the audience that there is no coming back from villainy for the character committing them

No pets allowed. A common saying of many establishments from hotels, to restaurants to office spaces. For whatever reason, the pets or just animals in general, are denied entry to a particular setting and are forced to look elsewhere at best or recognize they don't belong at worst. In most cases, while the human or superior race</ can access facilities with ease, pets are barred access for a multitude of reasons A sub-trope of Can't You Read the Sign? that applies specifically to this conflict. Usually Played for Laughs but sometimes can be used for drama should a character be very attached to their pet. In some cases, it can be an allegory for civil rights and being wrongfully barred from places of attendance based on appearances. An example includes the racist spin "No

Blacks, No Dogs, No Irish" which uses the label of "dog" as a slang for inferiors and undesirables, though this has become heavily outdated . Often the characters will choose to overcome these barriers, but sometimes the characters realize it's simply too much trouble In fantasy and science fiction, in universe, this can be upended as humans are not always a dominant race. It can be inverted to great effect with some animals barring other animals from being admitted, or more humorously, barring humans. Should aliens or other humanoids exist in the story, depending on the level of intelligence and the degree of interspecies conflict, this trope can apply in specific circumstances There is some Truth in Television behind this, as pets tend to unleash chaos in the form of causing damage, disrupting settings, distracting people and of course leaving...droppings. From a human perspective, there is little to stop this idea from existing as it's simply too much to deal with animals on a frequent basis. That said, there are exceptions including the valid utilization of service animals. There may exist plenty of real life examples to draw from but No Real Life Examples, Please! The Big Bad is supposed to help drive the plot , right? They provide the biggest obstacle for the hero to overcome. They give the audience (as well as Moral Guardians) something to channel their hate towards with terribly evil actions such as genocide , commiting crimes for immortality , kidnapping (or even worse), world-conquering, and kicking of puppies , even they can scare the audience (and children) by being the horrid monster they are through screentime. Usually, this is the case... except, of course, when they don't happen to be present at all Since all fiction essentially narrows down to conflict between two or more opposing forces, it is typical to represent these forces in the story's Main Characters , with the story's focus character called The Protagonist —usually (but not always) being the " good guy " (from the perspective of the work, at least)—and another in opposition to the protagonist called The Antagonist , who is usually (but not always) the " bad guy " (again, from the perspective of the work) Some stories, however, are cut from a different thread. Rather than representing the conflict as the "good guy" against the "bad guy", the central conflict is caused by other forces and does not feature characters in direct opposition to each other. Instead, the forces at work are more intangible and not bound to a set of characters This doesn't mean that there is no conflict or tension—otherwise there wouldn't be a story. It simply means that the central conflict of the work has no characters who are a defined source of friction. This could mean that the conflict comes from an internal struggle , such as with addiction, or it could mean that the conflict arises from some sort of natural/scientific disaster , or from simply trying to survive in a hostile environment . As long as there are no "bad guys", this trope applies. If villainous characters do appear in this kind of story at all, they will be a case of Villain of Another Story and/or Greater-Scope Villain ; they will not hurt, in any way, any of the story's main characters, even if they do horrible things to other unseen people It's possible that one of the characters will be the Hate Sink : not actually a Big Bad , but someone who makes the characters' lives more difficult to give the audience an outlet for the bad-guy hating. For example, if

Bob is seriously addicted to heroin and the work focuses around his battling of his addiction, then a drug dealer that constantly supplies Bob would not count as the antagonist, even though the dealer is certainly not nice, unless there is conflict generated between Bob and the dealer. In the case where it is not, the work would have No Antagonist. Therefore villains are technically allowed, but they can only cause harm indirectly In other words, if the central conflict is Bob vs his own drug addiction, it is this trope, but if it is Bob vs the drug dealer, then it is not The trope does, however, require an actual conflict taking place within the story—works with no real conflict, such as sandbox games , would not apply. Most Slice of Life works have No Antagonist, due to the conflict being life itself, but that doesn't apply to all such series, where the antagonist can easily be someone damaging the life of the protagonist (for instance, the local school bully). This trope is also common in Lit Fic , where it is usually broken down into the categories "character vs nature", or "character vs themselves" Not to be confused with Imaginary Enemy , where there is also no antagonist at all, but the protagonist thinks there is. Contrast Plot-Irrelevant Villain , where there is a villainous antagonist but is of little to no importance in the big game. If the story has neither an antagonist nor</ a conflict, the it most likely takes place in a Sugar Bowl Important: "No Antagonist" means Exactly What It Says on the Tin . If one or more sentient beings get in the way of the protagonists/main characters, however well-intentioned they are and however justified their actions, it is not an example

A wide variety of characters behave as if they are actual police officers and detectives or otherwise overstep their bounds, particularly the Amateur Sleuth and technicians. These people tend to be hired consultants, lab techs, or other characters attached to the department, and are allowed to act as police because of their investigative skills that are usually some branch of science anywhere from psychology to forensics. Regardless of their job description, however, in reality they would not have power to arrest, interrogate, execute warrants, and so on Obviously, the real police tend to take a very dim view of this practice. However, as was once said of Star Trek 's </ habit of sending the command staff into dangerous situations , if you're paying for the stars, you damn well better use them

Dirk Gently's Holistic Detective Agency </ : Dirk does this as part of the workings of his Holistic Detective Agency when he has a mystery that actually interests him rather than one that involves tricking old ladies into letting their cats loose. The local inspector Sergeant Gilks takes a rather dim view of this... along with Dirk's tendencies to be involved in highly peculiar situations that Gilks does not like very much in the first place, as well as his habits of removing or obscuring evidence...

In Torchwood </, though they do</ have authorization to be at crime scenes under the Masquerade of "special ops", and one of their group is</ a trained police officer, the rest of Torchwood Three consist of a pathologist, a computer expert/hacker, and... the guy who gets everywhere to work on time and looks good in a suit . In one episode, .

In Speculative Fiction , it is far too often the case that writers do not take into account the fact that the differences between terrestrial species and their alien counterparts would run deeper than appearance alone. Given that alien species would have evolved in environments vastly different to terrestrial ones, contending with different atmospheric conditions, different levels of background and cosmic radiation, different soil conditions, different pathogens and parasites, and so on, it is patently unlikely that any aspect of their biology would be directly compatible with their terrestrial counterparts. Aliens in speculative fiction are usually depicted less as properly alien creatures and more like humans from another country, and alien animals are merely exotic species from a different climate. This, then, means that you will often find one or more of the following in speculative fiction: Half-Human Hybrid — Humans and aliens are able to produce offspring together; the most blatant offense against conventional biological wisdom. See that entry for examples. Some of these are more plausible than others, although not by much. While there is reason to believe that Earth's atmosphere carries life because it is particularly suited to life, this is basically a confirmation bias — we consider it suited to life because it is suited to our</ life. This position is called the anthropic principle . Similarly, some people claim that most lifeforms in the universe would be fundamentally compatible with each other because they would be formed from the same basic chemicals. Science is currently undetermined on who's right - on one hand, carbon's properties mean it's more likely for carbon atoms to combine with other elements and form more complex life forms; on the other hand, with how many other elements exist there are way more chances for those elements to combine over carbon. Regardless even if the aliens we encounter are carbon-based that doesn't mean they'll be compatible: even here on Earth most species cannot reproduce with each other (and even when they can, the offspring are usually sterile) and can't eat the same food (chocolate, as an example, is poisonous to many species). This is one of the problems to watch out for in How to Invade an Alien Planet . A technological counterpart is Plug 'n' Play Technology . If different species (including, for example, humans and aliens) are shown reacting to drugs in exactly the same way despite biochemical barriers, see One Dose Fits All .

Stereotypical smart mouth, racist, big-city cop — but with a Sympathetic P.O.V. , which makes all the difference. Almost always written as a noble, misunderstood "good guy" (or girl). This could give the impression that the writer(s) are downplaying bigotry — or, in a passive-aggressive way, justifying bigotry in certain situations—to the point of making "loyalty" to "your own group" a virtue, thus making lack of bigotry come across as Category Traitor Sometimes this guy is shown as honestly mistaken and will moderate his bigoted views over time. This will often involve him coming into close contact with the group that he hates, possibly even being partnered with one of them The "noble" part frequently takes the form of not allowing his prejudices to interfere with police work—you won't see him charge a black guy with a crime he knows he didn't do. Is almost always white, but can also be of color. The ethnic version exists for the character to critique their own gender or race without the writers worrying about being called racist. Kinda like an inversion of N-Word Privileges by proxy Subtrope of — obviously — Noble Bigot . Usually a Politically Incorrect Hero

The Civil War has been subject to a great deal of historical whitewashing. The South is commonly romanticized as a land of Southern Belles , wise old colonels, Good Old Boys , and Southern Gentlemen . So whether it be by actual Southerners, Hollywood filmmakers who don't want to alienate a market, or writers running off Popular History , the Confederacy, and the army in particular, gets portrayed in an unexpectedly positive light considering that they're the bad guys in American history class The Confederate soldier won't care about slavery. They fight out of duty to their state, right or wrong , and are noble, honest, and loyal. The officers will be Southern Gentlemen of the highest degree. The Confederacy might be presented as a tragic underdog. At the least, they will be a Worthy Opponent . Portrayals of ex-Confederate soldiers will show them as proud of their service, and will sympathize with their bitterness over losing the war There is of course historical basis for the trope of the sympathetic Confederate soldier. General Robert E. Lee was famous for siding with his state of Virginia despite wanting the Union to remain whole and being offered command of the Union army, and frequently gets cast in the role of Reluctant Warrior and Worthy Opponent in fiction. However, in reality, Lee owned slaves, and during his campaigns, he allowed slaver raids by his forces to take Free Blacks and drag them south in chains ( ). An examination of the surviving letters and diaries of Confederate soldiers reveals that many of them were indeed fighting for home and country, though they did believe that emancipation would lead to servile insurrection (a race war) Though real examples obviously existed, this trope is generally employed to avoid having to confront the uncomfortable nature of the South in the Civil War era, instead glorifying the Confederate military and glossing over the unpleasant parts See also Southern Gentleman , My Country, Right or Wrong , and Worthy Opponent John Carter </ gives the title character a sympathetic backstory where he served as a cavalry captain and became disillusioned with fighting for a cause after he returned home to find his farm burned and his wife and child murdered . Carter's character arc in the film is overcoming his reluctance to fight for a cause after losing faith, which, by implication, glorifies his cause as a Confederate Robert E. Lee, of course, gets this treatment in Harry Turtledove 's The Guns of the South </ where he's a Reasonable Authority Figure as CSA President and works to free the slaves soon after the war ends

The backstory of Firefly </ is basically the Civil War IN SPACE! !, with the Alliance as the Union and the Independents as the Confederacy (if the Civil War had really been about States' Rights, and not slavery). Malcom Reynolds (The Captain of the ship and ex-Sergeant of Zoe) and Zoe both fought for the Independents and still believe they were on the right side. As the show is a Space Western , they correspond to examples of ex-Confederates in Wild West stories, with any unpleasant aspects of the Confederacy conveniently left out of the parallel. In terms of their cultures, it's the Alliance that has more in common with the antebellum South, and from what little we see, whatever problems the Independents had the Alliance are much worse.

Johnny Horton 's song "Johnny Reb" sings about the tenacity of the titular Confederate soldier.

Their goals are evil, but their means? Not so much. A Noble Demon is a villainous character with a Code of Honour . They don't care that they have a bad image — they may even actively cultivate and embrace it. However, every so often a situation presents itself and they're just not willing to go the extra mile necessary to be completely</ evil. They'll topple your castle, but they'll do it right after everyone has cleared out first . They'll sacrifice whole armies to achieve their goal but they'll also sacrifice themself if they must. They'll conquer your village but they won't cause more destruction than necessary . They want to kill The Hero but they won't stab an enemy In the Back . Their ambition might be to Take Over the World , or merely to uphold the evil side of the Balance Between Good and Evil . They might be obsessed with explaining this behavior so people won't think that they've gone soft . Killing enemies or servants who have failed but are loyal is " a waste of resources " and their inevitable newfound friends are " tactically advantageous allies ." A lot of this behavior is sometimes explained as the result of a complex they acquired when they felt weak and helpless, and if shown enough love , they may turn over a new leaf . Alternately, their nobility often gives them an opportunity to demonstrate Villainous Valour in the face of the hero's successes. And while Noble Demons are generally far from nice, being noble and powerful seems to imply they are above petty and malicious acts , or at least uninterested in them. A Noble Demon who's a Proud Warrior Race Guy often comments that their enemies are (or have become) petty and cowardly and stain the name of their species . Likewise, when other villains show their true colors under pressure , the Noble Demon is likely to show Villainous Valour . Often experiences Sympathy for the Devil from the heroes, and may perhaps show Sympathy for the Hero right back. If Eviler Than Thou comes up, the Noble Demon will likely be on the less evil end. May also be the "grayer" character in A Lighter Shade of Grey . Compare the less villainous versions: Ascended Demon , Family Values Villain , or Jerk with a Heart of Gold . Whether Anti-Villain or Anti-Hero beneath the facade, expect a Noble Demon's motives to include getting plenty of Villain Cred . See also Ambiguously Evil and Lawful Evil . Contrast with Card-Carrying Villain who doesn't deny they're evil but is much more willing to cross the Moral Event Horizon . Also contrast with Faux Affably Evil , whose kind acts only serve to benefit them (though milder examples of this may still qualify). Villains lacking this trait will usually be Always Chaotic Evil . Compare and contrast Nominal Hero , a character who does heroic deeds for all the wrong reasons. None of these examples are of the Complete Monster variety, as both their actions and</ means are purely evil and have no code of honor to abide to. Furthermore, a Complete Monster is never presented in any positive way, whereas honor is a redeeming feature for the Noble Demon.

Mr. Cataliades from The Sookie Stackhouse Mysteries

Nearly every conflict in human history has been over a resource of some kind. Land, water, food, oil, mineral rights, timber, livestock, labor... something other than national pride or honor and glory is usually lurking around as subtext whenever man kills man on the field of battle The local Unobtainium , Green Rocks , Spice of Life , Minovsky Particles , Vespene Gas or Imported Alien Phlebotinum are all naturally rare and valuable, so much that everybody wants to get their hands on it. Quite naturally, this

can lead to world- or galaxy-wide wars over the damn stuff. Caught up in the middle are the usual tragic bystanders, for whom your magical miracle substances are Worthless Yellow Rocks . Things will get... interesting if the resource in question turns out to be Aesoptinium that decides it doesn't want people fighting over it and sets up a No MacGuffin, No Winner scenario Compare and contrast Fantastic Nuke , when the phlebotinum creates a situation of Mutually Assured Destruction

Sometimes, nobody can die, even when it seems like they should. Unlike Never Say "Die" , they're allowed to use the words</ "kill" and "die", but for whatever reason no one ever actually does</ any killing or dying. It's not Amusing Injuries — the situations faced by the characters are presented as realistically dangerous and the threat of injury or death is definitely present. Nor is it simply Plot Armor — when Nobody Can Die, even the lowliest mook is seemingly immortal. It simply seems to be a law of physics that no situation can result in the death of a person — gunshots leave people injured but alive , explosions cause lots of property damage but never seem to happen with people in the blast radius, and the worst thing that can happen to characters in general is a Non-Lethal K.O. . Note that, since talking</ about death is allowed, there may be references to characters that have died in the past, but onscreen deaths are still verboten Nobody Can Die is a compromise between Anyone Can Die , which can be upsetting to younger or more sensitive audiences, and Never Say "Die" , which can seem childish even to children. It is occasionally imposed </ upon writers by Executive Meddling ; in these cases, expect them to try Getting Crap Past the Radar . Only Evil Can Die is the next level of compromise, where death only takes characters the audience are meant to think deserve it Compare and contrast Non-Lethal Warfare , where the combatants are deliberately using nonlethal weaponry, rather than the lack of deaths seeming to be a happy coincidence. Also compare Everybody Lives . The difference between that trope and this one is that Everybody Lives generally applies to just one book or season where the others can have high fatality counts, whereas in this trope, people never</ die. Not to be confused with Death Takes a Holiday , which is when death is literally impossible because The Grim Reaper is no longer on the job

Coo-coo! Coo-coo!</ When a character in fiction makes an animal call, which is typically that of a bird. When a character makes a bird call, expect it to be for one of two purposes, neither of which are for animal reasons: Seldom played straight anymore, as it's very easy to use for humor ; typically, it will be either be for parody (the caller definitely does not sound like a bird, but it works anyway) or deconstruction (the bird call is out of place for the time or location, and the position is given away). Not to be confused with Nobody Here but Us Statues , which is similar to but involves hiding in plain sight.

Alice tries to hide from Bob, so she pretends to be a statue (or, in more cartoonish settings, even a painting or a relief) in a museum, art gallery etc. Sometimes she has to Walk Like an Egyptian to fit in, or end up holding an empty picture frame in front of herself. Bob

typically doesn't catch on, though he looks at Alice suspiciously. (Bonus points if he says " I'll never understand this modern art " or "What an ugly statue!") Sometimes Alice will accidentally reveal herself, typically by sneezing , or in worst-case scenarios, Bob will sneeze and she will respond "gesundheit". Often Bob will pass Alice obliviously the first time, only to stop a few seconds later and run back ; either they will have an awkward pause before she runs away and he chases her, or Bob will find that Alice has vanished . Attempting to pass as a doll or a department store mannequin is a variant on this trope, particularly in big front-window displays. Compare Mobile Shrubbery , Stand-In Portrait , Knight's Armor Hideout and Wallpaper Camouflage , as well as Mistaken for Exhibit .

You know that children's book, Everyone Poops</ ? Well, they lied. Not everyone does. Sure, real people and animals in everyday life might, but you're not likely to see a fictional character going to the bathroom. This would detract from the plotline, and besides, nobody really wants to see that sort of thing. If something's not crucial to the story, why include it? Sometimes, of course, it is</ crucial to the story, and this trope is averted. Maybe there's a Potty Emergency ; maybe someone uses a bathroom break to escape custody ; maybe someone suffers an Undignified Death by being killed on the toilet — or worse, killed with </ a toilet ; or maybe there's just some good old-fashioned Toilet Humour . Maybe it isn't</ crucial to the story but is included anyway . This trope is sometimes averted without showing anything by simply having a character excusing themselves for a moment. Creatures with A Head at Each End beg the question of whether this trope literally</ applies. The page lists lampshades of the phenomenon ; straight examples and aversions are too many to count . Even the dead aren't immune to this trope, as evidenced in the subtrope No Dead Body Poops . Compare Bottomless Bladder , No Such Thing as Dehydration , Exposed to the Elements , Frigid Water Is Harmless , and No Periods, Period .

A trope frequently seen in Sit Coms and Romantic Comedies . The hero and his love interest are obviously all wrong for each other. They have little in common as far as interests or hobbies are concerned, their personalities are built to clash, and it's obvious that once the shine has worn off the apple, they're going to break up and break up hard. Maybe he's a serious-minded businessman and she's the daughter of two aging hippies who never left The '60s behind. Maybe he's an unambitious semi-jock who has never really done anything in his life, and she's a genius bound for a life of intellectual achievement. Whatever the case, friends, family, and casual acquaintances point out that "This will never work" at every opportunity because nobody in his right mind thinks that the two belong together Except they do. And when they live Happily Ever After , they prove everyone wrong, because True Love Is Exceptional There is often a scene where the primary naysayers express their incredulity over the situation, or sometimes even recant their disbelief. When the story starts out with the couple married, a recurring plot is one or both spouses getting doubts or clashing, only to reconcile and learn An Aesop about True Love Often a romantic version of the Odd Couple , though the two romantic leads don't need to literally be opposites. Also frequently involves an Uptown Girl . Compare with Star-Crossed Lovers . Also see What Does She See in Him? , where the question is how the attraction occurred at all, not whether they can make it work Not to be confused with

It Will Never Catch On

A specific type of Berserk Button , this character is extremely defensive about their hair and will quickly become angry if it is messed up or damaged in some way. Often used to indicate the character is at least somewhat vain as hair is often seen as similar to a peacock's tail—a display—and so it is a very easy symbol for vanity in general. Often played for comedy, expect these characters to have very outlandish styles. If it is</ Played for Drama , expect sexual abuse and/or assault to be a major element in their backstory , possibly including being dragged By the Hair . Compare Not in the Face!

Oh—uhm, hello! Sorry about the mess, uh, we couldn't afford hiring cleaners, and the light, well—one lightbulb should be enough, right? No pesky lampshades blocking the light, too, although this is TVTropes , so I suppose no lampshades isn't really appropriate, eh? Heh—oh, uh, manager says we can't afford jokes like that . And... uh, manager says we can only afford two-three paragraphs, so I got to cut short. But basically, a show with No Budget is Exactly What It Says on the Tin — it lacks budget entirely. Symptoms may be reusing sets, props, costumes, only having a small number of actors, and so on. If it's a comedy show, it's often lampshaded . It mostly happens in film and television, for obvious reasons. There are a lot of reasons for No Budget: an indie production with no backing, mistakes were made while dividing the money , a Pointy-Haired Boss wanted to pinch pennies in every way, the money was blown too early (leading to Bottle Episodes), the execs want to see failure from someone they don't like , and so on. In animated and CG shows, it can cause Off-Model , Special Effect Failure , and Off-the-Shelf FX - although keep that splurging at a hush-hush, manager would flip</ if he knew we were getting so many related tropes... Sometimes the filmmakers are good enough to make the best of it and produce a good work out of it. For instance, Mad Max </ was a cheap 1979 Australian film that proved a Sci Fi action classic that made the Guinness Book of World Records</ for the most profitable film ever, until topped 20 years later by The Blair Witch Project </ . Uh... manager says we've gone over budget now . Please put your examples below, and we'll deal with them in the morning. Maybe then the appeal for more cash will have gone through... Ok, people - that's a wrap! We've got an hour to get this whole page packed up and shipped back to the Trope Launch Pad before they charge for the next day. Let's show some hustle! </

In many a video game with Multiple Endings (and, in the majority of RPG cases, a Karma Meter), the "good" ending will be the canonical one. Rarely will the "bad" ending be canonical, or the "bad" side actually canonically win . This may be because there is less appeal in a Downer Ending , or simply because having the villains win wouldn't be financially conducive (because it would probably end the series right then and there). It may be necessary for the sake of having the protagonists of the first entry be recurring characters In any case, much as the "bad" side rarely gets its own campaign , it often doesn't get its canonical ending Take note; when this trope is averted or inverted, it can serve a discrete narrative purpose: If Evil wins, Good can come back next time

and vanquish the enemy even from a position of weakness. From a player's perspective, it makes previous (righteous) efforts less meaningful, but makes winning his current battle more rewarding Sometimes a subtrope of Cutting Off the Branches

A situation wherein a character hopes to demonstrate his preparedness by showing the massive amounts of canned foods he has stocked in case of an emergency. The demonstration is ruined when he, or another character, points out that he has no can opener. This is usually played for laughs, though it can work as a dramatic situation if the characters are starving. However, the drama of the scenario is somewhat undercut by how any tin can can be cracked open by using a knife (or even a spoon) to create an opening and slice the top open . (Or even just brute force if you're really desperate/creative. Tin can lids work as chisels, by the way.) Mostly becoming a Discredited Trope as a result of the above, and the fact that most companies are making the transition to pull-tabs on their cans. Still, enough cans remain un-tabbed that it should still be relevant for a while. As a side note, this is a bit of Truth in Television : The sealed tin can was invented in 1810, but the first tin can opener was produced in 1858, meaning that for almost 50 years, everyone</ had to rely on the chisel-and-brute-force method... of course, that just makes you wonder why fictional characters are so freaked out by it . The pop-top can was invented by Ermal Cleon Fraze, in 1959, after going on a picnic with his family, and discovering that he had failed to bring along an opener for their canned soft drinks.

Keeping your units alive as a Self-Imposed Challenge . This is where you try to make sure there are absolutely minimized, if any, casualties Different from a No Death Run in that games where this challenge is invoked have the Player controlling multiple characters at the same time, and not with the same degree of control as in a Platformer or a First-Person Shooter . Usually invoked in RPGs and Strategy games. As the aforementioned reduced degree of control makes a No-Damage Run technically impossible, this becomes the Closest Thing We Got This may extend to enemies for a Pacifist Run Compare Everybody Lives , which is when a work of fiction averts plotline</ deaths

Sometimes a character's entire shtick will be that he or she is a thinly disguised imitation of some celebrity somewhere. The more blatant examples will often have a parody of that celebrity's name. This can be done for various reasons, such as to serve as a homage and/or parody , to make a point using the character, or simply because the writers think that it would be cool . Though some consider it done because the writers are out of ideas. Many creators and viewers alike do not like it because it tends to smack of unoriginality and destroys the conceit that the work's universe is entirely fictional (though, of course, if the work is outright going for realism , it's quite appropriate). However, this does have the side effect of making the work an Unintentional Period Piece for the period of the work's creation, as later audiences, to varying degrees of success, can see through the "thinly disguised" part of the parody and clearly determine that the work was made during the height of the target's popularity The most common impressions to hear in cartoons are Jack Nicholson , Arnold

Schwarzenegger or Sylvester Stallone for tough-guy characters, Peter Lorre or Vincent Price for creepy characters, R. Lee Ermey for Drill Sergeant Nasties , Maurice Chevalier for a song and dance man or stock French Funny Foreigner character, Paul Lynde for Camp Gay characters, Bela Lugosi or Christopher Lee for vampires, Boris Karloff for Frankenstein's monster, Sean Connery or Don Adams for secret agents, Donald Pleasance or Alan Rickman for an action villain, Ed Wynn for assorted silly characters, John Wayne or Clint Eastwood for cowboys, Paul Hogan for Australians, Howard Cosell or John Madden for sports announcers, Joe Pesci or Ray Liotta for mobsters, and Mae West for vamps . As for more general examples, heavy-metal rocker characters will be given a Metal Scream of the sort perfected by the likes of Robert Plant , Steven Tyler , and Rob Halford . "Stoner" characters will tend to be based on either the Sean Penn character ("Spicoli") in Fast Times at Ridgemont High </ or the Dennis Hopper character in Apocalypse Now </. Anyone doing a stock pirate character ("Ahrrr, matey!") is paying tribute to Robert Newton's performance as Long John Silver in Disney's Treasure Island (1950) </. The witch stereotype is based on The Wicked Witch of the West May double as a Parental Bonus , when it is mostly aimed at kids If it's a fictional character that's being imitated, then it's an Expy or Captain Ersatz . The trope does not apply in the case of adaptations of live-action source materials, where the character designs are obliged to be based on the real actors. When the creators actively deny that the character was meant to be caricature of the person, see Denied Parody Compare Ink-Suit Actor , where a celebrity voices an animated caricature of themself. Comic-Book Fantasy Casting is a much milder version of this, where a real actor or other celebrity is used as a guide for a character's appearance but with no attempt to caricature their persona. Write Who You Know is for where a character is based on somebody who the creator personally knows, but not necessarily a celebrity. If the famous personality is an historical character that is already dead, especially it's from centuries ago, then it's No Historical Figures Were Harmed Note that some character voices, most notably those reminiscent of Peter Lorre and of John Wayne , are by now fourth-generation copies that have more to do with earlier impressions than with the original actors' voices. There may also be some overlap with the "Weird Al" Effect if the caricature is more familiar to younger audiences than the actual celebrity See also Lawyer-Friendly Cameo , No Communities Were Harmed , and Adam Westing . See Bland-Name Product for the equivalent treatment of a product (or possibly a business entity) rather than a person, potentially applying just as much detail to the parody Tuckerization is the inverse

Most of us with a basic knowledge of physics knows that Mass-Energy in equals Mass-Energy out . Whenever work is done on an object, energy has to come from somewhere. When you lift your fingers to type, energy from a chemical reaction is used to do it. Which raises the question, when a wizard does it , where does that energy come from? In Speculative Fiction , the Law of Conservation of Energy is disregarded more often than it is honoured. Whether it's magic or psychic powers, people can perform superhuman feats while the question of where the energy comes from to do them is never answered. Things can be set on fire, lifted with the power of the mind, crushed, or altered without an apparent energy source. Sometimes it

is explained by having a character get all that energy from being a Big Eater and/or Heavy Sleeper . Which in itself can be an example of Artistic License – Biology . This can also work in reverse with energy apparently being destroyed. Actions that should release a huge amount of energy, particularly energy in the form of heat, don't. The Law of Conservation of Mass is similarly ignored, particularly when involving powers that create something from apparently nothing or where shapeshifting is involved. This can lead to weird results when you start Abusing the Kardashev Scale for Fun and Profit . It is generally more common in Fantasy settings, especially with Artistic License – Physics , although some authors will try to explain where the power for magic comes from anyway. Some authors try to maintain conservation by invoking a law of Equivalent Exchange . Of course, it could be argued that any use of energy which is unequivocally already supernatural to begin with , just by definition doesn't necessarily have to follow physical laws anyway . Minor sidebar for Science Fiction authors who want</ to violate conservation of energy: You'll want to look up , which says that for every differentiable symmetry of the action of a physical theory there is a corresponding conserved quantity. This basically means that if energy is not conserved, then the laws of physics must be changing over time. . Perpetual Motion Machine is a subtrope of this. See also Shapeshifter Baggage , Elemental Baggage , Artistic License – Physics . This trope is often implied among certain Required Secondary Powers .

Scientific experiments are a funny thing. When doing one, you need to have two groups — the control group and the experimental group. Heck, sometimes there can be multiple</ control groups (it's a common misconception that a control group has no intervention at all, or only a placebo—the control group may be getting a standard treatment, and more than one treatment may be approved). This is done to make sure that the results of the experiments actually come from the things the scientists are doing, and don't happen on their own due to the Placebo Effect or something in the test environment they weren't aware of Fictional scientists will never do this. If creating a race of monsters or trying to make a superhuman soldier , there will be no control group. All of the people will be turned into monsters or Super Soldiers, or die from the treatments Then again, most experiments in fiction are far-fetched enough that the purpose of a control group would be to make sure that people weren't just psychosomatically </ growing to 30 feet and shooting lasers out of their eyes . Of course, procedure is still procedure, and said experiments sometimes take place in worlds which do</ have people manifesting similar things quite spontaneously. In any case, the experimenters should be finding out how much</ of the treatment was necessary to display effects.. If time/funding/ego concerns whittle the testing down to just one person, then you get Professor Guinea Pig Sometimes this trope will be averted for Black Comedy or similarly humorous reason A real life application of this trope is experimental treatments conducted on terminally-ill patients : they know that they're dying, they've tried pretty much everything else, so they will willingly sign approval forms and let you start Playing with Syringes on the long shot that you might</ be able to save them. This is actually fairly rare, as even if the subject lives, the resultant information is of far less value without knowing exactly what</ you did that saved them... which is what you learn from the

control group. (Well, that, and to make sure the 'treatment' didn't actually kill them faster</ .) The reason it's done at all is that it's considered unethical to deny possibly-lifesaving treatment from a terminally ill patient in order to use them as part of a control group

This trope occurs in works of fiction when crime happens, or seems to mostly happen, at night. Some comic book heroes and villains prefer operating at night, either due to habit or necessity. Crime in movies and television happens after the sun sets For filming movies and television shows, this is sometimes a matter of practicality. Filming at night makes it easier to show people being vulnerable because it's dark, they're alone, and there aren't any witnesses or bystanders around. In addition, it's often easier to get permits from cities to film at night, since they're naturally reluctant to shut down streets during the day which greatly affects both traffic and business Other times, the filmmakers will simply pretend it's dark Can be a sister trope to Always Night and Nice Day, Deadly Night . Compare Evil Is Not Well-Lit and Darkness Equals Death

When a foreign media property Especially Japanese anime and manga or Video Games . is licensed and released overseas — in this case the English-speaking world — you would expect a dub in the local language, right? However, that's not always the case. There can be many reasons for not dubbing something: Because international licensing is handled by region rather than by language area (not a big deal for Latin Spanish , German, or Japanese, but a HUGE problem for English or European Spanish), it is not uncommon for one region to get a dub but another to lack it. This is especially the case for anime that air on the transnational English-language satellite channel Animax , which broadcasts across South and Southeast Asia; the channel produces many of their own anime dubs — often in Hong Kong or Singapore — but does not sublicense those dubs out, leading to many series that have full English dubs (a few even recorded in</ North America!) being released subtitled only in the US and Canada. This trope became more and more prevalent during The New '10s with the anime market in decline and many licensors like Bandai Entertainment , Geneon , and ADV Films falling and closing down (with English dubs being the biggest cut from the market in order to survive the declining sales). This created a negative backlash in the old Subbing vs. Dubbing where some anime fans (particularly the dub haters) putting the blame entirely on the dubs, the dub fans, and (to the most extreme extent) the voice actors involved in the dubs and claiming dub fans are not the true supporters of the anime industry . Nozomi Entertainment and Discotek Media completely refuse to dub any new unreleased anime they license. NIS America also refused to do any non-video-game dubbing until March 2014, because of what happened to Bandai, Geneon, and ADV (they stated that they were "looking into it" for the future, eventually re-releasing Toradora! </ with an English dub). Despite this, English dubs in anime are still largely being produced for the North American markets, but most of them nowadays are done in Houston and Dallas , and occasionally, Los Angeles, rather than New York or Canada This is most likely because Funimation and Sentai Filmworks are able to produce anime dubs in a much lower budget, Texas being a right-to-work state that eliminates some of the union hassle , and the fact that Los Angeles and especially

New York and Vancouver have a much higher standard of living than Texas, thus making dubs more expensive , and Bang Zoom! Entertainment nowadays avert the All-Star Cast trope by using newer name voice actors in their anime dubs and even hold open auditions every year in Anime Expo in search for newer talents. Sentai Filmworks was a big proponent of this trope until about 2011 when they got back to regular dubbing, and only releases some</ of their catalogue sub-only (some of their titles that were initially released sub-only have received English dubs years later, such as Maria†Holic </ and Special A </). They even produced more dubs than Funimation in 2013. The revival of Toonami and the introduction of Neon Alley in North America have shown that there is still a market for English dubbed anime. Some popular streaming/downloading sites like iTunes and Netflix still routinely refuse to take most non-dubbed anime. While not nearly as many dubs are being produced as in their heyday, sub-only titles are still, in general, limited to niche modern titles and older ones that never got dubs. Occasionally, a series will initially be released sub-only, but will eventually be re-released with a dub. Some examples are also highlighted below. Even more rarely, a title will receive a dub, but is re-released without it. Lack of dubs is also very common in regions of other languages when it comes to video games. For the vast majority of Japanese games that make it to Western countries, American English is the only dub that's ever gonna be made. Meaning audiences from Europe (except the UK and Ireland, of course) and Latin America have no choice but to rely on subs only. The thing is, if dubs are expensive and complex in TV shows and movies already, in video games the costs go Up to Eleven , since the process is much more complex and time-consuming: special recording realities, taking care of the programming, long QA procedures, etc. Even games made with English as the first language can often lack dubs, especially those published by smaller companies and/or those released in countries outside of the so-called "EFIGS" A term used inside the video game localization industry which stands for "English-French-Italian-German-Spanish". These are standard 5 languages when it comes to localization for Western countries, specially Europe (although Spanish and Italian are occasionally left out in small games as well). Eastern European languages such as Polish and Russian, as well as regional variants such as Latin American Spanish and Canadian French have also seen a huge rise in the last 10 years, but these are usually treated as separate regions. region. Visual Novels localized in America usually don't get English dubs (particularly from Sekai Project) because visual novels are a very niche interest in America, and most of them don't have much voiced dialogue anyway. Usually the only visual novels to get English dubs are developed by indie developers or Americans themselves. Sometimes this will be inverted when a show is only released dubbed This is most common with shows aimed at young children overseas (such as Pokémon </), since the licensor believes not enough of an audience will be interested in watching the sub to justify the cost of making it. It can also happen if the Japanese creators are concerned about reverse importing. Sometimes, the destination audience would rather not have a dubbed version – for example, in countries such as the Netherlands, the Nordic States, Portugal, and Israel, dubs are viewed as appropriate only for shows aimed at children. Note that shows that were never expected to be published overseas in the first place , naturally, do not count for this trope. Angel Beats! </ - One of the OVAs was left undubbed by Sentai Filmworks . Animaniacs </ only had 13 episodes dubbed in Japanese, which were the first 12 episodes and episode 49.

You say you want a resolution ? Well, you know, we all want to see the end . But when you talk about a conclusion, you know that you can count this work out: a work intentionally ends unresolved, the Story Arcs are unconcluded, and you can believe whatever you want about what happens next When the main plot is resolved but other threads aren't, that's a different trope: Left Hanging . If the story ends right before a big fight scene it's a Bolivian Army Ending . When the lack of ending is passed off as being a good reward, it's A Winner Is You . If the writer ends the story in a way where the viewer or reader must decide by his own interpretation how it ended, it's an Ambiguous Ending . This trope may be combined with Negative Continuity , if the last episode's problems simply disappear. But when a big story arc is dismissed with a handwave , it's an Aborted Arc If external factors end the story, it is Cut Short : see Cancellation or Died During Production . If the author's comments about the ending are similarly ambiguous, it's the Shrug of God . Compare End-of-Series Awareness , No Romantic Resolution , Dead Fic (in fanfiction), Offscreen Inertia , The Resolution Will Not Be Identified , Drop the Cow , Endless Game and Non Standard Game Over Occasionally the story picks up later with a Remake or Spin-Off . If this is to build tension for a sequel, it's a Cliffhanger . If not, expect a pissed off fanbase , in which case a Continuation Fic may pick up where the official story left off As with all Ending Tropes , there will be unmarked spoilers ahead. Consider yourself warned

Explosions are cool . So are giant objects. Therefore, giant objects exploding are extremely cool , but let's think about this for a moment . Halt the Attack of the 50-Foot Whatever in a major city by blowing it up. Or just kill it and let it fall over, for that matter. That's going to do some monstrous damage to the city. Yet any collateral damage or casualties are depicted as minimal. Either we cut to credits before we see any aftermath, or (more blatantly) we see that there was no collateral effect at all. If there are, they are just Conveniently Empty Buildings . Why? You can't have the heroes take down the alien spacecraft For Great Justice , only to look sheepish when the flaming debris flattens the city . Not in any show on the idealism end of the scale , anyway. Maybe they have a brilliant plan to lure it somewhere uninhabited before they blow it to rubble, but surprisingly often, it's just not something the writers concern themselves with, leading viewers to notice the Inferred Holocaust . If you're a hero, you needn't worry about this Even if there is collateral damage, your Hero Insurance is going to cover it. If not, then Hilarity Sues . See Colony Drop for when a large man-made object is deliberately dropped on top of a planet in order to</ cause a massive impact. The Trope Namer is the fan theory about the destruction of Endor as a result of the detonation of the Death Star in Return of the Jedi </ (see Film section below). (And not the Ender Holocaust , which is about the opposite.) Compare There Are No Global Consequences and Never Say "Die" . Inferred Holocaust is when you realize the Monster of the Week might be dead but chances of survival are grim after the extensive damage. As potentially mass-death-causing events tend to happen during pivotal plot points, The first El-Hazard </ OVA features this. When an Attack Animal is awakened, one of the villains immediately</ orders her to destroy an entire city</ , which she goes about efficiently and brutally. Fortunately this is an unimportant city, and throughout the continuity said villain never faces any consequences for ordering

this destruction. The main cast even confronts him in the sequel OVA and nobody even brings up the subject. This also holds true for the living weapon herself, although she technically had no choice in the matter.

You're caught in a Chase Scene , when suddenly you hit a dead end — literally. You're at the edge of a cliff, or the roof of a skyscraper, or the lip of a sewer drain. Your pursuers are on your tail, and there is no escape. Well, No Escape But Down This trope is about escapes that end with a long fall. Sometimes it's on purpose (the pursued decides to take his chances or he knows it's not as dangerous as it looks, and wants to dare the pursuers to Try and Follow) or by accident (he doesn't realize he's run out of turf). Slo-Mo Big Air is a given. Survival depends on Soft Water , Literal Cliffhanger , or other forms of Not the Fall That Kills You… . Sometimes the pursued person jumps because it's Better to Die than Be Killed . Sometimes he jumps because he knows he'll be caught somehow , and thus survive the fall. And sometimes they simply feel that whatever they're trying to escape from is more dangerous than the ground Super-trope of High-Dive Escape , Suicidal "Gotcha!" , Super Window Jump , Trash Landing . Any work can be very well received in its country of origin without being famous elsewhere. Some franchises seem to churn out tons upon tons of merchandise and special content. Internationally, the majority of this stuff sees limited release, if any. There are a few reasons why this may occur — the language barrier, lack of potential appeal to foreign audiences, licensing difficulties, cultural differences , or censorship — for more, see Analysis . This is when any work was not</ released in a country even though there were good reasons</ to export it there. It has to meet at least one of the following conditions: It is part of a franchise that has previously proven to be successful in other regions (e.g. Sailor Moon </). This is about media that's not exported for no obvious reason</ . Because of the Internet, people have become far more aware of works from abroad, including obscure ones that aren't aimed at their country at all. But, just because a Vocal Minority believes something from abroad should be released for them, doesn't mean their country is a viable market. The distributors have to think of the money . In this section, the following are not</ valid examples: Audiovisual works — by nature, most audiovisual work is made explicitly for domestic consumption with little intention of exporting it. The only exception would be if it has already been released in some markets and proven successful. If there's little likelihood of strong market demand for a particular work, it is fair for a company not to export it to a foreign region. Movies made in Europe from the 1920s-'50s usually weren't released in the U.S., unless the starring actor/actress was a really big, recognizable name - Sophia Loren, say. Otherwise, the commercial release of said movie there wouldn't have been financially viable. Still, with today's primary distribution point being online for music (iTunes, Amazon , Spotify), games (Steam), movies (Netflix), books (Amazon) and</ television (Hulu), you gotta wonder about the motivation behind regionally restricted release when manufacture and shipping costs simply don't apply.</ Plus, as is often cited in online discussions related to the issue, if consumers cannot obtain work via legal means - i.e.

buying a ticket, purchasing a DVD or CD, or through subscribing to a streaming service or cable network - they will often turn to download and other methods, resulting in the producer of a work getting no revenue for it at all. Nothing sucks more than a certain series you want to see translated not getting one. Sometimes even a Fan Translation can't help, since the company may throw a Fanwork Ban at you, stonewalling any translation attempt. This may overlap with Region Coding , especially where DVDs, Blu-rays, gaming media, and web media is involved. May also invoke Screwed by the Network if it's only later seasons of a show that is not being exported and the show has been taken off the air in said markets where the show had been screwed, which may result in a case of Keep Circulating the Tapes . Can lead to Sequel First or Marth Debuted in "Smash Bros." See also Bad Export for You for a less extreme, yet more insulting version; also No Dub for You if a title is</ released without a native dub track. Compare to Offer Void In Nebraska and Banned in China (which is essentially " No Import for You "). Also compare the Denial of Digital Distribution variety where the digital release is region-limited. See also Import Gaming for a way around this. Contrast Short Run in Peru , and Germans Love David Hasselhoff . For a possible subversion, see Late Export for You .

When a character always wears a mask , one will wonder what his face really looks like. Sometimes it turns out that he doesn't have a face. Instead of some kind of mundane climax or anticlimax , we get thrown straight into Nightmare Fuel territory: Instead of a face, the character has some kind of blank slate, rotten mess, arcane forcefield or other completely inhuman thing that does not qualify as being a face Also happens when someone mistakes a suit of Animated Armor for a person Not exactly a Sub-Trope of The Faceless or The Blank , since those tropes are character types and this trope is a situation where a character transitions to the second trope from one specific subtype of the first trope. It's a kind of The Reveal as well as a kind of The Unreveal . As such, . Compare Not a Mask , where what you'd see if you took the "mask" off would probably still be pretty bad

A cousin trope to No OSHA Compliance In the real world, when some horrible disaster happens, humanitarian aid generally pours in to the area. In the United States, these efforts are (in theory) coordinated by the Federal Emergency Management Agency, or "FEMA" for short, hence the trope name. It may not be effective for whatever reason, but people try</ to help Not so in fiction, where earthquakes, terrorist attacks, and stranger events are avoided</ or outright cordoned off by the outside world and the survivors are left to fend for themselves. This seems especially prevalent in Japanese fiction, as it appears that nation has zero</ confidence in the stability of the social order — the slightest accident on the street will inevitably lead to people cracking each others' skulls open to feast on the goo within . This goes double if it's a Go Nagai production. Very confusing since historical evidence is that Japanese social order can and will survive everything nature, modern warfare and terrorism can throw at it This covers isolated disasters ignored by the outside world, not conditions where the entire</ fabric of civilization has been destroyed by global-scale events. A Lampshade Hanging of this trope as the first clue that a disaster extends beyond</ the purely local scale is such a common

narrative device that it's very nearly a sub-trope Note that this can sadly be very much Truth in Television , mostly in isolated areas the world doesn't pay much attention to, where civilization is less organized Compare Militaries Are Useless and Police Are Useless

In old or low-budget CGI, the characters will never wear loose garments, have long hair or include anything that might flow or rustle in wind or when moving. This is because accurately simulating flowing hair and fabric requires two extremely computationally expensive things: a very high polygon count that can translate into smoothly curved surfaces and individual strands of hair, and to accurately simulate the material's motion as well as the air itself. As a result, early CGI software and hardware limitations made anything other than clunky, Uncanny Valley inspiring graphics impossible (and these limitations still apply to modern entry-level hardware and software). Even when technical limits and costs are slowly being pushed back, it's still hard and costly to simulate nowadays, especially in video games, where maintaining 60 FPS means there's only 16 milliseconds to calculate all that. To circumvent these limitations, authors and graphic artists had to make a few concessions and stylistic choices. Such as: Averting this trope has long been a Holy Grail for CGI animators, which can lead to trouble A lot of instances of flowing hair or gowns end up flowing too much</, taking attention from anything else in the scene, like Dr. Ross' hair in Final Fantasy: The Spirits Within </, or Nariko's in Heavenly Sword doesn't call attention to itself but rather reinforces a viewer's immersion . This trope is why A Space Marine Is You is still so extremely prevalent: It's easier to model and animate a bald guy (or better yet, always helmeted) wearing an armored spacesuit than it is trying to create an Elegant Gothic Lolita from Harajuku. Just imagine the processing power required to handle the delicate and intricate clothes that flow in a Dramatic Wind ... or when running and fighting. To be fair, in real life a lot of people's hair doesn't move much, with the exception of strong wind or fully submerged. But Reality Is Unrealistic and less cool, and besides, how else would the CGI animators show off their skills and technology (and their budget; flowing in CGI can get expensive)? For another approach to averting this trope, see Jiggle Physics .

When human characters appear alongside other races in a given work, the humans are usually among the major characters. By the same token, some stories include no humans at all. The works that fall under this trope Take a Third Option —humans are present, but there are few of them compared to the rest of the cast . Additionally, the humans are not</ important characters, assuming they even appear on screen. Usually stories like this take place in a World of Funny Animals , but they can also be set in a world of Robots or Sentient Vehicles . So, as this trope says , there's no focus on humans. Specific versions for this trope: Compare Token Human , in which there's only one</ human present in the story, and Xenofiction , which is from the perspective of characters who aren't human and act like it. See also Humans Are Cthulhu , where humans are not treated as characters, but as a terrifying outside force, and Sliding Scale of Animal Cast , in which Level 2 refers to Living Prop humans, Level 3 refers to very few humans added to the animal cast, and Level 4 refers to a human protagonist in an animal cast. Compare and contrast Absent Aliens , in which the aliens are this trope for humans. See also Humans Through Alien Eyes . Not to Be Confused with Beast Fable

, Humanity's Wake and World of Funny Animals for when there are no humans at all</ . Contrast Human-Focused Adaptation .

Some series can go their entire lives without breaking the Fourth Wall once. Some series will occasionally break the Fourth Wall for a few moments of comedy, but outside of that the Fourth Wall is in full effect And then there are these A series with No Fourth Wall doesn't just break the fourth wall, it vaporizes</ it. There might as well not be one. Characters will make references to "the last episode" or "next issue". They'll criticize the production , writing , management or even the audience . In extreme cases, they'll refuse to go on acting. Expect there to be large amounts of Medium Awareness , such as characters in a comic pointing out the use of panels. No Fourth Wall often leads to characters being extremely Genre Savvy , or frequent lampshading of Genre Blindness A good way to test for whether it's merely Breaking the Fourth Wall or if there is No Fourth Wall at all is to check how important the breaking of the fourth wall is to the premise: If the moments of Breaking the Fourth Wall could be removed without readily changing the premise of the series, it's likely Breaking the Fourth Wall ; if breaking it is such an important part of the series that removing it would noticeably change the series, it's No Fourth Wall

Contrast Willing Suspension of Disbelief , this trope's sworn enemy. See also Sliding Scale of Fourth Wall Hardness . Lampshade Hanging is a less extreme form of this trope.

A semi-aversion of a Love Dodecahedron , only instead of stable, dedicated relationships , the romantic situation is just too scrambled for it to form. Characters seem to go through partners faster than an allergy sufferer goes through tissues. This can</ land the story more on the cynical side of the Sliding Scale of Idealism vs. Cynicism unless the characters are middle schoolers, where week-long girlfriends and boyfriends happen all the time. With characters any older than that, it usually turns ridiculous Compare Dating Do-Si-Do

We all know that karma can be a harsh but fair bitch, but sometimes it's just a total bitch . It's not enough that the bad guy is a Karma Houdini . It's not enough that the good guy Can't Get Away with Nuthin' . It's not even enough that he's a Butt-Monkey or The Chew Toy , put through the wringer for no reason. No, sometimes fate isn't satisfied until disaster befalls the good guy purely as a result of him doing the right thing</ If this happens because the hero helps people who are ungrateful , it can be a case of All of the Other Reindeer or The Farmer and the Viper . If this happens because the hero doesn't want unnecessary violence, it can be a case of Pacifism Backfire . More often, helping out exposes the hero to some other danger, like the wrath of a villain whose plans were disrupted by the good deed, or the wrath of a populace that is opposed to the method of help, such as in many Burn the Witch! stories that involve actual witches, or being Arrested for Heroism . Or being targeted by people who assume you have Chronic Hero Syndrome and so will be glad to help them for free. On the other hand, it can also happen to a villain making a Sudden Principled Stand or showing that Even Evil Has Standards Not every hero can handle this, and if it happens often enough or particularly badly

enough, a hero may very well fall . If they stick it through even to the end, knowing what's coming to them, it shows who they are in the dark It should also be noted that this trope is more complicated than it looks. Sometimes good intentions bring unjust punishment, but sometimes good intentions result in very bad</ results because the good-intentioned person was also foolish, incompetent, ignorant, or just mistaken. In many cases whether a bad outcome was undeserved or not depends on the details As Robert Heinlein's character Lazarus Long observes in one story, "Good intentions are no substitute for knowing how the buzzsaw works." Which doesn't mean that life is not often cruelly unjust, it merely means that things are often not as simple as they look at first glance Named for a well-known saying attributed to Clare Boothe Luce. The Wide-Eyed Idealist is prone to this, and tends to turn them into a Knight in Sour Armor at best. Very often, it is a consequence of doing Not Quite the Right Thing . Compare Being Good Sucks , where it's the act of being good (rather than the deeds themselves) that brings suffering, and contrast Laser-Guided Karma where every</ deed (good or otherwise) gets paid back in spades. If someone sees a hero going through this, it may lead to Sympathy for the Hero . Compare Androcles' Lion and Character Witness , two Tropes that can prove the exact opposite By its very nature, it frequently overlaps with Nice Job Breaking It, Hero! Though it's entirely possible for this to result from a deed that doesn't, in and of itself, have bad consequences

It's not easy for women on TV today to be both beautiful and strong, like the Amazons of Greek mythology. Why? Because All Guys Want Cheerleaders , but no guy wants a girl who can beat him up. If you must be a Magical Girlfriend , he would prefer the domestic type. A Huge Schoolgirl or Cute Bruiser all grown up is a threat to his tough, masculine image. In Layman's Terms , he's not an Understanding Boyfriend (yet) Strangely, as far as this trope is concerned her actual incli nation and ability to (sexually) assault, maim, cripple, or kill him aren't as important as whether she looks </ capable of doing so So you frequently find a protagonist who is instantly attracted to a hot girl only to discover too late that she's a black-belt, a professional athlete, or a superhero, and he suddenly needs to find a way to prove he's as tough and strong as she Unlike All Guys Want Cheerleaders , this trope doesn't necessarily tap into what the entertainment industry presumes turns guys in the audience on or off — that's more a part of Chickification . The proverbial Amazon is usually portrayed in a positive light and the guy as the fool. The most common way to end the plot was traditionally with An Aesop about equality. Today, the girl is just as likely to be the protagonist, and the ending is likely to be a Slap-Slap-Kiss . However, in older (1950 to 1990ish) media the trope is usually played straight and without irony, because writers assumed that young male viewers would see a naturally strong woman as an insult to the hero's (and by transference their own) masculinity A leading cause of The Chick meaning 'girly' or non-combatant. Contrast Amazon Chaser , where guys go for a woman because</ she kicks ass. Also contrast with Masculine Girl, Feminine Boy , where the man in question is meant to be weaker and girlier than his female counterpart, and the various tropes on Acceptable Feminine Goals and Traits . All Amazons Want Hercules may also be considered an inversion since it runs on the logic that No Amazon Wants a Normal Guy Another to keep in mind is that the guy (or girl or whomever) may be turned

off not because of their strength or power, but more because of the personality attributes one would assume an Amazon would have (aggression, intimidating personality, easily prone to violence, etc.) That doesn't go on here unless her strength is directly connected to said personality Compare to I Was Beaten by a Girl

This is where a guy is shown to be actively put off by a girl's aggressive pursuit of him. Conversely, if she were more shy and modest about her feelings, he would like her more. The use of this normally implies that men want to be the ones to chase and pursue a relationship, and hate</ it when it looks like, for any moment, this is not</ the case. To put it simply: a man wants to catch a woman; not be caught . This trope may be the reason why the guy will not</ be afflicted with The Dulcinea Effect towards this girl. To contrast, he will instead be shown to be afflicted with it towards a girl who is more passive. It doesn't matter whether the girl is (or isn't) an Action Girl —even if she's strong in combat, as long as she's shy romance-wise, she'll still be more desirable compared with a Damsel in Distress who is too eager. Compare My Girl Is Not a Slut ; the logic may be that a woman so eager to pursue one man will be just as eager to pursue another man. (As if it had nothing to do with her crush on one particular man.) On the other hand, it may be that the girl comes on too strong for the guy, who might otherwise return her affections. If the girl is a yandere , then running away as fast as possible is understandable. Compare with No Guy Wants an Amazon , where the man feels threatened because the girl is physically</ more intimidating (overlap between the two is common). Aggressiveness is often a trait of the Abhorrent Admirer , though it's definitely not the only trait that puts the guy off . If the girl stops</ chasing him, it could lead to an Unrequited Love Switcheroo . It's prevalent in anime, as the Japanese have different ideas of gender roles relative to the Anglosphere and Europe.

Put away the magic, energy blasts, and witty banter. Beauty Is Never Tarnished , Made of Iron , Toon Physics , and Hollywood Healing , if they were present in the story before, all are temporarily turned off. This is the scene where someone pummels, punches, kicks, beats, and/or batters another person to a limp, bruised, bloody pulp. Note that as far as Fight Scenes go, this is quite one-sided. That Second Wind you're waiting for? Keep waiting. It doesn't end that way Even when the victim can no longer even try to strike back (or block or dodge, for that matter), or if he never even had a chance to, the attacker just keeps going . It takes all the victim's determination just to keep breathing. And sometimes, even that may not be enough — some attackers take this to its logical conclusion and beat the victim to death (in which case, this trope may well continue to segue into Pummeling the Corpse , especially if the aggressor is just that</ angry) Dialogue is limited. At most, a particularly cold attacker may continue to mock or insult the victim between blows . Some blows are delivered off-screen; sounds are sometimes more disturbing than visuals, anyway In short, that scene where Violence Is Disturbing runs high. Little to no flashiness and more brutal, often gory If both combatants hand out a brutal beating, it's How Much More Can He Take? . If the beatdown is in retaliation for a past injustice, then it's Extreme Mêlée Revenge . If the victim is trying to get away, the attacker may need to inform them that You Will Not Evade Me . This is often the punishment for pushing a character's Berserk Button Compare and contrast with the Curb-Stomp Battle (where the recipient is defeated quickly and decisively, instead of being subjected to a prolonged assault; they also usually lack the Nightmare Fuel element of this trope) and contrast Once Is Not Enough . Compare Unstoppable Rage and Tranquil Fury . Often ends with There Is No Kill Like Overkill , because when an over-the-top asskicking ensues, it's probably because the

attacker wants their victim Deader Than Dead . </ "The Reason You Suck" Speech , when someone tells another why they're such a shitty person, and Break Them by Talking , when someone manages to make another breakdown just from talking to them, are the verbal equivalents of this

Evil has a lot of things going for it. It feels great , it tastes great , it has style , and it's just plain cool. For most of a given story, evil can probably be expected to give the heroes a very rough time, and if the Evil Overlord and his Mooks are competent enough, they will come alarmingly close to victory before the end of the story But for all it has going for it, Evil is just not very conducive to teamwork You see, one of the keys for a team to really work well together is that there has to be at least some level of mutual trust among them. People on the same side need to know their friends will be there to bail them out in a tight spot , and won't sell them out to the enemy or abandon them for some selfish gain at a bad moment . They need to know that, when the going gets tough, or when some temptation arises, their allies will still be right by their side, through thick and thin. For the most part, such willingness to put the group before oneself is inherently at odds with the whole idea of being a Bad Guy And so we have this trope. While the heroes cling to the Power of Friendship and trust in their True Companions to see them through, the villains simply cannot trust one another. Always, even when their victory seems closest, it seems to come undone because the bad guys are inherently treacherous and suspicious of one another. If the Evil Overlord is near to victory, you can expect The Dragon to make some bid for personal power at the last minute that gives the heroes enough breathing room to gain the victory. And if you have a team of more or less equal Card Carrying Villains in it For the Evulz , expect them to fall prey to this in no time at all, with their momentary shared goals falling by the wayside the second any of them sees an advantage in turning on their old 'friends.' This is the reason why trust and willingness to work with each other is one of the Evil Virtues . Whenever the heroes' Rogues Gallery form an alliance , there is a good chance that is trope will happen In short, this is Chronic Backstabbing Disorder , or even just chronic lack of trust, applied as a persistent Achilles' Heel of the bad guys. Subtrope of Evil Will Fail . Often results in an Enemy Civil War or Evil vs. Evil . Compare with The Complainer Is Always Wrong and Evil Cannot Comprehend Good . The opposite is Evil Is One Big, Happy Family and of course, Honor Among Thieves . Could be considered a form of PVP Balance , to make up for the fact that the heroes aren't allowed to cross the Moral Event Horizon to prevent Too Bleak, Stopped Caring

When the writers make it clear that there will be no romance between any of the lead characters. There are a few ways around this, such

as giving the characters offscreen significant others, or make the characters a figurative or literal family group and/or siblings , but on-screen romance still remains non-existent. Another trick is to ratchet the age of the characters down so it's realistic for them to not be thinking about such things. Particularly common in children's entertainment. One may also make the characters rather mature such as late middle age or older, suggesting that they would be past that sort of thing by then. Common with Cool Old Lady or Cool Old Guy main characters. English dubbing of anime, especially those targeted at younger demographics, at times tends to remove or change overtly romantic-sounding dialog with something more friendship related . Or occasionally it goes in the opposite direction — adding it in when such context is not in the original version Doesn't stop Shipping in any way , shape , or form . In some occasions, the writers change their mind along the way and decide to reward fans with an intimate relationship , even if only at the very last second . Some writers use the rule as a way to ramp up UST between characters. If the couple talk explicitly about love but aren't interested in sex, that's Chastity Couple . One way to show romantic initiative from the characters without actually putting love in the story is if All Love Is Unrequited . Can lead to tons of Starboarding . Can be used to avoid any Romantic Plot Tumors . Compare and contrast Ship Sinking . Also see Hates Being Touched . If a work with this aspect has a Valentine's Day Episode , expect at least one Platonic Valentine .

They're likely to crumble away into dust . The decay starts with the skin and moves inward, saving the character's skull for last. In other words: What happens when a magical Really 700 Years Old character is forced to really</ look their age Also, usually this depends on the particular immortal's place on the sliding scale of morality . A really, really nice immortal? Someone who wanted to get rid of their immortality and live a mortal life? Most of the time these guys start aging at a normal pace instead of crumbling into old age. A selfish and/or evil immortal, especially one whose immortality was Powered by a Forsaken Child ? Much higher chance of this happening. Even more likely to happen if Liquid Assets were exploited to cause the youth to begin with . Shapeshifter Swan Song is similar but for shape shifters Related to Age Without Youth . May end up as Dark Lord on Life Support

SOME ACTORS AND CHARACTERS BELIEVE THAT THE BEST WAY TO TALK IS TO TALK LOUDLY </! THEY DON'T RESTRICT YELLING TO WHEN THEY ARE ANGRY, UPSET OR AT THE BOTTOM OF A WELL CALLING FOR HELP -- THEY SHOUT ALL THE TIME DIFFERS SLIGHTLY FROM CHEWING THE SCENERY IN THAT IT'S NOT THE ACTING THAT'S CRANKED UP TO MAXIMUM — JUST THE VOLUME! Ahem. Sorry about that. Back to the topic at hand; some categories of television shows seem more prone to this type of acting than others: In extreme circumstances, a character will become so loud that the show can be watched only with the volume turned down, making it a problem when the quieter characters speak. In the worst case scenario, the character will become such a headache that the viewer might be put off watching. These are the shows that you can't have on in the background when you're talking to someone; you'll be drowned out. Can be justified if the actor in question has had a stage career, where voice projection is critical, or if the show is being taped in front of an audience where people in the back row

might otherwise have trouble hearing what's happening on stage. However, the fact that many shows with an audience manage to achieve an "indoor voice" suggest that the trope can be avoided. See also:

What a character says when something is wrong, stupid, or squicky enough. The usage tends to be: Or: Or: A step beyond "That's just wrong," or "That's wrong on so many levels." It can be followed, preceded or coupled with a Rapid-Fire "No!" or a Blunt "No" . Note: this trope is for In-Universe examples only. It is not to be potholed for anything tropers themselves find squicky or stupid. </

A standard comedy misunderstanding, in which a character claims a loved one "is no longer with us", "has moved on", "is in a better place", "has joined the choir invisible" etc. Considering how many euphemisms for death there are in modern language, everyone naturally assumes that they've died, but no, in fact the character was talking literally and the allegedly departed has just gone to work, are on vacation, or are in a musical group that prevents its members from being seen. She's gone to a better place — a resort in Palm Springs Whatever the case, if these euphemisms become too obvious or contrived, the listener or the speaker may have picked up the Idiot Ball Sometimes characters with darker senses of humor will do this on purpose. The characters they're talking to are usually not amused A lesser used inversion is that the character really is dead, but the listener doesn't understand the euphemisms used. This is usually less comedic and more tragic, but not always See also Never Say "Die" , He Didn't Make It , and Double Speak . Particularly crazy examples (think the Monty Python's Flying Circus </ Parrot Sketch) can cross over into Unusual Euphemism and Hurricane of Euphemisms . May involve a Rear Window Investigation . If the character is still around but the "euphemisms" suggest he's going</ to die, it overlaps with Mistaken for Dying . A Premature Eulogy may result. If the character himself tries to set the record straight, the others may respond " Not Now, We're Too Busy Crying over You ." If the character applies this trope to themself, it might be combined with That Man Is Dead . If the terms "dead", "murdered" or the like are being used to describe something innocuous, this also may count as an Unusual Dysphemism Subtrope of Un-Entendre and Reports of My Death Were Greatly Exaggerated . Sister Trope to Released to Elsewhere , which uses the same sort of euphemisms intentionally to cover up a death

An aversion of Love Dodecahedron (and other polygons). No competition, no rivalries— Cleaning Up Romantic Loose Ends was in play from the very beginning, and everyone falls in line with their destined other in a stable relationship Often goes with Everyone Must Be Paired , as the pairings almost invariably involve all the main characters, leaving no singles. If a character is left out of a relationship in stories that do this, it's usually because the character is heavily implied to be gay or lesbian, or explicitly asexual Compare with Pair the Spares (when the loves intersect at first but end up going on separate ways), and No Going

Steady , which breaks up Love Dodecahedrons in a more chaotic fashion.. Not to be confused with All Love Is Unrequited , the polar opposite of this

A character receives a prophecy or curse of the form "X cannot happen until Y," where Y is seemingly impossible. X is frequently (but not always) the character's death or defeat. Of course , Y ends up happening somehow, usually through some trick of wording or a loophole , with X promptly following. Over-reliance on this phrase by the baddie usually leads to a delicious Oh, Crap! moment. It often involves a "Eureka!" Moment , followed by the newly minted Magnificent Bastard drawing his sword and Cutting the Knot . Macbeth — the Trope Namer — met his end at the hands of a man delivered by C-section instead of by natural childbirth, for example. When the clause includes an exhaustive list — neither by night nor by day, or neither by man nor by beast — a Liminal Being such as a werewolf or a Liminal Time such as twilight may slip through because being half of each, it's neither fully. As can clearly be seen from the Mythology section, this trope is definitely Older Than Dirt . A subtrope of Prophecy Twist and Double Meaning ; compare Prophetic Fallacy . Can be a form of False Reassurance . For some other instances of impossible conditions being met, see Impossible Task and Engagement Challenge . For when condition Y isn't really fulfilled but a half-assed excuse is used to justify X happening anyway, see Metaphorically True . Its more comic Sister Trope is Cue the Flying Pigs . Sub-Trope to both Exact Words and Prophecy Armor , which is any time the subject of prophecy is stated to only be defeatable under specific circumstances, not necessarily seemingly-impossible ones. Since this trope is frequently used as a surprise twist, major spoilers abound below!

When a soldier or agent has</ a name, but is instead routinely called by a nickname. Especially common amongst pilots for a variety of reasons. The Trope Name comes from the French , and translates to English as "war name" — compare with the very similar "nom de plume", " Pen Name " There are various reasons why they might do this. If they are members of some secret organization, or can't be entirely confident that their communications are secure, they might go by these alternate names as a way of preventing their identity being discovered by eavesdroppers. Or maybe many people share a name; this makes it clear who is being talked to or about. Being given</ such a nickname can be used to indicate inclusion into a circle of close friends or other group. Newbies to the organization might not rate a nickname, or else get saddled with generic names like New Guy #1 or New Guy #2 Truth in Television for many organizations, particularly for aviation branches of the armed forces, where these nicknames are called "callsigns" and also aid in brevity of messages (depending on the equipment being used, if one</ guy is talking, nobody else</ can until he gets off the channel) and avoid confusion (in combat, or for that matter, in any relatively complicated flying operation such as formation flying or even just landing at a large enough airport, it is very important that everybody knows who is being told to fly at a certain course or to move in a certain direction) Needless to say, if you are given</ a callsign and you don't like it, then you should keep in mind that

The Complainer Is Always Wrong , and you can always get a worse one. Said nickname can be directly indicative of the person who has it, or it can be an Ironic Nickname , or it could refer to a Noodle Incident or some other noteworthy experience the person had with his friends Also serves as an In-Joke in many of these cases, making it clear to outsiders that there are things these guys know about each other that others don't Related to Only Known by Their Nickname and Code Name , and Squad Nickname for groups. Supertrope to Red Baron , where the nickname in question is widely known due to the character's famed (or feared) effectiveness on the battlefield. Moustache de Plume is a variant of this that borders on Sweet Polly Oliver

In a video game, only people that are relevant to the plot or a sidequest will be blessed with names. Everyone else will be nameless or be referred to with generic or descriptive titles . </ For example, if the town guard is named Samuel Winthrop, you should probably make a mental note of him, as he'll very likely wind up being essential to your progress. If his name is Town Guard, however, you can safely ignore him, as he is superfluous and has no bearing on anything. At most, he'll provide some useful exposition , but it's guaranteed that he'll never need to be sought out again. From a gameplay standpoint, this makes perfect sense and may even be a Justified Trope . By only giving important people names, you can reasonably narrow down the people you need to talk to, which curtails much of the tedium of having to Talk to Everyone . Corollaries include: Only relevant characters will have voice-overs. A common exception that proves the desirability of the rule is when early non-important NPC's have names and faces, but the writers start running out of time or patience and just put in generic people later. This is the naming equivalent of You ALL Look Familiar , and it is caused by The Law of Conservation of Detail . Contrast with The Dead Have Names (where characters are named posthumously to memorialize them) and He Had a Name (where a dead character's name is invoked specifically to send the message that the deceased wasn't</ just a bit of meaningless backdrop). This trope exists to some degree in other media, though movies and television obviously lack the "tells" inherent in things like dialogue boxes to immediately indicate to the audience who is important and who isn't.

A trope that appears when an election is involved, is that some people might put forth or support a candidate not because they like the person, but because they want to play a prank. Oftentimes, the prank will be played on the person when they win, usually when they get on stage. Other times the act of electing this person is a joke If this is the case, the person elected is someone who isn't taken seriously or viewed as a buffoon. Most examples take place in a school setting and typically involve positions like class president or prom queen. However, this can happen in elections where there are real stakes. In this case, people will support this candidate as a protest vote to demonstrate their displeasure with the system. Contrast with Dork Horse Candidate , where the candidate genuinely wants to run and their supporters really do want them to win. Compare with Promoted to Scapegoat . Will often be a tool of the Prom Wrecker . Can lead to a Gone Horribly Right situation if the candidate wins While this phenomenon does occur in the real world, No Real Life Examples, Please!

Some startling, extraordinary event occurs, and a bewildered spectator (archetypally, a lone tramp with a bottle) decides that some consumable they're working on is causing hallucinations , and promptly throws it away or pours it out on the ground. They might also take a vow of sobriety out loud (often with one hand raised), or write down a pledge to stop drinking or drugging If the person realizes their eyes and/or mind are not playing tricks on them, they may either recant or find a loophole in their decision As one of those "old-fashioned" comedy gags, it's rarely played straight nowadays , largely being replaced by Stoners Are Funny . It may be a throwback to the time of Prohibition, when the methanol in poorly-brewed bathtub gin could easily cause brain damage and blindness Contrast I Need a Freaking Drink (where the situation will make someone on screen turn to drinking). A Sister Trope to Mistaken for Bad Vision , when that trope occurs without alcohol Compare with Acid Reflux Nightmare , where someone swears off consumption of something after it gives them bad dreams

The villain has the hero at his mercy, surrounded by armed goons. Does he just shoot him ? Of course not. Does he take the hero prisoner to be strapped into an improbable torture device (from which he will immediately escape)? No, that comes later.</ Instead, for a time, he treats the hero as a close friend and guest in his home , giving him a plush bedroom and a fine (if tense) dinner with A Glass of Chianti and the hero's favorite meal , made from ingredients grown in the villain's garden . If the food isn't spiked, the meal ends with a tour of the facility, then a sales pitch on the villain's scheme to remake the world Just Between You and Me . The hero will reply " You're Insane! " — and that's if he's polite. If he isn't, saying " I'm Not Hungry " dampens the festivities quite early. The hero might attempt to steal a Cutlery Escape Aid during the meal. This differs from general Affably Evil villainy. Treating the hero as a guest is a demonstration of unassailable power, confidence and civility . It's not quite Go-Karting with Bowser , as it ratchets up the tension with the ever-present threat of unpleasantness should the hero step out of line — the conflict's not just a game . Nor is this Did We Just Have Tea with Cthulhu? , which requires the villain to be genuinely friendly rather than just faking. With the loonier sort of antagonist, the hero is forced to play along as the villain thinks the hero is his best friend and insists they act as such . The hero may be provided with formal dining attire: a tux for the gent and a good-looking, well-fitting dress for the lady, with a bath if needed. This may explicitly be so the villain can ogle her. It will almost certainly be so that the audience can watch her kick his butt in said dress later. If the hero's family are present, this can lead to an amusing case of Villain Over for Dinner . The paraphrased trope namer is the James Bond </ villain Goldfinger </ , who did later feed Bond. Also subverted the trope, as Goldfinger was initially going to simply kill Bond, before James bluffs Goldfinger into letting Bond live. These feasts are common in Bond films, which only really subverted it once. (see below) Compare and contrast Captive Date , where one side of a romantic evening would rather not be there but isn't allowed to leave, and Enemy Eats Your Lunch , which is when one of the sides isn't keen on sharing food but the other takes it anyway. Also compare and contrast Sacred Hospitality : The villain usually plans to torture the hero after the meal, or place him in some horrible death-trap. He is explicitly offering the hero the protection of guest-right but fully intending to violate that protection immediately thereafter. The villain thereby reveals

himself to be totally without moral or ethical scruples .

A Non-Action Guy is a male who is not</ heavily endowed with a certain quality that's expected of males in shows; usually courage or combat ability. He's usually a sidekick ; often to the Action Girl (or Action Girlfriend), or sometimes to an entire Five-Man Band . Expect him to need occasional rescuing . This combo has the added danger of the audience seeing him as The Chick , a role that can de-masculinize him or just make him annoying in the eyes of viewers The Non-Action Guy seems much more likely to be played for comedy than the traditional female version of The Chick . While women are not expected to kick ass (and thus those that do</ are exceptional), men often are—so a Non-Action Guy's lack of ability is written as something to laugh at Often he'll either grow into a more action-oriented role, become ignored , or become the Butt-Monkey as punishment for his failure at masculinity . A common, more acceptable practice is to put him on the Mission Control , where he can be of actual help without having to use any sort of action skill To avoid the negative connotations associated with this character type, it might be combined with other tropes such as the Loveable Rogue or Smart Guy where such a character may be unsuitable for action due to age, build, infirm, upbringing, or simply because it would be a waste of his talent. However, they make up for it by being a Guile Hero , The Chessmaster , or The Strategist . It sometimes goes hand in hand with Con Men Hate Guns or Thou Shalt Not Kill . The Non Action guy on a team may not literally be "no-action", but they may be the weakest member as far as offensive power is concerned. But it's not really what they are there to do . They may make up for it by using purely psychological tactics. They may also be a Terror Hero or a Master of Illusion , deception, or any various methods of combat on the cerebral level. Very often, either a Gentleman Detective or Gentleman Thief . In all other cases, he's Weak, but Skilled Expect Fix Fics to be written where his character is changed to fit expectations as a Canon Sue . If he's the protagonist, then he's likely an Action Survivor . If he's the Villain, he's likely a Non-Action Big Bad . In RPGs, he will often be the Utility Party Member . Compare Unfazed Everyman

A major character is never referred to by their actual or full name, instead being addressed by a title , nickname , Only One Name or none at all. Reasons for this vary, but it often serves the function of making a character seem more mysterious or eccentric In older (pre-1900 in North America; pre-1970 in the UK) fiction, a narrator may refer to a character (especially an older or more socially prominent character) by his or her surname . This is because at that time given names were much less commonly used socially than they are now; a young character may not even know the given name of an older character he or she is not related to. It was also common in that time to blank out the names of real people to avoid lawsuits and the like. This is often true in Japanese media set in the modern day as well, as given names are seen as being incredibly personal and sometimes not even used by close friends who still opt to use the surname. Interestingly, the reverse is true if the work is set in some periods of Japanese

history where the size of many of the clans that dominated society meant that it was hard to figure out whom one talking about if one just used the surname, so given names were used more instead. In other Asian media, however, one will often hear people referred to by their given names, but almost never by their surnames - partly because of the low diversity of surnames in many Asian languages A common joke is to do The Un-Reveal on the full name This trope can be somewhat justified , however, due to Nominal Importance : it's difficult enough for the writers to come up with good names for the main protagonists; it would be incredibly</ painstaking to come up with equally good names for a cast of characters who exist solely as part of the setting and serve no further purpose to the narrative Another common variation is for a series where a child is the main character to have parents only referred to as Mom and Dad Sometimes, a main protagonist will have no name to add to their mystique When this trope is applied to work titles, not just character names, it's No Title . When it's applied to location names, it's City with No Name Compare The Trope Without a Title , You Know the One , and I Know Your True Name (which may be a reason for this). Contrast Only One Name , Everyone Calls Him "Barkeep" , and I Am Not Shazam . Compare and contrast The Scottish Trope , for where characters know a name, but actively avoid saying it. See also Nameless Narrative and The All-Concealing "I" . When a character genuinely has no name whatsoever (as opposed to it not being given in the work), then they are The Nameless . If the character's parents never named them, then they were Never Given a Name . When a character is literally given the name "Nobody", then they are Somebody Named "Nobody"

In addition to nutritive qualities, certain foods have taste, texture, appearances, and distinct shapes. Beverages have colors, smells, temperatures, and qualities that are eye-and-palate-pleasing. We humans like to prepare our food in ways that please the senses, and entice us to consume it. Even nature has done this. Bright colors, savory, sugary tastes, and smooth-skinned textures for fruit, additional texture, crispness, and natural complexities in vegetables, painful pleasure and fine grittiness from peppers and spices, smoky and full overtones for meat, and light, mild, delicate tones for any kind of milk, just to name a few However, maybe something has gone wrong and caused us to eschew those ideals. It might be prepared by a sapient machine that only knows the basic dietary requirements of a species or individual, the culture may be sterile in many ways , people being interred at a correctional facility are being treated as objects and not individuals, or if it happens mostly on Earth, Humanity has lost its natural way Enter the "Nondescript, Nasty, Nutritious" substance, something that can barely be called "food". It has carbohydrates, proteins, fats, amino acids, other organic compounds, vitamins, minerals, binders, fillers, and any other substance that is "healthy", and can technically</ fill you up and sustain your life. However, as the title suggests, all of the personality, taste, and appeal has been sucked out of it, leaving behind a... "something"... that could very well work either as a brick in a wall, mortar for that brick, or work as lubricant or oil in an engine Mmm, tasty Although it's implied that a particular food of this trope should lack color, the color of the substance doesn't necessarily matter. It just has to be any of the following: somewhat artificial-looking or gelatin-like or paste-like, heavily

processed, bitter/odd-flavored, or even lacking in taste overall. It could look a vibrant transparent blue, but taste like pure soy sauce, or be colored radioactive green and taste of just... matter See also Plain Palate for people who prefer this kind of food, and Mess on a Plate for food that's visually unappealing regardless of its nutritional content. Sometimes creators of works of speculative fiction make up all kinds of futuristic machinery and even architecture, but do not bother to create futuristic-looking fashions for their characters, instead opting to use contemporary styles. This creates an effect similar to that of Zeerust , in which the style of the work seems dated not because they were trying to look futuristic, but because they couldn't see beyond their own contemporary looks Sometimes it is justified by some specific pieces of Truth in Television , like how many modern hairstyles have been around for centuries (often pointed out in movies), and how men's suits have changed (albeit going from casual sporting wear, to business dress, to the most formal thing many men will ever put on). More specifically, within the past 60-70 years, styles in suits have entered a more or less cyclical pattern (one decade wide tie, one decade skinny tie, one decade more colors, one decade fewer colors, one decade wide lapel, one decade narrow lapel...) as decades borrow from past ones (witness the Mad Men </ influence on contemporary fashion). On top of that, jeans have been the youth's casual trousers of choice in North America for some seventy years now (almost a trope of its own). By the same token, the Little Black Dress has, with minor tweaks, been universally acceptable for women since the 1920s (nearly a century—which by the standards of women's fashion might as well be an eternity). But this isn't the case once enough time has passed. Just compare how different medieval and Roman styles looks from each other; logically fashion two hundred or so years from now on will be just as different. Or just compare to now Anyone who thinks "but fashions don't really change that quickly, so why bother?" needs to Compare Popular History , 20 Minutes into the Future , Fashions Never Change , Modern Stasis , Sci-Fi Bob Haircut . In the real world , explosions are lethal. Let's assume, for a start, that the blast doesn't vaporise you or blow you limb-from-limb . If the pressure-wave doesn't kill you (instantly) by turning your organs to mush or dashing you to pieces against something, all the things and bits of things - shrapnel - caught in the blast can kill you all the same. These aren't usually chunks of rubble big enough to punch your guts out through your chest but rather little shards of (sharp) stuff travelling fast enough to bury themselves in your brains. Even if you survive the pressure-wave and the shrapnel, there's a real chance you'll just plain bleed to death from the internal and/or external wounds those two gave you. That's assuming the heat-wave isn't enough to (instantly) cook your internal organs either or sear enough

of your flesh from your bones that you'll die of blood loss. Never you mind the effect of all this on your hearing , i.e. perforating or just plain damaging your eardrums (perforation may well render you [totally] deaf for life). Merely seeing an explosion can be harmful, as some (e.g. thermonuclear) explosions are so bright they cause blindness - which is, moreover, permanent within certain ranges It should come as no surprise, then, that their lethality means that explosions are used in modern warfare. Numerous explosive weapons are used to kill infantry; there exist anti-personnel grenades, anti-personnel mines, mortars, and shrapnel/high-explosive artillery shells. These blow people apart and/or pulp them with shrapnel, which causes them to die of shock or blood loss. Most countries don't bother stocking less-lethal or non-lethal explosive weapons, e.g. stun ('flash-bang') grenades - such weapons are only useful in very specific situations which involve Special Forces (such as in hostage situations) In fiction, however, an explosion just gives you a bit of a push or shove and may cause a bit of singeing. Also, if you fall over, your clothes might get dirty Cartoons aimed at children are the most blatant offenders (with Looney Tunes characters able to survive dynamite going off in their hands) but this shows up in almost every medium and genre. This raises the question of why anyone even tries to use them (or, anything, for that matter) as weapons at all, if they're so harmless The answer, of course, is because explosions are pretty An interesting variation occurs in more serious but still censor-neutered cartoons where airplanes and helicopters explode. They'll have people in parachutes coming out of the explosion</, completely unharmed. A piece of advice: in Real Life , you have to eject before</ it explodes Some movies will feature similarly neutered explosives; rather than killing people in the blast radius, they transform people into stuntmen who are then pulled into the air by cables while going Aiiieee! Often it's possible to survive such a device even if standing a few feet from the detonation point, as long as you're jumping through the air in the opposite direction A similar behaviour can be seen in many video games, where fragmentation grenades typically have an incredibly small blast radius after which the lethal wall of burning-hot shrapnel they create simply vanishes. Some games (mainly multiplayer ones) even allow players to survive grenades going off right in their faces or even direct hits from rockets — albeit just barely — as a way to prevent explosives from being Game Breakers . It goes even further in games where every enemy and object dies with an explosion and where Chain Reaction Destruction phenomenon is common as the explosions caused in that manner are outright harmless. Sometimes explosions are so harmless they can be actively invoked as a propulsion system . In strategy games, explosives may deal less damage to infantry than they do to vehicles as a form of Competitive Balance Often a source of Amusing Injuries . Compare to the Slap-on-the-Wrist Nuke , for a bomb that should be much more destructive than it actually is Sub-Trope of No One Should Survive That . A boy meets a girl of his dreams , falls in love with her, is reciprocated, and all seems shiny... until The Reveal that the girl isn't quite compatible with him biologically. For example, she is an alien . Or a ghost . Or a demon . Or a six-foot praying mantis in a person-suit . Or... Either way, she is not human and that's a slight hindrance in their relationship. How exactly it plays out depends largely on the author: The Power of Love rules supreme and Interspecies Romance ensues; Gender Flipped (completely or par tly) variations are also included. If they stay together, Half Human Hybrids may result. Subtrope of Interspecies Romance . May be a case of Magical Girlfriend or even Action Girlfriend . Have you ever noticed how sometimes, pickles are really</ salty? That's the sort of thing this article would be about if it were a Self-Demonstrating Article . But it isn't. That would be silly. A birthday cake is a cake you eat on your birthday . That makes sense. But a butterfly is not a fly, a ten-gallon hat can't even hold one gallon, and a peanut is not a nut — and don't even get us started on peanut butter. Words or combinations of words like this whose meaning has nothing to do with their name are known as misnomers</ . Mostly for historical reasons the misnomer sticks and nobody—or almost nobody—bats an eyelid when it is used, since it is well accepted and people know what it means; this particular variant is a common result of calling Smeerps "rabbits" . A Cloudcuckoolander character and punster tropers are likely to hang a lampshade on these from time to time, complain that contents of the tin differ from the label (or that the tin itself is not made of tin), and that there's no baby in baby food . In Real Life , warfare is hardly an entertaining and carefree experience , and can seriously mess with kids' heads … not to mention their bodies . However, warfare and fighting can easily make for good, clean fun in entertainment media, and is often marketed to children. Most parents and Media Watchdogs are okay with media portraying Non-Lethal Warfare, regardless of the nature of the combat, its origins, the Fridge Logic or the Unfortunate Implications it may engender. No matter how lethal the weapons are, how dangerous the environment is, what the attitudes to enemy combatants and civilians are, no one gets hurt and no-one dies. At least, not on-screen Commonly, the combatants will use weapons or powers that stun or KO rather than kill, or at least have the option to. Anyone with more lethal weapons or power sets won't ever hit their target because the target knows Deadly Dodging . Lethal or destructive weapons will only hit the scenery or vehicles, and in the latter case, the crew will usually have ample time to eject or bail out first. Generally, the above will give the impression that things Could Have Been Messy were anyone playing for keeps or slightly sloppy We should mention the rules set out above assume that the setting allows for the possibility of death at all and that it can happen off-screen. If the target audience is too young even for that, the scale of Nerfed violence increases (er, decreases?). No one will use bladed weapons or guns (arrows might fly , though), traps, tanks, and other large scale weapons will be completely non-lethal, perhaps even designed to humiliate the enemy rather than knock them out. Likely "weapons" for use will be " energy " guns that are about as dangerous as laser tag guns… scratch that, less</ dangerous. Laser tag guns can at least potentially blind you. Or perhaps blunt weapons that "can't kill" because they don't cause bleeding This trope isn't an indicator of the quality of the on-screen fighting though, which doesn't need to be lethal or scarring to be entertaining. If it were to be considered "bad" it's only when it fails to carry Willing Suspension of Disbelief Compare with Bloodless Carnage and As Lethal as It Needs to Be . Contrast with how Snowball Fights and Paintball Matches are Played for Laughs with exceedingly 'gory' acting from the participants, especially when those involved act excessively militarily. Compare and</ contrast Nobody Can Die , where death is a narrative impossibility even when dealing with explicitly deadly weapons and situations See also Stun Guns , Family-Friendly Firearms

Some video games do not have a strict sense of a linear sequel . The game may— may</ —take place in the same continuity, but not necessarily in the same time period. Occasionally the only thing similar is the system of play or shared tropes and references This is because video games, uniquely among media, have another dimension by which installments in a series can be interrelated, other than characters, setting , plot, or tone; that dimension being gameplay mechanics. Of course, this also means you might get an installment that isn't really one at all . Plus, it has the benefit of helping to avoid Continuity Lock-Out —with non-linear sequels, it doesn't really matter if you start with, say, An RPG Adventure 1</ or An RPG Adventure 10</ This also avoids having to explain why the hero isn't at Level 255+ and where all his cool stuff went when he starts the next game Many

series of this sort have Recurring Elements Compare and contrast to a Thematic Series , which is a series that follows themes as opposed to specific characters or settings

Look closely at a female reptile, a female amphibian, a female bird, a female fish, a female insect, or most mammals that aren't human or primate. You'll doubtless notice the lack of a particular characteristic that is common to female humans. Most animals do not have human-like breasts at all, even if they fall into the category "mammal". Compare the bellies of a male and female dog, or even the chest of a female gorilla, and you won't find much difference unless she's recently given birth to a litter and is nursing young (that's about the only time she will ever</ have any vague semblance of what we call "breasts" on humans). Regardless of this, artists tend to oversize the mammaries of characters that do have them, or put them in places where they don't belong. Prominent breasts, or lack thereof, is one of the simplest visual cues for humanoids . Giving all female animals big boobs, or at least a body shape that mimics them, allows for distinction between the sexes without adding glaringly obvious costume tags , a wasp waist , or the more bizarre gender-specific characteristics in some other animals that the audience may very well be unable to recognize as sexual dimorphism . In such works, male animals are not necessarily given obvious pectorals. This can be said for most male cartoon characters, and not just male animals. If they want to be that egregious , they can make those non-mammal mammaries produce milk</ . If the character is an alien or artificial life form, then it makes a little bit more sense. Aliens have Bizarre Alien Biology after all, and creators of synthoids and such would probably want their "children" to be anthropomorphic enough to fit in. Not to mention that it's easier to design a skin-tight rubber bodysuit with strange textures for use by human actors. Additionally, the adaptations needed for practical bipedalism would also result in this making a degree of sense for humanoids that evolved from mammals other than primates, such as Cat Folk , Wolf Men , or other mammalian Beast Men . However, it still tends to make a lot less sense when applied to avian and reptilian races of creatures or aliens. Breasts are for nursing young, and for an Avian with a nice hard beak (especially those with curved or hooked beaks), that would be incredibly painful.</ Reptiles often have sharp teeth and often strong jaws, too, same with some fish. Remember, breasts are primarily for nursing young — not just</ to look sexy. This is extremely common in the Furry Fandom , though some furries prefer to just portray a reptile, avian, amphibian, or their mythical counterparts (Gryphons and Dragons) without them for anatomical purposes. Even when this trope is averted in canon, it seldom stops the Fan-Artists . There is also the school of thought of multiple breasts on aliens or furries , but that's a completely different subject altogether. Just in case male non-mammals feel left out, note that external genitalia and nipples are also a "mammal thing", and their presence in male creatures from other taxonomic groups is a variant of this trope. This Trope is sometimes found with Non-Mammalian Hair , hair being something else that only mammals have but is often added to non-mammalian females. Can go hand-in-hand with a Pregnant Reptile . Compare Sexy Dimorphism , Organic Bra , Multiboobage , Secondary Sexual Characteristics , Tertiary Sexual Characteristics , and Feather Fingers . Contrast Animals Lack Attributes , when procreative parts that animals rightly should</ have are omitted. Web Animation

In a context where the viewer expects a natural number, like 1, 2, 10, or a billion, a number from a larger set, like pi, infinity, three quarters, or negative twelve is used. It's funny because it makes no real-world sense. In formal mathematical jargon, this is a violation of the Since it's dependent on what you're trying to count, having "zero" of something may or may not be a non-natural number gag. A zero dollar bill is unexpected, while a politician with zero fans is just sad. Similarly, a half-dollar bill is just fine, even if your country might not issue them, while a politician with half a fan is nonsense May be explained in the story, maybe not. Either way, it's supposed to be mathematically correct, unlike Counting to Potato , where nonsense numbers are used because the character communicating them doesn't know how to count right. Compare Eleventy Zillion , where nonsense number names are used to suggest vaguely-defined but very large numbers A Missing Floor will often have a fractional number between the numbers of the two floors it's physically inbetween

Great news, Page! I'm giving you a Promotion! Your new title is Trope Page, as opposed to your old role of Blank Page. Now the pay's the same and there are no perks, but you will be expected to keep discussions, indexes, and a good example list. It's a new responsibility. Keep at it and you may get moved up later, but for now you need to put in the extra time, this is great opportunity for you! There are a great many names for this: in Real Life and in fictional office settings they call it being a Team Leader</. In the military they call it a Brevet</ or acting rank, you get the authority and whatnot of the promotion, but not the money. Happened a lot in Real Life in the American Civil War and the World Wars and still happens to this day to an extent if a unit is short on personnel. Think of it as the opposite of being Kicked Upstairs , you stay right where you are but do more work without getting paid extra for it! Oh and I need you to file these examples too. In Bleach </, whenever Captains are killed, discharged, or go missing, their spots are temporarily held by the next-highest ranking member, usually a Lieutenant (also translated as Assistant Captain). Acting Captains have to handle all of the duties of the old Captains but with no extra pay and no official command authority. This is mostly because of the weight the title "Captain" holds: they aren't just leaders, but effectively a walking WMD .

In Chengar Qordath's Winningverse </, this happens to Shining Armor in the aftermath of the changeling wedding invasion . He is removed from being Captain of the Guard (his dream job)through no real fault of his own, and shunted sideways into a new role. While the role isn't a dead-end job by a long shot, it's not what he wanted to do. And when the realization really sets in on the day he finally moves all of his stuff out of his office, it only kicks off the slew of bad news he gets that day.

An almost example appears in an opening scene of the film Scorched </ : a long-time employee of the bank is promoted to Assistant Manager, receiving a vast list of new responsibilities ... and a 55 cents an hour raise.

Brevet ranks turn up a lot in The X-Wing Series </ .

The Office</ .

In Paranoia </ most Troubleshooter missions require the group to choose a team leader (or have one chosen for them). The members had to follow the leader's orders, and the leader was responsible for successful completion of the mission. As most missions are impossible, and half the team is likely to try and sabotage it anyway in favor of personal goals, it really is a bad, BAD</ job. The team leader badge is a bulls-eye</ . ("Your badge depicts you as the centre of your team, with your expertise and knowledge radiating as inspiration to all." Uh huh.)

In The Matchmaker </, and its musical adaptation Hello, Dolly! </ , Vandergelder announces that he's going to promote his assistant Cornelius to chief clerk, and brushes Cornelius off when he points out that he was the chief clerk already. After he leaves Cornelius says sourly that if he does a very good job, maybe in a decade he'll be promoted to chief clerk again.

Commander Shepard starts Mass Effect </ as a Lieutenant Commander of the Alliance Navy, and also gains Spectre status from the Council. Come the third game, the Alliance recommissions Shepard, but two returning squad members (and, with the right background, his/her own mother</) either match or outrank</ him/her, and s/he gets the widespread duty of conducting centuries-in-the-making diplomacy with every race in the Milky Way and finding as many war assets as s/he can. By the end, s/he is essentially, along with Admiral Hackett, the leader of the alliance.

A character goes on a rant, presumably induced by some slight , and is caught up in a spot of Angrish . Or maybe they are giving a stirring speech, and are really on a roll, when they let out some Non Sequitur . When the rant or speech ends, the person being chewed out or preached to, with a perplexed tone, ignores 99% of the speech in order to single out the Non Sequitur Compare I Take Offense to That Last One! , where the target (if being lambasted) only disagrees with one of the insults, implying that they admit the others are correct. Also compare You Make Me Sic , where in a situation you expect someone to have a strong reaction to a statement or insult they single out bad spelling and grammar A Running Gag in Bleach </ has Rukia trying to explain things to Ichigo using a series of drawings. But all he can ever seem to focus on is how terrible the drawings are

Otter, in reaction, looks confused for a moment and mutters, "Germans?" to which Boon responds " Forget it, he's rolling ."

In an episode of Titus </ ; Erin is chewing Ken out for being a bad father, at one point calling him a "Motard". When her rant ends, he

Monty Python's Flying Circus </ is dotted with this in the Live At Drury Lane</ sketch "Cocktail Bar," where four businessmen stop in to order some rather unusual drinks ("Special with a twist of lemming," "Harlem Stinger," etc.)

On 4chan , someone told the story about how his mother's bakery was broken in to, and to protect the merchandise, she had him store all the cakes on hand at his apartment—about forty of them. He laments that he already housed one of them, and didn't know what else to do. This was the immediate response:

In Young Justice </ : After Arsenal wakes up and recaps everything that has happened since his capture, including an alien invasion, the formation of a team by all the sidekicks and Ollie growing a goatee:

A character has suffered an amusing injury , usually of the blunt force to the head variety. Dazed, he will say something really random and Non Sequitur , normally either before going out like a light or after being awakened . It seems that with proper application of blunt trauma, the human skull becomes a radio receiver tuned to a random station somewhere in the world. Three common phrases used are " How Many Fingers? am I holding up?" (helpful bystander), some variation of "I don't wanna go to school today, mommy" and "Anybody get the number of that truck?" (victim). The character may also mistake someone closest for someone else during such A subtrope of Non Sequitur and Parting-from-Consciousness Words , which also includes the cases where the parting words actually make sense. Overlaps with Intoxication Ensues when caused by drugs or alcohol. May result in Delirious Misidentification . See also Concussions Get You High . In less serious works, tends to come hand-in-hand with Circling Birdies The corresponding situation where a character says something random while regaining consciousness, is Waking Non Sequitur . If a character says something random while unconscious, that's Talking in Your Sleep . Spoonerism is a common variation

I'm a Marvel... and I'm a DC </ :

A trope most prevalent in Western Animation , but it can occur elsewhere. An actor is often cast into a role for which they can provide a great voice, but not always do the casting agents manage to get someone that can sing as well. Or, more rarely, their singing voice just doesn't sound enough like them for the producers' liking. A second actor will be brought in to dub the songs, and this isn't always as noticeable as one might think If the actor is supposed to be playing a musical instrument while singing, two</ doubles may well be used Most Japanese voice artists sing the Image Song for their characters regardless of their talent, although again this isn't always the case Less frequently, concessions will be made to work around a voice actor with a less than pleasant voice. Sometimes, this trope can be done for Rule of Funny by having a character's separately performed singing voice deliberately sound nothing like their speaking voice Compare Talent Double and Singing Voice Dissonance

A character is obviously "not from around here", but where they actually are</ from is kept a mystery. They don't even name a No Communities Were Harmed pretend country like Qurac or Bulungi . It's possible that it's All There in the Manual , but you won't get any hints in the show itself. Their name doesn't give any hints, it just Sounds Foreign , and their accent doesn't sound like that of any real country . They're likely to talk about The Old Country a lot without ever telling you what it is. Can be played for drama to hint at a character having a Mysterious Past , but more common as a way to create the ultimate Funny Foreigner —you can use all the best stereotypes without offending anyone</! Of course, if a home country is ever revealed or deduced , all of this becomes Misaimed Stereotyping and will probably continue to happen because of how it's still funny. Other characters may have their own assumptions, but these will be met by conflicting evidence, disagreement from others and offended denials by the foreigner himself ("Hungarian!? The Hungarians are our mortal enemies!</"). The author, if pressed, will probably respond with a Shrug of God . A popular variant in the UK is the "Eurotrash" character, someone whose origin can be loosely classed as Central/Western Europe but no narrower than that, speaking fluent English with an accent that hopscotches between Swedish, French, German, Italian… Their reticence to talk about where they come from may be an early hint that they're a Fauxreigner . Compare Ambiguously Brown and Undisclosed Native , which can overlap with this trope. Contrast But Not Too Foreign . See also Where the Hell Is Springfield? , for when it's the setting of the show that's ambiguously located. The real life version as applied to versatile actors is Plays Great Ethnics .

A character that looks strange in the context of their cartoon world. Often a result of Art Evolution , with earlier designs becoming The Artifact to a newer, more refined sensibility. It could be that a major character was designed independently and integrated without any changes. This could also be an intentional stylistic choice, indicating a descrepency between the odd one out and the rest of their world Crossovers often result in this, with an attempt at fidelity to both art styles rather than going for Off-Model . It's especially noticeable when the characters are from different franchises, showcasing distinctive character designs from their respective source material. A Gonk often utilizes this, deviating from the style specifically for the purpose of looking ugly. Same could be applied to an Eldritch Abomination to emphasize how alien it is Compare Art Shift (when the art itself shifts in style temporarily), Masculine Lines, Feminine Curves (women tend to be drawn more realistically than men in many illustrated works) and Flashy Protagonists, Bland Extras (when the major characters look non-standard compares to the background characters). Cartoonish Companions , No Cartoon Fish , and Realistic Humans, Cartoony Animals are subtropes

In most games, players see the dreaded Game Over screen when they lose in some way. Maybe you fell down too many Bottomless Pits and lost all your lives , or the Player Character was beaten to death by a particularly vicious Demonic Spider . Maybe you failed a story important mission or lost a critical Non-Player Character during an Escort Mission . You might have been caught or captured during a Stealth-Based Mission . ...Or, maybe you just forgot to pause the

game while reading the walkthrough you pulled from GameFAQs and the game's timer ran out — you get the idea. These are all standard failings, usually treated with a simple default message: " Game Over ." Alternatively, you have successfully finished the game, defeated the Final Boss and receive a Game Over message after the credits because technically the "game is over". But that is not what this trope is about . Sometimes there are games that give an unusual message or even a full cutscene for losing the game in a specific way. These are non-standard Game Overs.

This page is about the unusual, context-sensitive methods by which players trigger a Game Over screen. It doesn't include the times when the game tries to trick you into thinking that the game has ended For games where every death is accompanied by a special message, see Have a Nice Death . For games where every death has a special animation, see The Many Deaths of You . For games where all bad endings contain extended narrations or demonstrations about the consequences of your actions, see It's a Wonderful Failure For standard Game Overs that result from an instant-kill attack, see One-Hit Kill . For the game ending early due to a non-standard victory</ condition, see Instant-Win Condition . If a non-standard Game Over cuts the game's ending, then it's aptly No Ending . For non-standard Game Overs triggered early in the game, see Press Start to Game Over . For situations where there's an achievement awarded for this, see Achievement Mockery A number of quiz shows from the late 1960s and early 1970s — including the Who, What or Where Game</ and the original Sale of the Century </ — had rules where falling below zero at any time immediately eliminated that player from further play. These games spotted the players a small bankroll ($20 for $otC</, $125 for the betting-type 3 Ws</) and, like Jeopardy!</, money was deducted for incorrect answers. But enough incorrect answers meant falling to or below $0 and, per the rules, meant they were eliminated immediately. The "$0 means goodbye" rule was eliminated for the more familiar 1983 $otC</ and the 3 Ws</ 1990 remake The Challengers </. With the earlier incarnations, the standard "game over" is at the end of the front game of $otC</ (we've just played the last question, here's the scores, here's our champion) or, on the 3 Ws</ , after the day's final category is played with all three contestants participating

Bob must wear some form of uniform which he finds repressive or simply dislikes, so he tries to act out and be an individual through wearing something distinctive. If he actually gets away with it, he may even inspire others to do the same. Often, Bob's change to his uniform comes from finding a loophole — The rulebook says "black shirt, shoes, socks, and pants," but says nothing about silly hats or tearing the sleeves off the shirts . Essentially a Dress Code, but not a strict Uniform. This is often done in fiction to make things more visually interesting while still keeping a team feel. In Real Life this is a key reason why novelty neckties are so popular. Big earrings, watches laden down with gadgets, mismatched socks, you get the idea. In the professional world, this is popular with men, who tend to have fewer options for "proper" attire than women. This is often the case with Superhero Team Uniforms . Custom Uniform of Sexy is also usually this, but with a specific Fanservice angle. Compare Custom Uniform — while that one is "I won't wear the real one, so I'll wear whatever I damn well please," this is

"I'll wear the real one, but I'll make mine different than everyone else's." Transfer Student Uniforms : "Technically I'm waiting for my new uniform to be made so I'll wear my old one, but this is symbolic of my status ." Compare Distinctive Appearances .

Much comedy is based on having characters misunderstand other characters' words or language , but this can only go so far: after all, words have generally accepted meanings, which limits the possibilities for misunderstanding With nonverbal communication, the sky's the limit . A wink, a hand gesture, a significant look — could mean anything</ . It's possible to have characters conduct entire conversations in which each completely misinterprets what the other is saying A common hazard of Miming the Cues . Contrast Talking Through Technique and Hand Signals , where gestures can get a very precise message across

Mostly an espionage trope, but may crop up in crime fiction and other thrillers. The hero and an antagonist meet in public—a society function, a casino, a coffee shop or some other venue with lots of witnesses, (or other limitations, if that might not be enough — see the Highlander </ example below). Other times even a few witnesses of the wrong type will prevent combat from breaking out. In-story, the purpose of the scene is usually information gathering, and feeling out weaknesses of the opponent Related to Overt Rendezvous . Subverted by Conspicuously Public Assassination . If a subordinate antagonist is involved and genders align properly, can mutate into Duel of Seduction . A Chance Meeting Between Antagonists might turn into this, but more usually at least one of those involved is seeking the other A subtrope of Action Film, Quiet Drama Scene . Can easily set up We Meet Again . Compare Go-Karting with Bowser . Not related to We Come in Peace — Shoot to Kill A commonplace in James Bond </ films (and novels — Umberto Eco calls this the "First Check" scene in Ian Fleming 's stories)

Sometimes the best way to describe something is to give a few hints and let imaginations run wild, especially if you aren't allowed or can't be bothered to get explicit. One common way is to imply the general feel and mention a few outlandish items to be used but not how</ they are used. After all, who could come up with a funnier scene involving these odd tools than the viewer's imagination could? Noodle Implements is used to suggest an act that would normally be unthinkable to show, by listing a set of objects in context. The most common uses are for an especially Zany Scheme , some delightfully exotic sex or some truly ingenious torture. The phrasing and circumstance makes it obvious, but the unknown act appears much more intense. Or more silly. To compare it with Noodle Incident , Noodle Incident is basically a specific variant of Noodle Implements that already happened in-universe. Therefore a character can mention a Noodle Incident using Noodle Implements. An Incident is a single event, definite, while Implements can mean both "ongoing" and "tools", so it is more undefined and open. If the Noodle Implements are used erotically off-camera while a character or characters observe, they may find the results Head-Tiltingly Kinky Noodle Implements can cause Fridge Logic (and/or Fridge Squick) if you attempt to work out exactly what you do with a snorkel, a feather boa and a stuffed giraffe that's so incredibly erotic. Unfortunately, someone will have worked it out. There're probably pictures online . If the use is well known, it may become a form of Shout-Out . They may also be used in Planning with Props . In some cases, savvy characters will intentionally invoke this trope when questioning someone they've captured. Differs from Maximum Fun Chamber in that the character in question doesn't really know how to use the items to torture someone. Contrast And Some Other Stuff , where you see exactly how real implements are being used but their precise identity is obscured to prevent idiots from trying this at home . See also Maximum Fun Chamber , Comic Sutra , and Lost in Transmission . Compare Cow Tools , That Mysterious Thing . For lists of items used to commit an elaborate but unseen murder, see Once Killed a Man with a Noodle Implement . Not to be confused with Informing the Fourth Wall .

The Noodle Incident is something from the past that is referred to but never explained, with the implication that it's just too ludicrous for words—or perhaps too offensive for depiction—and the reality that any explanation would fall short of audience expectations. Questions about it are often met with "You Don't Want To Know…" Persisting is a good way to press a character's Berserk Button Commonly introduced to the audience by having characters react to some fantastic and improbable event with "Oh no, not again." The key to this trope is that the audience is left to imagine what happened based on vague

hints or clues, with funny (or scary) (or both) results Named for an incident referenced by the characters of Calvin and Hobbes It originated from the in which the word "incident" was not used, but was used all the time after that, starting with the strip Don't be surprised if it was caused by a trickster-type character . If there's a noodle incident and a trickster happens to be in the main cast, the trickster is almost always responsible for it, or at least blamed</ for it Almost always a case of Nothing Is Funnier , particularly if it has an outlandish name, such as the Trope Namer . Compare with Cryptic Background Reference , In-Joke , Jackhammered Conversation , Relax-o-Vision , Noodle Implements , Second-Hand Storytelling , Take Our Word for It , That Mysterious Thing , and What Did I Do Last Night? . Comedy counterpart to Nothing Is Scarier , where the imagined horror</ is more effective than what could be explained. Reminiscing about a Noodle Incident by the people involved can result in Lost in Transmission for an outsider. Compare and contrast Offscreen Moment of Awesome , where the off-screen incident would have been better on-screen. See also Cow Tools . Enough such incidents create a character who has Seen It All . If a Noodle Incident is essential to solving a mystery, it's a Riddle for the Ages . If it results in the person/people involved being banished from wherever it happened, they've become Persona Non Grata . And if, many episodes or installments later, we finally get to see the incident and all the details about it (at least one TV series season, book volume or film sequel has to be in the gap), the ensuing new episode/installment becomes the Resolved Noodle Incident . See also Great Offscreen War . Contrast Oblivious Mockery , where characters talk about an event they don't know happened but the viewer</ does (most of the time) In Spy Fiction or similar stories with two longtime allies, the Noodle Incident is usually referred to by a place's name. "This is just like Budapest!" "Remember Helsinki?" "God, it's Rio de Janeiro all over again." Sometimes this is elaborated upon, but usually not To be clear, this isn't simply a reference to something that is never shown "on-screen". A Noodle Incident is marked by a lack of information, shown or told. Bob saying to Alice, "Remember that time we robbed a bank?" does not qualify, whereas "Remember the bank?" does Naturally, this trope is a good source of Fanfic Fuel . Sometimes overlaps with Getting Crap Past the Radar . Contrast with Remember When You Blew Up a Sun? , which is where the reminiscence is anything but</ ambiguous Not to Be Confused with The Google Incident (or the second one), although you might get this vibe from some tropers

In some cases where the party has been split or someone has changed so much you hardly recognize him or her, you may want to make sure the Bob in front of you is the person you know, and make some kind of check; for example by asking him something only the real Bob could know. But what to do when Bob is usually so stupid he doesn't really know much? Well, you will check just that</ instead. Ask a question expecting an answer so silly that only the real Bob would be capable of pulling it off . Of course, Bob may also show his idiocy without waiting for any question. Inversely, giving an unusually intelligent answer will reveal the imposter Compare Trust Password and Bluff the Impostor . Will often overlap with Spot the Imposter Sub-Trope of Something Only They Would Say . See also Who Would Be Stupid Enough? . Not to be confused with Nobody's That Dumb

The above quote from Silver Spoon </ is after Keiji made a dubious relooking during his summer vacation.

When the Stephanie Brown Batgirl 's Friend on the Force gets in the middle of a fight between Batgirl and Clayface in Batgirl's shape, one of them says to shoot her, because she'll bleed and that will prove who she is. He shoots the other one, because only the real Steph could possibly think that was a plan.

In The World's End </ , Gary repeatedly headbutts a pillar to show that he hasn't been replaced.

In The Culture novel Matter </ Farbin is a King Incognito , one step ahead of the usurper who's declared him dead, who seeks help from his old tutor who hasn't seen him since he was a boy. The tutor says that if he's who he says he is, he'll remember the name of the tutor's assistant, and the subject of one of their lessons. When Farbin admits he can't recall either of these things, the tutor is reassured that this really is the Upper-Class Twit he remembers.

Blackadder II </: the Master of Disguise Prince Ludwig has infiltrated the court of Queen Elizabeth ; the palace is having a fancy dress party to take her mind off her troubles and Blackadder (who was Ludwig's prisoner) told Ludwig that Nursie always dresses as a cow. Then Blackadder escapes, returns to London, and stabs Nursie while she's dressed as a cow - but it isn't Nursie, it's Prince Ludwig.

Persona 4: Arena Ultimax </ : When faced with Kanji and Shadow Kanji and unable to tell the two apart, Yukiko holds an impromptu quiz show with questions about Inaba to determine which is the fake. Her last question is a math problem; when the Shadow gets it right, she proclaims he's the fake since the real Kanji would never be able to do the math so easily.

There was an episode of Bananaman

Two characters are escaping from something. One of them falls down, breaks a leg and says "Leave me, I Will Only Slow You Down ". The other one says, " I won't leave without you !" and takes his wounded friend with him. Possibly even requiring, as soon as they reach some degree of safety, that the wounded character gets evacuated first In more hard-pressed situations, the character must stand over the fallen friend and fight off enemies, all the way up to the grim Last Stand . In case of close comrades , such as Blood Brothers , or beloved commanders , this may be done even if the fallen friend is dead and not just wounded, and the heat of battle may make it impossible to tell whether the fallen character had just been wounded or had died. And if the dead character has Royal Blood or Blue Blood , this may have a grim necessity: they need to be able to prove that the character died</ to ensure that the succession goes smoothly in time of crisis This trope is often used to generate drama in a situation that calls for a Heroic Sacrifice . See Shoot the Dog Can lead to Antagonist in Mourning when the characters had been hostile to each other before. Extra points if they had just become Fire-Forged Friends Savvy villains

will exploit this rule to great effect by wounding their enemies, thereby pinning or slowing down their comrades If it really is impossible, the wounded soldier may plead for death rather than just being left On the other hand, if the wounded soldier can prevent the enemies from chasing his comrades, You Shall Not Pass! may justify leaving him. The soldier will probably insist on volunteering despite his comrades' protests When they must Bring News Back , the characters who stay behind often do it to buy the others time to get away. Those who must go on may find it hard to flee while others fight , but generally their sense of duty is up to it In many ways, this is Truth in Television , although without the dramatic clichés. Many armed forces units, especially the U.S. Navy SEALs and U.S. Army Rangers, pride themselves on never abandoning a wounded or dead soldier. Others, like the SAS, make a rule to leave wounded men for The Medics Often portrayed as a subtrope of Honor Before Reason . In real life, there is a perfectly cold-blooded reason to still do this: people are expensive and difficult to train and replace. Better (and cheaper) the guy with potentially years of experience spends some time in a hospital than you stick some neophyte right out of a rushed
